Thursday, March 20th. After breakfast I went to Holyrood Palace. Visitors are only allowed in the old part of the Palace, in which are Queen Mary's apartments; even in this part we are restricted. The Picture Gallery is an immense room; it measures 150 ft. in length by 24 ft. in breadth, and is about 20 ft. high. All around the room are hung portraits of the kings of Scotland. In a hasty look at them, the most prominent characteristic of all is, almost exactly the same style of nose. There are two enormous fireplaces in this room. I could stand in them; standing on my toes and stretching my utmost, I could not reach the mantels. From the Picture Gallery I was shown into Lord Darnley's rooms: 1st. the Audience Chamber; 2d, the bedroom; 3d, the dressing-room. Leaving these, I entered what is said to be the most interesting suite of rooms in Europe—the apartments of Mary Queen of Scots. The first room was the Queen's Audience Chamber; in it now stands the bedstead of Charles I: there are many old pieces of furniture in this room. Here it was that Queen Mary would summon the Reformer, John Knox, and upbraid him for his intolerance of everyone, especially the Queen, who differed with him in religious opinion. The next room is the bedroom of the Queen. In looking around the walls, I was much surprised to see Queen Elizabeth's portrait; it hangs near the bed. I said to the guide, "I wonder that her picture is here; it seems out of place." "Yes," he replied; "it is no compliment to Queen Mary." This picture among other things was given to Mary by Elizabeth; it always hung in this room, and as it was found here after Mary's death, it has been allowed to remain ever since. In this room stands the bedstead of Queen Mary, with its decayed hangings of crimson damask, its bedspread all covered with fringes and tassels. It is a sad sight. The imagination has again peopled this Palace with fair ladies and gay knights. I see Queen Mary tripping through these apartments, bewitching all by her loveliness and grace. I look around and the vision is gone—what was royalty two hundred years ago, is rags to-day. *Sic transit gloria mundi.* The Supping room is very small. It was in this room that the Queen was sitting with a few of her ladies and her secretary, Rizzio, taking tea, when Lord Darnley and his infamous followers entered and acted a part that is well known to all. There is a slight discoloration of the floor where the secretary fell, said to be his blood. The spot is not as bright as I expected to see it, but even if, as has been suggested, it has been retouched, so much the better—everybody wants to see the *place* where Rizzio fell: if no care is taken to keep it, it would be in time obliterated. Among other things, the Supping room contains the Queen's private altar piece, which is a painting of the Assumption of the Virgin on alabaster, and a white marble step which led to her private altar in the chapel.

The last place to visit is the chapel, only the sides of which remain standing. It is said that a builder was employed in the year 1758 to put on a new roof; instead of adding a wooden one with slate shingles, he thought that it would stand the test of time better if he should cover it, as he did, with flag-stones and a large quantity of stone work. The walls here this monstrous burden for a time, but finally gave way in the year 1768. Although it is in ruins, the birds are regular worshipers at the chapel, and when I entered they were having their early matins. J. O. N.

Not long since, Mr. Benjamin Coates of Philadelphia remarked to us that Mr. D. B. Warner of Liberia was the most sensible African he had ever met, or used words to that effect. We sought an introduction: the letter which we publish below will be read with interest.

MONROVIA, *Feb.* 14, 1879.

Mr. S. C. Armstrong,

Dear Sir:—

I have the pleasure to acknowledge the receipt of your letter of the 6th ult., in which you submit to me several questions touching matters and things in Liberia.

To your first question, "What is the condition of the people [here], are they anxious for a higher civilization, or are they content with the existing order of things?" I have to answer: The people are not content with the present order of things, and they are daily using their best endeavors to improve them, and to raise themselves to a higher standard of civilization; but that civilization when attained, will be in exact accord with their peculiar instincts, and not in harmony, altogether, with the civilization of the Anglo-Saxon people.

Secondly, "How is the color feeling?" &c. This is a question which requires tender and careful handling, and it should be touched only in extreme cases. The negro and the mulatto here are already so mixed up in marriage that it would be a very difficult matter to undertake a division of the two. Your scientists, however, are correct in their views, when they give it as their opinion that pure races hurt themselves when they amalgamate with the impure parts of those races; or, in the other direction—where the pure white man amalgamates with the pure negro woman, the issue of the two is physically crippled and morally injured,—the fusion of the two bloods works confusion and only confusion.

It would, therefore, be far better for both of the pure races, were the white race to keep to itself and the negro race to itself,—the issue of each would be physically healthier and stronger, and their moral natures would be more normal and less apt to be warped out of the line of their good tendencies.

As we have no data from which to gather facts on that subject, I am wholly unprepared to say what percentage of immigrants die every year. I can, however, say this, that, out of a company of fifty immigrants that landed here February 7th, a year ago, only four have since died. One of these was a new-born babe, the second, a woman between seventy and eighty years old.

The health of immigrants can be preserved by the immigrants themselves adhering to the advice, both of their attending physician and the older settlers,—this advice includes the kinds, as well as the quantities of food that should be taken during acclimation; as also when the immigrant should, and when he should not, go out into the field to labor.

If it is to the monetary state of the country you have reference, when you ask, "To what do you [I] attribute the present state of affairs in Liberia?" the one and only reply is, that, I attribute it to a want of a strict economy, perseverance, in the management of the financial department of the country. This done, everything else will move forward satisfactorily.

Coffee culture is being pushed onward with commendable energy and to profit. The foreign demand for Liberia coffee, both in the shape of scions and seed, and for clean coffee for table use, is daily increasing.

In conclusion, I have to record my heartfelt thanks to the good Mr. Benjamin Coates, your introducer to myself, for the many good words he has always taken pleasure in speaking in my behalf ever since 1845—the year we first had any dealings with each other. I have just learned that you take our newspaper, the "Observer."

Yours very respectfully,
D. B. WARNER.

A PATHETIC REMINISCENCE.

To the Editors of the Evening Post:

Your recent notice of the death of General Robert Anderson's only son and namesake recalls an incident not widely noticed at the time of its occurrence—the formal delivery of the body of General Anderson by the navy to the army at Fortress Monroe, Virginia, in February, 1872. The writer was at Hampton Normal School at the time, and was a deeply interested spectator of this picturesque and pathetic ceremonial.

The war-ship Guerriere, which had been detailed to bring home the body of General Anderson from Europe, came up into Hampton Roads in the evening of Monday, February 5. A friend on board, one of the officers in charge of the vessel, kindly notified us that at noon the next day the body would be surrendered into the keeping of the army. The 6th of February was a soft, still day, full of the inexpressible sweetness of early spring in Virginia. We filled three or four of the school row-boats, and pulled down a mile or more, lying off the fort in the boats, so that we might lose no detail of the scene. As we rowed, we told our colored oarsmen, Hampton students, over again the story of Sumter, and they in turn sang the plaintive song of their people:

"Dust, dust and ashes lie over on my grave,
But the Lord shall bring my spirit home."

It was a "white calm." The sun was thinly veiled in a luminous, white haze which overspread the sky without a rift of blue, and the glassy surface of the Roads was as white as the sky. This peculiar aspect of sky and sea heightened the color-effects of the pageant. Every sail and spar, every touch of red and blue, every twinkle of polished metal was exactly repeated in the smooth water. As the bells and bugles on shore called out noon, a long line of white launches and row-boats, draped and cushioned in scarlet, with large stern flags draping, put off from the Guerriere. One carried the guard and the catafalque covered with what seemed a heavy black velvet pall, the fringes of which trailed a little in the water. Other boats were filled with the ship's officers and men. As they gave way the firing of the minute guns from on board began. The strange procession, moving with the slow, regular stroke of many oars—every large and boat doubled by its own reflection in the water—at last drew up beside the broad wharf stairs. As the catafalque was raised to the level of the wharf a burst of funeral music came from the post band, the detachment of army officers and men formed in order about the casket, the representatives of the navy closed in, and to the measure of the wailing music and the awful guns they marched a short distance inland, and set down their burden gently in the little garrison chapel, under a guard of honor, to wait for "further orders." The task of the navy was accomplished.

The ceremony, we were told, was simply according to "regulations," but nothing could have been more touching or more picturesque. There were tears on all faces, white and black, as we turned and pulled slowly homeward through the Narrows to the Normal School wharf, the rowers singing:

"Dust, dust and ashes lie over on my grave."

Voices in another boat took up the refrain, and responded:

"He rose, He rose, He rose from the dead,
And the Lord will bring my spirit home."

New Haven, Conn, February 27, 1879.

J. S. W.

A NORTHERN MAN in Virginia, writes to Dr. Thomas Pollard, Commissioner of Agriculture, an account of his antecedents and of the inducements to make his home in this State—as follows:

I have now been a resident of your State fourteen months—arriving here in Nov., 1877 and purchasing an estate of 365 acres. The preceding twenty-five years I had been a resident of New York city and engaged in mercantile pursuits.

As you are aware, for families desirous of changing a city for a country life, the proper and fashionable thing to do, is to go West, and I did go West as far as Nebraska. After my Western trip, I was induced by friends to travel through Virginia, and after looking about pretty thoroughly, made up my mind to purchase and settle here, and thus far we do not regret the move and, feel assured, all things considered, we could not have done better.

First. We have a large dwelling house, all the necessary out building, orchard, fruit and flower garden, good arable and timbered lands well watered and numerous springs, good fences around the entire tract, at a less price per acre, including the improvements, than the bare prairie can be purchased in the favored sections of Iowa and Nebraska.

Second. We find ourselves within walking distance (¾ mile) of churches and schools, both public and private.

Third. We find good help, both male and female, at less than half the price demanded at the North West—and perfectly willing to be treated and considered as hired servants and as far as I have discovered, equally capable.

Fourth. We have cultivated and refined society in our neighborhood, who have shown us every kindness and attention and are anxious to enlist Northern capital and energy to dwell among them.

Fifth. The taxes on real and personal property are very light, being not one one-eighth of the amount levied in and about New York city, and not over one half of the amount levied on farms in Nebraska.

Sixth. The climate is mild and healthful, not subject to the extremes of heat and cold as in the Northwest and having longer seasons for agricultural labor.

Seventh. To sum up; Families desirous of securing homes in the country can purchase here at a less price than at the West and instead of having the *bare prairie*, with no improvement, get improved farms, with the many necessaries and comforts of life.

Please excuse this lengthy letter, and allow me to remain,

Yours truly,
JOHN H. STEVENS.

WHILE the relations of the races in Virginia and in the more northerly of the Southern States are, all things considered, satisfactory, there seems to have been little or no change for the better in the Gulf States. In the former states, colored voters are not only in a minority, thereby escaping the inevitable doom of negro majorities, but are of a better type, having had, during slavery, much more contact with civilization, lived in a more stimulating climate and more in an atmosphere of ideas.

Especially is this true of the mountainous region of Virginia, Tennessee, and North Carolina, where, owing to their scarcity, society was but slightly affected by them, and they were much influenced by their surroundings.

At the Hampton School, colored students from the mountains have in manliness and worth a decided advantage over those from the low country.

The negroes of the Gulf States are declared by their friends to be in a most deplorable situation, both as voters and as laborers. The trouble is, without doubt, of two kinds: their inward and their outward condition. Their thriftless ways, drinking habits, indolent tendencies, utter ignorance, and their distrust of whites, combine with prejudices, on the part of the whites, old habits of treatment, old ideas of the negroes' place, with the poverty of the blacks, the money famine of that region, and with a wretched system of credits, to make the ex-slaves as uncomfortable as they can well be.

The whites have shown no skill in dealing with their labor problem. Politics and not profits have been the order of the day: race lines have been drawn; demagogues have taken advantage of this, and inflamed men's passions and made them victims of wild fancies.

When we read of the Negro exodus from Mississippi to Kansas, there is no occasion for surprise.

Partisan papers charge this great movement to the loss of the negroes' political rights: thoughtful observers account for it by a combination of causes.

We believe that it results from the dissatisfaction of the colored people, and that that is due to more than defeat at the polls. Their troubles are both inward and outward, as above enumerated. The result is a distress that at last has forced a wild, spasmodic rush for relief that to many is likely to prove like a jump from the frying pan into the fire.

The planters are alarmed at the loss of laborers, and the Governor of Mississippi, with other prominent men, have called upon both whites and colored to send representatives to a Convention to be held at Vicksburg, in which, if possible, to adjust difficulties and quiet fears which to some extent are needless.

The Exodus to Kansas is the first practical effort in Anglo-African history by the colored man to settle his own difficulties. The vote that was given him has disappointed those who gave and those who got it.

Since the war the negroes have been mobilized; southern railroads derive large revenues from their constant travel. They will not resist any real or fancied wrong: they will "stand from under." Colored men will see more and more clearly the uselessness of Acts of Congress intended for their benefit. They will, as they are generally doing, stay where they were brought up; but if dissatisfied up to a certain point, they will go, sometimes quietly, sometimes with a rush.

The former method is illustrated by a steady stream of freedmen, since 1875, from Georgia, Mississippi, Alabama and Kentucky into Texas and Kansas, making little impression as it passed.

While the suffering and folly, and the deceit practiced by ticket agents and others, connected with the present movement, must soon check it, producing to some extent a return tide, there will be, we believe, an increasing tendency among the blacks, especially of the Southwest, to seek more congenial homes when not satisfied. They have suffered more than others of their race, and a friendly region is nearer to them than to others.

They will look less to legislation and more to their own resources, and when they do that they will at last find that they have a solid basis of negotiation, and will be recognized as never before. As voters, they are weak; as laborers, they are strong.

Face to face with their employers, not as communists or trades unionists, but as men with a common interest, they will find in them a fairer spirit than they had expected, and the dawn of a better day will come.

We hope for good results from the Convention at Vicksburg: it is a new and wise way of treating the labor question of the South.

AMONG the many statements in newspapers in regard to the Negro exodus, none have seemed to us more rational and sound than those of "a clergyman and a native of the South," in the N. Y. Herald of Monday, April 14th. He admits "political intimidations and even outrages against the negro in the South," but less than one party charges and more than the other admits. He says, "This negro exodus is not a flight from the terror of political violence."

"Their ideas as to what freedom would bring to them were extremely crude and extravagant." He claims that their disappointment and sense of being deceived have led to their seeking homes further west.

"They also have the idea that their social condition will be improved in the free States. They see that they can never be lifted to anything like social equality in the South. They hope to improve their social condition by getting into the free States. They realize the fact that their emancipation in the South has only lifted them from slavery to serfdom.

"Behind all this stands the fact that the negro in the South is systematically cheated out of his wages. This is done in this way:—The negro is ambitious to be a farmer on 'his own hook.' He rents a tract of land and the landlord has a lien against the whole crop for the rental. It is a penitentiary offence to move any part of the crop from the place before the landlord is satisfied, for his rents. The landlord has the first claim on what the negro makes.

RUINOUS ADVANCES.

"In nine cases out of ten the negro has not a dollar with which to make his crop. He must get advances from the money lender. The money lender is always a store keeper, dealing in plantation supplies. He agrees to advance to the negro farmer the money needed to make the crop, at an enormous rate of interest. He then sells him mules and farming utensils at an enormous profit, and during the year he advances from his store provender for the stock and provisions for the laborers also at enormous profits. To secure himself in the payment at the end of the year he takes a mortgage on the mules, farming implements and all the crop above the landlord's lien. Of course the negro comes out heavily in debt to the money lender. Everything is then sold, and the money lender buys all that the negro has at much below its real value. Now the negro has nothing, and is deeply in debt. He is henceforth in the power of his merciless creditor till he works that debt out. Of course under these circumstances emancipation is a huge disappointment to the negro. He is in a worse condition than he was in slavery. The white money lender gets all the fruit of his labor, and is under no obligation to feed and care for him and his wife and children.

"The ultimate effect of all this will be disastrous to the South. It is a short-sighted and absurd policy, to say nothing of its glaring dishonesty. It is killing the 'goose to get the golden egg.' It is already having the effect to drive the negro out of the South. When the negro leaves the South, the South will be ruined. White immigration will not go into the South, and the white men in the South will not labor on the plantations. When the negro leaves the South, all that sunny and fertile land will grow up in briers and thorns and go to waste. The remedy must be discovered and applied at once to avert the menacing disaster. The remedy is very simple—even-handed justice to the negro as a laborer. This will hold him in the South. Nothing else will."

Should Chinese labor replace that of the blacks all would work well for a time. But the Chinaman is keen as to what and where are his best chances. Having filled his contract, he would settle in the cities and compete with all classes of laborers, and unite the working classes of both colors in a hue and cry against him, that would create a new and troublesome political question.

THE growth of Agricultural literature in this State since the war is a sign of the times. We have just received No. 4, of the MONTHLY JOURNAL of the State Agricultural Society of Virginia. The subscription price is one dollar per year. It is full of interesting and original matter. It shows that increasing attention is being given to the soil, and that the true source of the Commonwealth's prosperity is better appreciated than ever.

WE have to acknowledge the receipt of a Hand Book of North Carolina from the Hon. L. L. Polk, Commissioner of Agriculture of that State; headquarters at Raleigh N. C. The office of Commissioner of Agriculture is newly created in many of the Southern States, and the issuing of Hand Books such as the above mentioned, is one of the hopeful features of the time. Commissioner Polk has done himself credit, and the State a great service in this carefully compiled document. It contains two hundred and ninety one pages, and is divided into four parts. The first part describes the organization of the department of Agriculture, contains a historical sketch of the State, a full account of its government, and a description of each county—closing with a record of the distinguished men of the State.

Part second describes the physical features of North Carolina, and is full of interesting details.

Part third refers to taxation, debts, corporations, education, homesteads, charities, relation of the races, climate, native products, fishing interests, railroads and to the future of the State.

Part fourth describes State and literary Institutions, of which there is a goodly list, public schools, and gives a statement of farm products, of cotton and woolen mills, of silk and bee culture, of fruits and of general statistics.

This Hand Book shows enterprise that will not fail to draw attention: the State could not have made a better investment. The Eastern States are full of families who wish to better their condition and to that end are eager for facts from every quarter.

We advise those who are looking for a land of resources and for a genial climate to get this Hand Book, for in both these respects North Carolina has claims and attractions that compare with those of the most favored parts of our country.

The present aspect of politics is, however, against migration. A "Solid South" is economically a great blunder, for so long as it lasts, political questions are also social questions. If the Northerner cannot comfortably free his mind in Dixie, he will either stick to his native hills or push to the western prairis even at the peril of his scalp.

VIRGINIA AND FREE SCHOOLS.

At the recent international exhibition in Paris, Mr. John D. Philbrick of Boston was made Superintendent of the educational department of the United States exhibit. He became thoroughly familiar with the exhibits of all countries, and was astonished at the efforts made by the leading European governments in educational matters. Not only are France, Belgium, Austria and Germany pushing the free school system, but they are giving the aid of the State to training in the trades and and arts. Men are instructed in the working of wood and metals, women are trained in the decorative art, and, finally, children are put into elementary grades of technical education. After surveying all these methods of instruction, Mr. Philbrick exclaimed, "We Americans must educate or die." And he comes, notwithstanding, from Massachusetts, the foremost State in the development of manufacturing and education in the United States. And now come some gentlemen of Virginia who say in fact, "If we educate we die," if it is done at the expense of the State. The argument against free schools is an old one. It was Bishop Berkeley of Virginia who said, "Thank God, we have no free schools!" There is indeed strength in the argument, and it is quite conclusive from a purely theoretical point of view. Under our Republican system of rule is the principle that the individual is everything and the State, in its true ideal, a mere police force, an adjuster of differences between men. If only those who were intelligent and educated held the ballot, there could be no argument in favor of free schools. But the ballot is every where in the hands of ignorant men; and the ballot is like a pistol, whether it be discharged by a statesman or an idiot, the force of the bullet is the same. Illiterate men hold it, and it cannot be taken from them. Here is the starting point. We find society full of most dangerous, rotten material, and we must deal with it as we find it. Face to face with this evil, our only safety lies in reducing that danger to a minimum, in the least possible time. So far, free schools are our only method. Nothing better has been considered practicable. It is true that they are not all-sufficient. Under their light and heat the vast glaciers of ignorance thaw out slowly. But those who come in contact with this ignorance constantly, see no better plan, at present.* The foes of the free school system urge that if education was left to the individual, as simply an individual enterprise, it would soon become as broad and as strong as where fostered by the State. It is simply a question of fact or probability. Germany not only establishes free schools, paid for by the State, but she compels attendance. Why? For the reason that the ignorant peasant refuses to give up the daily profit or income from the child's labor, for the sake of its education. England is in like difficulty, and has resorted to compulsory education. European scholars already say that so foolish is ignorance everywhere, that unless the Americans resort to compulsory education, their free school systems will fail. New England is now face to face with this difficulty, not on account of her Anglo Saxon citizens, but owing to the mass of illiterate foreigners who fill up her towns, and prefer the pittance of the child's wages to the ulterior advantages of any education. She considers it intolerable that the bog trotter from Ireland, and Ralph Waldo Emerson shall have the same power at the ballot box, and she is lessening the great gulf between them. She will not believe that the free schools make men vicious, as these Virginians represent. "De free schools hab ruined my boy," said an old darkey. "Why?" said his friend. "'Cause, afore de schools, my boy didn't read or write, but he hab now de learnin', and he hab committed forgery. Dat am ds matter of de free schools." Dr. Dabney and the old darkey are one on that question. There is a suggestion of expediency in this matter, so far as Virginia is concerned. Here is a State which should be, from whatever point of view regarded, the wealthiest State of the Union. But she is one of the poorest. She is begging for immigrants and capital. She cannot make terms, but must submit to terms. Like

* Dr. Forbes Winslow in his report on the condition of India, says the vast progress made in India is owing to the system of education established by the government.

the green grocer, she must "please her customers," or the trade will go to the next door. At best she has not much to offer, and unfortunately, the emigrant class have found it out. Are these opponents of free schools ready to force the State to say to these emigrants, "We cannot give you free schools. If you want education you must get it by your own efforts. It may be the worse for me, but I am living up to a principle." If crime comes of this, and theft and murder, or it makes the ballot, like the potato, something to be bought or sold, or if the Bible cannot be read or the laws understood, so be it. I must follow out my principle. Poverty with an all-pervading ignorance is better than wealth with education at the public expense." Lofty words like these might come from a great, self-sufficient State, and the groveling emigrant might be awed into accepting the citizenship of Virginia, but we strongly believe that Kansas and Texas with vast spaces of virgin soil, and free schools besides, will win the settlers. We know as matters of fact that one of the chief reasons given by Northern emigrants against residence in Virginia is the want of public schools of high grade. Scores of men have been fascinated by the published accounts of the material resources of the State, they have been disappointed in the matter of education. They may be fools, but they are the men for whom the State is begging, and they must be satisfied.

The most persistent attacks on the free school system have been made in the columns of the SOUTHERN PLANTER AND FARMER, a monthly periodical edited with great ability, and devotion to the interest of the State. It takes the first rank in usefulness. Out of its pages, however, we constantly see the necessity of further aid by the State in the matter of education, and the best illustration of the argument in favor of public education. The farmers need instruction in scientific agriculture It is of supreme importance. But individual effort towards furnishing such education is wanting. The State does little. The individual fails to come forward. Other communities are securing State aid in developing their material interests, and are beginning to reap the advantages of it. Theoretically the individuals in the State are competent, and willing to promote education. Theoretically also, every voter is fitted to handle the ballot. We must meet the failure of the theory in the case of the ballot, by a modification of the theory of the domain of the State in education. "Theoretically," said a sailor, "my ship is built to exclude water, and I need no pump." "Practically" said his mate, "your ship is leaking, and if you don't rig your pump, you will soon be water-logged." The discussion of the relations of the State to education is not undesirable. The community is better for it, provided it is not acrimonious. W. N. A

PRESIDENT MAKING.

There is abundant evidence that the President makers are now vigorously at work. It is a business which requires much forehandedness, especially in times like the present, when the contingencies against success are so numerous. The young man, just upon what Lowell calls the "awful verge of manhood," innocent of the tricks of n vain and deceitful world, unreservedly believes in acts of splendid statesmanship. He dreams of a vast and intelligent nation, moved by a profound judgment, mastered by a divine instinct, working by a severe method of logic, solemnly selecting out of its millions of citizens, the fittest statesman, the wisest patriot, placing him with dignified ceremony in the executive chair, where he becomes the equal of sovereigns, the companion of great generals, the dictator of policies, the idol of the people, the dispenser of patronage. To this young man comes the Muse of History with the inquiry, "Are the Presidents always wise and good?" The youth takes up the record, and is amazed; for many were neither wise, nor great, nor even men of common fame. "Why is it so?" he asks. There comes to him the professional politician, he who has a turn for office, as a mule has for kicking; he who feels that life is well rounded by the monthly emolnments,—and says: "These Presidents are made by 'States." Conventions make Presidents; we make conventions. We who do business in these things do not live on air, but need uncommonly large quantities of beef and bread, and, generally, rum. Do you think that we who make the conventions, who frame the issues, and fire the popular heart, will permit any man to be nominated who will neglect our comfort and support in the hour of victory? We nominate no man who we believe is disposed to betray us. We have been grossly deceived at times. Tyler fooled us, Andy Johnson brushed us aside, and there have been cases where an irrepressible move by the people took affairs out of our hands. Still, every business has its ups and downs." The young man inquires, "Is this statesmanship?" The professional replies: "Statesmanship is a very common affair. If men dealt with political, as they do with mathematical questions, grand work would be done. But in state affairs, ignorant prejudices must be regarded, foolish ideas respected, selfish interests protected, incompetent and knavish men be approved, and many imperfect measures adopted, and above all, and first in all things, we who make it our business to attend to the political affairs of the country must be maintained."

In seeking candidates, *availability* is the first requisite. After that, talent, fame, and honesty come as subordinate qualities. A public man with decided views, has enemies. An obstinate man cannot be managed by party men. So long as the machinery of government is managed by men who trade and live upon public office, it can hardly happen that the best men will be brought to the front except by accident. Such of our public men as have "confessed themselves," assert that the demand of party is tyrannical, and they soon relinquish their best work. The late Senator Grimes said that though he had been a war governor, and had, during the civil war, done prodigious service in Congress, and was considered one of the stanchest Republicans, he was, nevertheless, called a traitor by his party, because, in the exercise of his judgment, he had voted against the impeachment of President Johnson.

There are signs of better times coming. At present, however, the commercial feature in politics is the most prominent. While the wire pullers are at work, bargaining, persuading, and preparing tags for their candidates, the laymen, the voters are silent, scattered and almost helpless for want of a common purpose. Already the keynote of national legislation is the presidency. For this reason, there need be no fear of the passage of dangerous laws. Neither party can afford to make mistakes. The leaders move like men groping in the dark. It is quite apparent, that in the absence of a heavy groundswell of public opinion, sweeping with resistless force some great name into the executive chair, there is to be, for the next two years, a miserable scrimmage, involving every known species of intrigue, with much talk from men who will be inspired to eloquent speech by the prospect of party plunder. The "Ins" will manfully fight for their positions. The "Outs" will make a heroic struggle to get within.

Meanwhile, the people, generally, will learn something, and make a step forward to that "sweet by and by" of a political millennium, where merit alone will be the need of a candidate, where the office-seeking mourners will go about the streets, and the sound of the stump-spouting grinder will be low. W. N. A.

TO EACH NEW SUNSCAIBER to the "SOUTHERN WORKMAN" (a dollar a year), will be sent a picture drawn by one of the Indian boys at Hampton, on plain paper, in water colors or with colored pencil.

These are simple, crude sketches, inspired by imagination or experience and illustrate the peculiar type of art among the aborigines of America.

The boys cheerfully draw their pictures for a small sum, and thus keep in a little pocket money.

THOSE who have read Mr. T. T. Bryce's series of papers upon the modern questions of Political Economy, in the SOUTHERN WORKMAN, during the past year, will be glad to hear that he has collected them for republication in pamphlet form, with revision and additions. The pamphlet, of ninety-six pages, under the title of Economic Crumbs, is just issuing from the Hampton Institute Press, and may be had by application at its office. We will review it more fully next month.

For happy adaptation to popular taste and crystal clearness of expression and thought upon subjects on which there is a deplorable amount of haziness of ideas and confusion of words, we do not know this little book's equal, and we strongly recommend it to all classes of our readers.

THE African Methodist Episcopal Conference of Virginia, held its thirteenth annual session, April 13–17, at Hampton, Bishop T. M. Brown, D. D., presiding. There was a full attendance, sixty members being present, with three presiding elders, Rev. Mr. Schureman of the Norfolk district, Rev. Mr. Derrick, Richmond district, and Rev. Mr. Strange, Lynchburg district. The financial report showed a prosperous year among the churches, which now have a membership of 35,000. In the report on education, it was resolved not to admit any as deacons without a certain understanding of English grammar, arithmetic, and history sacred and and profane. This is a move in the right direction. Intelligent ministers are one great need of the race, and, with its present opportunities of instruction in Virginia, the necessity of passing an examination in these branches ought not to keep any earnest young man out of the ministry. For elders there is a more advanced examination.

A free and pleasant interchange of views took place at one of the meetings, between the Principal of the Normal School and Dr. H. M. Turner, of the Christian Recorder, who has published some of the attacks upon the school, which have been common in the colored papers. Taking occasion of the presence of so many of their representative men, Gen. Armstrong alluded to the animadversions upon the school by those who should be in harmony with every opportunity for the advancement of the race, and gave a statement of its ideas and work. His remarks were received with evident interest and satisfaction, and Dr. Turner himself, whom he had not observed sitting in the pew in front of him, rose, and while giving a frank expression of the opinions he had entertained, avowed a feeling of entire friendship to the school and its officers, and requested a copy of the remarks for publication in his paper.

By invitation of the Principal, the Conference spent Friday in visiting the school, and impressions were corrected which may have sometimes separated the people from their advantages.

On Sunday evening the school and others were addressed in Virginia Hall, by Bishop Brown, Rev. Mr. Derrick, and Rev. Prof. Johns, from St. Kitts, one of the West India islands. The addresses were interesting, and eloquent, and all of them expressed a high appreciation of the school and its methods, especially in regard to its foundation work and industrial training. Rev. Prof. Johns, who has been a teacher in the West Indies for years, and is also, we understand, an M. D. and a contributor to the "*Southern Clinic*," a medical Journal published in Richmond, Va., gave a very interesting account of the condition of things in the Islands, social, educational and religious. He intends to make his home in the United States, and has joined the Virginia Conference.

Rev. Peyton Lewis, a graduate of Hampton, in the class of '73, was ordained a deacon at this session of the Conference, and appointed to Chuckatuck, Nansemond Co.

He visited the school, and spoke a few words of good advice to those who are now occupying his old haunts.

WE copy the following from the *Colored Citizen* of Topeka, Kansas.

By the following telegram it will be seen that hundreds of our people from the South are to be furnished employment by the Northern Pacific R. R.

"Senator Windom's colonization scheme of negroes has been indorsed by the Northern Pacific contractors for the construction of the division to Yellowstone. They have made a contract with a Missouri firm for 500 negroes at $1.25 per day per head. The Board of Directors have ordered the building of the whole distance this season to the Yellowstone, and the sale of $2,500,000 of bonds. Hugh McCullough, the newly elected Director, is expected place them."

A VIRGINIA County Supt. of Schools sends the following appreciative postal:

Dear Sir:—

You have been kind enough to send us regularly your valuable paper, the Southern Workman. I read it with interest. I doubt not that it is doing a good work. I have recently changed my place of residence to ——. Please note this change.

Very truly yours, A. H.

DIED—At the home of a friend, in Hampton, Feb. 27, of disease of the heart, —Olivo Madison, formerly a student of Hampton Institute.

Her death will be long lamented by her friends, but was for her a happy release from a prospect of continued suffering, and a happy entrance into life. Her last days were made peaceful and comfortable by the ministrations of loving friends in a pleasant home.

THE state of mind of extreme Southern men on the negro question is well illustrated by an extract from the recent report of an interview with Mr. Jefferson Davis, which we reprint below. Mr. Davis has, if the report is reliable, changed his mind on the subject of free negro labor.

The crucial test of the freedman was whether he would be a better or worse producer than before. He has passed this ordeal successfully. No other can be so severe. Give the ex-slave plenty of light and he will find his way to a respectable manhood.

"THE FUTURE OF THE SOUTH

is more promising than that of any other section of the country; but he fully believed that the condition of the present generation of the black race was all the worse by reason of the abolition of slavery. Mr. Davis doubts very much the wisdom of the attempt to educate the negro, and of course he utterly disbelieves in giving him the ballot. He said, however, that he was watching with a good deal of interest the experiment of his education, and was not prepared to say but in the next generation it might be a necessity, in order to enable the negro to protect and guard his own rights. Mr. Davis spoke of the negro race in a rather patronizing way—as children, and not as men. He said they were affectionate, kindly in disposition, and full of the better qualities that belong to a servile race; that they were natural servants, and he could never believe they could be placed on an equality with the whites, either by education, legislation, or any possible changes of public sentiment in regard to them. It was his opinion that, wherever the negro race was found, it must be as an inferior and servile race, and, in the long run, they would give way to the superior race under any and all circumstances. He said that, but for the need of their labor in the fields of the South, he did not think it would be possible for the race to subsist for many generations in competition with the white race, who were so much their superiors in the capacity to plan and to accomplish results by patient and persistent effort. Mr. Davis acknowledged, however, that he had

"CHANGED HIS MIND ENTIRELY

upon one question, viz., that the great staples of the South, cotton and sugar, could be produced with greater economy and in greater abundance by paid labor rather than by the labor of slaves. He said to your correspondent: 'This has already been demonstrated, and that fact alone goes far to prove the advantage which the abolition of slavery has been to the whites.' He said, further: 'What I have said of the plantation labor is equally true of house or domestic employments; for now a far less number of servants is required than formerly to do the work of a household, and we avoid all the expense and annoyance of the feeble, superannuated and supernumeraries that were found upon all the old plantations in a state of dependence upon the owner."

THE "*African Times*," published at Sierra Leone, Africa, says; "We are indeed most glad to learn that the immigrants of the South Carolina Exodus Association, who went to Liberia in the Azor, are contented, happy, and doing well in Liberia. The two commissioners sent to Liberia by the colored people of Arkansas, Messrs. Hicks and Stanford, have returned with a favourable report. In the city of New Orleans there is an organization of women with more than 500 members, raising money, one dollar at a time, for the purpose of emigrating to Liberia with their families. The first difficulty of the great exodus movement

having been thus happily vanquished, Liberia may look forward confidently to a constant succession of shiploads of most desirable im-

them where they are now living, to try and better their condition by seeking a habitation elsewhere. But where a large number of

ter the fields of struggle and endeavor with a renewed zeal, and resolve, so long as God takes sides with the oppressed, he will not

Kansas? This difficulty confronts us at the outset; it is not unsurmountable, but it will not do to close our eyes to it. The mere fact

having been thus happily vanquished, Liberia may look forward confidently to a constant succession of shiploads of most desirable immigrants from America, who will leave the United States as fast as they can save money for the purpose. This is an exceedingly healthy movement and insures a rapid future progress for Liberia. The Hon. W. M. Davis, now in America from Liberia, a full-blooded negro, a self-made man, who has been for six years Attorney-General in Liberia, seems to have very sound views respecting this matter. He says: 'Above all, no emigrant should go there penniless; nor should they to any new country whatever. An empty pocket is not a good thing in a strange community. Every family ought to have somewhere from fifty to a hundred dollars after their arrival. Paupers are not wanted. If Liberia is ever to be built up—and the interests of Christianity and of English-speaking civilization seem to demand that it should be—it must be settled by thrifty people. There is a good market for all farm products, and great commercial possibilities for the superior coffee of the country and other valuable articles of export. There is room for labour as well as capital. The Government furnishes each immigrant head of a family with twenty-five acres of land, and there are many eligible locations, conveniently near to towns, not yet taken up. The soil everywhere is fertile." Mr. Davis thinks "the African fever will disappear altogether after the country is opened up and cleared. It is, in fact, disappearing gradually, not being nearly so severe as it was twenty-five years ago. Temperance, cleanliness and dietary care are almost certain safeguards against it.' "

THE SLAVE-TRADE ON THE RED SEA.

A volume of correspondence with British representatives and agents abroad, and reports from naval officers relating to the slave-trade, just issued, contains a report to the Admiralty from Vice-Admiral Sir R. Macdonald, regarding the slave-trade in the Red Sea and its vicinity, in which it is stated that during the year 1870 no less than 3,000 slaves were said to have been landed at Hodeidah from the African coast. Djeddah is reported to be still a large market for slaves. Up to 1874 a slave market existed in the middle of the bazaar, but on the representation of Her Majesty's Consul this was closed. The slave-trade is, however, now carried on to as great an extent as ever, but in a more private manner. We ought to add that this infamous traffic is most decidedly illegal in Turkey and Egypt and that if, notwithstanding the edicts of the Sultan and the Khedive, it is too often connived at by Turkish and Egyptian functionaries, it is also considerably facilitated by the negligence, indifference or even complicity of some foreign consuls and agents, on whom we have had our eye for years past.—*Levant Herald.*

MR. WILLIAM STILL, a prominent and successful colored business man of Philadelphia, whose clear head and good sense commend whatever he has to say, has given some valuable opinions on the subject of the Exodus to Kansas, and of the colored people generally that are well worthy of attention. We make extracts.

"I will state that I am neither surprised nor alarmed at the attitude of affairs, particularly in regard to this emigration movement. Long ago I came to the conclusion that the colored people in the South would have many struggles to encounter ere the good time arrived. Landless, moneyless, ignorant, and almost wholly dependent on the dominant race for everything—for houses to dwell in, land to till, stores to deal at, lawyers to defend them, doctors to cure them when sick; also surrounded with a state of morals far out of harmony with the doctrine of brotherly kindness or the civilization of the North, I could but feel that this condition of things, the natural result of slavery, would inevitably come about sooner or later, to some extent at least.

"I was not unmindful of the power and value of the ballot, but, under existing circumstances it has always seemed to me to be impossible for the colored man to maintain his ground surrounded with political agitations, while compelled to confront continually, in this poverty and ignorance, the enemy with every advantage over him. I am not by any means prepared to believe that the obstacles to his elevation in the South are insurmountable or that his only hope of redemption is to be sought in flight. No, he is not prepared for any such change in large numbers, for the reason that he would have to appear in a strange land among strangers, empty-handed, to seek employment as a hewer of wood in fields already well occupied, and where hire is now unremunerative. In this case, tens of thousands of poor people entering a state would be likely to settle too numerously to thrive themselves, or to admit of other laboring classes around them to do so; hence, becoming totally discouraged and disappointed, the last end would be worse than the first, in my opinion.

"I certainly do not favor the movement. There can be no objections to individuals, who feel that the way is utterly closed against them where they are now living, to try and better their condition by seeking a habitation elsewhere. But where a large number of people are actuated by impulse and from excitement, engendered by glowing descriptions of a milk and honey land, where everybody will be their friend, and there will be scarcely any more hardships or sufferings compared with what they have experienced, I think it is sure to lead to disastrous consequences. Such schemes, in the past at least, have invariably proved abortive with the colored people in this country.

"In whatever attitude I have viewed the millions of emancipated colored people, I could not imagine it possible for them to rise, without very much suffering, and by patient toiling to get out of the old ruts, where Slavery had degraded them so long, up to a higher level. But it has always seemed to me that the chances for achieving success and power lay not in the road of politics, but in the road of seeking mental, moral, religious and material physical improvement.

"From all the light which I have been able to gather from intelligent colored and white persons, I believe steady improvements are going on generally all over the South, in the way of getting education, land, more comfortable homes, and likewise entering business pursuits; in many instances the reports would hardly seem credible. A single case, out of quite a number which have come under my notice, I will allude to, namely, Montgomery & Sons, of Hurricane, Miss., now occupying the extensive plantation of the late President of the Confederacy and his brother Joseph—employing hundreds of hands and commanding a wide influence, not only on their plantations, but likewise in the commercial mart at Natchez, where they have a large commission house, carrying on a large trade, and are highly respected. In the cotton fairs for several years they have competed with the great cotton planters of the South, at St. Louis, I believe; and have, two seasons at least, carried off the premiums.

"Their commercial hooks have been put in competition with those of other merchants, at the State fair, and for beauty of penmanship, and correct observance of the rules of regular book-keeping, they stood up with the highest. One of the Davis plantations is owned by the Montgomerys, and the other is rented for a term of years. They are situated at Hurricane, Miss. A daughter is postmistress and assistant bookeeper. A letter received from her only two weeks ago, expressly relative to the condition and general improvement of the colored people in that region of the country, was decidedly favorable.

"A letter dated Jacksonville, Fla., March 15, 1879, from my sister, who has been teaching school in that State for the last ten years, makes this incidental remark: 'Mr. J. C. Waters says when he went to Conference at a place called Ocala, he saw Bishop J. J. Clinton's son, who was living there very nicely with two hundred and fifty acres of the best of land, and men and women at work for him. I think if more of our young men would purchase land and settle, they would become able men, etc.' Mr. Joseph N. Clinton is the young man alluded to. He graduated a few years ago at that most excellent institution, Lincoln University, in this State.

"One of my sons, after graduating at the above-named institution, went to North Carolina, and taught school two years, and was well satisfied from the cheapness of land, etc., that there were strong inducements for colored men who want to seek agricultural pursuits.

THE TRUE MEANS.

Mr. Still in conclusion said: "I have more hope in such agencies as Lincoln University, Hampton, Fiske University, Wilberforce College, and other similar institutions, developing the brain-power, which cannot fail in due time to overcome every obstacle. Considering the immensity of the work, which called for laborers and material, it is astonishing how little has been done, by the great North, towards the accomplishment of the work of education. But comparatively few noble men and women have given their hearts and means devotedly to the elvation of the emancipated. Even now there are doubtless free people to be numbered by the hundreds of thousands, in various parts of the South, who have never had a chance to enter a school or a church since the emancipation. Of course, one reason why the educational work was not pressed with more ardor by the North, was the belief that was cherished that in conforring the ballot and the Fifteenth Amendment upon the race, all was done which was needed to render them capable of making their way up to manhood and equality. But experience has proved that the strongholds of Southern injustice could not successfully be contended against in this way. Now if this exodus would only open the eyes and sympathies of the people to engage in a more earnest manner to advance education.

ESCHEW POLITICS.

"Let the colored man eschew politics wherever he cannot enjoy his right, unmolested, and, with an eye single to his elevation, enter the fields of struggle and endeavor with a renewed zeal, and resolve, so long as God takes sides with the oppressed, he will not cease his efforts to prove his capabilities and manhood just where he had worn the yoke, under the eyes and voices that used to cause him so often to wail. In a quiet and determined manner, with such teaching as might constantly be urged from the colored schools, churches and earnest practical men on the soil, it does not seem to me that it would take half as long to overcome the prejudices in the South as strong as they are, as it has done to overcome many of them as they existed in the North. The wise man says, 'When a man's ways please the Lord he maketh even his enemies to be at peace with him.' I have great faith in doing right with a view of success, whether others will do so or not, and if there was ever room for trying the experiment, it is now in the South."

WESTWARD HO!

EMIGRATION VIEWED THROUGH ECONOMIC SPECTACLES.

If we want to get a clear understanding of any subject, it is always best to look at it, just as it is, and not muddle ourselves with metaphors. When we clearly understand a subject, then we can illustrate it by metaphors, if we choose. During the past few weeks, there has been a migration of several thousand colored people from the lower Mississippi to the State of Kansas. Their movement is simply an emigration, and as such I propose to look at it, and not get confused at the outset by talking about "Exodus," the "Land of Canaan," etc., etc.

There is nothing miraculous about a few thousand people changing their abodes; all our Western country has been settled in this way; indeed it may be said, the whole Continent. This is a free country, and citizens may go where they please, if they have the means to pay their way. Intelligent men, when they emigrate, have some definite destination and object in view: they do not change their abodes, simply for the sake of change; but because, after carefully weighing the facts and chances for and against, they have concluded that they can better themselves. Men who change just for change's sake, are quite as apt to injure as benefit themselves.

Now let us see what economic laws underlie all society, and apply particularly to settlers in new countries: for the "going West" of colored men is governed in all respects by the same laws as govern the "going West" of other men. Natural laws care nothing for the color of a man's skin; a black man, or a white man, a red man or a yellow man, will, if he cannot swim, be drowned, if thrown into the ocean. A black man must have food, just as much as a white man, and neither can live very long without it.

The law of exchange is the fundamental law of society—society only exists through the exchanges of men. Before any exchange can take place about, one man must prefer what another has to what he has himself, and be willing to give one to get the other; furthermore, this feeling must be reciprocal. In plainer English, it takes two to make a bargain. Before we can get anything, we must be willing to give something, and that something must be what somebody wants, who can give us what we want.

This is the general law of Exchange: how much we can get for what we have, depends on a subordinate law, viz., the law of Demand and Supply. When we have anything to sell, we inquire, first, what Demand is there: that is, how many people are able and willing to buy what we have to sell. We next see what the Supply is: that is, how desirable to others is the thing to be sold; how much of it we have; how many other people have the same or similar things to sell, and finally, how anxious these other people are to sell. The difference between Demand and Supply is adjusted by price. Many sellers and few buyers mean low prices: many buyers and few sellers mean high prices. This is manifestly true of corn, cotton, and bacon, and equally so of labor, and its product, capital.

Food, clothing and shelter are the three first necessities of man: to live he must have these, or something he can promptly exchange for them.

Remembering that capital is nay means of profit saved, the three laws, above mentioned, are all needed for us to be able to predict with certainty, what the chances are of the colored emigrants to Kansas doing well. What have they to give in exchange for what the people of Kansas have? They all have labor; but what kind of labor is it? Is it the kind of labor, that labor buyers in Kansas want? Perhaps the easiest way to answer this question is to ask another, namely; Are laborers, whose knowledge of agriculture has been acquired on cotton plantations, and who are accustomed to a semi-tropical climate, the kind of laborers that Western wheat-farmers prefer, especially in a state where the winters are so cold as in Kansas? This difficulty confronts us at the outset; it is not unsurmountable, but it will not do to close our eyes to it. The mere fact that the emigrants are willing to work, is not in itself a guarantee, that they will get work to do; for there must be somebody just as willing to employ them, as they are willing to be employed, before they can get employment. These two difficulties, then, must be faced—first, whether their labor is the kind of labor wanted; second, if their labor be not exactly what is wanted, whether the people of Kansas will be willing to buy the kind of labor they offer.

In order to discuss this problem fully, let us assume that there are people in Kansas willing to buy the kind of labor the emigrants have to sell. The question at once rises, what sort of wages are likely to be paid? Here comes in the law of Supply and Demand. If there be a demand for the labor of 500 men in one spot, and 5,000 offer their services, it is clear as daylight, that the 500 will be employed who have the most desirable labor to sell, and who will take the least wages for it. The remaining 4,500 must either take their labor to some other market, or else sell it so cheaply, as to create a demand, that did not before exist. This is as true as the law of gravity, for in every exchange, both sides try to get as much and give as little as possible. It may be urged that mankind *ought not to do so;* but it *does.* The rate of wages is always the result of a bargain; and now let us see, in the fixing of the rate of wages for the newly-arrived emigrant, which side would hold the long arm of the lever—the would-be employer, or the would-be employed? It must be assumed that the would-be-employer has enough food, clothing and shelter to supply his own necessities for a time at least, or he would not be seeking to employ others,—he can afford to wait, if delay promise any advantage. But how about the would-be employed, if he have neither food, shelter, nor clothing, nor the means of buying them? Is it not pretty clear that it is he, who has the short arm of the lever; and that he must quickly accept some offer, never mind how low it may be, so long as it enable him to live? An emigrant with only his labor to sell, must sell it for whatever it will bring. He has no choice, or rather he can only choose between the rate offered by somebody else and *live,* or the rate demanded by himself and starve. If the emigrant has money enough to support himself and family, until he find somebody who wants his services, then a satisfactory rate will no doubt be obtained. Nevertheless, it must be borne in mind, that a man with only his labor to sell, enters the market, laboring under a serious disadvantage anywhere; but particularly in a strange place, where all the labor buyers are strangers, and where a multitude of his own friends are pressing their labor for sale.

What has been said, refers to the larger part of the emigrants, those who have hardly anything but their labor to offer in exchange. Now let us look at the smaller class, who go to Kansas with the idea of becoming farmers on their own account; men who are allured by the published statements that there are some good lands in Kansas which can be bought cheaply. No matter how cheap land or anything else may be, a man must have something to give for it. His farm once bought, his need of capital is by no means ended—he must have enough to buy stock, tools, and seed, or his farm will remain unbroken prairie: still further, he must have enough to buy food, clothing, and shelter for himself and family, until he can plow, sow, reap, and harvest a crop—four operations that require time, which no amount of willing labor can shorten. A man has a chance to starve to death a dozen times, between the day he begins to plow, and the day his grain is harvested, if he has only that crop to depend upon. Any man, then, who emigrates because he has just money enough to buy his farm, is as short-sighted, as would be a sailor, who would start on a six months' voyage with only six days' provisions.

There is another point, that comes properly within the scope of this inquiry, and that is, that the colored emigrant must put his labor in the market, in direct competition with the labor of the white emigrant, and that too with the conditions of climate all against him. In the Southern States, the colored field laborer (taken it the year around) has a decided advantage over the white: but in the Northern States, the reverse is true. During the first winter, this difference might hardly be noticeable, but in the second it would be marked. This matter is not of vital importance, but it is a fact not to be disregarded.

These words are written neither to encourage nor discourage emigration: their only object is to point out facts as they exist, and to state general laws, which no man, nor any race of men can overturn. The present movement may increase many fold, it may have culminated now; but no man should resolve on so important an act, as changing his abode, unless he weighs carefully all the chances for and against him.

T. T. B.

A NEW KIND OF LETTERS FROM this race, as for the Chinese. Working dirty faces and hands I sent them home to be made neat and I have four teachers, one of which is Miss ———. [another Hampton Singer,] and I.

A NEW KIND OF LETTERS FROM HAMPTON GRADUATES.

THE cost of instructing a student at Hamptoa is estimnted at $70 a year, ($210 for the course) and is met by contributions from the North, the studeat being required to meet his hoard hills and book bills by work and cash, which is all he is able to do. Such contributioas are called scholarships, and apportioned to students, each of whom sends in return a letter to the giver, with some accoant of his life, his efforts for aa education, &c.

The friends at the North who have given scholarships at any time during the ten years of the school's existence, frequently inqaire how their particular students nre doing since they have left school and entered upoa their work in the world.

To meet this natural desire to know the result of their beaefactions all of the graduates with whom we are in communication have been requested recently to send an account of themselves to us for the friends to whom they wrote their scholarship letters. The result of this request has been a large number of exceedingly interesting stories of varied experience, and the friends to whom they are addressed will doubtless be willing to share them with others. We give, therefore, a few specimen and extracts which furnish n bird's-eye view of the principal points of interest on this Southern field of labor. The letters and extracts are given without correction or alteration.

THE WHOLE IN A NUTSHELL.

The following, from a graduate of the class of '77, forms a good introduction to the letters, as it is an epitome, of the whole, very clearly given. The writer modestly says of it: "If this letter won't do, please return it to me and I will try again. You know I always did make a poor *out* at composing anything. I said what I meant and I meant what I said, but for all that it may not do."

———, VA., *April 9th*, 1879.

Kind Friend:

When I wrote you before, I was at Hampton preparing for the work in which I am now engaged, viz.: teaching. My experience, during the few years I have taught, is a story of two sides—a dark and a bright.

I have no pleasure in speaking of the dark side; yet to write an honest letter to a friend, I suppose I should give both sides.

Pinced among those who,—lazy and indolent, pass their days in wretched shanties and dirty rags; or in prison, for every kind of petit larceny and misdemeanor; and those who, intemperate and vicious, waste all their earnings in dissipation while their families suffer;-their children go tattered and hungry, —the colored teacher has enough to do.

But this is briefly the dark side of the story as I see it; and I suppose if there were no other side, many a teacher would despair. But when he sees, out of many, a few who are trying to lead honest, sober, Christian lives; a few who are trying to make something out of the name which the reckless lives of their fellows have blighted; a few who are industrious and frugal, he may well feel encouraged to go on with his work with double determination. This few, are trying in every way to improve themselves. They regard the fight they are making, a kind of life and death struggle, out of which they must come victorious. They save their earnings; purchase homes, and properly care for their children. These are doing well and have the respect to which they are entitled from all around them.

This is what I have chosen to call the bright side. To make tha dark side bright and the bright side brighter is the end, I think, every colored teacher has in view. Of course, what I have said is simply the result of my own short experience and limited observation. I believe the colored people of this country can be made good, honest, intelligent citizens if they can only have their first great want supplied—educated preachers and educated teachers.

Were I requested to appeal on behalf of the colored people, I should only ask a supply of good common-sense teachers and preachers; for I believe this is our first great need.

Sometime when you are at prayer, please remember me, and ask Him to make me a faithful worker. If you wish to write to me at any time, address, R.

LITTLE COTTON PICKERS.

Filial devotion, and consideration for the old is n marked trait in the negro, and may be as promising for long life for this race, as for the Chinese. Working themselves side by sids with their parents in the corn-fields, from their earliest years, they learn to appreciate the sacrifices which the old people make when they send them to school.

———, NORTH CAROLINA, 3, 30, 1879.

Dear Friend:

I was asked once more to write to you. I am staying with my Uncle this year. He is getting along in years, and asked me to assist him on his farm. I thought that it was nothing more than right for me to do what I can, because he gave me his assistance when I was not able to help myself. The school which I taught in Virginia is suspended this year; owing to the indebtedness of the State I suppose, and besides, the teachers have not been paid off for their services last year yet. I taught here last summer until the Fall then cotton commenced opening, and I had to close up, because the children have to pick cotton, a good many of them, to help pay for their winter clothes and shoes. They get forty cents per hundred, some make enough in the cotton season to supply themselves, while others don't. Hope you will not infer from the non-payment of teachers that I have given up, not so. I shall, unless something happens, go to my post early next Fall if not before. I tell you what I think is one of the great drawbacks to our race. They want to be, some of them, in an office, and actually they are not capable of the position. We need more land owners in the South. Here is another set of men among us too; and that is so many men going over the country preaching. Now, I like to hear a good minister such as we have at H., but I do not care much about these corn field-fellows. Hope you will answer this sometime. Love to all.

Your friend, B.

A SCHOOL IN THE FLORIDA WOODS.

A young girl who left Hampton, before completing the Junior year, gives a picturesque description of her school in the woods near St. Augustine. She naturally found difficulty in passing the required examination, and was accepted rather on the merits of a letter written to the Superintendent. Her success in teaching illustrates the fact we frequently observe, that tact and executive ability, with a heart for the work, contribute more to the graduate teacher's success than scholarship without them

———, MASS., *March 21st*, 1879.

Dear Sir:

I think perhaps you wonder at times what has become of the girl ———, to whom you so kindly gave a scholarship for two years. Though it has been a long, long time since I last wrote you, please let me assure you, you have not been forgotten by me. Had it not been for you I wouldn't have enjoyed the dear privileges I did while at Hampton, which will never be forgotten. I don't think there is much that I can say to interest you, sir, but you may be pleased to know that I tried teaching school last winter. And perhaps you would like to know what kind of a school I had, and how it was conducted. I will first say I had n very hard time getting my school—but at last, after quite a hard examination. I succeeded in getting one at ———, Fla., about thirty or forty miles from St. Augustine. I had made up my mind to take just what came and do the very best I could. I arrived on Saturday afternoon. Some of the children met me at the boat, and I was taken to a little shanty n little back in the woods. My room was just large enough to hold my bed and my trunk. There was a little clap-board window, no fastenings on either door or window. I found the school-house key and got some pinetops (had no broom) and swept the floor as well as I could. Afterward, I called on those of the parents and children that lived near and took the names and ages of the children. In the morning I went to the Sabbath school. The school was given up to me after being introduced, and I was called upon to lead the school in prayer, and after this to make an address. I never before had to do anything of this kind in public, but I breathed an earnest prayer, asking for aid from above; my prayer was answered and all fear passed away. Monday morning came. I called the roll, took the names of the rest of the scholars, read the Bible and had prayer, and afterward arranged the different classes. We could do but little toward study that day as we had no books. I had enrolled thirty-three scholars, but the average attendance was from twenty-two to twenty-six. When I first opened the school most of the children came with uncombed heads, dirty hands and ragged clothes, as the people were very, very poor, it was very hard for them to keep the children clothed; but they had plenty of water, so when the children came with uncombed hair and dirty faces and hands I sent them home to be made neat.

TOO POOR TO BUY A COMB.

I found one of my poorest little boys one morning behind a tree combing his hair with a stick. I asked him what he was doing; he said they were too poor to buy a comb, so that was the only way he could comb his hair. The children were very anxious to learn and got along rapidly. My scholars, most of them, were very good; the oldest was twenty-four years old, and the youngest three and a-half. At first there were two or three inclined to be a little naughty, but they became my best scholars in every way.

RAIN INSIDE AND THE FIRE OUTSIDE.

Our school-house was made of logs and in the spaces between them you might easily put your hands. The roof was made of clapboards. When it rained we had to huddle up in one corner, for it leaked terribly, and there was but one corner that was safe. We got along pretty well while the weather was warm and pleasant, but when the cold came we had a hard time. There was no way whatever for heating the school-house, and the wind blew in from all sides. The poor children were very poorly clad. Some had but two garments on, some one, and but few of them had shoes. Some of them had to come three miles, and then cross a river in a boat, still with aching hands and feet the dear children couldn't be kept from school. I would make two large fires out of doors and have the children sit around them. This was the only way I had to keep them warm. Some of their hands used to be so numb they couldn't hold their books. I used to rub their little hands and feet to warm them, but this wasn't of much use as they soon got cold again. I would give them a short recess two or three times and have them run and jump, and taught them gymnastic exercises. These helped to warm them a great deal. I tried to stop up the cracks in the school-house as well I could with moss, and when it blew so a fire wasn't safe outside, we had to stay in doors.

The Superintendent visited the school soon I took after it: he said he was pleased with the way it was conducted. He was a Roman Catholic, and when the children sang the Moody and Sankey hymns and repeated the Psalms I had taught them he shed tears. At the close of the school I had an examination. The children were examined in all their studies, nearly all had pieces to speak, which they did very well, they sang, repeated several of the psalms, had a spelling match, and a spelling out, in which a little boy about seven years old came out conqueror. There was quite a number of people present. The white school was closed that day, so as to be present on that occasion, as it was the first of the kind, ever had at ———. There was a number of Southerners present, who seemed quite pleased. The Superintendent at the last day, addressed the school, and said he saw great improvement in every way. My friend, Miss P. offered some prizes, which were to be given to my best scholars on that day, it was hard to decide as to who should get them, they had all tried so hard and did so well. In connection with my school, I had a sewing school for the girls that met once a week.

DID THEY SEW WITH PINE NEEDLES?

The things they made they had for their own. Most of them learned to sew very well. While the children sewed I read to them and taught them things to sing. The people there live in log huts, and are very poor. They haven't enough to eat at times.

HUNGRY TO BED.

Where I boarded, I had two meals a day,—sometimes one—which consisted of dry hominy or potatoes, and a cup of orange leaf or sassafras tea. I went to bed hungry many nights. When it rained it leaked on my bed. I would awaken at night cold and wet. Still I never felt like giving up. I felt I was doing a work for God, and for the advancement of my race.

I fear you are quite tired with my long letter, so I'll close; hoping you are enjoying good health, and all the blessings this earth affords.

Respectfully yours, O.

ONE OF THE HAMPTON SINGERS,

who sang through the North in '72–4, and graduated in 1875, writes thus cheerfully of his success in life.

———, *N. C., March 15th*, 1879.

The General Assembly of North Carolina in 76 and 7, appointed me a Justice of the Peace for two years, and that gave me some knowledge of the legal profession. I would teach from nine A. M. until three P. M. and after three and on Saturdays I would attend to the duties of my office. But my time expires next August 10th. I am now teaching in the city of ———, in District No. 1. My school numbers about four hundred and I have four teachers, one of which is Miss ———, [another Hampton Singer,] and I am principal. So far as I can hear from the Citizens and school Committee, they say that we are doing credit to ourselves from the way the school is conducted, for all seem pleased.

I am now married and have two fine children, a boy and girl. I have also a good wife; one with a good seamstress's trade and a fair education, with reading, writing, aritbmetic, grammar, and geography. My boy and girl, if I can raise them, I want to send to Hampton. I have also bought me a piece of land, about twenty acres, cost $200. all of it is paid for. I have also bought a nice horse and cart. I have a man living on my place cultivating ten acres of it for me, and the other ten acres I am going to let remain in wood to support the other. On the whole, I am getting along well. I do not want you or Gov. ——— to consider the time that was spent on me in that institution was in vain, but on the other hand think it was profitable. I find that the greatest drawback that I have had since I left Hampton, was the colored people—my own race; but I let them see that I leave it all to their ignorance by not making them any reply. And the ones who oppose me first, in the end they become my best friends, and praise my work.

Hoping to hear from you again soon, I am yours with much respect,

H.

WHITE SENTIMENT IN VIRGINIA.

Prejudice is found here and there, and confined to no color, but we believe it is usually met in a way to disarm it.

———, VA., *April 1st*, 1879.

Dear friend:

The whites are very friendly, and I believe they desire to see the colored people educated. I have taken special notice to see whether they were really against the negro on account of his color or on the account of the way he conducts himself, and I must say (and gladly too) that it is on account of his conduct, and not his color. If the colored man conducts himself right he is sure to get on well, and will be respected highly by the white people. All that is required to live in peace and harmony with the whites of this state, is industry, honesty and good behavior to all. My treatment from the whites has been as good as any one would desire. I am always spoken to politely by them, which is returned in the same way. Some of the first families of this County, have visited my school, and spoke very kindly towards the colored people indeed, would always say to the children if "they wish to have the respect of all people, they must be educated, and honest and truthful, and not above work." The colored people are improving very fast, I think. Many are buying nice little homes, and are working hard to make an honest living.

Yours respectfully, I.

GRAFTING TEACHERS. HOW TO MEET PREJUDICE.

———, VA., *April 7th*, 1879.

My dear friend:

I am of the opinion that no Hampton graduate can be contented without devoting a portion at least, of his or her time to this noble work. If it is not their intention when they enter Hampton, it becomes ingrafted in them while there. I completed my course in June, 1875, and have been teaching almost ever since.

HOW TO MEET PREJUDICE.

Having to pass every day through the plantations of some of those so much opposed to the school on my way to and from the school-house, I went to see them and politely asked their permission; and I was surprised to see how politely it was granted—only requesting that I would see that the children shut gates and put up fences after them. I began to think that I should not have such a *hard* time after all. All I wanted was, for them to give me a hearing. Well, I taught here five months, and what do you think was the result? I opened my school with a large number of ignorant but bright-eyed boys and girls, and the number increased almost daily. They would not remain at home because the weather was bad, for they had never had the advantage of a school before, and now they wanted to make good use of their time.

My school soon gained the favor of the whole community—so much so that the white people came in often to visit the school, and would always make approving remarks before leaving. I soon found that I had made friends of my former enemies. One of the wealthiest and heretofore the most prejudiced in the neighborhood told a woman in his employment that if I taught there again she might board me if she wished to, and another gave the colored people permission to build a school-house on his land.

RECORD OF INDIAN PROGRESS.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

[Eight names are grouped in this class, of whom the physician says:]

These ought to be watched for symptoms of lung trouble, and put upon medical treatment, if necessary, early. I do not think they are in any great danger, but they are the ones who will probably need attention in the universal instincts which turn the hearts of the little mothers to their doll babies, in every race and nation. Advantage has been taken of this to encourage them to needlework, and three very neatly dressed dollies are ready for their journey to some little Indian sisters in Dakota, if their own mammas do

OF THAT WHICH I HAVE RECEIVED, I GIVE TO YOU.

THE three Indians represented in this group are fine representatives of three tribes, sworn enemies each to each in their savage state, but brought here into friendly association for

RECORD OF INDIAN PROGRESS.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

BISHOP HARE'S VISIT.

Confirmation at St. John's Church.

To begin this letter where I left off the last, with some mention of the religious interest among the Indian students, I have to record a second very pleasant visit from Bishop Hare of the Niobrara or North-western Episcopal Mission, who returned very opportunely, in time to confirm the two communicants at St. John's church, and two more whom he baptized. The special friends of the Indians, West and East, may feel interested to know the names of the fifteen added to the Christian church. Those received into the school church at Bethesda Chapel, are Etahdleuh, Koha, Ohettoint, Howard Charleton, Henry Carruthers (Roman Nose), Nakawista (Bear's Heart), Coho, Tounkeah, Tichkemstse, Arsit (White Man), and Tsadletah, all from the St. Augustine band of Kiowas and Cheyennes. Those confirmed in St. Johns are Andrew Fox, Mok-piamani, Pamani, Dakotas; and Walter Wan-hi-yurs (Matches), a Cheyenne of the St. Augustines.

It will be observed that the original Indian name was in most cases retained in baptism, in both churches, certainly the most natural and pleasant way, though contrary to the old custom. To claim any monopoly of Christianity for the white man's names seems indeed rather farcical, considering all his relations with his red brethren.

The bishop gave to the school, and again in the church, a very interesting account of the Niobrara Mission and its schools, paying a handsome tribute also to the work of the American Board among the same tribes. A touching message to eastern Christians had been intrusted to him as he left the territory by a native missionary, Rev. Luke Wallace of Lower Brule station:—"Ask the good praying people of the East, to think of my poor people when the sun is setting."

THE HEALTH QUESTION.

It is well understood that the health question is a serious one in all efforts for the civilization of a race, so serious that it has been made the ground of argument against all attempts at Indian civilization, though if the race is doomed in any case, civilizing has the advantage at least of being a cheaper as well as more merciful means of extermination than starving and the horrors of Indian warfare.

There is no reason, however, why the effort to prepare them for the new conditions of life which must inevitably overtake them with the extinction of the buffalo, and the settlement of the country, should not be as carefully guarded in the matter of health as the organization of the army or the navy is. Every one of the little fellows picked from the city streets for the training school which is doing such admirable work for the navy, is put through a rigorous medical examination before admission. Such selection is absolutely essential to any general success.

The plan prescribed by the Department for Captain Pratt's journey to collect the Dakota students, provided no time nor means for such examination, and what care he could take in selection was made to some extent unavailing by changes of minds and the necessity of taking what substitutes could be obtained at the last moment. There is cause for congratulation that the sanitary condition is, on the whole, as good as it is, to start with; though it is not as perfect as it should have been. It is only fair to future criticism to have it clearly understood.

A thorough examination of the young men was made in March by the attending physician of the school. The following is a synopsis of his report:

"I beg leave to submit the following report of my examination into the physical condition of the Indians,—

Class I.

A certain number may be classed together as in prime health. Strong; lungs and heart sound.

[Nineteen names are given in this class.]

There are some who would, doubtless, belong to this class, if it were not for some temporary and curable affection.

[Six names are specified, the temporary affections being coughs, slight bronchitis, headache and back-ache. The coughs and slight bronchitis were sufficiently accounted for by the unusual severity of the winter, inducing a prevalence of such affections here as generally through the country, and all six seem to be in perfect health at present.]

Class II.

These are more delicate, and though not affected by any serious disease at present, examination shows that their lungs are weak. This class will not be likely to stand much exposure or hard work.

[Eight names are grouped in this class, of whom the physician says:]

These ought to be watched for symptoms of lung trouble, and put upon medical treatment, if necessary, early. I do not think they are in any great danger, but they are the ones who will probably need attention in the future.

Class III.

Under class third we may place those who are diseased in any permanent or chronic form. [Six names are in this list, the chief trouble being more or less weakness of the lungs, in some cases, however, so incipient that with this early understanding and care, it may be held in check.]

J. T. BOUTELLE, M. D."

This report does not include the nine girls. They seem to belong in the first class, with two exceptions, one having been kept out of school a good deal by rheumatism, another showing tendency to erysipelas, evidently of long standing. The health of both these is improving.

A very encouraging improvement is noticed in one of the St. Augustine Indians who last year had several hemorrhages from the lungs—the immediate result of a fall, renewing an old hurt received in the West.

FARMING AND GARDENING.

It is with an eye to the health question as well as to industrial training, that prominence is given to the outdoor education of the Indian students. Each boy has one day in the week on the farm, besides his two hours daily, on the other days, in the workshop, arranged to interfere as little as possible with lessons, but a healthful alternation with the confinement of the school-room. Besides his general farm work, each has been given a small plot of ground, a rod square, which he has marked off and planted himself, with such vegetables as he chose. The spring is late, and they are still watching with great interest for the springing up of their seeds.

OF THAT WHICH I HAVE RECEIVED, I GIVE TO YOU.

INDIAN ART.

The fashionable rage for "Keramics" has found its way to Hampton—not from the fashionable world, but by way of the wilderness. A very attractive corner of the Industrial Room shop is that devoted to the pottery painted by the Cheyennes and Kiowas whose untutored art bears a very curious resemblance to the Egyptian. Compare the colored illustrations of Egyptian frescoes in Edward Clark's handsome work on The Homestead of the Nations, with these painted braves in wild chase after the buffalo, or riding in full feather and stately grace around the vases, and you cannot but be struck by the similarity in type of feature and management of lines. Fans are also decorated in a way to keep a whole congregation awake through a hot Sunday sermon. Bows and arrows form a part of the collection, and sometimes moccasins and stone pipes sacrificed on the altar of education.

Some of the Dakota girls can work in beads and quills, but not much has yet been done in this way. Such work must, of course, be guarded not to interfere with study or exercise.

THE DOLLIES.

The three little girls are not beyond the universal instincts which turn the hearts of the little mothers to their doll babies, in every race and nation. Advantage has been taken of this to encourage them to needlework, and three very neatly dressed dollies are ready for their journey to some little Indian sisters in Dakota, if their own mammas do not meanwhile fall too deeply in love with them, of which I think there is danger.

H. W. L.

WORK AMONG THE INDIANS.

THE EPISCOPALIANS.

THE Missionary Herald, organ of the American Board of Commissioners for Foreign Missions, the well-known Congregational Society, says:

THE Episcopalians are now doing more than any other body of Christians in this country for the evangelization of the Indians. They have missions among the Oneidas, the Sioux, the Chippewas, the Dakotas, and the Shoshones, sustained at an expense of about forty thousand dollars a year. The missionary force includes one missionary bishop, ten white clergy, ten native clergy, sixteen native catechists and teachers, and fifteen women helpers—fifty-two in all. Forty-two of these are among the the Dakotas, in close proximity to the missions of the American Board. It is an interesting fact that this work of the Episcopalians is largely dependent on the efforts of the women of their churches, working through a society auxiliary to the Board of Missions. From the last report of this society, it appears that their cash contributions for Indian work amounted the past year to over $15,000, besides 166 boxes of useful articles to the value of nearly $1,100 more. After this, one can better understand the following from the pen of Bishop Hare: "The ministrations of the female members of the mission are such as only Christian women can render, and the influence of their work goes beyond the circle of those in whose behalf they specially labor. Said a leading heathen chief on one occasion: "I do not know about you missionary men, but I am sure," pointing to one of the ladies of the mission, in the distance, on her round of duty, "I am sure that that little missionary woman is good and true." In reply to the question, "Will Indians work?" the Episcopal agent at Yankton says, "Under the superintendence of the Agency engineer, the following industries are conducted entirely by Indian workmen, taught their trades during the last three years: one grist and saw-mill, steam power, with circular saw, turning lathes iron and wood planing machine, corn mill, one tin shop where all the tin ware used by the tribe (in number over two thousand) is manufactured, carpenter and blacksmith shops, slaughter-house, and issue-rooms. Again, under the direction of the Agency farmer, all outside and farm work is done. Indians, who three years ago were seen lounging about in gay blankets, feathers, and paint, are now to be seen in white men's clothing, behind the plow and cultivator, and cutting grain and hay with reaper and mower." These results are in full accord with those reported by our missionaries laboring among the same people, and with the results of efforts, years ago, among the Cherokees and Choctaws.

OF THAT WHICH I HAVE RECEIVED, I GIVE TO YOU.

THE three Indians represented in this group are fine representatives of three tribes, sworn enemies each to each in their savage state, but brought here into friendly association for common education and mutual help.

On the left, one of the St. Augustine Indians, in the United States uniform, a Cheyenne, addresses two of the newly arrived braves from Dakota, an Arickaree and a Sioux, still in their blankets and long hair, and says to them in the expressive sign language common to all the tribes from the Lakes to the Gulf:

"Look to me. I will show you."

This picture, and some others, from photographs of the Indians at Hampton, were published first in Frank Leslie's Illustrated News, and some of them are reproduced by courtesy of its proprietors in the Southern Workman. The copyright of this photograph is owned by the school.

This, from a missionary teacher (Congregational) at Fort Berthold, Dakota, gives, in the highest degree, the spirit of our Indian work and the local work at the agency.

It is manifestly just what ought to be known on this subject.

FORT BERTHOLD, DA. TER., *Feb.* 8, 1878.

Capt. and Mrs. Pratt,

Dear Friends:—I wrote to Mrs. Pratt but recently, but *still* have something to say. Will you bear with me? Mr. Hall writes you of Hardhorn's anxiety about Ara, but there is more that I think will be of interest to you. He says: "Why don't Arahatskis write to *me* like Tom Smith does to his mother? Don't he go to school? Don't he talk English? Don't he hear it? What does he work at? Is he sick? I hear they are all sick, and one died. Is that so? Is Ara sick? Not even a *little?*" I told him as best I could about George S.'s sickness and death, the care he had; that we were all sad to hear of his death. "Arahatskis is all well?" I said, "Yes. That land is warm; they have no winter, but they have some cold nights and many of the scholars and teachers took cold, coughed some, were hoarse, but none of our boys or girls were sick in bed." Capt. Pratt's little girl was sick in bed, but none of our boys but the Ree young man who died." He drew a long breath; he had been watching my face very closely, as he did when he first asked, "How is Arahatskis?" I think he *feared* I would keep something from him His reply was, "Good!" He said, "Ara's mother is in the village now; she heard one had died, and she thought of Ara, and her heart was sad, and my heart was sad, we cried, and then I come to see you and hear what Captain tells you. I cannot hear Captain's words, I cannot write to him; but you can, *both.* If Ara is little sick here or here, just a *little* sick; if he is indolent; if he does his work well, if he does it ill; if he hears English a little or much, if he talks it a little or much, Capt. Pratt will tell you and you tell me, and I will hear, and that will be right." I assured him I would, and that we had told Sharp-horn as soon as we heard his boy was sick. "And," I said, "You know I told *you* of it too." He said, "Yes, you did; that is right. Don't keep anything away from us, tell us *all*" I had no inclination to refuse him this *father's request.*

Tom Smith wrote a letter to me and his mother recently; it pleased us both very much, though I fear I do not know *all* he may have *thought he was saying.*

Now, please, Mr. and Mrs. Pratt—to write us letters, telling of each of the Berthold students, answering some such questions as Hard-horn asks; telling us what advancements *each* has made, of the disposition *each* shows under their new influences. Also as to who have received moneys from friends here, who moccasins, and *any* words of appreciation of these favors that would *surely* give pleasure to the donors. We want to invite their friends to meet with us again, to eat us on Thanksgiving, and thought that to have some special word for each from their own special ones there, would be an added feast to the *food.* They are always full of questions as to the progress they are making at *talking* English and learning to write it. I have some fears that Hard-horn will have a fit of hysterics when he receives evidence that Ara can "talk" and "hear" and write English. His highest hopes are in that boy. May Ara be spared to more than fulfill those hopes, even to return to his father and mother with the words of Eternal Life! I told Hard-horn to tell his wife, when she feared, because she could not see her boy, did not know how he was doing, to remember that God *did* see him, God knew what he was doing and what he needed; she could ask God to keep him from sickness and from all that was bad. He consented, and said something about their telling God, but I did not get the rest of his words.

With kindest regards to all,

Your friend. MYRA CALHOUN.

CHEYENNE AND ARRAPAHOE AGENCY, I. T,

February, 4th 1879,

My dear Friend Capt. Pratt:

I think you must be crying, you have not had any letters from us for a long time and that one would make your heart feel glad. We all still love you

and your family and have not forgotten you. The road you gave us long ago we still hold on to, and to all you told us about the Great Father above, and everything you want us to

woman, came forward, and the child taking hold of her blanket stepped behind her. A row was formed, made up first of the medicine-men, and then of all those who proposed

A Caution.—Great damage may be done by using concentrated fertilizers in close contact with seed or very young plants. A teaspoonful of such a fertilizer

timbers in place, take a chalk-line and snap it across their ends, over the center of the sills, to mark the places for the mortises for the posts. In width the mor-

and your family and have not forgotten you.

This road you gave us long ago we still hold on to, and to all you told us about the Great Father above, and everything you want us to hold to. As soon as the Spring comes, we all intend to make a corn field and raise corn in earnest. Should you come here, all your boys would be very glad, and all the Cheyennes would be glad too. I did not go upon the buffalo hunt, but stayed right here all the time.

The advice you gave me to put our children in the school we followed, although some of the old Cheyennes did not want us to do it. I got six in there. Six of those who came back did not put their children in school. These were Medicine Water, Come-up-Seven, Little Medicine, Long Back, Mest end Antelope; and Rising Bull, Nokomistuh, Howling Wolf and I put ours in. I think the people do not know how poor we are. I have nothing, no horses and no money, but I am going to work to get some. For a long time we have no letter from Capt. Pratt. Now all my people will be looking to get one; my wife, and sister, my mother and my child will look, for they all love you and will be anxious for an answer to this. The Cheyennes are now coming back from hunting, they did not find any buffalo. Five of the Agent's soldiers are with them, Little Medicine, Star, Medicine Water, Left Hand, Comenperal and Nokomistuh.

Your Friends did not come back filled up with buffalo but very hungry, the buffalo are gone. I am going to work soon to plow for corn, and push hard to make a crop.

Give my love to Cohoe, Bear's Heart and Little Chief. Cohoe's mother died a little while ago. Bear's Heart's parents are dead also. Little Chief's people are all well. These people's friends here are very poor, and they want them to help them all they can. Cohoe's father and brother are going to make corn with me, and Bear's Heart's people too, also Little Chief's. This talk is for all the Cheyennes who have relations with you, and whatever you tell them they take right hold of and keep. Nearly all these who came back last Spring are employed as soldiers by the Agent. You must tell me when you are coming to see us. By that time I want to have four horses, and show you how I can make corn.

Your friend,
CHIEF KILLER.

AN INDIAN MEDICINE DANCE.

The new—and very readable—magazine, Sunday Afternoon, has been publishing a series of interesting papers upon the Indians of the North-west, written by one who has lived and worked among them. Among these "Chips from a North-Western Log," is the following picture of an Ojibway medicine dance for the cure of a dying girl.

"By noon every Indian family near the lake had gathered here, for this dance was to be the 'Grand Medicine,' with every ceremony used only on the most important occasions. Poles had been put up, covering a space some hundred feet long, from which the snow had been carefully cleared. Boughs were piled thickly against them to keep off the wind, and rush-mats spread within on either side. Three fires burned at regular distances from each other, taking the places of the painted posts I saw afterward in the summer dances, while a stump at the upper end served as a rest for the sick girl, who, wrapped in blankets, leaned against it. Over the central fire hung an enormous kettle in which three dogs were boiling, and corn and potatoes were being cooked in Quawaysanebus's lodge. The gifts to the medicine man, blankets, calico, skins, leggins, etc., hung on a line at one end of the camp, and seating myself there I looked attentively at the faces, many of which were strange to me.

"Five medicine-men were seated near the central fire, the oldest one heating two drums with an energy which made the sweat roll in great drops from his face. All held medicine-bags—those of the people, of weasel-skin, and containing charms given at their initiation, and those of the medicine-men, of mink or otter. Corn and potatoes had been handed about and eaten, and now the head medicine-man, holding his sacred bag in both hands, arose from the ground and bending forward, trotted around the lodge in a space that had been left for that purpose, saying: 'How, how, how!' and followed by the four others, each shaking his bag over over the patient as he passed. This was to clear the lodge of evil Manitous which might be waiting to take the place of the one they intended to drive out from the child. Returning then to their former places, the head man began a chant, growing louder and louder, and in a language known, so the Indians say, only to the higher degrees of medicine-men. As it ended, all the drums rattled; the people bowed their heads and lifted their medicine bags, and the sound of 'How, how, how!' came from every one present.

"Up to this moment Andisogezhacoka had sat motionless; but now she was lifted to her feet. Madam Squattog, the oldest medicine-woman, came forward, and the child taking hold of her blanket stepped behind her. A row was formed, made up first of the medicine-men, and then of all those who proposed becoming such, each one holding the blanket of the one before him, and all beginning to march slowly and carefully to the sound of the drums. Madame Squattog examined the ground with minutest care, picking up or pushing aside even a splinter or spray of hemlock. Three times they made the circuit, faster and faster, shaking the medicine-bags at the end of each round and waiting for the bow and answering 'How, how, how!' of the people. Then the drums beat, the rattle was shaken, and a wild minor chant began, interpreted for me by Aiken as meaning that the road through life and to the spirit land had been made clear; that the tender feet could walk over it even in darkness, finding nothing to hurt them, and that if the Master of Life so willed it, his child could easily come to him by the narrow path.

"As they sang, Quawaysanebus stood wrapped in his blanket and moving up and down slowly like the movement of the Shaker dance. Mess corn and potatoes were handed about as the chant ended, and I ate also in token of good-will. I noticed now that each one held a small shell in the hollow of the hand. Quawaysanebus turned shortly, and taking all the gifts from the line laid them in order on the ground, the whole company marching about them. Then they were lifted and put about the child in a circle; and again all marched around, dropping into her lap the shell they had put for a moment into their mouths, and picking it up at the second round. This was done three times, and then the head medicine-man kneeling down by Andisogezhecoke, began with her right foot, the people still marching, rubbing it furiously, then petting it softly and passing to the left one, going in this way over her whole body, and ending with her head. As he touched her on the crown, the spot at which the Manitou was now passing out, a howl went up from the whole crowd; the sacred bags were pointed toward her and men and women danced up and down. The rattle and drums sounded their loudest and then ceased. All sank down, and for an instant were motionless and silent. Then Quewaysanebus lifting the gifts, presented them to the medicine-men and women, and bowed to the people, who crowded now about the great kettle and filled their pans with the broth and meat of the sacred dogs killed for the occasion.

"I had been watching the child anxiously since the rubbing began. Languid and at first unable to lift her head, the excitement had grown upon her till she walked in the procession with a vigor I could not have believed possible. It was very fleeting, however. She shivered and asked for another blanket, but as they brought it and lifted her to wrap it about her, she gasped, flung out her arms, and then fell back and was gone. Every one was silent as I sought for a few moments to restore her, then reelizing it was useless, turned to her father who stood near, his face working painfully, but saying no word. He stooped and lifted her, and clasping her almost fiercely to his breast, passed into his lodge and shut the door, while the women began the death wail: 'Wah ah nowin, wah ah nowin!' Her mother burst into sobs and shrieks, and threw herself upon the ground, tearing her hair, while the sisters sought in vain to comfort her."

On the Farm.

HINTS FOR WORK.

From the American Agriculturist.

Top-dressing.—An early top-dressing of artificial manure upon fall grain and grass fields is often of the greatest advantage. The ground is now moist and mellow, and the soluble fertilizers are at once ready to be utilized. We have seen the effect in the changed color of the foliage in twelve hours after an application, when a gentle shower has fallen immediately afterwards. If the fertilizer can be sown during a shower, so much the better, otherwise we choose the afternoon for the work, so that the dew of the night may act as a rapid solvent.

What Fertilizers to Use.—For grass, 150 lbs. of Rectified Peruvian Guano per acre is often useful, and so may be the same quantity of complete grass manures made for this purpose. Those who cannot procure these easily, can use 100 lbs. of gypsum per acre, with 250 lbs. of fine bone dust and as many wood ashes as possible up to 40 bushels per acre. The German Potash Salts are a good substitute for ashes. For grain the prepared complete fertilizers, or Peruvian guano, bone dust, or superphosphate of lime may be used. Wood ashes never come amiss for any crop.

A Caution.—Great damage may be done by using concentrated fertilizers in close contact with seed or very young plants. A teaspoonful of such a fertilizer dropped upon a seed or young sprouted grain will kill the germ, or the tender sprout or "growing point" of the plant. Any concentrated fertilizer should be *well mixed* with the soil or scattered very thinly over the surface, and unless it is raining at this time, should never be sown upon a growing crop while the leaves are wet. Common sense will guide a thoughtful man when he knows that most of these fertilizers are either caustic or corrosive, excepting gypsum, which is harmless.

Cows.—There is no better feed as a steady diet for cows, than grass; but there may be cases in which some stimulating food may be used with benefit. Early grass is not healthful, being immature and too laxative. It would be better to follow the old English practice in this respect and not turn cows to grass until May. Mayday is an ancient farmer's holiday on this account in England, and we might well follow their practice. This, of course, refers to localities with the same seasons—earlier at the south, and even later at the far north.

Pigs.—Pork is looking up and pigs are worth more than they were a few months ago. While prices are low, the cost of feeding should be reduced. Pigs can be kept most cheaply upon grass in summer, and an orchard is a good place for them; they will do service in destroying insects.

Sundry Matters.—Poultry should be kept free from vermin; dig up the ground in the runs and clean the houses, and so escape gapes. Provide good coops for young chicks, and let them run in the garden or orchard. Clean up everything about the house and barns and burn the rubbish; numerous eggs and chrysalides of insects will be burned with it. Put all the tools and implements in order, and whitewash pig-pens, poultry-houses and sheep-pens. Look well to fences before cattle find the weak places; if these are once found, they are always dangerous. Pile up all loose manure; it may thus be made into good condition for corn or roots next month. As the weather becomes warm, use plaster freely to deodorize yards, stables and pens; it does a double duty when thus used. Clean the outlets of drains, and repair washed roads.

A VIRGINIA CORN-HOUSE.

A progressive farmer, residing in Chesterfield county, Virginia, where money is scarce and wood plenty, finding the buildings greatly dilapidated, went to work to right them. He sends the result of his experience, in one case, to the *American Agriculturist*, for the benefit of those in similar circumstances. He says: "My first attempt was a corn-crib, for which I adopted the rustic style, using the young pines which had overrun the fields. Any person understanding the use of the simplest tools can construct such a building. From a white-oak log, 18 inches in diameter, cut 4 pieces, each 5 feet long, for foundation-posts, squaring 3 feet of the top, the portion intended to go into the ground being left entire. The depth to dig the holes was found by leveling; for example, the spot where one post is to be set, is six inches higher than the ground where the second is to be; the first hole is to be dug 2 feet deep, and the second 1½ foot and so on for the others; this will make the posts level on top. To make the building rat-proof, I nailed an inch board on top of the posts, projecting 5 or 6 inches each way; then plates of tin were fastened to the edges of the board, the corners being secured together with wires. Two sills 8 to 9 inches through at butt, with a straight spot hewed at each end were spiked on top of the posts, and four floor timbers, notched where they rest upon the sills were nailed in place. To hew the ends of the sills and other timbers so that they will not wind, after having cut the flat surface on one end, tack a straight-edge finish with it, then hold another straight-edge on the other end and sight toward the first, bringing their edges in line and mark where the score is to be cut. Having the floor-timbers in place, take a chalk-line and snap it across their ends, over the center of the sills, to mark the places for the mortises for the posts. In width the mortises are one-third the average diameter of the posts, and in length the diameter of the smallest post. As the tops of the floor-beams will not be level, a level line to work from as a guide in making mortises, putting on the plates, etc., is obtained by a chalk-line across the bottom of the posts, this is done by standing the posts in place—securing them with cleats—and afterwards taking them down to cut the tenons. All mortises and tenons should be cut, holes bored and the timbers fitted together on the ground, as in framing any other building; then if one or more of the poles is crooked, it can be allowed for in the framing." The roof is covered with long shingles rove from pine logs; the shingles project 2 feet over the eaves. The butt-ends of the plates and purlins are all put at one end; the slight taper will do no harm. The poles for the frame above the sills are uniformly about 5 inches through at the butt-ends, and have the bark removed. The panels are made of 2 to 3-inch poles, set quite close together, nailed at each end, and left with the bark on, thus producing a pleasing and picturesque effect. The floor may be of 2-inch boards or split poles. The door or doors may be constructed of 2-inch poles, nailed to stout cleats and a brace, and hung with ordinary hinges. It is better to have the jambs of ash or hickory, as being more durable. Shelves may be put up on either side of the door, for storing seeds, etc. All the lumber used on my corn-house, was fit for no other purpose save fire-wood, and all the labor beside my own, was two days work of a helper at 75 cts. per day. With the abundance of pines and cedar here, one can put up such buildings very cheaply, and they are much more appropriate to the country than the old block-houses, and are more durable, and pleasing in appearance.

MAY-DAY AT HAMPTON.

May-day is not much more than a sentiment in the shivering North. In the sunny South it divides with Christmas the honors of the year. In a very simple way it has become a traditional festival with the students at Hampton, and the last May-day celebration is thus pleasantly described by a friend who was present.

Among the many pleasant anniversaries that the Hampton Student observes, none is more interesting and charming in its manner of celebration than the May-Day party. It has the advantage over the festivals of Thanksgiving and Christmas in the bountiful aid given by kind nature. For those other days, the house must be made bright, warm and cheerful in spite of the bleak winds that bring with them the chill of the waters over whose face they have passed. Holly and mistletoe, the great Mother gives us (a meagre contribution for so wealthy a parent) and says—"You needn't expect anything more from me, children; if you are going to have a good time, you must get it up yourselves. If it's going to be bright, you must look to your eyes and tongues and dresses to make it so." But as the time for the May Party approaches, the old lady softens, and instead of opposing, turns to and does her best to help the thing along. And what generous preparations she makes for her share of the work. On every stretch of green-sward she spreads a yellow mantle of buttercups. On the fence and over the porch of every cabin she hangs a curtain of honeysuckles and roses—white, yellow, pink and red. Beds of narcissus, iris, and geranium; clusters of purple sweet pea, clumps of lilies—fill every door-yard, and mingle their odors with the fragrance of the locusts and pines; and the woods and roadsides give offerings of azalea, myrtle and violets. If we have done well without Mother Earth, what can't we do when she gives her lavish aid to the undertaking.

It is, very properly, a girls' party. Except as delighted spectators, the boys do not appear in the ceremonies. They have done work for it though, and come in for a share of the credit. They have been to the woods and returned laden with flowers and branches. They have also taken the settees in the chapel, and from the double rows that lined each side of the centre aisle half the length of the hall, have made single rows that reach the whole seventy-five feet, leaving between them and on each side, broad promenades. On the platform they have made a raised dais covered with red cloth, in the middle of which,

and under an arch of flowers, is a throne for the queen, who has been elected some weeks ago by her schoolmates.

At half-past seven every seat in the hall is

London, April 21.—The Durham miners' strike is regarded now as more important and more determined than the great strike of 1844, when the men held out four months on less means. Forty to fifty thousand men are engaged in the strike.

Hampton Normal and Agricultural Institute.

DEVLIN & CO.

and under an arch of flowers, is a throne for the queen, who has been elected some weeks ago by her schoolmates.

At half-past seven every seat in the hall is filled with teachers and scholars and friends of the Institution, the students' hand at the back of the hall strikes up a march, the doors are thrown open, and from opposite sides enter two processions of girls dressed in white, each one bearing a wand covered with flowers. They march up the sides of the room to the back where they meet in the middle aisle, and come down two by two for a little way. Then the first couple stop, separate, and stand face to face with their wands joined at the top. Under this arch the next couple pass; stop, raise their wands and join them in the same way. The rest pass through in like manner, each pair adding to the floral bower that, when all the wand-bearers have stopped, reaches nearly the whole length of the hall. Then come four girls carrying baskets of flowers, who take their places at the end next the stage.

After them come (one at a time) three girls; the first of whom carries a banner with the words,—"Welcome Beautiful Queen" inscribed upon it; the second, a lighted candle; the third, a basket of flowers with which she strews the path. Each as she passes down the aisle repeats a few lines explaining the symbolic meaning of her burden.

Their duty thus fulfilled, they take their stations on either side of the steps leading to the platform, and await the coming of the Queen, who now appears leaning upon the arms of two of her maids of honor and followed by four more, one of whom has a sceptre made of flowers, and another a large bouquet. They march up the aisle under the fragrant canopy and the Queen is conducted to her throne, while the maids of honor range themselves on either side. A song is then sung, after which a crown of gold (it may not be of solid gold, but the writer feels that it would not be the thing to ask her majesty about it) is then placed upon the brow of the Queen by one of the two who supported her.

The sceptre is then given into her left hand, the bouquet presented, and a large wreath thrown over her shoulders, each act being accompanied with a few appropriate lines of poetry, and then the Queen rises and addresses her faithful subjects, thanking them for their homage and gifts, and assuring them of her love for them. This ends the ceremony, and then the scholars walk up to be presented to her majesty, who received them, on this occasion of which we write, in a very dignified and graceful manner.

A little dancing by the girls followed, and then the band played for promenading, chatting or anything else that is done to music at such times.

A pleasant feature of the after sport was the sight of the Indians learning to play dominoes under the tuition of some of the girls and boys. It was hard to picture these pleasant faced, well-dressed young fellows—timidly laying down double-sixes or drawing a handful of dominoes in the search for a three or a five to match with—as painted savages dancing a war dance, or yelling in triumph over a prostrate foe. This stalwart young brave who quietly plays "the deuce" and blocks his opponents—how differently would he have played if three short years ago with an enemy on the plain.

The bugle sounds the call to go to bed, the bell strikes, and in a few minutes the chapel is in darkness, and May-Day is over.

This hasty sketch can give but a faint idea of this very beautiful festival. It is entirely the work of the scholars and reflects great credit upon them.

C. G. B.

NEWS OF THE MONTH.

FOREIGN

London, April 22.—Advices from Cape Town, Africa, dated April 6, via St. Vincent, says: "Lord Chelmsford's camp at Gingle-Lova, on the road to Ekowe, was attacked at daybreak on April 3 by 11,000 Zulus, who made frequent and desperate attacks on all sides, but were repulsed and pursued with great loss. Four hundred and seventy-one Zulus were found dead around the treaches.

London, April 22.—The St. Petersburg correspondent of the Cologne Gazette explains the state of things preceding the publication of the imperial ukase. He says a clandestinely circulated organ of the revolutionists (Land and Liberty) demanded the abolition of the third section of the imperial chancellery and the dismissal of the court camarilla surrounding the Czar. It published a list of about two hundred names declaring that the revolutionists would shoot, stab and murder until their demands are satisfied and the camarilla swept from the face of the earth. The correspondent estimates that the secret society numbers 19,000 fully initiated working members, besides thousands who have taken a simple oath of loyalty. The total value of the property of the society is estimated at 2,000,000 roubles. The Czar, who until lately drove out unattended, now has his carriage surrounded by Cossacks.

The moderate liberal party of Poland have adopted a more conciliatory policy toward the Czar.

Pesth, April 18.—The rivers Maros and Koros have again broken their dams in several places. The village of Zerend has been destroyed, and the town of Arad is endangered, the water having already reached the cellars of the houses.

Some hundreds of square miles of fields are again submerged. The towns of Belzsread, Tamlad and Gyulavarasay are threatened. The water at Szegedin has risen eight inches. People are again quitting their houses.

London, April 21.—The Durham miners' strike is regarded now as more important and more determined than the great strike of 1844, when the men held out four months on less means. Forty to fifty thousand men are engaged in the strike.

Turin, April 23.—Queen Victoria and Princess Beatrice passed through here to-day en route for England.

Leipzig, April 23.—Herr Richter, professor of music, is dead.

Hamburg, April 23.—At a meeting of merchants held on the Bourse to-day, it was resolved to petition the Reichstag against differential duties and raising the tariff rates, except for purposes of revenue.

Mons, Belgium, April 23.—Miners on a strike at Jemmapes have threatened to pillage a mill. A battalion of infantry has been sent to keep the peace.

The number of persons killed by the fire-damp explosion in the Agrappe coal pit, near Mons, April 17, is ascertained to be 117. Only forty-seven corpses have so far been recovered.

London, April 23.—The honorary degree of LL. D. of Washington and Lee University of Virginia has been presented to Mr. Beresford Hope.

Chili has formally declared war against Peru.

DOMESTIC.

The daily consumption of milk in New York city and its suburbs approaches 400,000 quarts, and at least $25,000,000 are invested by farmers in that industry alone.

A million and a half dollars of funds appropriated for the support of the common schools in Pennsylvania remain unpaid.

A New Albany (Ind.) firm will soon begin the manufacture of felt. Although the demand for this article is large, it is made in this country to only a very limited extent.

In the West the spring trade has opened with a good deal of animation, and the aggregate sales are reported to be far ahead of last year.

Boston is spending a million dollars or so on a new system of sewerage, and feels quite confident that it is going to prove a good investment.

A rice mill is to be established at Jacksonville, Fla. There are produced now in Florida about 1,500,000 lbs. of rice annually.

The Sumter (Fla) Advance says that the orange crop will be twice as large this year as it was last.

The colored people are about to commence the building of a fine church at Natchitoches, Louisiana.

Large improvements in water-works, sewers, &c., for Jacksonville, Fla., are under contract.

The labors of the United States fish commission in connection with stocking western waters with shad have met with very satisfactory results, numerous cases being on record of the occurrence of the adult fish at many different localities in their new area of distribution.

President White, the newly appointed minister to Germany, delivered his farewell address to the students in Cornell University, at Ithaca, N. Y., Wednesday. No allusion was made to public affairs or the duties connected with his mission to Germany. Mr. White will go to Washington this week, and sail for Germany early in May.

Prominent colored men of St. Louis have formed a Colored Immigration Aid Association, and elected J. Milton Turner president. The object is to establish colored colonies and aid colored immigration from the South to the Territories and other sections of the Union.

Indianapolis, April 23.—The Notre Dame Catholic University was destroyed by fire to-day. The college building, infirmary, Old Mea's Home, Music Hall and Minim's Hall were all entirely destroyed. The loss is estimated at $300,000; insurance, $60,000.

Yazoo City, Miss., elected two colored aldermen last week, the democrats doing the work for them. At Nashville, Tenn., a few days ago, a colored lawyer, G. W. Lytle, was admitted to practice in the Chancery Court.

The tobacconists in Petersburg, Va., are very busy manufacturing the weed to meet orders under the reduced tax. A full force is employed, and some of the factories are working from twelve to fifteen hours per day.

In the Massachusetts House of Representatives, the bill to secure women the right to vote on municipal affairs in cities and towns was rejected without debate. The bill to give women the right to vote for members of school committees came from the Senate, and was passed.

Ex-Governor Gen. John A. Dix died at his residence in New York on the night of April 21st.

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable, &c., &c.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, numbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to round the perfect whole.

It is the pride of the Publishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, upon a title-page is a sort of guarantee which the educational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series includes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS.

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung up in every part of the Union for making an "Imitation Singer Machine."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken the FIRST PRIZE over ALL competitors more than TWO HUNDRED TIMES. *Why?*

After the Chicago Fire the Relief Committee undertook to furnish sewing machines to the needy women of that city. Applicants were permitted to choose from six different kinds of machines. 2,944 applicants were furnished with machines; 2,427 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines! These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The people bought Singer Machines as follows:

1870	127,933	Singer Machines
1871	181,260	" "
1872	219,758	" "
1873	232,444	" "
1874	241,679	" "
1875	249,852	" "
1876	263,316	" "
1877	282,812	" "
1878	356,432	" "

Many of the manufacturers of other machines refuse to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines. A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED.*

SEND FOR CIRCULAR. THE SINGER MANUFACTURING COMPANY,

TERMS: Transient $3.00 per day, $17.50 per week and upwards, according to location, &c.

This Hotel, thoroughly built and elegantly furnished, is situated upon the beach and at the head of the landing for the various steamers that touch at Old Point Comfort. It can be reached daily by the elegant steamships of the old Dominion Steamship Company from New York, or by rail from that city and Philadelphia to Baltimore, and thence by the splendid steamers of the Old Bay Line.

The drives in the vicinity are delightful, the Hampton Normal and Agricultural School, the National Military Home, National Cemetery, and the town of Hampton—containing one of the oldest churches in the country, are all within the limits of an easy ride, drive, or sail.

The climate during the year is unsurpassed for salubrity, the range of the thermometer here for the past 10 years, as taken from the notes of the Meteorological Observatory, shows an average of 60°, 74°, 76°, for Summer; 70°, 56°, 46°, for Autumn; 45°, 44°, 42°, for Winter; and 48°, 52°, 63°, for the Spring months. —Open for guests all the year.

THE TWO BREATHS.

BY REV. CHARLES KINGSLEY.

Reprinted by permission of London "Ladies Sanitary Association"

Ladies, I have been honored by a second invitation to address you here, from the ledy to whose public spirit the establishment of these lectures is dne. I dare not refuse it: because it gives me an opportunity of speeking on a matter, knowledga and ignorance about which may seriously effect your health and happiness, and that of tha children with whom you may have to do. I must apologize if I sey many things which are well known to many persons in the room: they ought to he well known to all; and it is generally best to assuma total ignorance in one'a hearers, and to hegin from the heginning.

I shall try to ba as simple as possibla; to trouble yon as little as possible with scientific terms; to ba practical; and at the same time, if possible, interesting.

I should wieh to call thie lecture "The Two Breaths"—not merely "The Breath," and for this reason: every time you breathe, you breathe two different breathe; you take in one, you give out another. The composition of thoee two breathe is different. Thc hreath which has been breathed out must not be breethed in again. To tell you why it must not would lead ma into anatomical details, not quite in place here as yet; though tha day will come, I trnst, when every woman antrusted with thc care of children, will be expected to know something about them. But this I may say—Those who habitually taka in freeh breath, will probably grow up large, strong, cheerful, active, clear-headed, fit for their work. Thoee who habituelly take in the breth which has been breathed out by themselves, or any other living creature, will certainly grow up, if they grow up at all, small, weak, nervous, depressed, unfit for work, and tempted continually to resort to stimulants, and becoma drunkarde. If you want to see how different the hreath breathed out ie from tha breath taken in, you have only to try a somewhat cruel experiment, but one which people too often try upon themselves, their children, and their work-people.

If you take any small animal with lungs like your own—a mouse, for instance—and force it to breethe no air bnt what you hnve breathed already; if you put it in e close hox, and while you take in breath from the outer air, send out your breath through a tube, into that box, the animal will soon faint; if you go on long with this process, it will die.

Take a second instance, which I beg to press most serionely on the notice of mothers, governesses, and nurses: If you allow a child to get into the habit of sleeping with its head under the bedclothes, and thereby breathing its own breath over and over again, that child will assuredly grow weak and ill. Medical men have cases on record of scrofula eppearing in children previously healthy, which could only be accounted for from this habit, and which ceased when the habit stopped. Let me again entreat your attention to thia undoubted fact.

Take another instance, which is only too common: If you are in a crowded room, with plenty of fira and lighte and compeny, doors and windows all shut tight, how often you feel faint—so faint, that you require smelling-salte or eoma other stimulant. The cauee of your faintness ie juet the same as that of tha mouse'e fainting in tho hox: you and your friende, and ee I shall show you presently, the fira and the candles likawise, have heen all breathing each other'e breeths, over and over ngain, till the eir hee becoma unfit to support lifa. Yon are doing your heat to enact over again tha Highland tragedy, of which Sir Jemes Simpson tells in his lactures to the working-classes of Edinhurgh, when at a Chriatmas meeting, thirty-six persone danced all night in a emall room with a low cailing, keeping the doors and windows shut. The atmosphera of tha room was noxious heyond description; and the effect was, that seven of the party were soon after seized with typhns fever, of which two died. You ere inflicting on yourselves the torments of tha poor dog, who is kept at the Grotto del Cene, near Naples—to be stupified for the amusement of visitors, hy the carbonic ecid gas of the Grotto, and brought to life egain hy heing dragged into the fresh air; ney, you ere inflicting upon yourselves the torments of the famous Black Hole of Calcutta; and, if there were no chimney in the room, hy which some fresh air could enter, the candles would soon hurn blue, your hreins hecome disturbed, and you run the riek of dying, and the candlee of actuelly going out.

Of this last fact there is no douht; for if, instead of putting a mouse into the hox, you will put a lighted candle, and hreathe into the tube, as hefore, however gently, you will in a short time put the candle out.

Now, how is thie? First, whet is the difference between the hreath you take in, and the breath you give ont? And, next, Why has it a similar effect on animel life and a lighted candle?

The difference ie this. The hreath you teke in is, or ought to be, pure air, eompoeed, on the whole, of oxygen and nitrogen, with a minute portion of carhonic acid.

The hreath you give out is impure air, to which has heen edded, among other matters which will not support life, an excess of carbonic acid.,

That this is the fact you can prove for yourselves hy a simple experiment. Get a little lime-water at the chemist's, end breathe into it through a glass tuhe, your hreath will at once maka the lime-water milky. The carbonic ecid of your breath has laid hold of the lime, and made it visible as white carbonata of lime—in plain English, as common chalk.

Now, I do not wish, as I said, to load your memories with scientific terms: but I beseech you to remember at least these two—oxygen and carbonic acid gas; and to remember thet, as surely as oxygen feede the fire of life, so eurely does carbonic acid pnt it out.

I say "the fire of life." In that expression lies the enewer to our second question: Why doee our hreath produce a eimilar effect opon the mouee and the lighted candle? Every one of us is, as it were, a living fire. Were we not, how could wa ba alwaye warmer than the eir outside us? Thera is a process going on perpetually in each of ne, eimiler to that by which coal ie hurnt in the fire, oil in a lamp, wax in a candle, and the earth itself in a volcano. To keep each of those fires elight, oxygen is needed; and the products of combustion, as they are called, are more or leee the sama in each case—carhonic acid and etcam.

Theee facts justify the expression I just made use of (and which may hava seemed to some of you fantastical,) that the fire and the candlee in the crowded room were hreethiog the same breath as you were. It is but too true. An averege fire in the grata requires, I helieve, to keep it burning, as much oxygen as three human beings do; each candle or lamp must have ite ehare of oxygen likewiee, and thet e very conaidcrahle one; and an averagc gas-burner—pray attend to thie, you who live in rooms lightad with gas—consumes ae much oxygen as six candles or eleven men. All alike are making carbonic acid. The carbonic acid of the fire happily escapes up the chimney in tha emoke; but the carbonic ecid from the human heings and the candlee remains to poison the room, unless it be ventilated.

Now, I think you mey understand one of the simplest, end yet most terrible, cases of want of ventilation—death hy the fumee of charcoal. A human being shut up in a room, of which every creck is closed, with a pan of hurniog charcoel, falls asleep, never to weke egain. His inward fire is competing with the fire of the charcoal for the oxygen of tho room; hoth are making carbonic acid out of it; hut the charcoal being the stronger of the two, gete all the oxygen to itself, and leavee the human beiog nothing to inhala but the carhonic acid which it has mede. The human heing, being the weaker, diee first; hut the charcoal diee also. When it has exheusted all the oxygen of the room, it cools, goes out, and is found in the morning half-consumed beside its victim. If you put a giant or an elephant, I should imagine, into that room, instead of e humen being, tha case would ha reversed for a time; the elephant would put out the hurning charcoal hy the carhonic acid from its mighty lungs; and then, when it had exheusted ell the air in tha room, die likewise of its own carhonic acid.

Now, too, I think wa may see what ventilation means, and why it ie needed.

Ventilation means simply letting out the foul air, and latting in tho freeh air: letting out the air which has been breathed by men or hy candles, letting in the air which has not. And, to understand how to do that, wa must remember a most simple chemical law, that gas as it is warmed, expands, and therefore hecomes lighter; as it cools, it contracts, and hecomes heavier.

Now the carhonic acid in tha hreath which comes out of our mouths is warm, lighter than the air, and rises to tha ceiling; and therefore in eny unventilated room full of people, there is a layer of foul air along the ceiling. You might soon test that for yourselves, if you could mount a ledder end put your heeds there aloft. You do test it for yourselves when you sit in the galleries of churches and theetres, where the air is probably more foul, and therefore more injurious, than down below.

Where, egain, work-people are employed in a crowded house of many stories, the health of thoee who work on the upper floors alwaye suffers most.

In the old monkey-house at the Zoological Gardens, when the cegee were on the old plan, tier upon tier, the poor little fellows in the uppermost tier (eo I have been told) elways died first of the monkey's constitutional complaint, consumption, simply from breathing the warm breeth of their friends below. But since the cagee have been altered, and made to renge eide by eide from top to bottom, consumption (I understand) has vastly diminished emong them.

The first question in ventilation, therefore, is to get thie carbonic acid sefe ont of the room, while it is warm end light, and close to the ceiling; for if you do not, this heppene. The carhonic ecid gas cools and becomes heavier—for carbonic acid, at the same temperature as common air, is eo much heavier than common eir, that yon may actuelly (if you are handy enough) turn it from one veeeel to another. So down to the floor this heavy carbonic acid comes, and lies elong it, just as it lies often in the bottom of old welle, or old brewers' vats, as a layer of poison, killing occaeionelly the men who descend into it. Hence, as foolieh a practice as I know is that of sleeping on the floor; for, toward tha small hours, when tho room gete cold, the eleeper on the floor ie breathing carhonic acid.

And here ona word to those ladiee who intereet themselves with the poor. Tha poor are too apt in times of distress to pawn their bedsteade and keep their beds. Never, if you have any iofluence, let that heppen. Keep the hedetead, whatever else may go, to save the sleeper from the carbonic acid on the floor.

A very simple method of ventilation is employed in those excellent cottagee which her Majeety has built for her labourers round Windsor. Over each door a sheet of perforated zinc, eome eighteen inches square, ie fixed, allowiog the foul air to eecape into tha passage, and in the ceiling of the passaga a eimilar sheet of zinc, allowing it to escape into the roof. Fresh air, meanwhile, should be obtained from ontside, by piercing the windowe, or otherwise. And here let me give one hint to all huilders of houses—if possible, let bedroom windowe open at the top as well as the bottom.

Let me imprese the necessity of using some such contrivancee, not only on parente and educators, but on thoee who employ work-people, and abova all on those who employ young women in ehops or in work-rooms. What their condition may be in thie city, I know not: but most painful it has heen to me in other plaees, when passing through warehouses or work-roome, to see the sodden, sickly countenancee of the girls who are passing the greater part of the day in them; and painful, also, to breethe an atmosphere of which hehit hed, elas, made them unconscious, but which, to one coming out of the open air, was altogether noxious, and shocking aleo; for it was fostering the eeeds of death, not only in the preeent but in futura generatione.

Why should thie he? Every one will agree that good ventilation ie necessary in a hospital, becauee people cannot get well without fresh air. Do they not see, that, by the same reasoning, good ventilation is necessary everywhere, becausa people cannot remain well without fresh air? [Mr. Kingsley here "entreats thoea who employ women in work-rooms," if they have not time to read large works on physiology, to procure certain excellent little English Tracts on the subject. Similar onee are prepariog for the Hampton Tract Sanitary Series.

I look forward—I say it openly—to some period of higher civilization, when the acts of parliament for the ventilation of factories and workshops shall be largely extended, and mada far more stringent; when officers of public health shell be empowered to enforce the ventilation of every room in which persons are employed for hire; and empowered also to demand a proper system of ventilation for every new house, whether in country or in town. To that, I helieve, we must coma: but I had sooner far see thesa improvements carried out, as befits the citizens of a free country, in the spirit of the Gospel rather than in that of the law—carried out not compulsorily and from fear of fines, but voluntarily, from a sense of duty, honour, and humanity. I appeal, therefore, to the good feeling of all whom it may concern, whether the health of thoee whom they employ, and therefore the supply of fresh air which they absolntely need, are not matters for which they are more or less responsible to their country and their God.

And if any excellent person of the old school should answer me, "Why maka all this fuss about ventilation?

Our forefethers got on very well without it." I must answer that, begging their pardons, our ancestors did

digestion was the least out of order. Nay, the very morals will suffer. From ill-filled lungs, which signify

men, who do not care about the matter as a point of beauty—but simply to vie with each other in obedience to something called fashion—that they should, I say,

Our forefathers got on very well without it." I must answer that, begging their pardons, our ancestors did nothing of the kind. Our ancestors got on usually very ill in these matters: and when they got on well, it was because they had good ventilation in spite of themselves.

First, They got on very ill. To quote a few remarkable instances of longevity, or to tell me that men were larger and stronger on the average in old times, is to yield to the old fallacy of fancying that savages were peculiarly healthy, because those who were seen were active and strong. The simple answer is that the strong alone survived, while the majority died from the severity of training. Savages do not increase in number; and our ancestors increased but very slowly for many centuries. I am not going to disgust my audience with statistics of disease: but knowing something, as I happen to do, of the social state and of the health of the middle ages, I have no hesitation in saying that the average of disease and death was greater than it is now. Epidemics of many kinds, typhus, ague, plague—all diseases which were caused more or less by bad air, devastated this land and Europe in those days with a horrible intensity, to which even the cholera of our times are mild. The back streets, the hospitals, the jails, the barracks, the camps—every place in which any large number of persons congregated, were so many nests of pestilence engendered by uncleanliness, which defiled alike the water which was drunk and the air which was breathed; and as a single fact, of which the tables of insurance companies assure us, the average of human life in England has increased twenty-five per cent. since the reign of George I., owing simply to our more rational and cleanly habits of life.

But secondly, I said that when our ancestors got on well, they did so because they got ventilation in spite of themselves. Luckily for them, their houses were ill-built, their doors and windows would not shut. They had lattice-windowed houses too, to live in, one of which, as I can testify from long experience, is as thoroughly ventilating as living in a lantern with the glass broken out. It was because their houses were full of draughts, and still more, in the early middle ages, because they had no glass, and stopped out the air only by a shutter at night, that they sought for shelter rather than for fresh air, of which they sometimes had too much; and to escape the wind, built their houses in holes, such as that in which the old city of Winchester stands. Shelter, I believe, as much as the desire to be near fish in Lent, and to occupy the rich soil of the valleys, made the monks of old England choose the river banks for the sites of their abbeys. They made a mistake therein, which, like most mistakes, did not go unpunished. These low situations, especially while the forests were yet thick on the hills around, were the perennial haunts of fever and ague, produced by subtle vegetable poisons, carried in the carbonic acid given off by rotting vegetation. So there again they fell in with man's old enemy, bad air. Still, as long as the doors and windows did not shut, some free circulation of air remained. But now, our doors and windows shut only too tight. We have plate glass instead of lattices; and we have replaced the draughty and smoky but really wholesome open chimney, with its wide corners and settles, by narrow registers, and even by stoves. We have done all we can, in fact to seal ourselves up hermetically from the outer air, and to breathe our own breaths over and over again; and we pay the penalty of it in a thousand ways unknown to our ancestors, through whose rooms all the winds of heaven whistled, and who were glad enough to shelter themselves from draughts in the sitting-room by the high screen round the fire, and in the sleeping room by the thick curtains of the four-post bedstead, which is now rapidly disappearing before a higher civilization. We therefore absolutely require to make for ourselves the very ventilation from which our ancestors tried to escape.

But, Ladies, there is an old and true proverb, that you may bring a horse to the water, but you cannot make him drink. And likewise, it is too true, that you may bring people to the fresh air, but you cannot make them breathe it. Their own folly, or the folly of their parents and educators, prevents their lungs being duly filled and duly emptied. Therefore, the blood is not duly oxygenated, and the whole system goes wrong. Paleness, weakness, consumption, scrofula, and too many other ailments, are the consequence of ill-filled lungs. For without well-filled lungs, robust health is impossible.

And if any one shall answer, "We do not want robust health so much as intellectual attainment. The mortal body, being the lower organ, must take its chance, and be even sacrificed if need be, to the higher organ, the immortal mind."—To such I reply, You cannot do it. The laws of nature, which are the express will of God, laugh such attempts to scorn. Every organ of the body is formed out of the blood; and if the blood be vitiated, every organ suffers in proportion to its delicacy; and the brain, being the most delicate and highly specialized of all organs, suffers most of all and soonest of all, as every one knows who has tried to work his brain when his digestion was the least out of order. Nay, the very morals will suffer. From ill-filled lungs, which signify ill-repaired blood, arise year by year an amount not merely of disease, but of folly, temper, laziness, intemperance, madness, and, let me tell you fairly, crime—the sum of which will never be known till that great day when men shall be called to account for all deeds done in the body, whether they be good or evil.

I will say this shortly, that the three most common causes of ill-filled lungs, in children and in young ladies, are stillness, silence, and stays.

First stillness; a sedentary life, and want of exercise. A girl is kept for hours sitting on a bench writing or reading, to do which she must lean forward; and if her teacher cruelly attempts to make her sit upright, and thereby keep the spine in an attitude for which Nature did not intend it, she is doing her best to bring on that disease so fearfully common in girls' schools, lateral curvature of the spine. But practically the girl will stoop forward. And what happens? The lower ribs are pressed into the body, thereby displacing more or less something inside. The diaphragm in the meantime, which is the very bellows of the lungs remains loose; the lungs are never properly filled or emptied; and an excess of carbonic acid accumulates at the bottom of them. What follows? Frequent sighing to get rid of it; heaviness of head; depression of the whole nervous system under the influence of the poison of the lungs; and when the poor child gets up from her weary work, what is the first thing she probably does? She lifts up her chest, stretches, yawns, and breathes deeply—Nature's voice, Nature's instinctive cure, which is probably regarded as ungraceful, as what is called "lolling," is. As if sitting upright was not an attitude in itself essentially ungraceful, and such as no artist would care to draw. As if "lolling" which means putting the body in the attitude of the most perfect ease compatible with a fully expanded chest, was not in itself essentially graceful, and to be seen in every reposing figure in Greek bas-reliefs and vases; graceful, and like all graceful actions, healthful at the same time. You may as well try to cure a lame horse by galloping him, as to cure a diseased lung by working it. But where the breathing organs are of average health, let it be said once and for all, that children and young people cannot make too much noise. The parents who cannot bear the noise of their children have no right to have brought them into the world. The School-mistress who enforces silence on her pupils is committing—unintentionally no doubt, but still committing—an offence against reason, worthy only of a convent. Every shout, every burst of laughter, every song; nay, in the case of infants, as physiologists well know, every moderate fit of crying, conduces to health, by rapidly filling and emptying the lungs, and changing the blood more rapidly from black to red, that is, from death to life. Andrew Combe tells a story of a large charity school, in which the young girls were, for the sake of their health, shut up in the hall and school-room during play hours, from November till March, and no romping or noise allowed. The natural consequences were, the great majority of them fell ill; and I am afraid that a great deal of illness has been from time to time contracted in certain school-rooms, simply through this one cause of enforced silence. Some cause or other there must be for the amount of ill-health and weakliness which prevails especially among girls of the middle classes in towns, who have not, poor things, the opportunities which richer girls have, of keeping themselves in strong health by riding, skating, archery (that last quite an admirable exercise for the chest and lungs, and far preferable to croquet, which involves too much unwholesome stooping.) Even playing at ball, which has been popular ever since the time of old Homer, who makes the Princess Nausicaa and her maidens play it on the sea shore, after they have washed the garments of the royal household—even a game of ball, I say—if milliners and shop-girl had room to indulge in one after their sedentary work—might bring fresh spirits to many a heart, and fresh colour to many a cheek.

I spoke just now of the Greeks. I suppose you will all allow that the Greeks were, as far as we know, the most beautiful race which the world ever saw. Every educated man knows that they were also the cleverest of all races; and next to his Bible, thanks God for Greek literature.

Now these people had made physical as well as intellectual education, a science as well as a study. Their women practised gracefulness, in some cases even athletic, exercises. They developed by a free and healthy life, those figures which remain everlasting and unapproachable models of human beauty: but (to come to my third point) they wore no stays. The first mention of stays that I have ever found is in the letters of dear old Synesius, Bishop of Cyrene, on the Greek coast of Africa, about four hundred years after the Christian era. He tells us how when he was shipwrecked on a remote part of the coast, and he and the rest of the passengers were starving on cockles and limpets, there was among them a slave girl out of the far East, who had a pinched wasp-waist, such as you may see on the old Hindoo sculptures, and such as you may see in any street in a British town. And when the Greek ladies of the neighbourhood found her out, they sent for her from house to house, to behold with astonishment and laughter, this now prodigious waist, with which it seemed to them it was impossible for a human being to breathe or live; and they petted the poor girl and fed her, as they might a dwarf or a giantess, till she got quite fat and comfortable, while her owners had not enough to eat. So strange and ridiculous seemed our present fashion to the descendants of those who, centuries before, had imagined because they had seen living and moving, those glorious statues which we pretend to admire, but refuse to imitate.

It seems to me that a few centuries hence, when mankind has learnt to fear God more, and therefore to obey more strictly those laws of nature and of science which are the will of God—it seems to me, I say, that in those days the present fashion of tight lacing will be looked back upon as a contemptible and barbarous superstition, denoting a very low level of civilization in the peoples which have practised it. That for generations past women should have been in the habit—not to please men, who do not care about the matter as a point of beauty—but simply to vie with each other in obedience to something called fashion—that they should, I say, have been in the habit of deliberately crushing that part of the body which should especially be left free, contracting and displacing their lungs, their heart, and all the most vital and important organs, and entailing thereby disease, not only on themselves, but on their children after them—that for forty years past physicians should have been telling them of the folly of what they have been doing:—and that they should as yet, in the great majority of cases, not only turn a deaf ear to all warnings, but actually deny the offense, of which one glance of the physician or sculptor, who knows what shape the human body ought to be, brings them in guilty—this, I say, is an instance of—what shall I call it? which at once deserves the lash, not merely of the satirist, but of any theologian who really believes that God made the physical universe. Let me, I pray you, appeal to your common sense for a moment. When any one chooses a horse or a dog, whether for strength, for speed, or for any other useful purpose, the first thing almost to be looked at is the girth round the lower ribs, the room for heart and lungs. Exactly in proportion to that will he the animal's general healthiness, power of endurance, and value in many other ways. If you will look at eminent lawyers and famous orators, who have attained a healthy old age, you will see that in every case they are men of remarkable size, not merely in the upper, but in the lower part of the chest; men who had, therefore, a peculiar power of using the diaphragm to fill and to clear the lungs, and therefore to oxygenate the blood of the whole body. Now it is just these lower ribs, across which the diaphragm is stretched like the head of a drum, which stays contract to a minimum. If you advised owners of horses and hounds to put their horses or their hounds into stays, and lace them up tight, in order to increase their beauty, you would receive, I doubt not, a very courteous, but certainly a very decided refusal to do that which would spoil not merely the animals themselves, but the whole stud or the whole kennel for years to come. And if you advised an orator to put himself into stays, he, no doubt, again would give a courteous answer; but he would reply (if he was really an educated man) that to comply with your request would involve his giving up public work, under the probable penalty of being dead within a twelvemonth.

And how much work of every kind, intellectual as well as physical, is spoiled or hindered,—how many deaths occur from consumption and other complaints which are the result of this habit of tight lacing, is known partly to the medical men who lift up their voices in vain, and known fully to Him who will not interfere with the least of his own physical laws to save human beings from the consequences of their wilful folly.

And now—to end this lecture with more pleasing thoughts—What becomes of this breath which passes from your lips? Is it merely harmful—merely waste? God forbid! God has forbidden that anything should be merely harmful or merely waste in this so wise and and well made world. The carbonic acid which passes from your lips at every breath—ay, even that which oozes from the volcano crater when the eruption is past—is a precious boon to thousands of things of which you have daily need. Indeed there is a sort of hint at physical truth in the old fairy tale of the girl, from whose lips, as she spoke, fell pearls and diamonds; for the carbonic acid of your breath may help hereafter to make the pure carbonate of lime of a pearl, or the still purer carbon of a diamond. Nay, it may go (in such a world of transformations do we live) to make atoms of coal strata, which shall lie buried for ages beneath deep seas, shall be upheaved in continents which are yet unborn, and there be burnt for the use of a future race of men, and resolved into their original elements. Cool, wise men tell us, is, on the whole, breath and sunlight—the breath of living creatures who have lived in the vast swamps and forests of some primeval world, and the sunlight which transmuted that breath into the leaves and stems of trees, magically locked up for ages in that black stone, to become, when it is burnt at last, light and carbonic acid, as it was at first. For, though you must not breathe your breath again, you may at least eat your breath, if you will allow the sun to transmute it for you into vegetables: or you may enjoy its fragrance and its colour in the shape of a lily or a rose. When you walk in a sunlit garden, every word you speak, every breath you breathe, is feeding the plants and flowers around. The delicate surfaces of the green leaves absorbs the carbonic acid, and parts it into its elements, retaining the carbon to make woody fibre, and courteously returning you the oxygen to mingle with the fresh air, and be inhaled by your lungs once more. Thus do you feed the plants, just as the plants feed you, while the great life-giving sun feeds both; and the geranium standing in the sick child's window does not merely refresh, but joice his eye and mind by its beauty and freshness, but repays honestly the trouble spent on it, absorbing the breath which the child needs not, and giving to him the breath which he needs.

So are the services of all things constituted according to a Divine and wonderful order, and knit together in mutual dependence and mutual helpfulness.—A fact to be remembered with hope and comfort: but also with awe and fear. For as in that which is above nature, so in nature itself; he that breaks one physical law is guilty of all. The whole universe as it were, takes up arms against him; and all nature, with her numberless and unseen powers, is ready to avenge herself on him, and on his children after him, he knows not whan nor where. He, on the other hand, who obeys the laws of nature with his whole heart and mind, will find all things working together to him for good. He is at peace with the physical universe. He is helped and befriended alike by the sun above his head and the dust beneath his feet: because he is obeying the will and mind of Him who made sun, and dust, and all things; and who has given them a law which cannot be broken.

A DRINK BY THE WAY.

We are indebted to Messrs. Harper Bros. for this picturesque scene of Eastern life. In the cities of the "dry sad thirsty land" of the East, the water carrier has a good trade. The wells are few, and private or State property, opened at stated times in the day for those who pay for the right to draw: "a spring shut up, a fountain sealed.' The musical cry of *Fresh water, Fresh water*, in Italian or Syriac or Turkish accents, draws the customers, but each must pay a few small coins for his refreshment. Our Saviour's invitation, "If any man thirst, let him come unto me and drink," and the Prophet's anticipation of it, "Ho every one that thirsteth, come ye to the waters, and he that hath no money come;" gathered a force from realities of life at the time they were spoken.

CORRESPONDENCE.

March 20.

Having seen all that is shown to visitors at Holyrood Palace, I set out for Castle Edinburgh and on my way, saw John Knox's house. Castle Edinburgh stands on a lofty rock and smiles or frowns, as the times may be, upon the whole City. A guide showed me the most interesting parts of the Castle. There are seven gates to pass through before you enter the ancient citadel; one of these ways was once defended by an iron port-cullis; over this is the old prison where crown prisoners were kept. In the Crown Room where the Scottish Regalia is kept, stands the old oak chest in which the Regalia was hidden and supposed to be lost, until Sir Walter Scott made a search for it, by permission of the Crown, and found it in this room. It is said that Scotchmen are proud of these symbols of their unconquered independence, for these relics run back through a long line of monarchs to Robert Bruce, the hero of Bannockburn. The Regalia consists of a crown, a sceptre, a sword of state and a silver rod of office. In a room about 10 ft. by 15 ft., Mary Queen of Scots gave birth to a son, James VI of Scotland and I of England. The guide pointed out the great precipice over which the royal infant was lowered in a basket when he was eight days old, to save him from the hands of his cruel relatives.

On the highest part of Castle Rock, stands Queen Margaret's private chapel, which is 16½ ft. by 10½ ft. and is said to be the oldest building in Scotland. It was built in the eleventh century by Margaret, who was the wife of King Malcolm, the son, I believe, of good King Duncan so basely murdered by Macbeth.

Beside the chapel stands Mons Meg, a great gun used in the fifteenth century for bombarding. It threw great stone balls as large as the largest of our bomb-shells. The construction of the gun is very peculiar, that is, it appeared so to me; the inside is made of great bars of iron running parallel with the gun and fitted close together, while on the outside are bands of iron the whole length; one of the bands near the breech was broken in 1682 while firing a salute.

As I was going down a stairway of the castle, the guide said to me, "This is the royal way, or the way Queen Victoria entered the citadel. When her Majesty was pleased to visit the Castle these stairs were all carpeted for her." What! I was about to exclaim, did her Majesty walk on a carpet to the citadel of this ancient castle, where tha mother of the king who gave her Scotland did often tread its naked floors? "Her Most Gracious Majesty," he continued, "was pleased to say that she would not disgrace the Castle by walking on a carpet, and it pleased her majesty to have it removed."

As I left the Castle, the guide said to me, "I think that we shall have a storm to-morrow or next day." "What are the indications?" I asked, anxious to learn everything. "*That man in America* says we may expect a storm, and everything he has said this year has been true." I felt of more consequence when I heard this compliment to America; and when I saw our principal Sewing Machines offered for sale with enticing advertisements, I felt proud to think that American ideas and inventions are permeating and influencing movements in the Old World.

March 21st. After breakfast I ascended the Scott Monument. It is fearful to look from such a height; there are so many conflicting desires. I inwardly said, I will not look down, only around; but something said, You must look down; so, putting my eyes on a line with the railing, I approached it and looked over.

I visited the site of the old Tolbooth, better known as the "Heart of Mid-Lothian." The spot is indicated by a large heart which is made in the middle of the street; one can learn much of the history of the old prison by reading Scott's novel, "The Heart of Mid-Lothian." There is so much here to remind one of the great Novelist and Poet, that Scotland seems still more appropriate as the name for this beautiful country.

Returned to Glasgow this morning, and went to a restaurant for a lunch. By the by, some wit, anxious to display his Latin, picked up a very good derivation for restaurant. He says, "*res* is thing and *taurus* 'hull: restaurant, a hulling thing." They are certainly very convenient.

In visiting these cities, I am more interested to know how the poor live than the rich. I like to see the homes of the humble, and hurriedly pass the dens of crime where filth is a subject and vice is king. It was toward evening as I passed through one of the avenues of poverty; mothers were out, probably to meet a tired husband and father: almost every mother seemed to have her baby in her arms or by the hand,—it was the largest *infantry* turn out I ever beheld.

Two Scotch hearses passed me; one was surmounted with little black trees from four to six feet high; I should think that they were intended to represent the cypress. They were the gloomiest things I ever saw, making the passage from death to life appear mournful. A man in mourning passed; he had the customary crape band around his beaver; but as if afraid that it might not be seen or understood, there was a black crape bow, the ends of which reached the brim of his hat; it is fortunate for the poor and sincere that sorrow is not measured by the yards of black crape we may wear.

At 9 o'clock, P. M., I took the train from Glasgow to London. An European railway car is very different from what we see in America: it has several compartments called carriages; in each carriage are two seats that run the width of the carriage, with a passage between them; there are two doors to each on opposite sides; the view is unobstructed by panels of wood work. These carriages are distinguished as First, Second, and Third class. The First class is generally nicely cushioned and carpeted; the Second is about the same as the First, but of inferior quality; while the Third class is only cushioned. The engine is a marvel of simplicity compared with the American; it seems to be lighter and more powerful, while the "ding-dong" so annoying to people living near railways, is never heard. I did not see an engine with a bell while in Europe. No checks are given for baggage; a printed label with the name of the place to which you are going is pasted on the baggage, and when you get to your journey's end you must get out and claim it.

March 22d. I traveled all night; 6 o'clock A. M., as we were nearing London, I tried to start a conversation with the only occupant of the carriage with me; but finding that my questions rather annoyed, I apologized for my rudeness and asked him if he did not think me very inquisitive, when he sweetly nodded in the affirmative. I was much pleased with the beautiful appearance of the country. In the distance, the Lombardy Poplars seemed to be the stately pillars of some ruined cathedral; the trees were destitute of leaves, but I admired their delicate tracery—it looked as though fairy hands had been making lace work around the sky.

Reached London about 8:30 A. M., and went at once to a hotel. In the afternoon I visited St. Paul's Cathedral. Its vastness is impressive; it is, I believe, the only cathedral in the country that does not belong to the Gothic order of architecture. On the outside it has a very dirty look, as the dampness and dust of the city have blackened its walls, which are here and there relieved by blotches of white which was probably the original color.

March 23d. Went to Westminster Abbey to hear Canon Farrar. The sacred edifice was crowded with people; scores had to stand. The Rev. Canon delivered a most excellent sermon, addressed to young men. I wish I could be read or heard by thousands of young men in our own land.

He first dwelt upon the lives of St. Anthony (the first hermit) and St. Jerome; their lives of asceticism only made it harder for them to be holy; they had a most fearful combat with the lusts that war against the soul. They finally triumphed, but God never intended that man should live such a life. "Let there be plain living and high thinking. Our lives will be high or low, noble or ignoble, according as we live near to or deviate from our Great Standard."

Oh, that every preacher would thus boldly and so kindly help failing humanity! Young men are sinking down, down, down, conscious of peril, but helpless and unaided in overcoming a baneful appetite. I will add, as nearly as possible, the words of Canon Farrar to those who are trying to escape from the captivity of hell:

"Young men, do not think of the sins of your past life. 'Let the dead past bury its dead.' Do you think that after a mother had told her child not to eat of a certain fruit, she would set it before him? It would make it harder for the child to resist the temptation. You must not place before yourselves the evils of past self-indulgence—it is the forbidden fruit; do not even think of the consequences, but keep up a good heart, keeping the mind busy and all of your time occupied; fight boldly against the flesh, and although you may be often defeated, in the end you will triumph gloriously, for God never leaves unaided a sincere, struggling soul."

I visited the private chapels of the Abbey, and also the Poets' Corner; among other stones were Milton's and Gray's. I copied the following from Gray's monument:

"No more the Grecian Muse unrival'd reigns:
To Britain let the Nations homage pay:
She felt a Homer's fire in Milton's strains,
A Pindar's rapture in the Lyre of Gray."

In one part of the Abbey the floor is largely composed of tombstones; one cannot step unless he treads upon the sacred dead. While walking, I looked down and saw that I was standing upon the grave of Dickens; an indescribable feeling passed over me when I realized where I stood. Some one had lovingly scattered early spring flowers upon his grave, and through them in letters of brass I saw the name, Charles Dickens.

The Abbey is very different from what I expected to see, having imagined it to be a great cover to a graveyard, with its old and weather-beaten roof falling under the burden of time; but instead, I see a fine cathedral in perfect repair, dignified through age and the ashes of its illustrious dead. J. C. H.

The writer of the following letter is an uncommonly clear-headed, worthy man, and, with others like him, who have graduated at Hampton, is able to do a great work in the way indicated in his letter.

But the Hampton school cannot assume the burden of it; and the societies devoted to such work seem to be able to do nothing for the freedmen: at least, we never hear of them there.

BONSACKS, VA., *March* 26, 1879.

Dear General:—

I noticed an article in the last number of the WORKMAN headed, "Colportage among the Colored People," and suggestions by Colonel Preston of Lexington, Va.

I really believe it would be one of the greatest blessings that could be offered them. And I dare say it would be hailed with gratitude and delight by us all. You are preparing young men and women yearly to go out to teach the benighted millions to read, but there are none to furnish them with suitable matter to read. There is quite a number of young men here, who desire good books to read, and have consulted me as to the kind and where to get them; yet they are not supplied. I think the colportage would answer all of their needs; and would, at the same time, help us as teachers to teach that all-important branch—reading. The paramount importance of such an enterprise cannot be estimated. Frank Trigg and I taught near together this term and we have talked more than once about such a noble scheme, if put into effect. We would offer our services as colporteurs, if you will start the enterprise, and think we are fit.

Hoping to hear from you soon, I am
Your pupil, JOHN H. BILLUPS.

PARROTY PEOPLE.

If parrots render society any special service, it is in their unconsciously being satires on a good part of it. A large percentage of mankind go mumbling and fumbling through life, with no more ideas of their own than a flock of parrots, or a lot of phonographs. They are but sounding-boards for other people's ideas, and their utterances are only "words, words, words."

When a parrot struts about its cage, and says, "Polly wants a cracker," etc, it does about all a parrot can do, and all it was intended to do. Men, however, have mightier missions, upon which they can go if they will; but if they prefer to stay in a cage, and be parrots, there is no law to prevent them.

If all men were of this parroty sort, contented to do as others did, and as their fathers did before them, this would be a very tame world, although its people would be said to be in that negative state called "contentment." There is a great deal of milk and water talk about it being man's duty to be contented as he is, and with things as they are, but if this pretty theory be put in universal practice, the wheels of progress will stop, and laziness become a cardinal virtue. Every step forward, since the year one, has been made because some one was not contented with his surroundings, and yearned for something better. Discontent has two forms: a manly form that ends in improvements, and a parroty form, that begins and ends in peevishness.

Parrots, whether they wear feathers, skirts, or whiskers, never get beyond servile imitation: they do what their masters do, be that good, bad, or indifferent. In birds this sort of thing may sometimes be amusing, but in men it is always disgusting. And, alas, how often is this feeling of disgust excited!

To enumerate all the varieties of parroty people would be an endless, useless task; but there are some varieties which contain so many individuals, that everybody knows more than one of them.

A "circle" of so called fashionable people is a good deal like a company of parrots. They are forever trying to do this, that, or the other; not that it is pretty, pleasant, or healthful, but because somebody else does it. Such people always seem standing on tiptoe ready to sneeze when somebody else takes snuff. They always look uncomfortable; and the deceptions they practice seldom reach beyond themselves. What they are, soon shows through what they try to be, like base metal through thin silver plating. This variety of unfeathered parrots is composed of the weakest members of society; of putty sort of people, who are dented, so to speak, by everyone with whom they come in contact. Who of us does not know many such? I remember a man named Page, who after spending six months in Paris, returned to America. He pretended to speak English with an accent, and pronounced his name "Parjuy." Poor fellow! He fondly hoped some one would think him a Frenchman; but everybody, except himself, knew he was a fool. When a man has sunk to a certain depth of parrotism, he seems to develop some traits of the ostrich: the more utter parrot he is, the less he believes anybody knows it; just as the foolish "bird of the desert" imagines his body invisible, when he cannot see it himself.

Let Dame Fashion squeeze her body into the shape of a funnel, and forthwith a multitude of Eve's daughters will become funnels in appearance; and consumptive dyspeptics in reality. Adam's sons are not a whit behind Eve's daughters in this respect. Give equal opportunities to both, and it would require a judge of unusual discrimination to decide which is the sillier bird. Many men, especially young men, drink to excess, not so much because they like the taste of liquor, as because other men drink it. One parrot says, "Take a drink, boys;" the rest of the flock say, "Take a drink, boys," and—it is taken.

Political parrots are a numerous class, and if by some mysterious dispensation of Providence, there had not been as many placed in one party as the other, they would be a source of grave danger to a country like ours. There are hundreds, nye, thousands of citizens, who never use their reasoning faculties on political questions. The Party says so and so; the Parrots say so and so—and vote so and so: although so far as their ballots represent any individual political convictions, they might as well be cast by parrots with plumage as without it. The most dreary, hopeless kind of political parrot, is one who is proud of being such; and one who boasts that for twenty, thirty, or forty years he has never voted anything but "a straight ticket." Nothing short of a miracle can change such a being into a useful citizen. Any man who really believes that any political party never makes any mistakes, can believe that the moon is made of green cheese, and his faith would find fitter surroundings in a lunatic asylum, than in wielding the ballot.

School-rooms are only too apt to be cages, where scholars are taught to chatter, and rattle off lessons, precisely as parrots are taught to say, "Pretty Poll," or use some less innocent expression. It is pleasant to think, however, that the practice of making children "learn by heart," and only "by heart," is dying of old age, or something equally fatal. But why this parroty process was ever called "learning by heart" is difficult to understand; for surely of all organs employed, the heart has the least to do with it. Perhaps it would be more accurate to call it the "Echo Process," or "learning by ear and tongue;" but either of these titles would bring out too clearly the errors of the system, and error never likes plain speech—it prefers biding in tortuous sentences. People on whom rests the responsibility of educating youth, should ever remember that they have to cultivate minds capable of reasoning, and not the ears and tongues of parrots.

In parrot talk the reasoning faculties are not used: a sound strikes the mind through the ear, and rolls off the tongue as a hand ball off a fence. There is no particular impression made on either the mind or the fence; but both ball and sound bounce from what they strike with a little less force than they came against it. This simile illustrates the fact, that even the best parrots, be they birds or men, never quite equal their models; if the models be bad, they are pretty sure to be worse.

Parroty people, although they do not know it, are always ridiculous: the fun they afford lies in noting the wide difference between what they try to do, and what they succeed in doing. To see a short, stout man try to take as long steps as a tall, thin man, makes people laugh. They do not laugh at the man because he is short, nor stout; neither do they laugh because he takes steps: but they do laugh because he tries to make his short legs seem long, and—fails.

If anyone doubt that there are many parroty people, let them try to explain, by some other hypothesis, the rapidity with which slang expressions spread from Sandy Hook to the Golden Gate. T. T. B.

Business Manager, Hampton, Va.

HAMPTON NORMAL AND AGRICULTURAL INST., HAMPTON, VA., *May* 21, 1879.

To the Trustees of the Hampton Normal and Agricultural Institute:

GENTLEMEN:—

The total uumber of graduates from this institution since it opened in April, 1868, including this year's class, 40 in number, is 316.

The total number of admissions for the same time, including this year's (100 in number, besides Indians,) has been 1,027.

Average attendance this year has been as follows:

	Young mem.	*Young women.*
Seniors,	20	11
Middlers,	44	32
Juniors,	47	29
Preparatories,	14	6
Indians,	55	9
	199	76

Besides having a knowledge of reading, writing, and of arithmetic through Long Division, all who are admitted are expected to havs horne a good character, to have sound health, and to be not under fourteen or over twenty-five years of age.

It has been found impossible to raise the standard of admission. Ten years ago over half of our students were from schools maintained by northern charity, whose nine months' sessions, good outfit and skillful teachers fitted a fine class of candidates for the Junior class. The State Schools which have taken their place, have, except in the cities, but three or six months' sessions, poor apparatus and usually inferior teaching. In the principal Southern cities there are many good public schools for colored yontli. Hampton attracts chiefly country youth who don't mind hard work, and have had very few opportunities.

Students are usually received on their own application: reliable information as to their character or qualities is seldom to be had. Every year a number present themselves without a word of previous notice. A desire for education on the part of such may consist with serious defects of character, obtuseness, and very imperfect notions of its meaning.

"WEEDING OUT"

the new comers is an important duty of every session. The first year at the school is prohationary: about twenty per cent. are dropped, principally for weakness of character or for dulness of intellect. Most of thess ara benefited by their short course, and work for such is not considered as wasted.

During tha entire three years' course, there is frequent leaving of students for disciplinary, pecuniary, domestic and other reasons. But experience shows that those who are really capable and earnest seldom fail to return, even after an absence of years, to complete their education.

AID FOR STUDENTS.

Personal aid is given usually at the close of each session, according to need and merit, generally by way of reducing the debts of those who have nobody but themselves to depend upon.

The total charges to students for last session were.....$22,537 32
Assistance amounted to..... $3,223 31
or one-seventh of the amount charged: the usual proportion of such relief from year to year.

Students paid in labor the same year, $14,504.96—the balance was paid in cash or remains as debt to be paid up. Graduates show a good spirit about paying up debts.

Rev. Dr. B. Sears, agent of the Peabody Fund, has sent $500 to be applied to stndents' personal expenses this year, at the rate of $50 apiece. Those who get this aid will richly deserve it.

SCHOLARSHIPS.

Friends of the school are asked to meet the student half way: to provide for each ons the cost of his education, a scholarship of seventy dollars; ($70.00) for each year of the three years' course; or $210.00 in all; the student to pay his personal expenses, board, fuel, washing, mending, &c., farnished by the school at $10.00 a month or at $35.00 per session of eight and a-half months: this besides providing his own clothing, books and incidentals.

The board bill is payables half in cash and half in labor.

SPIRIT OF LABOR.

From quantities of letters received, I know that hundreds of colored youth would gladly work out their entire expenses in the school: one-tenth of those now in attendance do so, paying no cash. The monthly payment of five dollars keeps out scores who are eager to come.

Wages of negroes are low, yet one-fourth of our boarders are able, by constant labor in summer as well as by school work, to meet the requirements of half cash and half labor, besides finding their clothes, books, and incidentals.

I question if in any institution for whites in the land, youth are making more exertions for themselves, than the negroes at Hampton and other schools devoted to that race.

The pauper spirit has no encouragement; there is no begging except for more work. The conduct of studeats the past ten years justifies all the pains and cost of an expensive industrial system and all efforts for its improvement.

"SHELLBANKS."

During the past year a generous friend has purchased for the school a valuable stock aud grain farm of 330 acres, known as "Shellbanks," five miles distant, which will afford much labor to students, large supplies for school consumption, and be an excellent place for Indians in summer. No wiser or more needed gift could have been made.

WORKSHOP.

With the approval of the Executive Committee, a work-shop has been commenced, which, with a start in machinery by way of a saw-mill, with planer and matcher, to be placed in the basement, will cost not less than $6,000. More than $12,000 will be required to complete it. This enterprise is greatly encouraged by the gift of a new and improved sixty horse power engine with boiler, by Mr. Geo. H. Corliss of Providence, R. I., valued at $4,000. The building will be two story frame on a brick basement eleven feet in height; aize, 140 x 50 feet; and will need over 200,000 bricks, all of which have been made or will be made on the place, mostly by students' labor. We hope at once to complete the basement, cover the machinery temporarily, saw up logs into lumber, boards, etc., with which to erect the frame part in the summer or fall, as the needed funds shall be contributed. To do this $6,000.00 will be needed.

Mr. Charles D. Cake, a Southern man, of Hampton, a thorough mechanic, is to be manager. Colored and Indian students will furnish the labor; the former to be of those destitute of funds, who will work steadily for a year or more and enter or re-enter school with earnings to carry them through, and a skill which will anywhere command twice the wages of ordinary hands. The latter will learn what will serve them well among their people.

Thia will establish the mechanical feature of the school. The perfecting of our manual labor feature is important. It is our point of difficulty; precedent is against ua; results so far are encouraging.

AN INDUSTRIAL HALL,

Conspicuous in efficacy for good, as in its appearauce, crowning the finest site on our grounds, commanding the broad waters of Hampton Roads, joining with Academic Hall on its right in offering to youth the true way to manhood and to usefulness, should not be delayed for want of funds.

The interests of the two races under our care are best served by a combined training of the hands and heads of those who ars to be their teachers and leaders.

The cause of education would, I believe, be served by the success of a well-rounded industrial system, to answer honest doubts of its practicability.

In the South, negro mechanics are relatively common; in the North, they are relatively scarce Competition in the North keeps them back more than prejudice at the South. Here they have a fair field. But the question, How shall young colored mechanics replace the present class who were trained in slave times is a serious one.

SCIENTIFIC RATHER THAN CLASSIC.

This institution (whenever the common schools with which it immediately connects shall so improve as to permit it) should develop in the direction of scientific teaching.

All, or nearly all of the leading institutions devoted to the freedmen teach Latin and Greek. Classic lore has its place in this field, but the bearing of science on the new and vast productions of the South, in which the negro should have his share, is vital. Practical knowledge that will open the resources of the soil is a paramount need. Getting wealth is desirable for the freedman; it makes him a safer and a better citizen, and creates favorable conditions for that morality, the want of which is their weakest point.

RELIGIOUS WORK.

No work for the ex-slaves can ignore the fact that their preachers have their cars and lead them as they choose; newspapers hardly reach them. The negro understands colloquial English: that of literature is to him an almost unknown tongue.

To reach this generation there must be a great progress of pulpit work, not so much in quantity as in quality. How to do it, I think is indicated in the following words from a letter from Mrs. H. B. Stowe, written from Florida.

"For a long time yet, in the couatry, the *preacher* must be only an educated farmer, laboring week days and preaching Sundays; this is what I want to prepare —— for."

For the many large colored churches in the Southern cities men are being trained in denominational Seminaries in Washington, Richmond, Raleigh, Nashville, New Orleaas and elsewhere, but the mass of these people are scattered in the country, unable to msintain intelligent preaching, and in many cases are sadly victimized by men who are worse than incompetent.

One who teaches from three to six months in winter, farms the rest of the time and preaches Sunday, is the man for the field work, and for the masses of this generation. Thus only can a competent man get work and a support.

Col. J. T. L. Preston, of the Virginia Military Institute at Lexington, has suggested the need among the blacks of good moral and religious reading, and that Hampton graduates could do a good work spreading such matter. His published letter has attracted their attention and brought interesting responses.

The danger to the rising generation of a flood of vicious readiag from which their ignorance has been a protection cannot be overestimated. It will be hard to meet.

GIRLS.

The education of colored girls is as important as that of the men. They are received into the higher freedmen schools of the South, but are always, I think, in less numbers than the young men, being in proportion to tha latter about as one to two.

Parents prefer to make sacrifices for their sons; there seems a readier and greater yield for the expense and pains with the boys. Young men have a more tangible aim, more stimulus and a better chance. There is not much to make girls ambitious.

Conditional to all progress is the improvement of women. Provision for their comfort hars is better than that for the men; special encoursgement should be given to increase their numbers. We are deluged with applications from male students.

It is to be hoped that there may be some wise and noble charity in bchalf of colored girls of the South. Nothing adequate in that direction has yet been done. The past rests upon them far more heavily than upon the men. Their color makes impossible the safeguards that surround the intelligent and improved of our race. Their "toning up" under good influences has, in our experience, been most remarkable, and their success as graduates equal to that of the men.

GRADUATES.

Part of one teacher's time has been devoted to corresponding with graduates-supplying reading matter and other encouragement. Out of the 267 graduates now living (9 have died) the school is in regular correspondence at present with 218 as well as with 11 undergraduates engaged in teaching.

Over forty of them havs been brought into correspondence with friends in the North who have sent them papers and and letters, and sometimes supplies, not as personal charity, but as helps to teaching. Some new light and pleasant impressions on both sides have come of this; we hope for more of it. You will see the value of these relations to intelligent earnest workers living among the poor and degraded.

We endeavor each year to reach the entire force that has left. Up to July, 1878, out of two hundred and twenty-two graduates but seventeen had failed to teach; of the last class numbering fifty-four, twenty-one have not taught because of the closing of public schools in this State. Forty-eight ex-students have engaged in teaching. Not less than 30,000 children have come under the instruction of Hampton graduates.

Unusually full reports have been received during the past term, extracts from which have been and are to be published in the "SOUTHERN WORKMAN." Their labors have extended beyond Virgiaia into West Virginia, North Carolina, Maryland, and slightly into other States. There have been no grievances or "outrages." In common with those sent out on similar duty from other institutions they report an increasing appreciation of their work by all classes. The qualified and well-behaved negro teacher is received and treated well everywhere.

The common school system is deeply rooted and well championed in this and the adjacent States. In Virginia, in 1878, there were 4,545 free schools of which 1,146, were colored, with an average daily attendance of 34,300; 61,772 colored pupils were enrolled; 673 colored teachers were employed in the colored schools; the rest of the teachers being white. The average length of school session was 5.33 months.

There was a falliag off $250,000.00 of school revenue and the blacks lost as compared with the previous years eighty-four schools and 3,271 pupils. A greater loss is feared the current year.

In Norfolk, Va., ths city colored schools are taught by Hampton graduates; in Portsmouth, just opposite, by whites; females in both cases, and both are under excellent supervision by ex-confederate officers. Salaries are forty dollars a month, and are promptly paid. The sessions last ten months. In country schools, where the majority of graduates are employed, thera are serious difficulties. Short and unsatisfactory sessions of four to six months; pay at the rate of twenty to thirty dollars per month in warrants which are not cashed sometimes for a year, and sold at a discount of from ten to twenty-five per cent. are discouraging.

Owing to the present condition of Virginia finances, at least half of the public schools have been closed, and over a score of graduates anxious to teach, have gone nto service to maintain themselves.

City schools have not been so much affected. An improvement the coming year

The youngar onea are the best material to work upon, especially girls; the latas reminders of the needs of a noble but wronged people.

"A very encouraging improvement is noticed in one of the St. Augustine Indians who last year had several hemorrhages from the

City schools have not been so much affected. An improvement the coming year is hoped for. Were it not for a genuine desire to do their people good, a large number of our graduates would forsake this field for more comfortable situations in the North which are within their reach.

Then there are the trials which an intelligent worker must experience everywhere from the narrow minded and ignorant. The Hampton teacher is a radical among his own people, and often combats notions dear to those for whom he is laboring.

TEACHERS' INSTITUTE.

The methods of primary teaching introduced last year, by Col. F. N. Parker, Superintendent of Public Schools of Quincy, Mass., have been of great advantage to his class in their field work. He is expected to conduct an "institute" this year with the present graduating class, from May 26th to June 13th. He will give them rational and clear directions upon the raw material and difficult conditions they will deal with. He will teach them how to make school apparatus, charts, etc., when books are not not to be had; helping them to do the most with their time and opportunities. Miss Bullard, a former pupil of his, has conducted the "Butler" School on his plan the past year, making it a school of observation for the Seniors. Good primary teachers are the universal and paramount need of Southern free schools.

INDIANS.

At the last annual meeting, I reported the arrival in April 1878, of seventeen Cheyenne and Kiowa Indians, direct from Florida where they had been held for three years by the government, as prisoners of war, to be maintained here by private charity. Plans to secure more under government auspices were submitted to, and approved by you.

On the 5th day of November, 1878, forty-nine Indian youth, nine of them girls, were brought here, from the following named agencies in Dakota Territory, selected by Capt. R. H. Pratt, of the U. S. Army, under instructions from the department of Indian Affairs at Washington.

From Fort Berthold, nine boys and four girls.
From Standing Rock, three " " one "
From Cheyenne River, nine " " "
From Crow Creek, five " " one "
From Yankton, eight " " three "
From Lower Brule, six boys.

Their ages are from ten to twenty-two years. Over half of them had been to Ageney Schools, and could read and write in their own language. The government pays the school $167.00 per annum for the entire expense of each one, including clothing, board, instruction in the rudiments of knowlege, and in agriculture and the mechanic arts. The school agreed to provide the necessary buildings and outfit, which it has done. The Indian Cottage or "Wigwam" has so far cost $10,987.91. The cost of finishing two new corridors in Virginia Hall by contract for Indian girls was $1,800. besides furniture for the twenty new rooms.

I believe no one can doubt the wisdom of calling upon the public to do a share of the work for Indians. People will be interested in them only as they do something for them.

The large shop now building is in part for the mechanical instruction of Indians. For the first year at least, we will expend for Indians over two dollars for each one received from the public treasury. The gift of the fine stock and grazing farm of three hundred and thirty acres, "Shellbanks," five miles distant, was inspired by the need of Indian boys of experience in caring for stock. They will thus be fitted for what is the first step in the civilization of the wild tribes; raising cattle and horses.

It is proposed on our part to create every possible condition of success with the important experiment intrusted to us. Its significance was referred to by the President in his last Message, and by the Secretary of the Interior in his last Annual Report.

In view of our experience with Indian pupils, I would remark as follows:

The younger ones are the best material to work upon, especially girls; the latter from twelve to fifteen years of age. They are more pliant and more easily acclimated.

Coming utterly ignorant of English, accessible only through an interpreter, they have made excellent progress in their studies, in language especially; both sexes doing equally well, comparing in talent favorably with the brightest class of colored students. In the presence of visitors they are at a disadvantage; they are always reluctant to air their English; but their desire to learn it is most earnest. Their chief complaint is "too much Indian talk."

On the whole they take kindly to cold water and cleanliness, and to civilized ways; there are differences among them. To help them acquire our language and habits, each Dakota boy has a colored room-mate who is this voluntarily. In most cases there has sprung up a strong attachment between them, and as yet no hostility; the help to the Indians is invaluable. The Dakotas are ready to do the full share of cleaning and care of the room; they pick up words, ideas and habits, and thus get a tutoring to be had in no other way. Success as to contact of races seems complete.

Would the students of any white school in the country do as much for these wild Indians?

Upward of twelve per cent. of our colored students have Indian blood in their veins. The "Mattypony" and "Pamunkey" Indians on old reservations seventy miles from this place, are said to have forfeited their heritage because of absorption into the negro race.

Within three days after their arrival from the West, the Dakotas begged to have their hair cut in order to look like the rest. Long hair was their glory at home. This and many changes, not always on the surface, are due to atmosphere and indirect influence rather than to rules or teaching. At this point is the chief advantage to them of the Hampton School. The force of custom and habit is greater than that of mere regulations.

They have given up tobacco, and have nothing to do with liquor, though rum is for sale within three minutes' walk of their quarters.

They are reasonable, tractable. "They are like other young people," is the frequent remark of those who have to do with them. They have quick tempers, a few have bad dispositions, and trouble of some kind would not at any time be surprising.

They are mechanically quick, interested in tools, willing to work; not, as a rule, up to a full day's work, but some are. They will shirk when left alone. The idea of work is not in their brains or blood: they don't see the point of it or its relation to life. Good management is changing all this.

The question is not of their capacity, but of our capacity to understand them and step by step bring them up to proper ideas and habits. The danger is not of their, but of our failure.

The girls go to school five days each week, are taught sewing, household work, and are to be instructed in cooking and gardening.

The boys work on the farm, a few in shops, an entire day each week, and besides, are divided into squads so that each one works two hours daily for four days each week in the "training shop," under Mr. G. B. Starkweather, where they are taught the use of tools, and to work in wood, iron, tin and leather. Saturday is holiday, with free access to shops, where many resort voluntarily.

Our Indian youth are encouraged to practice and improve in their native art. Painting on paper, fans, and on pottery, brings them pocket money which keeps them cheerful.

The negro has the only American music; the Indian has the only American art.

I believe it to be a duty to preserve, and in a wise and natural way to develop both. The latter is curiously suggestive of ancient Egyptian or oriental styles. There is an oriental expression in the Indian's countenance.

Our Indian paintings are much sought after, and are doing good in many places, as reminders of the needs of a noble but wronged people.

The danger to this experiment is in the matter of health. The change from the cold bracing air of Dakota to this damp seaside air and lower latitude, is a risk. I am advised by an old Indian missionary to let the Indians be very lazy in the summer days. During the vacation, from June 15th to October 1st, we hope to encamp an Indian party for some weeks at "Shellbanks," which is situated beautifully upon a broad river, where they will have an outdoor life, light duty, such as care of stock, and abundant leisure and play.

I cannot do better here than quote from the "Southern Workman" for April from an article by Miss H. W. Ludlow; one of our Indian teachers:

"THE HEALTH QUESTION.

"It is well understood that the health question is a serious one in all efforts for the civilization of a race, so serious that it has been made the ground of argument against all attempts at Indian civilization, though if the race is doomed in any case, civilizing has the advantage at least of being a cheaper as well as more merciful means of extermination than starving and the horrors of Indian warfare.

There is no reason, however, why the effort to prepare them for the new conditions of life, which must inevitably overtake them with the extinction of the buffalo, and the settlement of the country, should not be as carefully guarded in the matter of health as the organization of the army or the navy is. Every one of the little fellows picked from the city streets for the training school which is doing such admirable work for the navy, is put through a rigorous medical examination before admission. Such selection is absolutely essential to any general success.

"The plan prescribed by the Department for Captain Pratt's journey to collect the Dakota students, provided no time or means for such examination, and what care he could take in selection was made to some extent unavailing by changes of minds and the necessity of taking what substitutes could be obtained at the last moment. There is cause for congratulation that the sanitary condition is, on the whole, as good as it is, to start with; though it is not as perfect as it should have been. It is only fair to future criticism to have it clearly understood.

"A thorough examination of the young men who arrived in November last, was made in March by the attending physician of the school. The following is a synopsis of his report:

"'I beg leave to submit the following report of my examination into the physical condition of the Indians,—

"*Class I.*

"A certain number may be classed together as in prime health. Strong; lungs and heart sound.

"[Nineteen names are given in this class.]

"There are some who would, doubtless, belong to this class, if it were not for some temporary and curable affection.

"[Six names are specified, the temporary affections being coughs, slight bronchitis, headache and back-ache. The coughs and slight bronchitis were sufficiently accounted for by the unusual severity of the winter, inducing a prevalence of such affections here as generally through the country, and all six seem to be in perfect health at present.]

"*Class II.*

"These are more delicate, and though not affected by any serious disease at present, examination shows that their lungs are weak. This class will not be likely to stand much exposure or hard work.

"[Eight names are grouped in this class, of whom the physician says:]

"These ought to be watched for symptoms of lung trouble, and put upon medical treatment, if necessary, early. I do not think they are in any great danger, but they are the ones who will probably need attention in the future.

"*Class III.*

"Under class third we may place those who are diseased in any permanent or chronic form. [Six names are in this list, the chief trouble being more or less weakness of the lungs, in some cases, however, so incipient that with this early understanding and care, it may be held in check.]

"J. T. BOUTELLE, M. D.'

"This report does not include the nine girls. They seem to belong in the first class, with two exceptions, one having been kept out of school a good deal by rheumatism, another showing tendency to erysipelas, evidently of long standing. The health of both these is improving.

"A very encouraging improvement is noticed in one of the St. Augustine Indians who last year had several hemorrhages from the lungs—the immediate result of a fall, renewing an old hurt received in the West."

Since the warm weather there is a general improvement in the health of our Indian pupils, though at least one cannot live much longer.

There is more tribal than race feeling. There was at first a little jealousy on one side and suspiciousness on the other.

Until the "Wigwam" was done, students were crowded uncomfortably.

Since all are well provided for, there have been no bad signs and many good ones, as to race feeling. On our rolls are the names of Chief's sons whose ancestors have been at perpetual war; yet no difficulty has occurred. This bodes good after the return of these students.

There is no contempt for the negro. A colored non-commissioned officer has more influence over a Dakota Indian than has a Cheyenne of like position. The boys of different tribes don't like to be controlled by each other. I think they can in time be got over this.

I believe that a colored school, on the labor plan, offers better conditions for educating Indians than any others. Both races need similar methods.

There has been a very active correspondence in their native language between our Indian pupils and their friends in Dakota, resulting in a lively interest among parents and friends there, and a desire on the part of many to come here.

Each month every Indian's record is made up on a card and sent to his people through the Agent, with good effect, I am informed.

These pupils are practically hostages; their being here is a peace measure. We are not dealing with peace ful Indians, for then it would be no experiment. Over half of the 250,000 Indians in America are domesticated.

Our work is upon a wild, fighting people, who have refused peace and are trained for war. But while their children are at school they will not fight; so I am told on good authority.

In getting more Indians, the point made at the last annual meeting was the need of girls to offset the young men, for relapse was inevitable should they return home to mate themselves with savages.

Capt. Pratt was instructed to secure twenty-five girls and twenty-five boys from the upper Missouri, but according to his report to the Commissioner of Indian affairs:

"The girls from this (Cheyenne River) Agency were at the last moment led to abandon their intention through the prejudices against the Hampton Institute as a colored institution, existing in the minds of the educators at the Agency, which the officer who had undertaken the task of getting them ready found impossible to overcome in the short time at his disposal. I found this prejudice more or less at the several other agencies below, and with like effect as to girls." There is reason to believe that a different feeling caused chiefly by the letters that have passed, now prevails.

A serious objection on the part of Indians sending their girls away was that the girls do the drudgery and can't be spared. They do not miss their sons who are idle when not on the war path.

Our work for Indians is imperfect in the want of girls and in the physical weakness as above reported of many of the young men whose selection was hurried. It is a wonder, under the circumstances, that so good a class was brought. Some mortality among these youth may be expected, and should not be charged wholly to the attempt to educate them.

The want of girls should, I think, be remedied. I would recommend that the Trustees address to the Secretary of the Interior a statement of the facts and a request that twenty more Indian girls be sent here to be educated. There is not room for more than twenty more.

ENDOWMENT.

For several years I have urged the immediate need of an endowment fund of not less than two hundred thousand dollars ($200,000), the income of which

should meet, in part, annual expenses, which with 315 students (mostly board-

CAPT. JOHN HAMPDEN CHAMBERLAYNE, editor of that vigorous, independent and

term is four years, the members of the Lower House are elected for only two years; hence, in the middle of every Presidential term.

idiocies, and go to work filling up what we can all see, is a Constitutional "Hole in the Sky."

T. T. B.

should meet, in part, annual expenses, which, with 315 students (mostly boarders, the cash value of whose labor payments is 30 per cent. less than the amount credited) and 21 teachers, and all incidentals, amounts to $35,000 a year.

With the State aid of ten thousand dollars ($10,000) a year, the income from our small fund, and permanent annual subscriptions, one-half the needed amount may be considered as secure.

For the rest, much time and strength must he expended. For a good part of it there is a reasonable expectation, which is met in a surprising degree by the continued generosity of friends.

The income from a fund of $200,000 would lighten n hurden that is heavy, and reduce the risks to the school from accidents or misfortunes that a work like this should not benr.

IN GENERAL.

The military department under Capt. Henry Romeyn, commandant, has been very satisfactory. Students have been drilled, without arms, and an improved bearing is manifest.

It has been an aid to the school discipline, to the safety of its property, and has reached into details of daily life and conduct.

A good uniform has beeu adopted, and furnished as it could be paid for. It is popular, and is the best and cheapest suit they can get. One hundred and thirty suits have been made in our Industricl room, costing students from $7.50 to $12.00 apiece.

The School Band, under the charge of Mr. John E. Fuller, has attained a proficiency highly creditable to its leader.

The housekeeping and boarding department is in better condition than ever before.

The cooking class is deferred till next year. Gardening for girls is important and will, if possihle, be commenced the following session.

There was awarded to the Exhibit of the Hampton Normal and Agricultural Institute nt the Paris Exhibition of 1878, a handsome gold medal which has just come to hand.

Owing to its unhealthfulness, it was deemed best to dispose of the cotton farm "Wildwood," which was reported upon last year. It was, besides, too remote to be under the care of the administration here. While the price realized was moderate, it was, on the whole, a satisfactory transaction.

The Rev. John H. Denison, late of New Britain, Conn., pastor of Bethesda Church (undenominational), which the majority of students and officers attend, has done most acceptable service. Students of all classes, including Indians, show genuine interest in the conduct of life and in religious matters.

I nm glad to acknowledge the services of the Rev. J. J. Gravatt, rector of St. John's Church at Hampton, in taking charge of the spiritual interests of the Indians from the agencies under Episcopal care. They will thus return to their homes in full accord with the methods and teachings which will prevail about them.

Relations with the State are in all directions satisfactory. There has been no change in the Board of Curators appointed hy the Governor in behalf of the State.

Tho institution was formally complained of to the Legislature for interfering with local (Hampton) interests hy reason of its industrial operations, but without injury to its character or standing. The most intelligent element in the community, without sectional distinction, made public vindication in a handsome way.

I am more than ever convinced of the sincere interest in, and appreciation of of this hy Virginians and other Southerners, judging from the treatment of graduates, the cordiality of the press, and public officers, and hy letters from some of her best and ahlest men of this and other States.

I invite your attention to the accompanying reports of the heads of the sevsral departments which show a year of progress.

With great respect,

Your obedient servant,

S. C. ARMSTRONG, PRINCIPAL.

CAPT. JOHN HAMPDEN CHAMBERLAYNE, editor of that vigorous, independent and progressive journal, the Richmond *State*, has accepted an invitation to deliver a course of lectures at Hampton Institute upon the History of Virginia. Personal reasons will postpone the course until next fall, but Capt. Chamberlayne visited the school on the 25th and made a short address to the students. He told them of his long and cordial friendship to the school and the Southern Workman, and sympathy with the cause they represent; and, speaking, as he well may, as a representative of the governing power in the State and of the public sentiment which he has done so much to mould, he assured them that the Virginian white people believe in colored education—in universal education,—while a few talk against public schools, it is only a few; while some think Mr. A. oughtn't to be taxed to keep Mr. B.'s child in school, which seems a fair statement enough at first glance, the body of the people can see far enough to understand that that is cheaper for Mr. A. than to be taxed to keep Mr. B.'s child in jail; and further than that, the body of the people have heart and conscience enough to feel that they owe a hounden duty to its citizens to see that there shall he no one in it in ignorance. The people believe in common schools, and the State will foster them in the future as she has in the past to an immense amount.

A CONSTITUTIONAL "HOLE IN THE SKY."

The wisdom of the framers of our Constitution has, for more than a century, challenged the admiration of the world:—that thirteen Eoglish colonies could successfully declare and maintain themselves independent of Great Britain, was a surprise; but that their public men should be able to form a democratic republican goverement, that should last more than a century, has been and is, a still greater surprise.

At the close of the revolotion, the thirteen colonies were mutually jealous, or to say the least, had only a half-hearted confidence in one another. This condition of the public mind is clearly visihlo all through the constitution; it is a series of checks and counter-checks; admirable in itself, but resulting in a system, where responsibilities are divided. Tha framers of tha constitution recognized that they were to frama a government for a very jealous, very practical people, and that tha republic at which they aimed, was to he a republic of men, not of angels. In this suhordination of the ideal, and the regarding American citizens as they were, and not as they ought to he, "the Fathers" avoided the rock, on which so many attempts at republic making have split. Still, they could not banish from their minds the ideal of a perfect republic, wherein the executive, the legislative, and judicial branches of tha government would he perfectly independent of one another. The Constitution hints at a recognition of this idcal; indeed, in theory, the three hranches are entirely distinct and indefore them; consequently with a liva interest pendent; but in practice, every one at times trenches on the domain of the other. A majority of the legislative hranch can pass any hill, yet the veto of tha executiva can pravent its becoming a law: still, two-thirds of the legislative hranch can pass such a hill in spite of the President's veto; and, furthermore, tha Supreme Court can declare such a law, or any other, null and void: still further, ha it remembered, that tha gentlemen who sit on the Supreme Bench, are creatures of the Executive. All this interweaving and interlaciog of powers is only a development of the idea, that the beginnings and endings of all powers are vested in the people. Purely democratic as is this idea, it results in no branch having undivided responsihility.

Wonderful as was the fabric the framers wrought, remarkahle as was their foresight,—it was still human work, and hence not perfect. We know we cannot maka it perfect, for tha absolute is beyond us; we also know that constantly changing the processes of goverament is dangerous; neverthelcss, only hide-hound ignorance insists on having all things remain as they are, and talks ahont its heing a sacrilege, to attempt to improve on the work of "the Fathers." The all-pervading idea of our government is Union: and Djsunion could take no more ugly form, than a direct conflict hetween the Executive and Legislative Branches would exhibit. Such a condition of affairs can very easily arise, and our Constitution provides no means of loosening such a "dead lock" as would result. This I call a Constitutional "Hole in the Sky." Tha Presidential term is four years, the members of tha Lower House are elected for only two years; hence, in the middle of every Presidential term, there is a chance of the Presidential chair heing filled hy a man of one political faith, while a majority of the Representatives may he of another. A majority of Congress has a perfect right to pass what hills they please, and in what form they please; the President has an equal right to veto them: and unless the majority in Congress he two-thirds, a dead lock will at once ensue. Both branches of the government might he perfectly sincere, and each honestly believe the other to he wrong; hut, nevertheless, their integrity would neither loosen the dead-lock, nor save the country from the possibility of disunion. The President could not dissolve Coogress, and it could adjourn from day to day until the expiration of its term: neither could Congress impeach the President for doing his duty. There is no tribunal, save the sovereign People, hefore which such a difference could he adjusted, and almost two years would have to clapse hefore the question could he thus adjusted.

In England, owiog to the plan of "changing ministries," the councils of the executive and the legislative branch cannot loog be at variance. With us, it is possible that such a variance last two years. This is a grave defect in our government, and should at once he remedied: for every defect grows more dangerous, as the country grows larger; and any way, it is easier to guard against a fire, than extinguish it, if it once gets under way. An amendment to the Constitution is necessary to remedy this defect, whereby tha term of office of the President would be made to coincida with the term of office of the Members of the Lower House. Wida differences of opinion would no douht exist as to the hest way of accomplishing this result; hut in whatever way it was settlied, it would he an improvement on the present condition of things. Soma people would favor the leogthening of the Coogressional term: others would prefer the shortening of the Presidential term: whila others still, might think it hest to make both terms cover three years.

There is a good deal of twaddle talked ahout the patriotism of the American people risiog superior to party, and carrying the country safely through such a crisis. Against a foreign foc, the patriotism of this, or any other country, can he relied upon, to do a great many wonderful things: such performances call for patriotism in the ahstract, when men are called upon to sink partisanship, sectional feelings, and cherished convictions, hut few men anywhere can he found equal to the task. It is surely wise to so conduct affairs, that there will be no necessity of calling upon so etherial a force as patriotism in the ahstract.

So much for what ought to be done: and now as to when will he the best time to do it. In addition to quoting the trite adage "There is no time like the present," it may he urged, that the country, at this very hour, needs soma national issue, on which parties may divide, and which will afford an opportunity of "blowing off" political steam. Party lines are just now inextricably mixed; the policy of at least one-half of the Democratic party, on tha minor and moiibund issues, is not tha policy of the other half: and the Republican party is under no hetter discipline. As a result, we find the leaders of hoth parties, forced to the extremity of raising the ghosts of dead issues, and making them squeak and gibher at an uninterested people. All citizens would rejoica in having some live political issne hein it: they would welcome such, as a happy relief, as a pleasant change, from the present rattling of marrowless hones.

What tha people want most (in hoth senses of the word want) is a National issue: sectional issues arc dead, and should ba huried. With a National issue, we should hear no more ahout "solid South," nor "solid North," and tha rising generations might be made to believe that soma political questions were not bounded hy geographic lines. The questions, about which partisans now wrangle, are so trivial, that the mock heroics, in which hoth sides indulge, are almost laughahle. To hear tha South, with the record for valor that is hers, declara she is afraid to face United States troops, with tha odds of 50,000 to one in her favor! Is it not ahaurd? Shades of Lee and Jackson, do not listen to it. Equally ahaurd is it, to see the leaders on the other side, pretend to shiver at the idea of a "solid South." What has tha country to fear from the South, even if she he "solid?" And what is more, no impartial, intelligent man can go through the South, and not be convinced, that the South is a great deal more solid in Congress than anywhere else. The extreme of one party completely overshadowing a second, has been followed as usual by the complete overshadowing of tha first hy the second; and the next swing of the political pendulum will probahly hring it nearer to an cquilihrinm. Let the peopla insist that tha politicians stop drivelbng political idiocies, and go to work filling up what we can all see, is a Constitntiooal "Hole in the Sky."

T. T. B.

THE following letter is hy a former student of the Hampton Institute, a reliable and worthy man who writes from a village in Eastern North Carolina not a hundred miles from Hampton. He has been advised that the cost of going West for a small company would huy for them a good cheap farm in many places in North Carolina or Virginia, where the whites would be only too glad to convert their land into money, and not refuse colored customers. A diligent search for a suitahle place would not fail of success.

May 26, 1879.

General, Dear Sir:—

I am glad to have this opportunity of writing you a few lines. My main object of writing to you is to find out about the Western question. All of my people are anxious to go West. Is it good for them or not? They have worked very hard since the war and made nothing at all. All do their work year hy year, and are in debt every year; and they have decided to go West if they can get good authority, such as you and other good men that understand the question.

General, these black people are worse off now than they were in slavery. I will tell you my reasons for saying so. These Southerners do not give any one black man a chance to huy land or anything else, without a large profit—so high that the negro can never pay for it and feed his family too. I engaged to huy a piece of land hera at my own home, hut I will give up huying it if I think I can do better in the West or Africa. The colored people must take their own business in hand. There is plenty of unoccupied land down South, hut the negro cannot get it after working so hard. Please write me a letter that I can read in public and let the people know all about it. There are two or three men getting up crowds to go West. Is it to their benefit or not?

In regard to my teaching, I think I have been doing good in every day and Sunday-school. It is most time for my summer school to commence. I am a man of family now; I was married Dec. 19, 1878. I do not know what to write you about these poor colored people. *Very* few of them own land, and the white people will not sell them land; they do this in order to get the labor of the negro.

Oh! many thanks for all the papers which I have received from H., especially the *Educational Journal*.

Crops are looking splendid, especially cotton crops. I am a teacher and a farmer, doing all the good I can in all the ways I can. Excuse my long letter. Let me know what you think of the labor question.

Yours truly, E. C.

WE ARE happy to announce the promise of three tracts for the Hampton Tract Series, from the eminent and widely known advocates of Social Sanitary Science, Dr. Stephen Smith and Dr. Elisha Harris of New York city, and Dr. A. M. Shew, head of the State Asylum for the Insane, Middletown, Conn.

The cordial consent of these distinguished gentlemen to give their names and labor to the Hampton Tracts, shows how the necessity of the effort is estimated hy leading thinkers upon social science.

We had expected to begin the issue of the promised tracts before now, hut the nrduous public duties of these active philanthropists increased of late hy the organization of the National Sanitary Commission, oblige them to postpone the work for a while. And as for the months of July—Oct. the WORKMAN is reduced to its old eight page size, the publication of the Hampton Tracts in it will be discontinued until November.

The series as nt present ready, are as follows:

No. I, The Health Laws of Moses.
No. II, Prevsntable Dessase.
No. III, Dnty of Teachers.
No. IV. Who Found Jamie?
No. V, A Haunted Honse.
No. VI, Woman's Work in Sanitary Reform.
No. VII, The Rights of the Body.
No. VIII, The Two Breaths.

Send to G. P. Putnam's Son's, Naw York, or to Hampton Institnte, Price 8cts., 100 $5.00, 1,000 $40.00.

REPORTS BY HAMPTON GRADUATES.

I teach the girls at tha Bute St. school. I have girls in my grade from eleven to eight-

REPORTS BY HAMPTON GRADUATES.

We continue in this number, the reports which the Hampton graduates have recently been requested to send to the friends to whom they originally wrote their "scholarship letters."

A contribution of $70 for a year—or $210 for the three years' course—to Hampton, is called a scholarship, being the estimated expense of a student's schooling. His board, washing and such personal expenses are met by himself, at the rate of $10 a month, paid, on an average, half in work, and half in cash.

Every contributor of a scholarship to Hampton, is put into direct communication with the student to whose benefit the gift is applied, receiving a letter from the young man or woman, giving some account of previous life and experiences in the struggle for education. These letters are called scholarship letters, and have proved a very efficient means of deepening the interest and sympathy of many in the people with whose life and efforts they are thus brought face to face. This interest has continued often for years, as is shown by frequent inquiries after the progress of *their* students after leaving school and going out into the field of work for which it was meant to prepare them. To meet such inquiries, many of the 218 graduates with whom we are in communication at present were requested recently to write again to those who had thus assisted them, and give some account of themselves and their work. In response to this request, a great number of letters have been received which would be of interest to many besides those to whom they were addressed, who will no doubt have no objection to sharing them. They are given without correction.

COUNTY AND CITY SCHOOLS.

The experiences of the graduate teacher in county and city schools are given in striking contrast by a young woman who has done good work in both:

NORFOLK, VA., *March* 21, '79.

Kind Sir:—

You may remember that I wrote to you in '74. I graduated that year. Since my graduation I have taught three different schools.

I found teaching quite different from going to school. I wish you could have seen my first school-house. It was an old log hut. The chimney was laid upon boards which rested on the rafters. Whenever we had a good fire, the boards would catch fire. The clay that was between the logs would fall out and leave holes large enough for a dog to get through. I had about sixty pupils. I found them quite earnest workers. They studied very hard and behaved nicely. I found it pleasant work to teach them. I taught a term of four months and left with much sorrow. I have never become so much attached to any school since.

The next school I taught was in a church. The school board paid the colored people five dollars a month for the use of it. We had no school furniture whatever. It was a frame building, with neither doors nor windows yet. I opened school the first of January without a stove. Some days it was so cold that I had to let the children make a fire out of doors and sit on the logs to keep warm. We succeeded in getting a stove about the first of March.

About this time, a kind friend in Ashland, Mass., sent me ten dollars, which I expended on this unfinished building, hanging doors, putting in windows, etc. After we got everything straight, warm weather came, and we got along nicely until the term ended. Through this same friend, some ladies sent me a barrel of clothes for my scholars, which I found very acceptable. As my school-house set in the woods, I had frequent visits from the snakes and lizards in that vicinity.

My scholars seemed to learn rapidly. At the end of this term, June, '76, I left them. I hear from them every little while; they are still going on.

During my vacation I received an appointment to a public school in Norfolk. When I came here to be examined, I found five other teachers. All passed the examination and received a certificate.

There are eight colored schools in the city, all taught by colored teachers, five of whom are graduates of Hampton. Six schools are in one building on North St., and two in the house on Bute St. The boys and girls are taught separately. In the North St. school-house we have the primary schools, and the intermediate grades and the lower grammar grades. The Bute St. school has the higher grammar grade. The rectors of our school are students of Howard University.

I teach the girls at the Bute St. school. I have girls in my grade from eleven to eighteen. I teach reading, writing, spelling, arithmetic, geography, grammar, U. S. History, and natural philosophy. My girls do well for their chances, for most of them have no help at home and yet they study very hard. We have an examination every five months. We teach ten months, from the 1st of September to the 30th of June. I have two girls at school in Washington, and five or six at Hampton, all doing very well, I am told.

I find that school-teaching is like everything else; it has its drawbacks; but there is nothing that I like so well. I only wish that my education was more complete, that I might be able to do more good in the world. I study some and try to improve myself all I can, as I cannot afford to go to school now.

Hoping that you may not think education wasted on all of the colored people,

I am yours, most respectfully, M.

AN EX-CONFEDERATE SUPERINTENDENT.

Another young woman, teaching in one of the same set of schools, adds this pleasant testimony to the kindness of the Superintendent, (an ex-Confederate Brigadier General), whose interest in the colored schools and their teachers is often witnessed to by the Hampton graduates:

"We have a very kind Superintendent, who visits the schools twice a month and sometimes more. Our salary is $40 a month, always paid promptly by the 15th of the following month after due, which is very good, as most of the country school teachers have to wait for their money so long."

TEACHER, PREACHER AND CARPENTER—A CIRCUIT WALKER.

The good grit and true missionary spirit of the writer of the following letter will be appreciated by all who admire the heroic pioneer preachers of the West. Just such men are needed all through the South as well:

BIG LICK, ROANOKE CO., VA., *April* 18, '79.

Esteemed Friend:—

Yours of March 7th requested me to do what I was just intending to do. You must excuse me for not writing sooner. My school was about out and it kept me very busy to prepare for its examination and exhibition which came off the 11th inst., and I think was very nice. I was also about *eighteen miles from where any stationery could be obtained*, which kept me from writing till now.

I was teaching in Franklin Co., Va. I am also Pastor of three Missionary Baptist churches which are five, ten and eighteen miles from where I taught, which imposed upon me a very hard task. All of these points had to be promptly met and are in a very mountainous country. It is traveled on foot. After the close of my school on the 11th, I preached on Sunday, after walking about fifteen miles on Saturday, and then walked six miles and preached on Sunday night, and on Monday morning I went to Rocky Mount at Franklin Court House, and back Tuesday, the distance of sixteen miles.

And after all, I got no money. The treasurer told me he had no money, and had not finished paying for the year '77.

The school that I taught only paid me fifteen dollars per month. The trustees said they had not the money to pay any more.

I could have gotten twenty-five dollars at the school that I taught the previous term at thirty dollars, but as they were anxious to have me teach and had no school of consequence, I agreed to teach the school for seventy-five dollars, which I did and had a nice and pleasant session.

I have been teaching ever since I left Hampton. In 1874, I worked at the carpenter's trade during the summer, and in the fall I taught a six months' term. In the spring of '75 I commenced exhorting, and was licensed (to preach) June 12, '75, by the church I belonged to. I continued to teach and preach, till in March, '77, the church called a Presbytery of Elders who ordained me to the full work of the ministry; and I have been doing all I can ever since for the upbuilding of my people. I have taught every year since and studied harder than I did while in school, trying to sustain my title of Elder. I have a few scattered books of different kinds. The best are four volumes of T. Fuller's works and an Encyclopedia of Religious Knowledge. I expect to devote my whole life to this work, if the Lord will help me. B.

TROUBLE OVER.

THE writer of the letter from which we make the following extract, is one of the older graduates who can remember the war and slavery time from which we are allpping so fast away. His first effort to write a scholarship letter three months after he entered the school, was so perfectly illegible that no one was able to decipher a single word of it. He studied hard and has made a man of himself. It is pleasant to hear that his troubles seem to be over.

———, N. C., *March* 21, 1879.

"About troubles, I have not had any since I have been teaching either with parents or outsiders. If anything, I have gained friends. I will give you a little sketch of my life. I was sold four times. All of my owners were very bad to me. I did not have any chance of learning anything in a book, I did not know my brothers and sisters, not until after the civil war. My father heard of me in the time of war, and he thought after the war he would try to find me. He heard of me living in Georgia, so he sent an inquiring letter to see if he could not find me. I am proud to say he was successful. Oh I was so glad to hear of my dear father and mother whom I had been away from so long. My father and mother are both living, right at the same place they were living when I was sold from them.

Several of the colored people own land down here."

AMONG THE MOUNTAINS.

Most colored graduates take to teaching as their natural vocation, but sometimes it seems "best to begin with a little aversion" and find the hills on the first of the road. The spirit rises to meet the emergency, and success is deserved and all the sweeter, as it has proved to the young man who writes the following graphic description of his experiences in the mountains of Virginia.

ACCOMAC CO., VA., *March* 21*st*, 1870.

Dear Friend:

I graduated from Hampton in '76, and since my graduation, I am happy to say, I have been engaged in teaching. Before leaving school, I had an idea that I would abhor teaching and that I would seek other employment. I spent my summer at Saratoga, and when I arrived at Hamptos in the fall a lady friend of mine informed me that she had a school for me, and that I must accept, for she had sent in my name as an applicant. I soon decided to try it one term at least. I went South to see my parents. I had not seen them for four years, and after spending only four days with them I had a letter saying for me to report to Pulaski Co., Va., for a school at once. I left the following morning to commence my new work. I arrived at Pulaski Co., saw the Co. Supt. and he told me that I could not open school for 16 days. I waited patiently 12 days, and then decided to go down to the place where I was to teach, four days beforehand so as to give the people notice. It was twelve miles by the railroad. When I arrived it was about 5 o'clock P. M.

TOO YOUNG.

I saw a few colored men at the depot. I told them I was sent as their teacher. I noticed they examined me very closely; and I soon heard one say to the other, "Why, he is too young, he is nothing but a boy; he can't teach our children." One of them came and asked me my age; I told him 18. I asked him who the leading colored man was. He told me who was mostly interested in school matters. I started for the man's house. I asked his wife for her husband, and she informed me that he was off hunting for his hogs, but if I went to the next neighbor's he could give me some information. I thanked her and went as I was directed, and I was informed that, that gentleman wasn't home, he had gone to "hunt for his hogs." I went to another house and to my astonishment *that* man had gone to "hunt for *his* hogs."

TRIALS AND TRIBULATIONS.

I became discouraged. I met two men and I asked if they knew where I could be accommodated for the night, that I was the school teacher, and did not know where to go. They told me that they could not tell me. One said he would take me in, but his wife was sick. It was now half-past six o'clock. I went back to the depot and the Agent told me the next train would not pass till three o'clock in the morning, and as it was nothing but a flag station she might not stop. I began to think I was not the one to be a school teacher. I said to myself this is trial and tribulation. I had but one more thing to do, and that was to button up my coat and walk twelve miles back to ———. I soon started on my lonesome journey. It was all among the mountains; something that I was not used to, I had some fearfully dark railroad cuts to pass through, and was frightened all of the time. I arrived at about 9 o'clock. I had two lonesome miles through the heart of the mountains to tramp further, and I felt I had rather do anything than to walk it alone. I tried to hire a conveyance, but everything seemed to be occupied.

GHOSTS AND CATAMOUNTS.

I saw a colored man and I asked him if he would go with me a little way, that I was a school-teacher, and a stranger, and if he would go, I would pay him the sum he charged. He remarked "I would not go that road to night as dark as it is, for five dollars, for it is dangerous, there is often *something seen*." I said "what?" "Ghosts" he said. "Oh, I am not afraid of ghosts. I am afraid of wild animals and such like." But I saw that I should have to go alone, so I started. I got almost three-quarters of a mile in the mountains, when while looking on the right hand side, I heard something on my left. I looked, and there, within about six feet of me, was a huge animal called a catamount; it was eating a bone. I saw it first and quickly jumped behind a tree. It came into the road, looked as though it knew something was about, then went back to eat its meat. I jumped from tree to tree until I had a chance to run, and that I did. I arrived safely in ———, about 10 o'clock, the next day. I told the Superintendent to please write and get me a boarding place. He did so, and I am happy to say I enjoyed my school exceedingly after I commenced. I began to feel as though there was a great work for me to do; as soon as I saw my race's great need of education, I put both hands to the plow and now I love my teaching a great deal more than I ever expected, although I have never gone back to ——— since. The fall of '77 I was sent on Eastern Shore, Va., where I am now. When I arrived there, I hadn't any trouble.

REMEMBERING THEIR COLONEL.

On Sunday morning I went to church. I spoke to the people and told that I was from Hampton, and that Gen'l. Armstrong sent me as their teacher. As soon as I spoke his name, one of the pillars of the church said, "my brother, who did you say sent you?" I repeated my words. That was sufficient. He got up and said—"Brothers and sisters, I know Gen'l. Armstrong; he's a great, good man. He was my Colonel in the army, and he is spending his life for you and me, and if he sent you I know you are a good teacher." After such I was welcomed and they asked all about their Colonel and I had several to send their love to him. I never had any trouble. I had a fine school.

SUNDAY SCHOOL AND TEMPERANCE.

I soon organized a Sunday School, and invited old and young. Boys and young men, who had spent their Sundays playing marbles, began to come to Sunday-school, and now I have organized two others near me; one five miles from mine and the other twelve miles. I expect to visit one to-morrow as. A friend in Boston sent books and papers, and I have divided them among them so as to get them all started as well as possible. Also I have a temperance society in my Sabbath school which has sixty on roll. It is very seldom I see a colored man intoxicated. In fact, I don't remember seeing one in two years, but nearly every Saturday, you can see some white men drunk. I have gained the respect of all. I have nearly as many whites to come to me as colored. I have taught here nearly six months, and Virginia seems as if she can't pay her debts. I haven't had one cent of pay as yet, and I think it is doubtful about my getting it soon without a discount of about 25 per cent. My school will close April 14th, after which time I will take my departure. I will go to visit Hampton and then start North somewhere to get employment for the summer. I had to leave my Sunday School, but I have a Superintendent who I hope will discharge his duties during my absence. I will close for fear of worrying you.

A GOOD NAME TO FIGHT UNDER.

I am truly glad that I was ever a member of Hamptou school. The State of Virginia is feeling her good so much, if a student is from Hampton school, as soon as he tells it, the word Hampton fights a battle for him, and I always take pleasure in telling that I am a Hampton student. I do believe that every other graduate from tha Institute feels greatly indebted to the friends who supported them, and we will try and show them that their time and money have been spent to some advantage towards the promotion of the colored race.

Hoping to hear from you any time,

I am yours sincerely, M.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

THE QUESTION OF DISCIPLINE.

"Don't you have trouble in controlling the Indians? How do you manage them?" These are questions frequently asked.

Soon after the arrivsl of the rather wild looking set of long-haired and blanketed Dakotas, five or six of the officers of the school bad occasiou to visit a farm in the neighborbood, and rnde out to it together, on horseback. The progress of the unusual cuvalcade through Hampton was sufficient to start a rumor which had some circulation, that the noble red men had all fled to the woods, and the valiant officials taken the war-path in pursuit. Similar rumors were not uncommon in St. Augustine while the Indian prisoners were there, I understand.

The question of discipline, though without the populnr fear of concealed tomahawks und scalping knives, was from the first, indeed, the subject of some anxiety.

With the colored student, the strongest possible influence that can he brought to hear is suspension or expulsion from the advantages for which his chances are so few and so highly prized. A refractory Indian, on the contrsry, cannot be sent a thousand miles home to his woods—perhaps if he could he, he would not object—nor turned adrift for awhile in the school of experience. A guard-house was established with the military organization of the school, and accepted by the student cadets as a feature of military discipline not too degrading to the self-respect of an American citizen. The St. Augustine prisoners of war had, of course, grown somewhat familiar with it in Florida. But howit would suit the constitution of these children of the wilderness was n question, and with their conviction against physical coercion of any kind, the school officers would find it hard to be at last shut up to it.

The first case fnr discipline among the newcomers was therefore looked for with some anxiety, It camo in the person of one of the brighter half of Dakota youug men, who, attracted hy the novelty of the workshop, stayed awey from a class two days in succession, to slip in with the working squad out of his own hours. Admonished therefor, he proceeded to show his independence und revenge himself upon the teacher hy "cutting" the same class several more successive recitations. In the temporary absence of the interpreter at Washington, it was thought hest to dsley any further notice of the case until there could be a thorough understanding. As soon as the interpreter returned, the young man was called to an interview with his teacher, and after a quiet talk acknowledged that he had been wrong and, promised to do right in future.

That it was only a potched up peace and he bad been let off too easily was soon shown, however, hy his very deliberetely breakiug his promise. The case had then, of course, to be reported to the Principal, with some anxiety and uncomfortable recalling of conventional ideas as to Indian powers of holding out. All the Indian boys were brought together in their awa assembly room, and the delinquent called out before the Principal, Commandant and teacher who had reported him. The Principal explained the case to the students, who, like eny other set of school-boys, most virtuously agreed in condemning their comrade's fault. The offender, allowed to speak for himself, made no excuse whatever and acknowledged himself in the wrong. But when he was told thet though he had broken one promise, this heing the first time he had heen reported, no further notice would be taken of his fault, if he now agreed to return to his duty and give no further trouble, an ominous silence followed. Perhaps three minutes passed, and tho young brave stood with flushed face growing darker every mament, a picture of grim determination. He was quietly told that he was not desired to answer till he could do so from the heart, and that he might take the next day to think of it, going neither to his classes, work or play, or to his meals which would be brought to him. If he could not come to a right decision in one dny, he might reflect upon it the next day in the limits of his own room. The sentence was carried out, and happily one day's meditation was sufficient. When sent for to the Principal's offico at its close, he came with a very different face, and desired the interpreter to say that his heart was good and he had thrown all the bad away. His conduct ever since has thus fnr confirmed his declaration. In further conversation he expressed a desire to he given a room outside of the Indinn cottage, so that he might hear more English. While his wish was granted, he was warned that disobedience and neglect of duty would stand directly in the way of his learning English, as he had found it to do for a day.

I have gone into these details simply hecause it may be regarded as a test case. Others may need some ingenuity of treatmeat, but it is very satisfactory to find that the young braves are susceptible to moral suasion, and particularly to such a worthy motive as the desire to get on in English.

It is only fair to say that the general spirit manifested among them has heen of docility and interest in their study and work, and there hasb een no trouhle of any account with any of them.

INDIAN SMOKING.

When the first seventeen Indian students arrived at Hampton in April, 1878, they were notified tbat they must, while at the school, give up smoking. They came in company with the entire hand of sixty-two from St. Augustine, Fla., where they had been held as prisoners of war for over threo years; the latter being on their way to their old home in the Indian Territory; and the studeuts could go home with them if they preferred the "weed" to the school. Each one, after muture deliheration, with a sigu and a grunt signified his pledge aot to use tobacco.

The following incident illustrates their fidelity:

In December the officer of the guard reported having found Soaring Eagle smoking, and S. E. was called to account. He said, "Yes; I smoke." His attontion was called to the promise to give up smoking, made when he first arrived at the school. He replied in a sad, earnest manner, "I have not forgot, — ——! I have not forgot." "Then why did you smoke?" was asked. He replied, "Long time me little boy, I smoke all time. Sometime uot eat, long time hungry, I smoke, aot hungry. Me sick, I smoke, uot sick. Just now a little sick, I smoke. I do not forget." There is no evidence that he bes violated his pledge a secon time.

THE CHARM OF A BOOK.

The mystery of "the paper that talks" has always been attractive to the redmen. They are very eager to get a book into their hands and naturally impatient of preliminsry steps. "If I cannot read when I gn home, my people will laugh at me," said a young brave. The letters received from the agencies show thet their friends are as eager as they are. This very excellant ambitinn is taken advantage of as far as possible. The only trouble is that primary reading books are so well adapted to little children that they are less useful for older minds, and it is thought better to give them, in part at least, lessons from the board on words and phrases which come into direct use in their daily life. With this practice they are making very marked progress, apparent to all who watch them from week to week, though their great natural shyness and reserve makes them a not very reliahle class to show to company.

To furnish them with a more nourishing mental diet than the children's readers supply, leaflets have been provided speciely for the most advanced class, with short historical anecdotes, facts of science, and simple Bible teachings. These aro read with interest. But after all, they have not quite the charm of books. The gretitude of the Floridas, when a geogrephy was first given to them after they had been taught orally from ueps for some months, was really touching. As fast as they can make them of use, other books will be provided for all. Meanwhile, the first and second and third readers are assiduously pondered. This worship of a book is not confined to the Indians. The object-lessnns given to the little childreu of the Butler School this winter by a trained teacher from Col. Parker's famous schools in Quincy, Mass., have proved quite trying to the faith and peticnce of some of the parents, who thought because the little ones did not bring home books to study, they could not ho learning anything.

LETTERS HAME.

A letter we published last month from a lady teacher at Fort Berthold Agency, remarked, "I think Arahotchklah's father will have the hysterics when he gets Ara's first letter." Perhaps this forswarning may save the old man from such an attack, but a letter is ready for him. Monthly reports of general standing in work, study and conduct and condition of health are sent home for each student from Dakota. On the back of each report card is "room for remarks," usually filled up by some teacher; but the last time a happy thought occurred to some one, that it would be a pleasant thing for the students to write a few words themselves, which they are now for the first time able to do. They seized tbis idea with great delight, and had a very "heppy meeting" in the school hours devoted to it. The phrases are, of course, such as they have been learning to use for some time, and there is no great variety in the letters. Still, they chose from them themselves, and re-combined them to some extant, and no one, I think, said anything he did not understand and mean.

Here is Ara's:—

"I nm Arihotchksah. I like to go to school. I can speak English a little. I am very well. I like workshop. I like Hampton school."

INDIAN BOYS AT HAMPTON.

This group of the smallest Indian boys from Dakota, was taken just after they were brought to Hampton Institute, Novembor, 1878. Their names and tribes aro as follows beginning each line from left to right, the first three, second two, and third one on the stool.

Daniel Chantay Wahneechay, from Cheyenne River Agency, fourteen years, Minniconjoe Sioux. Charley Stone, Unkpapa Sioux, fourteen years old. Leroy Shutashnay, fourteen, a Two-Kettle Sioux from Cheyenne Rivor Agency. Charley Tatahnkaskah, twelvo years old, Sans Arc Sioux from Cheyenne River Agency. Edmund Bishop, from Yankton Agency, a Yankton Sioux. Arihotch-kish—Loug arm, thirteen years old. Gros Ventre.

INDIAN BOYS AT HAMPTON.

THE UNITED STATES PLEDGED TO EDUOATE THE INDIANS.

Appeals to private benevolence for help in educating and civilizing the Indians, reveal a prevsiling feeling that the Government is responsible far settling the Indian question somehow, whether by bullets or schaol books.

But if the Government is the people, then the people are responsible and should make themselves familiar with Government pledges and know how they are fulfilled. The demanstrated success of experiments like that at St. Augustine and this at Hampton, has done and will do more than any speeches can, to rouse and encourage the Government to the fulfilment of its pledges. And this makes their success the more impartant snd worthy of all exertion.

Fram a recent report to the Depsrtment of the Interior, we extract the following items of information in regard to our Indian treaties, which may be to many as novel as they are striking:

DEPARTMENT OF THE INTERIOR,
OFFICE AF INDIAN AFFAIRS,
WASHINGTON, *April* 28, 1879.

TO THE HONORABLE, THE SECRETARY OF THE INTERIOR, Washington, D. C.

Sir:—

By reference to the treaties now in force with our nomadic tribes, it is found that a clause, in ilks terms, in reference to education appears in seven (7) of our most important onas, while manifestly the same spirit of educational help from the Gosernment, pervades them all.

Ons of the clauses referred to, is as follows (see rsvision of Indian treaties, pags 132, Treaty with the Cheysnns and Arapahoes, 1868):

"Article 7.—In order to insure the civilization of the tribes entering into this treaty, tha necessity of education is admitted, especially by such of them as ere or may be settled on said agricultural reservetion, and they thersby pledge themselves to compel their children, male and female, between the ages of six and sixteen years, to attend school; and it is hereby made the duty of the agent for said Indians to see thet this stipulation is strictly complied with; and the United States agrees that for every thirty children between said ages, who can be induced or compelled to attend school, a house shall be provided, and a teacher competent to teach the elementary branches of an English education, shall be furnished, who will resids among said Indians and faithfully discharge his or her duties as teacher.

"The provisions of this article to continna not less than twenty years."

These treaties were all confirmed in 1868, and, as will be seen, the educational clause is respectively limited to twenty years. The *intent* was unquestionably to gether into schools, *all* of the children of the tribes who becama perties to the treaties. By reference to the last annual report from this office, it will be found that the total population of the tribes having this clause in their treaties, on the dete of that report, was about 71,000, and their children of school age numbered 12,000; and that ten years after making these treaties, of this greet number of children entitled to educational privileges at government expense, only 944 were really provided for.

The following extracts from said report have a direct bearing upon this subject, and merit speciel attention in this connection:

"The results, efter trial during the few years past, of the peace policy, imperfectly carried out as it has been, prove beyond a doubt that the eventual civilization of the Indians may be reached through the education of their children; and further that it can be brought about more speedily by that method than by any other. Many adult Indians can, of course, in the meantime, be taught to raise their own subsistence from the grouud, to herd cattle, or to do mechanical work; but while self-support is one of the cardiual points to be reached, civilization, the ultimate end, can only be accomplished through an education of the head and heart. The Navajoes and Moquis Pueblos are capable of self-support, but having no schools, are still degraded heathen, apparently no nearer civilization than they were half a century ago. Such education can be given only to children removed from the example of their parents and the influence of the camps, and kept in boarding-schools. Experience shows that Indian children do not differ from whits children of similar social status and surroundings, in aptitude or capacity for acquiring knowledge; and opposition or indifference to education on the part of parents decreases yearly; so the question of Indian education resolves itself mainly into a question of school facilities.

"But the figures contained in the tables herewith, fall fer short of indicating a purpose on the part of the Govrnment to make this question one of speedy solution.

"At a low estimate, the number of Indian children of school-going age, exclusive of those belonging to the five civilized tribes of the Indian Territory, may be placed at 33,000. Of these, not less than 8,000 could, within a short time, be gethered into boarding schools, except for the fact that the teachers are yet to be employed, the school-buildings are yet to be erected, and the funds for both, and for feeding and clothing the scholars, ere yet to be appropriated.

"The whole number of children who can be accommodated in the boarding-schools now provided at the various agencies, is only 2,589. To these may be added 5,082 more, who can find room in day schools,—those expensive makshifts for educational appliances among Indians,—making a total of only 7,671 Indians who have yet been placed within reach of school facilities. And when it is considered that the fifty youth who spend from ohs to *three* years in a boarding-school, must step from thet into the social atmosphere created by 500 youth and 2,500 other members of the tribe who are still in ignorance, it can readily be seen that the elevation of an Indian tribe is being attempted by a method at least as slow as it is sure; and that what should be the work of a yeer will be protracted through a decade, and the work of n decade through a generation.

"In many cases this policy is not only shortsighted, but in direct contravention of treaty stipulations, as, for example, the treaty of 1868, with the Kiowas and Comenches (heretofore uoted). The one boarding school at the Kiowa and Comanche Agency, which will accommodate 75 pupils, is filled, and the othsr 425 children are waiting their turn. To comply with treaty stipulations with these two tribes, would more than absorb the entire fund appropriated for the civilizetion and education of all the Indians in the Indian Territory, exclusive of the five civilized tribes. Even more glaring violations of educational clauses in Sioux treaties might be cited."

The experience of tha Department has been that the best results are obtained by a removal of the children from all tribal influence during the progress of education, so that educators can command all the timo and attention of their pupils.

Yonth so educated return to their tribes as teachers, interpreters, and examples in farm-

ing, &c.; and if properly sustained and guided thereafter, prove far more effective guides than whites of the same capacity.

Nothing is more essential than that Indian youth while passing through school, should have thorough instruction in some practical branch of labor that will meet their needs for obtaining a livelihood after leaving school.

Very respectfully,
Your ob'd't servant, E. J. BROOKS,
Acting Commissioner.

WHATEVER may be one's theory about educating Indians, will not the following letter convince any reader that it is worth while training the young man referred to?

His education has been already provided for by two young ladies, each paying one-half of his expenses, which are $120.00 a year besides his clothing.

We say *training*, not teaching, because the Hampton method is to fit both head and hand for usefulness, and to send the Indian back to his home able to *do* something at the outset, and not with a brain full of facts and ideas that he can put to no use.

The failure of Indian education in the past is due, in great measure, to the neglecting the dictates of common sense in their education.

The boy referred to will come, and wishes to bring a companion who is also very highly spoken of by Mr. Wheeler. Who will help him?

KESHENA, WIS., *Feb.* 12, 1879.

Gen. S. C. Armstrong,
Normal Institute, Hampton, Va.,

Dear Sir:—

I have been deeply interested in the work which God has given you to do in educating the Indian. I am teaching in a boarding school among the Menomonee Indians, and have in my school a boy in whom I think I see the making of a noble and talented man, if he could be placed under favorable circumstances. He is fifteen years old, speaks good English, is a pretty good reader and writer, has gone to Compound Proportion in Roy's Arithmetic, and has a good knowledge of geography; has a natural genius for drawing which should be cultivated. He is altogether in advance of any member of the tribe, either youth or adult.

His father is a Roman Catholic, though not a very faithful one. This tribe is one-half Roman Catholic, and one-half Pagan.

I think I can secure the consent of the parents to send the boy away to school, and would like to place him in your care. Please tell us whether you can take him, what the necessary expenses will be, exclusive of clothing and travelling expenses, and what share he can reasonably earn himself ont of school hours, and also if there are any funds at your disposal which could be used in his support. Do you know whether the Government would do anything toward his support?

Please reply as soon as convenient, and direct to yours respectfully,

W. W. WHEELER,
Keshena, Wisconsin.

WE trust that the following extract will serve to confirm the faith of any who may distrust the wisdom of the Hampton work for Indians. Major Thomas is one of the best men in the Indian service, and is in charge of unusually fine and capable tribes.

ABSTRACT OF REPORT OF MAJOR B. M. THOMAS, RELATIVE TO HIS VISIT TO HAMPTON, VA.

While at Washington, I had the advantage of a visit to Hampton Agricultural Institute, Va., where there are sixty-seven Indians being educated in company with two hundred and fifty negroes.

I made the visit by direction of the Department and in company with Gen. R. H. Milroy, Indian agent. We were most kindly received by the officers of the Institute, who seemed to take pleasure in showing us all the departments of the Institution in everyday working order. I was astonished and very much gratified by what I saw. The Institution is well equipped, remarkably well managed; every one seems to be happy, and all are learning.

Such an Institution certainly is the best possible place to educate Indians. The Indians there are learning faster and more things that will be of advantage to them, than they could possibly learn in their own country. I respectfully recommend that this system be enlarged till Indians from all the tribes can be educated in the East. * * *

Very respectfully,
Your ob'd't servant,
BEN. M. THOMAS,
U. S. Ind. Agent.

PATHETIC LETTERS FROM INDIANS.

The following pathetic letters from two of the St. Augustine Indians who returned to their tribe, have been received by Capt. Pratt. He hesitated at first to publish them, unwilling to encourage or seem to encourage anything like begging. But the case has this peculiar condition,—the men who, after long suffering and struggling, make this appeal to one who once was their "father and was good to them," have little or no chance of earning money, no tools to farm with, no work to get. A letter published some time ago in the WORKMAN from "Chief Killer," moved some friendly hearts in his behalf. Inquiry was made of Capt. Pratt as to the best way of sending a box of clothing to him, and he wishes to say for the benefit of others who may be moved to active sympathy by these letters, that a box or barrel sent to the address given below, with a letter, would be distributed according to the wishes of the giver.

Another very significant point suggested by these letters is, that, unless some provision is made, the Cheyenne and Kiowa students who have been making such progress at Hampton for a year, in the English language and civilization, must go back to find the same depths of poverty, and lack of work and opportunities awaiting them.

Anything for the Kiowas or Comanches, to care of Agent Hunt, Ft. Sill, Ind. Ty.

For Cheyennes, to care of Agent Miles, Darlington, Ind. Ty.

UNITED STATES INDIAN SERVICE,
CHEY. AND ARAP. AGENCY, IND. TY.
March 22, 1879.

CAPT. R. H. PRATT, Hampton, Va.,

Dear Friend:—

A long time ago you were my father. You were very good to me. Since I have been here I have never written to you. Now I want to send you a letter. I want to tell you that the white man's road which a long time ago you gave to me, I have not thrown away, but am still holding to it. The paper you gave me with the verses from the Bible, I have not lost, nor what the Bible says in those verses. I know they are good talks. I have tried to give that road to all the Cheyennes. Have worked hard to get them to take hold of it. Have taught it to my child, and all the English I know I have talked to my son, and he now understands most of it and will follow it.

Most all of the Cheyennes want to take hold and work and make corn, and live like white men. Many are now making ready to plant corn, and others are breaking land. I am going to give my boy to the agent next week to put into school.

The annuity clothes we are issued are not good. Very soon they are worn out. All my relations hold to the white man's road. All are willing to work. If you could get me a suit of white man's clothes, I would like to have them. I have my soldier's uniform yet, but it is worn badly, and the clothes the agent gives me do not wear long, and I can get no more till next winter.

When we were in Florida with you, we were not hungry or poor; the white women had all white people were our friends; but here we are often hungry and always poor.

Please write me soon,
Your friend, BUFFALO MEAT.

FORT SILL, *April* 29, 1879.

Dear Capt. Pratt:

You first taught me the white man's road. I am now very poor and disconsolate. All you gave me is gone, and if you can send me any clothes or something to work in I will be thankful. I have no tools to work with, or plows to work the ground to make corn. Can you send me some? I am again a *Comanche*. I was compelled to go back to the old road, though I did not want to, but I had no pants and had to take leggins. I never have any money, for I cannot earn it *here*, and my heart told me to come to you for help, and perhaps you could send these things to me. I have no piece of ground for my own, and now when I want to work the white man's road and learn it, I have nothing to do it with. I am working first on this man's ground, then on somebody else's, and I am never settled in any place. I have made a great many rails, so you see I have not forgotten what you told me. I haven't a horse of my own. I am very poor. When you come to see us I shall have nothing to show you—no corn—no house—nothing at all. This is a poor country and a bad ground. I don't sleep well, I am afraid. When I was with the white people I was happy. Couldn't you give me a poor old house of some kind? I heard that I was to have a house on the Washita, but I don't want it there. I want it here where I have always lived, and where my people have their houses. The white people in this country are crazy. This is all.

From QUOYOUAH.

DIED at Yazoo City, Miss., March 29th, of consumption, Eliza Nottingham, beloved wife of Samuel C. Windsor. Mrs. Windsor was a gradnate of Hampton Institute of the class of '72. Mr. Windsor was graduated in '71 in the first class that went out, afterward continuing his studies at Oberlin. Since their marriage, he and his wife have worked faithfully as teachers in Mississippi, often in danger and much difficulty. In his present great sorrow, which is aggravated by his own ill health, Mr. Windsor has the earnest prayers and sympathy for which he asks, of all his friends of Hampton Institute.

The writer of this letter was a Hampton student of even less than ordinary promise, but, like many whose school standing was not high, he has been conspicuous out of school.

We publish his letter as a phase of the experience of a colored boy whose little knowledge among his ignorant people gives him a prominence that is impossible for such a youth in intelligent communities:

———, N. C., *March* 26, 1879.

Gen'l ——— ———, *Esteemed Sir*:—

While sitting in my school-room to-day, thinking of my many friends, I, lonely,—yes, very lonely—thought of you, and I could not help from shedding tears. Dear Gen'l, please believe me that it was no small thought with me. When I sit and think how kind you were to me while I was a member of your institution, it makes me feel myself much in your debt. Dear sir, I feel myself in debt to you now.

If it is your pleasure to read any of the North Carolina newspapers, you will see my name appear before you very often. Dear sir, I feel my need of education, and only wish that I could return to Hampton and finish my studies; but sir, I cannot come now: it takes all that I can make to pay my mother's doctor's bill, and to keep me something to wear. I owe to your school some money, and I shall try to pay it the 30th of May, when I come to see you. Dear General, I can never forget you, and only wish that I could be with you again. I often, yes, very often, think of you since I left school. I have met with a great success in this life. I am pleased to say that all people seem to like me, and I get along well. It all came from the advice you gave me. Dear friend, please remember me to your wife, and to Gen'l S. C. A. I will try to come up on the 30th day of May. General, I would like to come back to school. I have three churches in charge, and I do feel my need of education. General, please write me a long letter, and give me the news of your school. Please send me one copy of your paper and catalogue.

I am only twenty-two years of age. I have been a member of the Legislature ever since I was twenty-one. But I am done with politics and shall never accept of the nomination any more. I cannot serve two masters at once. Please remember me to Miss M. and sister; I would be glad to see them. I am this year appointed as Sunday-school State Missionary. My mother has been sick every day since I left your school. Old Mr. ——— is dead, and also my brother.

Your friend, S.

On the Farm.

From the American Agriculturist.

Mowing Machines are now indispensable. The scythe may be used for cutting about fence corners when the wasteful zigzag rail fence is used; but so far as other uses go, it may be hung up out of the way. In choosing a mower, the chief points to consider are lightness of draft, strength and simplicity of construction. With these, one has economy in use, durability, convenience of handling, and ease in keeping in order—points of the utmost importance. There is one other point worth noting, which is safety in case of a run away, or when mowing a rough field, and there is danger that the driver may be thrown upon the cutting bar. The cutting bar should always be well in advance of the driver, but never directly ahead of him.

Curing Hay in the cock is preferable to sun drying. The sweating and fermentation improve, and prevent heating in the mow or stack. The writer prefers to put up hay, after the dew is off, in moderately large cocks,—four feet wide and high,—after it has lain spread in the sun for one full day. It may thus stay safely for a week, if necessary, and a hay cap will protect it from a 24 hours' rain. The day it is drawn in, a man should start early and throw open the cocks, to get a final airing for for two or three hours before it is taken up.

A Horse Fork should be in every barn. In the hurry of haying, the cost of a horse hay fork may easily be saved in one week, by rapid unloading.

Corn,—Late plantings of corn may be made up to the middle of the month. Some early sorts, and some new varieties which claim to be extra early, may be tried as an experiment. It will pay very well to make late plantings up to July for fodder, planting in drills 3 feet apart, with about 12 grains to the foot in the drill. The large kinds of

Sweet Corn is the best for fodder. Triumph, Marblehead, Mammoth, and Stowell's Evergreen, are suitable for the purpose. The common opinion, that sweet corn is better for fodder than field corn, is well founded; but there is some difficulty in curing the stalks, which is easily surmounted, however, and which will be noted in season.

Frequent Cultivation is essential to successful corn growing. The cultivator should be kept going this month through the corn and the root crops, about once a week. It matters not that there are no weeds, that we cultivate and hoe, but to loosen the soil, and by that means to stimulate the growth.

Summer Fertilizers.—The experience of the past few years has often shown it to be useful to give a light dressing of fertilizer to the corn, just before the last cultivation. This helps the earing, and renders many ears productive that would otherwise be abortive. The fertilizer should be worked in with the cultivator. A mixture of poultry manure, ashes, and plaster, will be useful, or the prepared artificial corn fertilizer, may be used in place of this.

Roots.—Early blood beets, and Sugar beets, may be sown early this month. Mangels will now require clean culture, and vigorous thinning. Rutabagas may be sown from the first to the 25th of this month, upon land that has not been prepared in time for earlier crops.

Fodder Crops.—The rye ground cleared by this time may be immediately prepared, and planted with fodder corn or oats, the latter to be followed with late turnips as the oats are cut for feeding; or Hungarian grass may follow the rye, and be cut off in time for sowing rye again next fall. A good plot of cabbages will be found useful for fall and early winter feeding of cows, and if plants have been provided for, they may be set out on the rye ground, or some other piece of rich moist soil.

Working Horses.—An ample bedding of fresh straw will do much to induce a tired horse to lie down and rest. Clean grooming, and an occasional washing will also greatly encourage restfulness and improve the appetite and health. Over-feeding is not judicious, and will not restore flesh lost by hard work and want of comfortable rest. To prevent galls, the harness should be washed and kept soft with castor oil. If vermin attack the harness, a little powdered aloes rubbed in with the oil, will keep them away from the leather.

desired. Nothing came of this, but finally Mr. E. O. Boudinot, a Cherokee, claimed to have discovered that

NEWS OF THE MONTH.

FOREIGN.

MOUNT ÆTNA is active.

THE new French Atlantic cable is being laid by the steamer Farraday.

THE Nihilists are still at work in Russia. Incendiary fires and assassinations are every day occurrences.

THE Ameer of Afghanistan, Yakoob Khan, has signed a treaty of peace with England conceding every political and commercial advantage hoped for by the British.

THE typhus fever is raging fearfully in Morocco. The deaths have been as many as 200 a day. Foreigners and natives suffer alike: a number of consuls and vice-consuls have died.

A congress is now holding in Paris for the purpose of deciding which of the several proposed schemes is the most practicable for cutting a ship canal across the Isthmus of Darien.

SIR GARNET WOLSELEY has succeeded Lord Chelmsford as supreme military commander, in South Africa. Extensive preparations are being made for a second campaign. Sir Bartle Frere is made governor of the Cape Colony.

Advices from Hong Kong state that the Americans in China received the news of the veto by President Hayes of the anti-Chinese bill with gratification. The European residents expressed surprise, having anticipated a different result. The Chinese who have friends or relatives in America were pleased, but in official circles, it is said, strong retaliatory measures had been arranged, and the veto was not received with unmixed pleasure. The government, it is believed, would have welcomed an excuse for initiating an extreme anti-American policy.

POLITICAL.

SENATOR THURMAN seems likely to be the democratic candidate for governor of Ohio.

WILLIAM LLOYD GARRISON, the great abolitionist and anti-slavery editor, died May 28th, at the residence of his daughter in New York City.

THE bill before the Pennsylvania legislature praying for payment of the losses sustained during the labor riots of '76 has been withdrawn.

THE new constitution, for California, framed by the Kearneyites and very detrimental to capital and Chinese labor, has been adopted, much to the surprise of whole country.

Congressman Hull of Florida, who contested the seat of another man, and had his claim allowed by a Democratic House, has been summoned home as a defendant in a criminal prosecution for falsifying election returns. Two of his accomplices have been found guilty and sentenced.

THE riot bribery investigating committee in the Pennsylvania Legislature examined twelve witnesses Tuesday. The most important testimony was that of Chris. L. Magee, who said he represented a committee of taxpayers of Pittsburg and produced forty-four checks showing that he had paid about $2,000 to newspaper publishers for inserting articles in their papers in favor of the measure. The highest paid in any one case was $100.

CIVIL RIGHTS IN GEORGIA.—In a case before Judge Erskine, of the United States Court at Savannah, Ga., where a colored woman was ordered from the "white" deck of a steamer to a place below where accommodations were provided for her class, and failing to comply was put off the boat and afterwards instituted suit for damages, Judge Erskine has decided that common carriers have the right to provide different accommodations for different classes of passengers and to assign each class to its quarters. Judge Woods of the United States Circuit Court at Atlanta, has also recently decided in a school question that equality does not mean identity, and that separate accommodations may be provided and insisted upon.

DOMESTIC.

THE Episcopal Council for the Diocese of Virginia met at Fredericksburg, Va., May 30th.

Rear Admiral Sylvanus W. Gordon, United States Navy, died suddenly at Blois, France, last week.

THE ANNUAL REPORT of the New York Produce Exchange shows that the receipts of grain, flour and meal at that point in 1878 were 152,982,170 bushels, an increase over 1877 of 49,548,388 bushels.

THE Congressional committee on the question of counting the electoral vote for President of the United States has agreed upon a bill for the election of a chief magistrate in the event of a contest which provides that in case of a disputed case to electors in any State the Supreme court of that State shall determine which set of electors is the legal one, and such decision shall be final unless reversed by the concurrent action of both houses of Congress.

DEATH OF AN OLD SOLDIER.—Gen. Charles Everett died at the residence of his son, near Smyrna, Del., a few days ago. His age was 98 years. In the Mexican war at Nauvoo, Ill., about forty years ago, Gen. Everett was severely wounded. He was a soldier in the Mexican war, and at the opening of the late war entered the federal army as a captain. He fought under Gens. Baker, Williams and Butler, and was wounded at Fort Hudson, receiving two shots in his leg, which was broken. He came out of the war a brigadier general by brevet. He moved to Smyrna from Camden, N. J., last summer.

COLONEL Frank H. Fletcher, an agent appointed by the St. Louis commission to visit Kansas, to obtain information as to the condition and prospects of the colored immigrants, gives in his report the result of his inquiries among the colonies of colored people who have been settled in various parts of Kansas for a year or more. He found them all contented and doing well, having suffered very little from ill health, each family having from forty to one hundred and sixty acres of land, and on an average not far from seven acres in cultivation. They were well satisfied with the country and with their prospects, and on good terms with their neighbors.—*Boston Commonwealth.*

THE INVASION OF THE INDIAN TERRITORY—*Its inception, &c.*—News received at Washington shows that the invasion of the Indian Territory was got up as a speculation of a few restless men who were making money out of the emigrants by selling them supplies and who had no other objects in view than this. One man was discovered making private bargains with merchants in Kansas towns bordering on the Indian Territory, by which these were to pay him from $500 to $1,500 by general contribution, on condition that he induced certain numbers of emigrants to pass through their town and buy their supplies there, and it was to secure this profit that this man and his agents formed colonies to emigrate to the Indian Territory. The discovery of this plot, and the interference of the federal authorities, put a stop to the whole movement.

One who claims to know all about it says, that the movement for taking up lands in the Indian Territory was first agitated by a few persons at Wichita Kansas, in 1870, at which time a colony of fifty persons was organized which soon reached 10,000 and every thing was in readiness to move in, when it was determined to stay the movement until some legislation could be obtained at Washington sanctioning the occupation of the lands desired. Nothing came of this, but finally Mr. E. C. Boudinot, a Cherokee, claimed to have discovered that the United States, by treaties, had purchased from Indian tribes in the Indian Territory about 14,000,000 acres of land and it was on these lands the immigrants expected to settle.

DIED at Hampton Institute, May 30th, of pleurisy, after an illness of but ten days, Nick Pratt, (Pa-a-cys) Cheyenne Indian. This is the first break in the band of Indian students from St. Augustine. Nick will be sincerely mourned by his comrades and teachers, and many friends. He has greatly improved, of late especially. His efforts to live a better life have been observed by all near him, and we hoped to see him soon added to the number of those who have professed the christian faith. We believe that God who has been leading him, has now taken him home to Himself.

BANK OPEN ALL DAY.

During the trucking season THE HOME SAVINGS BANK is open daily from 9 until 5 o'clock, and is open on Saturday nights from 6 until 8 o'clock. All deposits (Savings Accounts) draw interest at six per cent. from day of deposit. The business of this Bank has nearly doubled since its removal to Main Street.

Every man should have something laid up in the Savings Bank towards buying a home of his own.

DENTISTRY.

Dr. T. H. Parramore has permanently settled in Hampton, and is prepared to perform all operations on the teeth, and insert artificial sets. Rooms, over H. L. Schmelz & Co.'s store, on Main street.

THE

NATIONAL SERIES

OF

STANDARD

TEXT-BOOKS.

This series of school-books, nnmbering between three and four hundred volumes, is *known and popularly used in every section of the United States, and by every class of citizens*, representing all shades of political opinion and religious belief.

The series is *complete*, covering every variety and grade of science and literature, from the primer which guides the lisping tongue of the infant, to the abstruse and difficult "West Point Course."

The series is *uniformly excellent*. Each volume, among so many, maintains its own standard of merit, and assists, in its place, to ronnd the perfect whole.

It is the pride of the Pnblishers that their imprint appears in not a single poor, or even indifferent text-book. Its appearance, therefore, npon a title-page is a sort of guarantee whioh the edncational public have learned to respect.

For these reasons, this series has been justly denominated the NATIONAL SERIES OF STANDARD SCHOOL BOOKS—a title which is now universally conceded in its broadest sense, and which cannot, with equal propriety, be applied to any rival publications whatsoever. The series inolndes the following well-known and universally popular works:

NATIONAL READERS AND SPELLERS.

BY

PARKER & WATSON.

DIAGRAM ENGLISH GRAMMAR

BY

W. CLARK, A. M.

NATIONAL COURSE IN GEOGRAPHY

BY

MONTEITH & McNALLY.

NATIONAL BYSTEM of MATHEMATICS

BY

CHARLES DAVIES, LL. D.

BARNES' BRIEF U. S. HISTORY.

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung np in every part of the Union for making an "Imitation Singer Machine."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken the FIRST Prize over ALL competitors more then TWO HUNDRED TIMES. *Why?*

After the Chicago Fire the Relief Committee undertook to furnish sewing machines to the needy women of that city. Applicants were permitted to choose from six different kinds of machines. 2,944 applicants were furnished with machines: 2,427 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines! These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The people bought Singer Machines as follows:

1870	127,833	Singer Machines	
1871	181,260	"	"
1872	219,758	"	"
1873	232,444	"	"
1874	241,679	"	"
1875	249,852	"	"
1876	262,316	"	"
1877	282,812	"	"
1878	356,432	"	"

Many of the manufacturers of other machines refuse to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines. A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED.*

SEND FOR CIRCULAR. THE SINGER MANUFACTURING COMPANY,

ANNIVERSARY EXERCISES AT HAMPTON INSTITUTE.

The eleventh year of the Hampton Normal School closed on Thursday, May 22d, with the usual anniversary exercises attended by a large nnmher of visitors, among whom were many leeding and distinguished men of the North and South.

Among the guests were Hon. Carl Schurz, Secretary of the fnterior; Hon. Geo. W. McCreary, Scerctary of War; Hon. A. C. Barstow of Providence, R. f., Indian Commissioner; Hon. Wm. Stickney of Washington, Indian Commissioner; Senator Saundera of Nebraska; Representativa Pound of Wisconsin; Rev. Dr. Merk Hopkins of Massachusetts, tha vencrable ex-prcsident of Williems College; President D. C. Gilman of the Johns Hopkins University, Baltimore; the venerable Rev. Dr. Wm. S. Plummer of South Carolina; Mr. and Mrs. S. D. Warren and Miss Annie Lowell, of Boston; Gen. E. Whittlesey, Gen. E. Upton, U. S. A., Commandant of the Artillcry School at Fortress Monroe; Capt. L. E. Campbell, Q. M., U. S. A., Fortress Monroe, and a large number of officers from that post; Capt. Gillis, Commanding U. S. Receiving Ship Franklin at Norfolk; Lieut. Com. Bishop and other officers of the same vessel; Lieut. Queckenbush and Licut. Harrington, U. S. Marine Corps, stationed at Norfolk; Paymaster Smith, U. S. A.; several officers of the German School ship Nymphe lying at Norfolk; Hon. F. N. Watkins of Virginia; Dea. Ezra Farnesworth of Boston; S. M. Shoemaker, Esq., of Baltimore; Prof. Remsen of Johns ffopkins University; Judge Foster of Connecticut; Rev. Mr. Foote of Massachusetts; Rev. Dr. A. N. Arnold; of ft. I.; T. M. Brewer, Esq., of New York; Rev Thomas K. Fessenden of Connecticut; Mr. Anthony M. Kimber of Philadelphia; Mr. Alexander Hyde of Massachusetts; Dr. Lewis H. Steiner of Maryland; Z. S. Ely., Esq., of New York; Col. Thomas Tahb, of Hampton, Va., Mr. and Mrs. Enoch Lewis, and Miss Sarah Lewis of Philadelphia, Miss M. A. Longstreth of Philadelphia; Rev. Jas. H. Holmes, of Richmond; Rcv. Prof. Johns. of Hempton, late of the West fadies; Rcv. Wm. Thorulon, of Hampton, and other leading colored ministers of Hampton, Norfolk and Portsmouth; Mr. Schriver of the Baltimore *American;* Mr. Perkins of the Norfolk *Landmark;* Mr. Glennan of the Norfolk *Virginian;* Rcv. J. W. Harding of the Springfield *Republican;* Mr. Goddard of the Boston *Advertiser;* Mr. Hubbard of the Hartford *Courant;* Mr. J. H. Clark (Max Adeler) of the Philadelphia *Bulletin;* and the Rev. Geo. W. Boynton, of the "*Independent;*" Mr. E. B. Monroe, Mr. Andrew Kevnn, of Petersburg, Va., ' There were over six hundred guests, hesides three hnndred students assembled in the chapel.

INDIAN VISITORS.

A very striking addition to the distinguished guests were six tull Indian braves in blankets and feathers; a delegation of Northern Cheyennes from fndian Territory who have beeu consulting with the "Great Father" in Washington, end came down to Hampton under escort of Capt. Pratt and Agent Miles to sce the young men of their tribe here at school, to some of whom they are related. Their nunes are Iachi Vih, Little Chief, chief of their bund, High Wolf, Porcupine, Black Wolf, Eagle Feather, and Little Wolf, ell leeding bnves.

It will be remembered that in 1837 a treaty was made with the Southern Cheyennes in Colorado who were established in Indian Territory by the Governmcnt. ft has ever since been the policy of the Department to get the Northern Cheyennes to join these, nnd leave the Sioux with whom they have been affiliated. Two years ago, one thousand surrendered and were sent to fndian Territory. Six hundred and fifty of these have affiliated with the Southern Cheyennes and ere doing well. The fate of the rest who started north under the leadership of Dull Knife, is too recent and well known to need reiteration. Two hundred were left in the North when the thousand gave themselves up, and took part in the fight in which Custer fell. These surrendered in the summer of '77, nnd since then havo been allies of the United States. Part of them—our visitors nmong the number —were nt Fort fKeough on the Yellowstone in Montana, nnd ected as scouts for Gen. Miles in the campaign which ended in the surrender of Chief Joscph and the Nez Perecs; losing one man killed, end doing faithful service. They were then sent to Indian Territory by the Government, but have been homesick and dissatisfied. The object of the delegation's visit to Washington, is to petition the Great Father to let them return to their Northern homes. The older ones especially, do not believe in civilization, and did not come to Hampton with any intention of liking it. Just what they think of it now, is impossible to say, but they are interested and excited, follow the Cheyenne students around into classes and work shop, talk with them, shake hands with their tcachers, and evidently keep up a great deal of thinking. In the evening they watch the social intercourse and merry-making of the students of both races, their stern features now end then relaxing into a smile, and one of the braves was civilized gentleman enough to ask a Dakota girl for her photograph. Photographs of all the Indian students, in their students uniform and neat dresses, at study and work, and of the school grounds and buildings, and specimens of the students' work, will be given them to carry home. An impression of some kind is made no doubt, and it is hoped, one which will do good in the interest of peace and civilization.

THE EXAMINATION OF CLASSES

occupied the morning as usual. The Senior class was examined in Intellectual Philosophy (Dr. Hopkins "Outline of Man," the venerable author being an interested listener) Algebra, Political Economy and Civil Government, Ancient Hjstory, and the Practics of Teaching. For the last, model classes of little children were brought from the Butler School and taught by the seniors, who have been trained during the year by a teacher from Col. Parker's training school in Quincy, Mass. The lower classes had their usual recitations with more or less of a review, and the Indians their erithmetic, reeding, geography and conversation classes. All the classes acquitted themselves generally well, and showed good progress.

THE INDUSTRIES

of the school received their usual share of attention. The farm, printing-office and workshops were inspected; knitting machines were running, and specimens of farm products and sewing, with some samples of Indian art, were on exhibition in Academic Hall.

THE INDIAN WORKSHOP

was open all the morning, and filled with successive classes of Mr. Starkweather's Indian pupils in mcchanics, and a very much interested throng of visitors, among whom the Indino chiefs were conspicuous.

DRILL AND DINNER.

At noon, as usual, the Senior class was escorted to Virginia Hall by the school brass band, and the lower classes. The student cadets were inspected on the green in front, by Capt. Heory Romeyn, U. S. A., Commandant, eod then marched in to dinner, while the invited guests took lunch on the piazza and lawn of the Principal's house.

THE AFTERNOON EXERCISES,

in Virginia Hall, were according to the following

PROGRAMME:

MUSIC--Normal School Band.

SALUTATORY: ESSAY.....Little things.
Della E. Chadwick, Beaufort, N. C.

ESSAY.....Fourteen Years of Anglo-African History.
Samuel E. Courtney, Malden, W. Va.

SELECTION....."Lazy Man's Land." *From the German,*
Lucy Smith, Hampton, Va.

VALEDICTORY: ESSAY.....*After the Victory.*
Wm. L. Hamlin, Petersburg.

MUSIC.

POST GRADUATE ADDRESS.....The Force that Wins.
Booker Washington, Malden, W. Va.

PRESENTATION OF DIPLOMAS.

MUSIC.

The programme was agreeably lightened by music by the Normel School brass band which has greatly improved thia yenr, nnd hy the school choir, end full chorus.

Plantation songs and glecs mede a pleasant variety, increased by a Wer Song from the Kiowas, and a simple hymn or two by the Indian students, rather shyly sung.

Tbe character of tbe orations nnd essays was at least equal to any previous anniversary, on the whole, probnbly superior; and drew from n prominent Virginian present the remerk to his neighbor, that he had never nttended n college commencement where there wea so much common sense instead of rant, a compliment the school prizes as in the line of its nmbition and efforts.

At the close the Principal made the statement, that while the gradunting essays and orations had passed through the hands of the teacher, the revision had been chiefly in the way of cutting down and transposition—the Englisb was the student's own, and those which showed most intellect had been revised least. From this statemeut he excepted the post-graduate eddress, which was delivered exactly as it was written in West Virginia hy the speaker, Mr. Booker Washington of the Class of '75. We give such extracts as we have room for from this address, but they will lack tbe very earnest and sympathetic delivery which enforced the words:

THE FORCE THAT WINS.

"It is a significant fact that of the many who stert out in lifs with a firm and resolute determination to accomplish something in this world for themselves and their country, so few reach the desired end, and so many dwindle into insignificance.

My humble experience, as a teacher in the South for the last four years, teaches me that there is a force with which we can labor and succeed, and there is a force with which we can labor and fail. ft requires not the pretending fop whose knowledge is limited to his kid gloves or his polished broad-cloth. ft requires not the wise gentleman whose store of knowledge consists, merely, in what he memorized from books; it requires not mere education, hut wisdom nnd common sense, n heart set on the right and a trust in God. As a teacher it requires him who can exchange the teacher's desk for the plow or shovel, not him whose heart is set on his salary and not the results of his labor. Hs who remains in the school-room six bours simply because the law demands it, has not a force that will win. As the bardy pioneers, when they began to hew out the forests to lay the foundation of our proud republic, excluded all gentlemen frou their midst, so we, the pioneers of a cause as mighty as that, would inform all such that they nre not the forces that will win.

So in all departments of labor. fn school, hs who studies for the class room, ends with the class-room, but the scholar who studies for the battles of life will win in the battles of life.

Let no misfortnus, no discouragement cause us to think that there is uot work to be performed by each of us. Our beginning in life may bave been cloudy and crowded with disadvantages, but there is a work for the weakest as well as the strongest, and if performed well, in the end it is as honorable as thet performed by the greatest.

If you had asked Elihu Burritt how he rose from the blacksmith shop to be master of ancient and modern languages, he would have told you of days and years of unceasing toil. If you had asked Hugh Miller how he fouod his way from the rock querry to a rank among the first scientists, he would have told you thet patience and perseverence hold the key to the treasures of this world. If you had asked Benjamin Banneker, our negro philosopher, how he climbed from a servaot boy to be classed among the first astronomers of our land, he would have told you the mighty truth that labor conquers all things.

In all ages there have been those whose only nmbition in lifs was to shine in splendor before the world. They have borne titles which they have not merited. They have professed that which they did not know. They have planned out devices and intrigues by which they might keep pace by the side of those who have been truly great. In short they have spent their lives in mapping out soms short and easy road to what the world calls greatoess. But how different has it been with the world's true benefactors. Silently and almost unnoticed they have toiled, waiting for the honor labor brings. With patience and perseverence they have endured much. Clad in plain garments and moving in quiet circles the gaudy world has passed them by. Thus with determination and resolution they press onward, till their work benefits the world and makes an impression that will live when their bodies sleep in tha clay. Such has been the character of those who have led the world in science, in politics, in religion, and in every thing that tends to make man wiser and better. Would we imitate such characters, we must remember that pretension may serve for momentary impressions, hut that which is to stand the scrutiny of years must be n reality.

There is but one road to success and that is the right road. There is but one foundation upon which we can build that shall be enduring and that is upon a pnre character. No matter what the disadvantages may be, no matter what the color of the skins, no matter whether he is rich or poor, n lifs begun and ended upon this foundation will be a success and will be crowned with that bonor which shall be eternal May it ever be onr aim through life to build ourselves and those whom we tench firmly upon this foundation, for it is more priceless than wealth, will do far more for us than any legislation, and will win when other forces fail; and lastly, "Let all the ands thou aim'st at be thy country's, thy God's, and truth's," then we shall be a nation known and respected by all men for truth, virtue, and honesty."

We hnve no room for the gradueting essays, nnd it would be contrary to custom and difficult to select from them.

At the same time, some few particulars concerning the class and some of the speakers may interest and not be out of place. one of the young women would be remembered by some who beerd her singing which added interest to the attraction of the Ladies' New England Kitchen at the Centennial Exhibition. Tha speaker of the post graduate address had the pleasure of seeing on the stege with him, 'n young man whom he had prepared to enter the middle year at Hempton. Two others of his pupils graduated with the class one of them his brother. Mr. Washington has been doiag excellent work ever since his own valedictory was delivered four years ago.

One thing which evidently struck some of the Northern visitors with surprise, was the fair skins of some of the speskers. Six out of the thirteen, perhaps, would not be suspected in the North of a drop of African blood. fnquiry is often mede as to the relative mental ability of the light and dark colored. Perhaps this and other Anniversary programmes ere as fair an answer as the school can give. Its honors are awerded, as is usuel, for scholarship and general character, and the programme made up from the best efforts. In the present case, light and dark divide the honors about equally; two of the young women end five young men being dark; four young women and two young men, white or nearly so. The salutatorian end valedictorian are both of the darkest. A review of programmes from the first class that graduated, keeps up the average to e curious degree. Out of eight valedictorians, four have been black, end four light, ranging to white; of the six salutatorians, four have been dark and two very light. Honors are even, apparently, and without the slightest effort to make them so, or any consideration of the question till now.

This startling fact of white negroes in the South, is one of the saddest results of American slavery. Their position is not an enviable one, but full of peculiar temptstion end trials on either hand, calling for speciel sympathy and aid.

THE SHORT TALK

of the Kiowa Indian student, Etahdleub Doanmoe (Boy Hunting), not a graduete, but one of the most hopeful of the numher brought a year ago from St. Augustine to Hampton, we give as a curiosity and interesting addition to the features of the occasion, which "went straight to the heart" of many who heard it. It was partly written by himself, and partly drawn from him in conversation: and then written out for him to commit to memory. ft was delivered with enough distinctness of pronnneiation to be understood, and accompanied by n running translation into the Indian sign langusge, a very graceful system of natural gestures common to all the tribes from the Gulf to the lakes. The young men is in every way a fino representative of his race and its possibilities.

MY HOME IN INDIAN TERRITORY.

"I am a Kiown fndian boy twenty-three years oid. My home is in the fndian Territory. My people are not much civilized. They live in houses mads of skins of the buffalo. They liks to hunt and fight. When f was a little boy f did not see many white people. The Kiowas moved camp often to keep near the buffalo, and we lived on buffalo meat and herries all the time. We had no hrend, no coffee or sugar. We boys talkad all the time about huoting the buffalo, going to fight the Utes, Navajoes or Pawnees, and most about fighting the white people or stealing horses. The old Kiowas talked all tha time to os about fight or hnnt the buffalo. Sometimes the men would go off and bring back scalps of white men and women, or fndian men and women; then we had a big dance. This was all f heard and all f saw, and f thonght it was good, so f will be a big fighter and a good huoter too, and may-be I get to be a big chief. When I was about fifteen years old I killed my first buffalo, with a bow and arrow. I had no gun. Then I was called a man, because f could kill buffalo. Then I went with the young men to fight the Utes and Navajoes and to steal their horses. I was in three fights with the Utes and two with the Navajoes. We did not get many horses; too much fight f went to Texas about ten times, with young Kiowas and Comanches to fight the whites and get their horses. We fought the soldiers most, and a good many fndian men got killed, but I did not get hurt, only sometimes my horse got killed. All this time I wore a blanket or a buffalo robe, and liked to have my hair long, and paint my face and wear big rings in my ears. I did not know anything about God, or churches, or schools, or how to make things grow from the ground to live on. Four years ago there was a big war. The Kiowas, Comanches and Cheyennes fought the soldiers all winter. The buffalo were nearly all gone, and the Indians got very hungry. The horses worked hard, and it was so cold the grass was poor, so they got very weak, and we lost many in fights with the soldiers. Then the soldiers came to our camps and we had to run away and leave our lodges, than the soldiers burned them. We all got vary tired and hungry, and the women and children cried, so the chiefs said we will go in to Fort Sill, and give up. We met Capt. Pratt in the Wichita Mountains. He had some Indian soldiers and two wagons loaded with bread, sugar and coffee. He gave us plenty, and we gave him all our guns, pistols, bows and arrows, shields and spears. That night we had a big dance because we had plenty to eat. In three days more we came to Fort Sill, and all the women were taken away, and the men put in the guard house. In two months some of the men had

In this number we refute an elaborate argument against our efforts for Indians, coming from a leading Eastern newspaper, the *New York Tribune*, that ought to champion all honest and worthy efforts, even if experimental; and we present the thought and experience of noble men and women, who know whereof they affirm, whose devotion to the interests of the Indians, and whose comprehension of his case is beyond challenge.

"Chief Wizi" the guardian of Markpiamani, an Indian boy who recently died at Hampton of disease contracted before he left his home, "made a speech on the on the subject," writes Capt. Daugherty, of the 1st Infantry, Acting Agent at Crow Creek Agency, in a letter which we print in another column, "at the end of which he said to them that if only *one* of their children returns to them with a knowledge of civilized life and with education, they will feel amply compensated for the loss of all the others."

A voice from civilization decries our effort, because, forsooth, some of them may die during the attempt, but the savage tells us he will be satisfied if but *one* shall come back to illustrate and to show them the white man's way.

We invite attention to the article by Miss Helen W. Ludlow vindicating the wisdom of the Secretary of the Interior in sending Indians to this place, to the interesting letters of Capt. Daugherty, of Mrs. M. E. Duigan, of Mr. E. Ballou of Camp Brown, Wyoming Territory; and to the valuable statements of the Rev. C. L. Hall of Fort Berthold, Dakota Territory.

We are glad to report an improved state of health among the Hampton Indians.

The twelve weakest of them have just returned refreshed from a beautiful camping ground on the stock farm of this institution, situated on a broad river where they have fished, hunted, roamed, eaten enormously, and played croquet without limit. Open air, and out-door life have braced them up wonderfully. A new company has taken their place for two weeks' work and play.

This place is an old and well-known Virginia plantation of 330 acres, originally the property of the Lowry family, now known as "Shellbanks," the best stock and grain farm in the county.

It was purchased and presented to this institution by a lady in Boston, Mass., for the special benefit of our Indian students. For coolness, healthfulness and beauty, "Shellbanks" cannot be surpassed.

The Indians at this place are divided into two squads, one half working all the morning, the other half, all the afternoon. They live in tents, have meals in a canvas covered bower, live on fresh beef and mutton, and do their own cooking in the open air, on the sandy beach just above high water mark. Two boats are always at their service.

In the work department a surprising knack for mending and making shoes has been developed. The Dakota Indian is a born shoemaker. Their first efforts are a surprising success. No more shoes will be bought for the boys.

Our effort for Indians depends only in part on government. A new workshop to contain a saw mill, matcher and planer, grist and bone mill, carpenter shop, printing office, knitting machines and eventually other appliances for practical education is commenced. Of the six thousand dollars needed at once for this object, one thousand dollars have been given by a friend; for the rest we appeal to the people of the country.

CROW CREEK AGENCY, D. T., *June* 11, 1879.

Gen. S. C. Armstrong,
My dear Sir:—

I have the honor to acknowledge the receipt of your letter announcing the death of Mark-pe-a-me-ni. The intelligence has been communicated to his relatives, who happily have sufficient intelligence to regard the event with philosophical resignation.

His guardian, Chief Wizi, made a speech to the people on the subject, at the end of which he said to them that if only *one* of their children returns to them with a knowledge of civilized life, and with education, they will feel amply compensated for the loss of all the others.

I am, General, very respectfully,
Your ob'd't servant,
WM. E. DAUGHERTY,
Capt. 1st Inf'y,
Acting Agent.

CROW CREEK, D. T., *June* 18, 1879.

My Dear Sir:—

We had heard by Captain Daugherty of the death of the Dakota boy that you had so kindly nursed and attended. He has no mother living—she died insane some years ago; his father is somewhere up the river. He was an adopted son of Wizi, Chief of the Yanktonaise; he has always been with him, and really Wizi was all the father he ever knew. I was not aware that he had hemorrhages before he went away. Wizi told me to-night that he had many. I supposed him sound, or I would have discouraged his going away. I was more attracted to him than to any of the other young men sent, and he was so sweet and earnest in his manner, and seemed to feel the importance of the step that he was taking. Please accept our thanks for all your attention to him. The Indians were not at all surprised and said they were quite sure that he would not live long. I read your letter to Wizi to-night and the tears came to his eyes; he expressed his thanks for your care of him.

I am sure you would have been pleased at the expressions of pleasure from the father and mother of Charlie Stone on the receipt of the card, and the little letter on the back penned by their son. The mother was just telling me that they had not heard from *himself*, when the father came in quite radiant with the message. They are anxious for his picture, and wished me to say that they are willing to pay for it; a common tin-type will do, I am sure. He is an only son and the pride and hope of the father, who is a Christian, Indian and has a nice farm a few miles from here. Please remember me with love to all the Dekotas, and allow me to present my kindest regards to Captain and Mrs. Pratt.

Sincerely yours,
MRS. M. E. DUIGAN.

SHOSHONE AND BANNOCK AGENCY, WYO., *June* 16, 1879.

Gen. S. C. Armstrong,
Hampton, Va.,

Dear Sir:—

A copy of the SOUTHERN WORKMAN sent to Agent Patten fell into my hands today. Being engaged in teaching Indians, I feel an interest in whatever is calculated to advance the work. I am convinced that you have taken an advanced step, in the right direction, in this matter; and trust that your institution will receive a still more liberal aid, enabling you to accommodate and train many more Indian youth for teachers and missionaries to their respective tribes.

Day schools, so far as I have noticed, among the Northern tribes amount to very little. Boarding and manual labor schools, if conducted by competent and earnest men and women, will soon work out a great reformation. But far greater results would be attained, and the desired end much sooner reached, if the pupils, after being trained a few years in these schools, were then transferred to similar institutions to yours to finish their education. There certainly would be no question as to the policy of *such transfer*. By their seeing more of the world, and the ways of civilization, their views of life would be enlarged, and aspirations for higher attainments would be developed.

I have had a class of Arapahoe youth under instruction since January last,—have about forty now. My experience is that they are just as apt at learning as average white children, and quite as willing to work. If the money that has been expended—to say nothing of the lives sacrificed, and all the attending evils—had been appropriated to the establishment of Boarding and Manual Labor Schools, and such institutions as yours, the Indian problem, as it is called, would long ago have been solved.

I am glad to think that the time is now near at hand when these cruel wars shall cease, and our Government will do justice to this long-abused and defiant people.

Enclosed find $1.00, for which please send your paper to my address. If you will send a few extra copies, I will endeavor to get some others interested in your noble work.

Very truly,
E. BALLOU,
Camp Brown, Wy. Ty.

FT. BERTHOLD, D. T., *June* 11, 1879.

Gen. S. C. ARMSTRONG,

Dear Sir:—

I have read an article in the *Tribune* with the ominous heading, "The effort so far a failure," which refers to the experience of the Board of Foreign Missions, of which your father was a missionary, and with which I am connected. The best answer to the writer that occurs to me (and it looks to me a sufficient answer) is that the aim of the Secretary of the Interior, and of your Institute, is different from the aim of the "American Board." The aim of the "Board," as he says, was to train up a native missionary force, and they found that could be better done on the missionary field. The U. S. Government can have no such aim. Their aim should be, and I believe is, to fit Indians for citizenship and life side by side with the whites; and what more effective means of accomplishing this can there be than educating their children side by side with white children? It is true that other work tending to make Indians citizens in companionship with whites must go on in connection with this schooling of the children. But the Secretary of the Interior should be credited with more wisdom and foresight than the writer seems disposed to concede to him. All barriers between Indians and whites must be broken down. The reservation system, which cuts an Indian off from contact with industrious, energetic frontiersmen, while it leaves him exposed to the influence of the worst sort of whites—an army of "prodigal sons" who are schooling the Indians in their vices and escaping with them the restraint of the law—must be abolished. This system is on a false and unjust and untenable basis, as the recent decision in the case of the Poncas shows; an Indian is a person who has a right to life, *liberty* and the pursuit of happiness; and he must be allowed his liberty, subject to the restraint and enjoying the protection of laws, and owning his 160 acres as does his white neighbor, and subject to the same influences; as his white neighbor.

Sir, when I think of the young people from this agency under your training, and compare their present condition and surroundings with what they would have been had they remained here, I am almost out of patience with those who oppose your work.

But will the youth not fall back into a worse state when they return? some ask. That depends on two things: (1st) The kind of training they get at Hampton—the special fitness for some branch of industry, and the moral force of character acquired; and (2d) the help and direction they get after their return. If they are dropped, if the Government agent or the missionary take no interest in them, and if the way for them to engage in the industries they have been apprenticed to be blocked, if they are *imprisoned* on a reservation outside the pale of United States law and order, and if their education at the hands of wicked and degraded whites *re-commence* in unchecked force, then we might expect just such a result as might be expected in the case of white children "graduated" into the same conditions.

On the contrary, if they come back to the influence of white laws, and to the influence of ordinary frontier farmers, miners and mechanics, such as are daily crowding up to most of the reservations (and who might have their homes side by side with the Indians, if the reservations ceased to be), then the graduated Indian youth will occupy the same position, and have similar influences and chances, to the white youth of the neighboring farmer's family. When our Government yields to the pressure of good men in the Indian work to exchange this system of tribal "ownership of occupancy" for one of individual ownership by title-deed, under the protection of law, they will have taken a great step toward making the red man a citizen, and the work of educating red children at a distant boarding school to become useful citizens, will not be a failure, as it is not a failure to educate white or black children with the same hope.

Very respectfully yours,
C. L. HALL,
Miss. A. B. C. F. M.

ANSWER TO THE N. Y. TRIBUNE.

Some months ago the Hampton Institute was favored with the copy of a manuscript, prepared in Washington, to demonstrate the folly of the School's new work for the Indians, and to foretell its failure. The paper, which had not then been made public, was read with interest in a small circle of those most nearly concerned in the effort, and laid away for future reference, the general feeling being that its points could be all readily met.

Since then, quite recently, this document has been adopted by the New York Tribune, and made the substance of a nearly three-column letter in that journal over the signature of one of its editors, pointed more directly now against the Secretary of the Interior in his encouragement of the Hampton enterprise.

The Tribune letter has been already answered and very well answered on several points, by at least two prominent journals, the Baltimore *American* and Philadelphia *Evening Bulletin*. It may be expected, however, that, on a subject so nearly concerning her, Hampton should have a word to say for herself, especially as to her own views and intentions which have been so freely interpreted, and so easily fore-sentenced.

THE TRIBUNE'S POINTS.

The points the Tribune letter seeks to make are that any attempt to benefit Indians by educating their youth at a distance from the tribes must prove a failure: 1st, because the majority of the students die from the effects of the removal; 2d, because the majority of those who survive, relapse on their return, into original or worse than original barbarism; 3d, because, whether they relapse or not, the education and civilization they receive, unfits them for their home life, or, in the words of the manuscript, creates a "gulf which the Indian must repass in order to place himself in sympathy with his own people, or expatriate himself and become 'a man without a country.'"

To establish these points the writer goes back three hundred years, and beginning with the attempts of the sanguinary Spanish zealot Melendez to Christianize his ungrateful captives, has collected the records of ten or a dozen unsuccessful efforts in Indian education, from which he presages the failure of Hampton.

ADVISER TO STUDY PRECEDENTS.

From these the Tribune letter selects six as most to its purpose, and thinks "as this interesting experiment will cost somebody, the Indians or the government, $8,000 to $10,000 a year, it would have been wise to study the history of similar experiments." "Leaving out," as it says, "the abortive attempt to found an Indian college at Henrico in Virginia soon after the settlement of Jamestown," and the unsuccessful efforts of the Jesuits in the XVII century;" (leaving them out perhaps because they were not schools at a distance from the tribes at all, but such as the writer advocates, set right down among them in the forest) it takes up four other records to argue from, viz.; of Eliot's schools in Roxbury and Cambridge (Harvard college) in 1660; William and Mary College which was begun for the Indians, in 1700; Wheelock's Indian Charity School at Lebanon, Conn, 1730; from which sprang Dartmouth; and the "Foreign Mission School" established by the American Board of Foreign Missions, in 1817 at Cornwall, Conn.

Of the first we are told that only one Indian graduated at Harvard, dying of consumption soon after taking his degree, and that the attempt was a failure mainly because of loss of health attending change of diet and a regular course of study. Of William and Mary, a contemporary writer quoted says that "the young Indians procured with much difficulty were formerly boarded and lodged in the town where abundance of them used to die. . . . Those of them that have escaped well and have been taught to read and write, have, for the most part, returned to their homes with or without baptism, where they follow their own savage customs and heathenish rites," Of Mr. Wheelock's school, after nearly twenty years' experience, he writes himself as complaint that though the students generally carried a good character through school, not more than half have preserved it unstained after leaving, and many relapsed entirely into barbarism, and he have thinks that white men alone can be depended on as independent missionaries.

THE TRIBUNE'S STRONG POINT.

The letter's strong argument is, however, from the record of the Cornwall school, regarding its plan as "substantially the same as that of the Hampton Institute, as will be seen from the following extract from its constitution:

"The education in our own country of heathen youth in such manner as with subsequent professional instruction will qualify them to become useful missionaries, physicians, surgeons, schoolmasters, or interpreters, and to communicate to the heathen na-

tions such knowledge in agriculture and the arts as may prove the means of promoting Christianity and civilization."

After great temporary prosperity, this school seemed suddenly to collapse, and was discontinued after ten years because it became apparent as the first graduates were ready to leave that not all could be employed as missionaries in any capacity, and those who were not fitted for missionaries had no career open before them and would be subject to great trial and temptation.

The Tribune writer remarks that "this experiment was in the hands of wise Christian men. There was no lack of means. . . . All the influences were friendly; the youths were selected with utmost care; the course of instruction left nothing to be desired; and yet the wisest feature of it appears to have been its abandonment. Altogether, it seems too much to hope that the Hampton experiment will succeed."

There is much similarity between these records it will be seen, and in the mind of the Tribune correspondent all that failure is attributable to one cause; the distant removal of the students from their tribes, affecting their health and forcing an artificial civilization without the chance to use it or the moral strength to maintain it in their wilderness. As these have failed, so must Hampton.

IS HAMPTON ANOTHER CORNWALL?

According to the Tribune, the resemblance would seem to lie in the industriel training for which we have seen that provision was made in the Cornwall constitution. But how was this provision carried out? The same yearly reports and magazines of the Foreign Missionary Society, on which the Tribune's letter is made up will show, "Suitable land," as it says, was provided, by purchase and gift; viz.: five and a-half acres of arable land and ninety-three of woodland. The first report says that "the young men in the school all labored in their turn a part of the time, and have cultivated four acres of corn and three of potatoes and secured some hay. The committee hope to be able to extend the farming business next session so that each student will by laboring two days in a week nearly earn his own food."

The next mention of the subject is two years after, in 1819. The report says "It has been deemed expedient that the members of the school should be taught the various branches of husbandry. They have accordingly labored in rotation under the superintendence of the steward. *The pupils have been able to perform the requisite labor in the early and latter part of each day without encroachment upon the regular hours of study.*" (The italics are our own.)

NO REPORT OF INDUSTRIES AFTER THIRD YEAR.

This apologetic mention of industrial training is the last. From the seven subsequent reports and occasional published letters of visitors at the examinations, we learn of the assiduity of the students in their studies. They master the mysteries of English spelling, and astonish their hearers with declamations in Latin and Greek and even recite passages of Hebrew scripture, and make surprising answers in theology, but there is not the smallest indication of any interest in the industrial department of the institution or of the existence of any such feature.

DEATH FOR WANT OF EXERCISE.

There is a strong contrary indication indeed in the Report for 1822 which appeals urgently to the farmers of Litchfield Co. to supply the student's table, not doubting that "there is sufficient liberality in this thriving agricultural district, if called into systematic operation, to furnish abundant supplies of food and clothing for any probable number of youths who may enjoy the blessings of this seminary."

And in the next year's report, we are the less surprised to read of the death of a student at this agricultural school, "a full Cherokee of great promise, after a residence of about seven months; change of climate and mode of living *added to a want of sufficient exercise* probably inducing the disease."

A LOOK AT HAMPTON.

No one who knows Hampton needs to follow the argument further. If Cornwall and Hampton are as the Tribune declares, "substantially the same in plan," they are very essentially unlike in practice. Agriculture, which seems to have been the one industry ever in operation at Cornwall is only one important one of a dozen at Hampton. Unlike Cornwall again, her industries "encroach" so far upon the course of studies at Hampton, that they are an essential part of the course. Every Indian young man or boy except two or three who have chosen some other special trade, has regularly one full day's work on the farm in each week, and two hours in the workshop every other day but Saturday, making in all another day's work. His work on the farm and in the shop is under supervision and directly educational. His faithfulness and progress in it affects his standing. Ride over the farm of 193 acres on any day of the working week, and you will count up somewhere the day's squad of Indian students scattered among their fellow workers of another race, "encroaching" vigorously with spade or plough or cradle upon the hours of the school-room study, digging away at other than Greek roots, and at least saving themselves from danger of death from "want of exercise." But this is the school which the Tribune thinks "substantially the same" as Cornwall.

Or walk through the general workshop, simple, rude in its appointments, but looking to better things. Among the balsamic fragrance of pine shavings and rosin, and the less delectable odors of calf skin and machine oil, you will find sixteen or twenty young braves in aprons instead of blankets, working away as merry as grigs, but earnest as—Indians—each at the trade he has chosen. Some desire to learn more than one and have the promise of a second *after mastering the first*. That hand lathe you see, with a driving wheel of six feet diameter was entirely constructed by the young men, the band is a neatly plaited larint of hide with the hair on. The trades so far taught are carpenter's, wood turner's, blacksmith's, tinner's, shoemaker's and saddle and burness maker's. To what extent, taught do you ask? Well, those little fellows are making stools good enough for the shop; that young man's table you will think very respectable, though you can see some roughnesses, and he sees them as well as any one; he will do better next time. The tinsmiths are turning out really nice dust-pans, and the crowning triumph so far is a complete pair of low kip shoes, pegged, with heels and leather strings, made from first to last by the head Indian shoemaker. Some admiring companions have already brought him their boots to patch, and it will not be very long before he and his fellow workman can shoe the whole set. With better tools and machinery, there is every reason to expect great utility in all these industries. Outside of the general workshop, one of the Floridas who has been a year at the school has made excellent progress in the carpenter's trade, and is working upon the new machine shop; two more are learning wagon-making, and one is in the engine room. The industries of Hampton are no experiment. Not for three, but for eleven years it has been her policy to sustain and increase them, and she is fully convinced of the necessity of work and self-help in the development of manhood in any man or any race. What report of Hampton, official or of a newspaper correspondent, for the eleven years of her existence, could omit all mention of her Indian trade? It would be Hamlet with Hamlet left out. Yet the Tribune thinks that Hampton is like Cornwall.

If we fail to find the resemblance where it is chiefly asserted, how is it as to other points?"

CORNWALL'S CURRICULUM.

Look at the curriculum arranged fifty years ago for the children of the forest. According to the reports and the manuscript, though omitted by the Tribune, "the course of instruction embraced reading, writing, English grammar, geometry, history, geography, rhetoric, surveying, navigation, natural philosophy and the Latin and Greek languages." From a visitor's letter in 1819, we learn that theology and Hebrew must be added to this list—he says nothing of industries. This is the "course of training" which the Tribune says "left nothing to be desired," an opinion in which Hempton must differ with the Tribune as widely as she does from Cornwall. It is the idea of fifty years ago, but not Hampton's, nor, we believe, of most modern educators. No Latin, Greek or Hebrew at Hampton.

NO GIRLS AT CORNWALL.

Another radical point of difference between Cornwall and Hampton, and second to none, we believe in significance, is the difference which fifty years have wrought in sentiment as to the co-education of the sexes. The Foreign Missionary Society was not without an appreciation of the importance of educating girls. Its reports for 1826—the same year it was decided to discontinue Cornwall—declares that "the education of females more than any other means of human appointment aids in the advancement of civilization." But the sentiment of the times made their education very inferior to that of young men, and the idea of their co-education was still further in advance of the age. It certainly was not attempted at Cornwall. It is a fundamental idea of Hampton—not an experiment, but an established success for one race, and deemed absolutely essential for the development of every other. But the Tribune thinks them "substantially the same." Perhaps if Cornwall had been more like Hampton in this respect there would have been less occasion for recommending its discontinuance, speaks rather vaguely of change of circumstances and difficulty of preserving such a happy "medium in social intercourse, as should secure some acquaintance with refined Christian society and exclude those attentions which would dissipate the mind and prevent suitable application to study." And it only "thinks proper to give some of the ("excellent") reasons which led to the decision."

The "Historical Records of the Town of Cornwall, collected by Theodore S. Gold," supply the interpretation. They tell "There were not only Chinese, Japanese and Portuguese, but the Cherokee tribe of Indians was there represented. Two members of this tribe became enamored of the young ladies of the village offered marriage and were accepted. This created a great deal of feeling and finally ended in breaking up the school." (p. 31.) Hampton, at any rate, looks with special interest and hope upon the girls' half of this effort in Indian education. Early inured to work, saved at least from the vices of laziness, we are inclined to believe even that they constitute the most promising half of it, and finding in greater constitutional vigor a compensation for their life of hardship, will prove perhaps the most important factor in the salvation of their race. If a white man beyond the restraints of civilization finds support and safety in home and wife—not a darner of his stockings merely, but an intelligent and an intelligent and equal companion—why should not an Indian? We believe that the Secretary of the Interior in no point shows the wisdom of his views upon Indian education more truly than in approving the education of Indian girls side by side with their brethren

THE OTHER "FAILURES."

There is no need to linger upon the *Tribune's* other "precedents." There is a remarkable similarity between all of them. Latin and Greek, no industrial training, and almost universal: the girls left out of the question—is the record, running back two hundred years to the Jesuits' school at Quebec for Indian youths, who, Parkman tells us, "sooner or later, all ran wild in the woods, carrying with them a fruits of their studies a sufficiency of prayers, offices and chants learned by rote, along with a feeble smuttering of Latin and rhetoric which they soon dropped by the way." (Old Regime in Canada, p. 163.) Seven hours' school confinement a day, with "evenings devoted to study," and *such* studies—with no physical training,—are quite enough to account for a heavy sick roll, even without the theory, as, in the case of William and Mary, where, sent to board in the town, many died, "some will have it, for want of proper necessaries and due care taken with them." This unnatural straining and disregard of the common laws of health was quite enough, we believe, to account for most of the mortality, without considering the dangers of transportation, no doubt aggravated by them immensely. We think so the more from the record in the Missionary reports of the Mackinaw school, for 1827—the very year Cornwall was closed. The report says: "Such is the medium of intercourse with all the Northwestern Indians that children can as easily be obtained from a distance of several hundred miles as from a shorter. There are now in the school children from the borders of the three great lakes, the shores of Hudson Bay, three or four from Red River, two from Lake Atabasco, far in the North-west, several from the interior, south of Lake Superior, and several from the wilderness near the Mississippi." In those days, these distances were much more formidable than now, but the school was prospering and nothing is said of discontinuing it. The real reason of the superior success of the mission station schools over the eastern seminaries, is, we believe, that they aimed at no such high-strung "course" of superfluities, but a simpler, more natural education, generally, perhaps always, combined with industrial training. The fact of the children's proximity to their tribe was not considered an advantage, but often deprecated, as it is now by our missionary teachers, and was provided against as far as possible, sometimes by legal indenture binding the children to the superintendent of the mission. We have received more than one expression of similar feeling from missionary teachers since the Indians came to Hampton.

ONE OMITTED REASON FOR CORNWALL'S DISCONTINUANCE.

The report to the Prudential Committee,

THE HEALTH QUESTION.

To say that there is, after all, a degree of risk in transferring Indians so far from home to be educated, is to say nothing new or unknown. If we cannot on this occasion repeat the formula of Mr. Phileas Fogg—who, in his eighty days round the world, found no emergency too much for him,—"That is provided for," we can at least say that it is foreseen, and as far provided for perhaps as the present state of sanitary knowledge permits. On the points of study and industry—both essential to the question—nothing more need be said. Shellbanks, a stock farm of 339 acres, seven miles from Hampton on Beck River, belonging to the school, furnishes a pleasant vacation rest for the Indian youths. The boys go out there in squads, for two weeks' stay at a time. They sleep in a tent, cook for themselves, have abundance of fresh meat and milk and vegetables; on cool days have a light day's work of four or five hours, and, for the rest, fish, row, bathe, rove as they please, making no one afraid, except perhaps the black birds. The farm manager—a colored student—reports them as all docile, and pleasant. Civilization is represented by the morning and evening prayer which he has with them. For those whose turn is to stay at Hampton, a camp on the beach is provided, and tent life is the order of the summer for all.

All the details of Hampton views and methods have been quite at the service of the originators of the *Tribune* letter. They have been invited more than once to visit the school, and if they had taken as much pains to examine Hampton as to investigate the records of three hundred years, their course would have *seemed* a fairer one.

With all possible precautions, there is still risk. There may be sickness and death. There has already been. But are their chances any better at home? "Consumption is the great regular scourge of Indian youth," says Henry Elliott, writing of "Wild Babies" in last November Harpers'. One has only to look through the last year's reports from the Agencies to the Commissioner of Indian Affairs to fully confirm and add to this statement. Total ignorance of health laws, dirt, crowding, superstition, vice—these are the sufficient causes for the great mortality, in the opinion of the agents. Dr. Allen of the Red Lake Agency, Minn., believes that "as their manner of living improves, with a richer diet of wheat flour, their health will improve, especially as they are desirous to use *soap* on their persons." He regards *soap* as a great civilizer. Add to these risks, those of Indian wars (at a minimum while their children are away at school), and not least, of forced transportation, not to schools, but to distant, undesired new reservations, and we think the balance is in favor of the schools.

ROOM FOR ALL TO WORK.

But Hampton's effort interferes with no other for the Indians. There is room for all to work; the laborers are only too few. As far as Hampton is distinctively an experiment, that is, in the co-education of the two races, we believe the experiment is already a success, and that there are certain marked advantages in the association. But as she is undenominational, so is she impartial in bidding God-speed to all honest efforts. To demand more of newly civilized Indian missionaries than white ones dare to undertake, is cowardly; to expect to "make a lever of a few Indian youth to lift a whole race out of barbarism," is an absurdity which it did not need a three-column letter to point out. What is needed rather is an unlimited number of jack-screws, each to lift a little, but all in unison if it may be.

That past efforts have been jack-screws and not levers should have been no disappointment. Great good has been done by every effort, we believe, in spite of mistakes—but vastly more ought to be done as these errors are corrected by time.

A very curious point to notice in the record of Mr. Wheelock's Charity School, a hundred years ago, is the contrast between two of his own statements. In the full flush of his first enthusiasm, he writes, "if *one-half* the Indian boys thus educated, shall prove good and useful men, there will be no reason to regret our toil and expense for the whole." After twenty years of constant effort, he writes sadly, about to abandon his undertaking, "Of all the number before mentioned, I don't hear of more than *half* who have preserved their characters unstained." Morals enough suggest themselves, but shall we not side with his strength rather than his weakness and decide that it did pay? Civilization is of slow growth, but it grows by effort and struggle, not by inanition, and now that *we* have it we fancy it has paid.

A most sensible Indian chief a hundred years ago declined an offer of the British Commissioners of Virginia to put his young men at college, because the kind of training proposed would teach them neither to bear cold and hunger, neither to build a cabin, kill a deer nor take an enemy. But he graciously offered to take the Virginia gentlemen's sons to the woods, and *make men of them.*

He had, at least, the right idea of the true aim of education. To make men and women of them is what Hampton wants to do for these Indian boys and girls, as for all her students. If the *Tribune*, or any number of other philanthropists and philosophers, have a similar desire and a different plan, there is room for all, and "May God bless us, every one."

KINDERGARTEN NORMAL INSTITUTE AND National Kindergarten, Washington, D. C. Autumn Class begins Oct. 1, 1879. Mrs. Louise Pollock and Miss Susie Pollock, Principals. Mrs. Louise Pollock has been for fifteen years an earnest student and advocate of the Kindergarten System, and translated Midge, Line Morgenstern's "Paradise of Childhood," a Manual for Family and Kindergarten in 1864. LETTERS FROM HAMPTON GRADUATES TO DONORS OF SCHOLARSHIPS.

Mr. Charles G. Nordhoff, the well known journalist and author (of "*Politics for Young Americans*," Travels to Cnlifornin and to the Sandwich Islands, &c.,) having recently visited Hampton Institute and desiring to aid its cause with his nble pen, was convinced that the letters written by Hampton graduates themselves, direct from their field of laher, supply the most effective material for arousing the interest of Northern philanthropists, and instructing them as to the condition and necessities of the Southern freedmen. He quoted at length, therefore, from some of these letters from the Workman, in his letter of over a column in the New York *Herald*, which has been read hy its thousands of readers, and must do much to aid the general cause.

In a private letter, returning the balance of the letters sent him, to Hampton he says: "They are very interesting, and show me that we of the North know really nothing of the country negroes of the South."

It is our full conviction of both these facts—that the people need instructing as to this Southern field and work, and that direct and reliable information from it, cannot fail to be both interesting and profitable, which has occasioned our efforts to secure and publish these letters, and which leads us to continue their publication.

THE EFFECT OF EDUCATION.

THE first letter we will give is from a young man who was one of the best scholars that ever graduated from Hampton, and one of the student singers during the whole time that band was out, since which time, he has been continuing his studies at Oberlin preparatory school and college. The effect of the culture of travel and intercourse with many educated people, and continued study, with the solid foundation of Christian principle and a training in industry, upon the opinions of an intelligent young colored man as to the needs of his race and the best methods of raising it, are worth observing:

ST. LOUIS, MO., *April* 22d, '79.

Kind Friend:

Gen. Armstrong has requested me to write you a letter in order that you may learn what I have been doing since leaving Hampton.

Immediately after graduating, in 1872, I was invited to join the company of singers organized at that time, and was thus indirectly connected with the institution until June, 1875. I presume you already know something of our tour through the United States, and Canada, and I will not give you an account of it.

Since that time I have been teaching and attending school. During the winters of '75 and '76 I taught five months in Virginia, and four in North Carolina. This was my first attempt at teaching. At each place I gave satisfaction and had no experience worth relating.

In the fall of '76, I went to Oberlin College, and remained there until last September, when I came to this city and secured a position in one of the colored schools. While at Oberlin I almost completed the studies of the Freshman year. As soon as I can earn more money I intend to finish my college course. I have always had a great desire to get a first class education. It may not be best for me to spend so much of my time in school when my services are in such demand; I may not be able to do more effective work then than now, but I know I shall work more satisfactorily to myself.

My work here is hard, but, after all, I enjoy it. The colored people in this city have good educational advantages, and school officers manifest considerable interest in the progress of the pupils. They offer the same advantages that they do the whites. The schools are pretty well filled and compare favorably with the older ones of the city. A large portion of the children are poor, and receive very little home training. The majority of them must receive all their moral instruction and higher ideas of life, from their teacher if they receive any at all. I cannot say that all the teachers here have the best character, since the number is so large, but I do think that many of them have the highest interests of their pupils at heart.

Since leaving Hampton, I have had some intercourse with the colored people in almost every section of the country, and the more I know of them, the more I am in sympathy with the Hampton method; she aims to develop character well as the mind. I think it is very evident that the Negro can become an intelligent citizen if he has the means for improvement, but being educated in vice for two hundred and fifty years, it will not be an easy task for him to abandon his old habits.

Some hring charges against Hampton because she does not give her students a full college course, but gives them instruction in house-keeping, agriculture, &c. They say that higher education is discouraged there. Being a Hampton graduate, I am often attacked hy such persons among my people. I tell them that such is not the case. There are a great many classical schools all over the country which open their doors to colored youth who can afford to attend them; some exclusively for them. Hampton is for the poor who wish to get some education and have not the time nor money to spend in such schools. It is to train teachers. I also say that the other race has such schools, and we need them as well. I don't think we are so far advanced in civilization that we can dispense with training and industrial schools yet. We need more such schools.

I am glad I began my education there. I was too young and inexperienced at that time to understand fully its workings and aims, but now I see its atmosphere was a silent factor in developing my character. I sometimes imagine that I am not doing as much good as I might among those with whom I am inboring, but on thinking the matter over, I come to the conclusion that the young under my instruction, unconsciously imitate my actions, to a certain extent, just as I did those of my instructors, and so I feel encouraged.

Whatever course I shall hereafter pursue in life, I hope it shall not be one which will make you regret that your scholarship went toward paying for my education while at Hampton. I shall ever remember you gratefully.

Yours very truly, I.

A SCHOOL IN THE BLUE RIDGE.

In the mountains of Virginia, special conditions of society exist; instead of great plantations and first families, there is a large proportion of small farms and small farmers of the class once known as poor whites, but the best of the class, though little educated and somewhat narrow, are good workers and likely to contribute most to the prosperity of the State. Much superstition and ignorance exists among them and among the negroes here, but the relations of the races are, as the writer of the following letter reports, friendly, and work among them is very hopeful.

——, VA., *March* 26*th*, '79.

Mr. ——: *My dear friend:*

I consider it a great pleasure as well as my duty, to inform you of my whereabouts, and of my success in this and other fields of labor since I completed my course at the Hampton institute in the class of 1872.

I am now teaching four miles south of the above named town, the school I first took charge of after the completion of my course at Hampton. I have devoted an average of five months in each year to teaching since '72, either in this, Pulnski or Wythe Counties, and am happy to inform you that I have met with great success, in having large schools and advancing my scholars rapidly.

My present school numbers ninety-three scholars, the majority of which come an average distance of two and a-half miles by half past eight o'clock, A. M.

I find these people still anxious to have their children educated as when I first came among them. Although I find it necessary to devote a great deal of my time to moral training of my scholars, I am proud to say that they are improving fast, both intellectually and morally. This is my third return to this school after laboring elsewhere. It seems almost impossible for me to get entirely from this people, as they haunt me so by letter, that I am forced to return to them after intermissions of one and two years.

I am engaged in a very large Sunday school, composed of day-school scholars, their parents and many others who can't attend the day school. We are standing greatly in need of books, tracts and Sunday-school papers.

Many of my scholars have recently embraced religion, which of course makes it very pleasant for me, both in Sabbath school and day school. This place is situated in the South-western part of Va., among the Blue Ridge Mountains. My school house stands on the highest hill in the vicinity, known as Bunker Hill after the famous hill of that name.

I find the white people in this section friendly, although many of them are opposed to the free schools. I would be glad to write more, but fear I may weary your patience.

Yours truly, H.

WANT OF LEADERS.

The following letter from a young woman, gives with picturesque and sometimes humorous touches, one great want of the colored people of the South, the want of confidence in their leader, and of leaders worthy of confidence. It most forcibly snggests the need of training their youth not in book learning merely bnt, primarily and above all, in the qualities of practical manhood, and common sense and chnracter which shall fit them to be leaders of men.

——, VA., *Feb* 27*th*, '79.

Dear Sir:

I nm pleased to give you an account of my first experience in teaching. I taught nearly three months. This was nn entered school, got up by the people of the township. I had on roll fifty-five. The house was small and crowded and very open. I, as well as the scholars, suffered severely from the cold. Scholars seemed anxious to learn nnd were making fine progress in their studies.

After being there a month, I opened Sunday school which was very desirable. The little folks were delighted with the privilege of attending a Sabbath school, and they did attend promptly. Everybody was pleased with me; they said I was the best teacher they ever had, their children learned faster under me than anyone else. I used Col Parker's method of teaching all the while, and the children did advance rapidly, and I certainly did all I could to their advantage. I also opened an evening school composed of grown persons only. Educatioo is very much needed in this part of the country, as you will see plainly before I close.

The reason the school closed, was on accennt of some misunderstaading among the people.

Rev. ——— ———, (colored) was the committee of the school in that section. I was hired for five months, hut the people did not put money enough in the treasury to pay for one month. They did not like their leader (Rev. ——— ———) well enough to trust him with the money to pay the teacher, for what reason I can't tell. All I had to do was to look to the committee for my money. The first month, they paid well enough; the second month they wouldn't pay a cent; so the committee called them together, telling them if they wanted the school to go on, to pay what was due. The people, no doubt, would have carried the school on, but he talked to them in such a way they couldn't understand him. Everybody seemed to be angry and ready to fight. At last, a white gentleman passing by the school house, and hearing the quarrelling stopped and looked on as long as he wanted to, and seeing that the people wouldn't or couldn't understand, asked permission to explain what the committee was tryiog to, and he did explain nicely, in a way that the least child could understand it.

He described and spoke very highly of Hampton school, and said I was from Hampton, I certainly was a good teacher and deserved my money, for I was full capable of doing the work, everybody said I was. He told them to pay what they could, for it was a just debt. At this Rev. ——— ——— became much excited, saying the people would not hear him as they did the white man. So he was led aside by one of his own members; he used several words that didn't become him. So the people won't have any more to do with this school so long as he is committee. The people wanted me, but did not want the same committee, so for this reason, the school couldn't go on any longer. So you can see they don't pull together. They don't even know how to treat a teacher; they are full of superstition.

I am now eighteen miles from ———. Hearing the people wanted a school, I came down. On the following Sunday, I went to the church and stated to the people my reason for coming. The first man rose and said:

"Sister, you is too late. If you had come when we was digging 'taioes, and picking peas, we would a had you."

A dozen or more arose and said the same thing. The last one who rose was a little different, saying:

"We like you mighty well, Miss, but de peas and de 'tatoes is all gone, an' de money is gone too."

I will close hoping to hear from you soon.

Your sincere friend, M.

FROM A MINISTER'S WIFE.

Methodist ministers' wives at the North who know the hardship of a life of itinerancy from one country parsonage to another, will surely feel for this less favored sister who having to take in sewing and washing, with a hahy to take care of, to help eke out her husband's ill paid pittance, is still "trying to make home as pleasant, tidy, interesting and loving as possible." She also was one of the Hampton student singers, and has taught before and since her marriage.

———, NANSEMOND, CO., VA., *Mar.* 21, '79.

Dear Sir:

I remember you as my kind benefactor while at school, and take great pleasure in writing you these few lines to inform you something of my work and general experience since I left Hampton.

The first thing I did after leaving was to go to my home and open public school about twenty miles from there at a little place in Perquimans county, North Carolina. At this place the people seemed eager to have their children educated, and soon I had on roll fifty scholars. I taught only two months, and closed with an exhibition, left none in their a, b, c's, although I found many in them when I began.

I then went back home, and was soon married to one of my former classmates at Hampton. With him I went to live in the western part of Virginia among the Blue Ridge Mountains. There I found the people generally ignorant and superstitious. Our people seemed anxious to have schools, and especially in Bedford County, so that my husband wrote to General Armstrong, several times for teachers, which requests were complied with.

Mr. ———, the Supt. of Public Instruction in Bedford County seemed very much pleased with the teachers who came from Hampton, so much so that sometimes when they went to be examined, he would only look at their diplomas and mark their grade certificate from them.

I taught three sessions under him and with general satisfaction to the Public school officers and people concerned.

At this time I am a minister's wife and the mother of one child, and am trying to make home as pleasant, tidy, interesting and loving as possible, and thus to help my husband to spread true religion among the people. I go to Sunday-school every Sunday morning and meet the bright faces of a few children. In this school we use the Sunday-School Edition printed at Hampton.

Please always think of me as being ever grateful for your timely aid, which you rendered me while at Hampton.

Yours respectfully, A.

SENTIMENTS ON EDUCATION IN GEORGIA.

The following report of the state of white and colored views of negro education in Georgia is from a young man of good character and strength of mind, with five years' continuous experience as a teacher among the people of whom he speaks.

——— Co., Ga., *March* 25*th*, 1879.

Dear Sir:

It affords me much pleasure to write you. Since I left Hampton I am proud to say that my success among my people has been great so far. I have been teaching for five years, and not in one instance have I met with any obstacles, particularly among the white people. They have treated me very kindly. Those with whom I have come in educational matters, seem to, by their conduct and words approve of "the colored man being educated." I have not confined my teachings to one thing in particular; but have tried, through the mercies of kind Providence, to teach morality, Christianity and honesty, as well as school books. My school *record* numbers about seven hundred children who have been under my instructions. My patrons and their children are not only interested and desirous for an education, but for their elevation also. They flock to my school days, evenings and nights. Good many of my patrons attend night school, and I find it quite interesting and encouraging in teaching them. Our schools generally run from five to six months in each year. The salaries of teachers are not large, varying from fifteen, twenty to forty dollars per month.

We have aid from no other sources than the poll taxes, which are collected in the fall, and divided among the number of school districts, according to the pro rata of school aged children. Hampton is a great place for all colored youths; would that there were many more such Hamptons. I can assure you, dear sir, that your kindness and generous donations to help me on with my schooling, and others at Hampton, have not been wasted or prodigally used. As God has opened the hearts of our Northern friends to assist Gen'l. Armstrong in his great works at Hampton, I hope they will help him on, and they will surely see and receive their reward. We are all well. The yellow fever is over and gone, and not much sickness now. Hoping to hear from you, I remain,

With respects,

Yours truly, C.

EXTRACT FROM THE JEWISH TALMUD.

He searches the righteous. How? By judging of the manner in which they attend to the flocks intrusted to their charge.

David the son of Jesse, He tried in this manner. Before the lambs David set tender grass for food; to the old sheep he gave soft herbs and tender grass, while to the young sheep, able to chew well, he gave the old grass; feeding each according to its wants and strength. Therefore the Lord said, "David, who is able to care for the wants of the flocks, intrusted to him, will be able to rule properly over my flock, the people of Israel," even as it is written, "After the young flock He brought him to rule over Jacob, His people."

So did the Lord try Moses. While keeping the flock of his father-in-law in the wilderness, a lamb left the flock and ran away. The merciful shepherd pursued the end found it quenching its thirst at a spring by the roadside. "Poor lamb," said Moses, I did not know that thou wast thirsty;" and after the lamb had finished drinking, he took it up tenderly in his arms and carried it back to the flock. Then said God, "Moses, if thy love and care is so great for an animal, how much greater will it be exerted for thy fellow-being! thou shalt lead my people Israel."—*Jewish Record, Philadelphia.*

INCIDENTS OF INDIAN LIFE AT HAMPTON.

A LITTLE EXCITED.

A few days after the above incident Koha

matters concerning their health; their ill-health is caused more by their imprudence

ones who cannot get out of the hot, unwholesome city streets where they sicken and die for want of the sweet country air.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

THE MARRIAGE QUESTION.

All of the boys are much interested in the marriage question; hardly had the Dakotas arrived here in November, before one of the young braves began to send the most gallant of love letters to his favorite Indian squaw. From the following conversations it seems that the Indian boys are looking favorably upon the colored girls at the school.

One boy says, "I want to learn to make chairs and tables, so that when I get married I can have them in my house." When asked if he would take an educated squaw or one of the Indian women at home to wife, he replied, "No; I marry a colored girl; she will teach me good English."

Another boy says, "I went to learn all I can, and when I stop school I will write to my father that I want six horses." "What will you do with the horses at Hampton?" he was asked; "will you sell them to get money to take you back to the Territory?" "No; I give them to colored girl's father." Why do you give them to him? "If he give me the girl I give him the horses." "What will you do with the girl?" "I take her to my home in the Territory; she be my wife, and work for me, make corn, potatoes, and take care of my wigwam." "What work will you do?" "Oh! I *sleep*, and sometimes kill buffalo." "But may be the colored girl has never done such hard work; it may make her sick; what will you do if she can't work for you?" His laughing reply denied his words: "I give her one year to try; if she can't work, I throw her away and get another wife."

ON GUARD.

Gathering fruit at half-past ten P. M. by moonlight is rather exciting, but may get one into trouble, particularly if it be in the fruit orchards at the Normal School.

On this eventful night two Indians were on guard; going their rounds they were attracted to the cherry orchard by an unusual noise; leaping the fence, they stealthily approached the disturber of midnight peace. Before the intruder was conscious of their presence, they made him their prisoner: he proved to be one of the colored students. One of the Indians put his whistle to his mouth to call more guards,—"Sh—sh," remonstrated the prisoner, "don't make so much fuss; you'll wake all the people on the place." Quietly submitting to his captors, he was conducted to the guard-house. Taking a seat at the table, the prisoner began to write; the stern guard took his club and knocked him on the knuckles, to make him put down the pen: he started to talk, but up came the club again, this time to his mouth. Locking the door of the guard-house, the guards took a seat some distance from the prisoner: there is a large chimney in the room, and probably seeing the advantages it offered, the prisoner took a seat behind it—it kept him out of the sight of the guards. An open window had probably been overlooked; after a few minutes they went to see if all was well and found the open window, and no prisoner; darting out of the door, they caught sight of him running toward his cottage; having the advantage of a start, he was soon in his room, and locking his door, jumped into bed with all his clothes on. The determined guard was not to be thus foiled; jumping over the opening above the door, he took his stand by the bedside of his prisoner, and would probably have remained there all night if the officer of the guards had not talked with the colored boy and told him it would be better for him to return to the guard-house with the Indian guard; knowing that his punishment would be lighter, the boy consented to be re-led to the guard-house.

THE PENITENT.

That the boys are sometimes obstinate cannot be denied, but they soon yield and acknowledge their error, either in words or actions.

In one of the arithmetic classes a boy was sent to the board to work an example; he readily consented and soon had an answer; his teacher saw a mistake and called his attention to it; the boy tried to correct it, but was unsuccessful, and took his seat feeling very disagreeable, and turned his back to the board. Wishing to help and encourage him, the teacher called him by name, "Koba," but received no answer; supposing that he was thinking about the example, she concluded not to disturb him; thus the matter dropped for a time. About 7:30 P. M. the teacher heard a knock at her door; opening it, she saw Koba. "*Why!* Come in, Koba," she said. "Miss B——," he began as soon as the door was shut, "to-day you said, 'Koba,' and I did not say anything. I did not feel good. By and by, I think maybe Miss B—— feel bad because I did not speak, maybe she think I don't like her; so I have come to tell you that I am sorry." Need it be added that his kind teacher, who had no suspicion of his feelings, met him more than half way to make this treaty of peace?

A LITTLE EXCITED.

A few days after the above incident Koba was again sent to the board to do an example. For a time it looked as though the former experience was to be repeated; he took his seat, and it seemed as though he had given it up. A few minutes passed, but they seemed as so many hours to the anxious teacher; then throwing his feet high into the air in a wild demonstrative way, Koba exclaimed, "I know, I know," and going to the board, gave the correct answer at once.

A NOVEL MOONLIGHT DRESS-PARADE.

In going from Virginia Hall to the Wigwam, I was surprised to see a small procession of boys ahead of me; guessing who they were, I quickened my step and soon came upon them; they were marching without music or banners, with broomsticks for weapons and night-shirts for uniforms; a colored student commanded the troops, and had them marking time. Seeing me, he ordered a halt, maybe for a grand review; his men saw me, and immediately there was a great stampede; the excited troops, without discipline or order, went back to their quarters at double-quick time.

OUTDOORS VERSUS HOUSE.

The warm weather is now upon us, and probably no one feels the depressing influence of the summer heat more than the Dakota Indians. Reared as they have been, in their cold northern homes, where snow and ice abound the greater part of the year, it will not be surprising to learn that they try every way to keep cool.

A few nights ago, after a very hot day, about twelve of the boys took their beds and blankets out on the piazza of the Wigwam, intending to sleep there all night. Knowing the changes from a hot and sultry day to a damp and chilly night, I told them that they would not be permitted to sleep out all night, then left them to take their things back into the Wigwam. As everything kept very quiet, I went down to see if they had gone in. Imagine my surprise when I found them all tucked up in bed out on the piazza, with their blankets drawn over their heads, pretending to be fast asleep. I said not a word, but went to work, pulling the blankets from over them; they jumped up, struck by the chilly night air; then I pitched the beds into the house. There was a little scratching of the head, and some muttering from the older boys; then they retired to their rooms, wishing perhaps that I had stayed abroad during the summer months.

The strictest supervision is required in all matters concerning their health; their illhealth is caused more by their imprudence than by climatic influence. Two out of the three fatal cases that we have had since their coming, can be directly traced to imprudence; the third case was caused by a diseased constitution, brought from Dakota to Hampton.

BY THE SEA-SHORE.

IN MEMORIAM.

Mark-pe-s-ma-ni, from Crow Creek Agency, Dakota, died of consumption at Hampton, Monday morning, June 2, '79. He was buried from the School Chapel; Rev. Mr. Gravatt of St. John's Episcopal Church, of which the deceased was a member, read the beautiful burial service of the church. After some appropriate remarks, the solemn funeral procession trod the way to our little graveyard, to the sound of a Dead March, played by the school band. The remains were borne to the burying-ground by his Indian friends, where we deposited our sacred dust. The services closed with a prayer from the minister, who commended the departed spirit to the kind care of our loving Father. As we were about to turn from the grave, one of the members of the band took his place beside the grave, and blew a long, sweet, touching Good-night.

The beautiful moon cast a soft, subdued light upon the solemn scene; we could but think of that future morning when the trumpet shall sound to bid us arise.

It is pleasant to add that we have every reason to believe that the departed is now happy: in a letter to one of his friends he said, "I die gled." He was patient and gentle in the midst of his increasing infirmities, and when death came it had no terror for him.

J. C. R.

BY THE SEA-SHORE.

A PICTURE FOR THE CHILDREN.

Happy are the children who live in the country in the summer time; in the cool, green woods among the mountains, or by the sea-shore where the long, white waves run up the beach, and leave pretty, bright shells and curious seaweed on the sand. What fun to run down the beach after them with little bare feet, and build forts in the sand, and write your name and see the tide wash it out; to wade in the edge of the waves, or dive off the rocks, and frolic in the water, or rock in the row boat, or go skimming over the sea like a bird in the white winged sail boats.

Everybody who lives in town is glad to get into the country when summer comes, but there are hundreds and thousands of poor little ones who cannot get out of the hot, unwholesome city streets where they sicken and die for want of the sweet country air.

A few years ago, into one kind man's heart came a beautiful thought for these poor little ones. And he spoke out his thought in one of the great city newspapers, (for that is one thing they are for) and asked everybody who could to send a little money so that every poor child in the city could have at least one good day of country pleasure that summer, and every poor sick baby and its mother have a week or two of country life. So many little hearts were made glad, so many sick babies got well, the children behaved so well when they were happy, and the country people who had kindly taken them into their homes got so much interested in them that everybody said it must be done again. So every summer the good work goes on, and more lives are saved and more hearts made happy.

Now here is a picture of the sea-shore and what do you make of it? I think this little girl has come with her mamma and aunty to the sea-shore for the summer. And they have come to ask the Fisherman whose boat they always have whether he can take them out sailing this morning. And he is telling them about the poor little ones who are coming, and how his wife is to take one to board with them, and the little girl says she will come and sea the baby, and the lady says it may go sailing with them, and there come the gentlemen who are bringing all the children from the city. Don't you wish they would hurry along so that we could sea them!

CORRESPONDENCE.

Mar. 23d. Taking an omnibus I went to the Tabernacle to hear Rev. Mr. Spurgeon. I did not have the pleasure of hearing him—as he was in France hoping to recover his health. Mr. Charles Spurgeon, a son, occupied the pulpit of his father; his prayers were long but very earnest, it seemed as though they must have said to every aching and hardened heart, "I am praying for you."

The Tabernacle has three galleries entirely around it; the whole interior of the edifice is so admirably arranged that a congregation of 5,000 people can see as well as hear the preacher.

Mar. 24th. Went to the British Museum. I did not get any idea of its extent until I went in; the study of its treasures is endless; the library alone is said to contain over eight hundred thousand volumes, and large additions are made to this collection every year. The whole world has contributed its treasures which make this the finest museum on the globe.

Passing through innumerable suites of rooms devoted to Zoology, Geology, Mineralogy, Botany, and Antiquities, I came to the Ethnographical room; in this room can be seen both the antiquities and the objects in modern use, belonging to all nations not of the European race. I was much interested in the African exhibit; it consists of specimens of cotton fabrics, mostly obtained during the Niger Expedition; shields from Central Africa; weapons and heads used in the African trade; the beads are of two qualities: one for obtaining gold and the other traded for ivory, the former appear to be of porcelain, the latter of glass, all highly colored to attract the eye,—arrows in leather quivers, made by the Mandingo tribes of West Africa; Tuarik saddles and wooden head stools from Ashentee; it is said that the head stools are used principally by the dandies; these young men having oiled and carefully prepared their hair were so afraid they would have to go through the same trouble in the morning, they invented these blocks or head stools; the neck rests on the stool while the head is unsupported; no doubt a few well made night caps would help wonderfully in the work of civilization. There are hats and boxes made of calabashes. The hats are very large and slightly resemble Chinese parasols; the boxes are beautifully shaped and carved; the carvings of the gourds and calabashes bear a striking resemblance to the Ancient Egyptian style; spoons, leather pouches, dresses, pipes, and ornaments of various kinds, used by natives in Kaffirland; these are all barbarous; there are four pieces of pottery well made and worth studying, two pieces are highly glazed. All of the African exhibit of pottery including pipes is well made; the clothes are strong and dyed in quiet colors such as dark blue, very dark red, and white, one sample of cloth made from the leaf of a tree strongly resembles the Chinese ponjee silk in texture and softness, but it is lustreless—spears, wooden fetiches, tobacco pipes, and musical instruments are also to be seen. I had no idea there were stringed instruments in Africa but here are samples in a variety of shapes. I was much pleased to see two varnished calabashes the work of negroes near Para, South America they are exquisitely done; at first I thought it was the lacquer work of the Chinese.

The treasures of African seem inexhaustible. Passing through the department of mineralogy I saw samples of Malachite which were found in South and West Africa.

A feeling of awe passed over me as I wan- | essential, and which will be of the most prac- | ness—to have frequent and rigid examina- | a corresponding rise in the virtue and in- | telligence of the ruler. If the ballot is

A feeling of awe passed over me as I wandered through the great Assyrian and Egyptian galleries and saw the mighty monuments made by men thousands of years ago. Colossal human-headed figures of Lions and Bulls, Bas-reliefs of Tiglath-Pileser II., representations of sieges, stone and wooden coffins and mummies; probably the most interesting thing in the Egyptian Department is the Rosetta stone; it is a tablet of black basalt with three inscriptions, two of them are in the Egyptian language but of different characters, the third in Greek. This stone furnished the key to the interpretation of the Egyptian Hieroglyphics.

Mar. 25th. The Bank of England has nothing very attractive in its external appearance; it is only so much wall supported by pillars, ineteed of buttresses; but within is all that one could desire; it is strongly defended at night by soldiers stationed at the Tower, a detachment march up to the Bank every night to guard it.

Mar. 26th. Took an omnibus from Chespside to Charing Cross to visit the National Gallery of Arts; the building is much discolored on the outside by dust, and a stranger, without being told, would not think, that so unimposing a building could hovs such treasures of art within.

I felt myself drawn to some of the pictures. I have never thought of Judas Iscariot except as the traitor, but when I looked upon Armitages portrait with the remorse of Judas stamped on every lineament, and the muscles fearfully contracted, I pitied the man. What can be the agony of a soul when it is God-forsaken and foredoomed. I was pleased with Murillo's "Holy Family;" the whole of heven is thrown into the face of the child instead of the Virgin.

HOW HIGH?

The "Golden Mean" of which poets sing, is something more easy to rhapsodize about than really reach. In all branches of human effort it is difficult to strike this "golden mean," hnt particularly so, in fixing the educational pitch of Normal Schools for the colored people of the South, in this, the second decade of their freedom.

Leaving out of consideration that small intensely "conservative" class, who are opposed to "hook learnin'" in general, and to negro education in particular, there are a vast number of people, white and black, who manifest a deep interest in the standard of these normal schools; and perhaps it is not extravagant to say, that their theories are almost as opposite as the poles. Friends of the colored people, real and pretended; their foes, open and covert; and the colored people themselves,—all have theories as to how high the standard of the schools should be. Perhaps the extreme views may be stated as follows: it is claimed by some that a knowledge of the three R's is all-sufficient—"readin', 'ritin', 'rithmetic,"—and that all beyond is "vanity and vexation of spirit." Others urge that only the higher branches of intellectual effort should be pursued, and that Greak and Latin should be studied, never mind what else had to be neglected. Perhaps it is not an overstatement to say, that a large majority of the colored people entertain the theory last mentioned. Their most bitter enemies shere this view—the people who would rejoice in their discomfiture, and scoff at their failure, would ask nothing better, than for the negro normal schools to be conducted in each a manner, that the practicel education of the race prove a failure. The best educated of the colored race do not entertain this view—they know if we would build a tall tower, we must have a broad base: and that no man can climb to a point fifty feet in the air, without passing through points twenty, thirty and forty feet from the ground.

Theories are cheap—anybody that wants, can have a theory; but how much they are worth, can only be teeted by practice. A series of experiments conducted by practical people, with the sole object of getting the best possible results, is worth reams of theories. The eleven years' work of this institution is valuable; for in them a mass of facts has been gathered, that outweighs any amount of guesswork. The students, who have attended the school, have at least been up to the average of the colored race, if they have not been above it: and what has been found true of them, it in fair to assume as true of the race at large, or at least of that portion of it, to whom normal schools have an interest. The first fact that stares us in the face is the poverty of most of the students; they can only afford to give a limited number of years to their education, and what they cannot get in those years, they must either do without, or acquire later in life. To be sure, there are some colored people who can afford to send their children to school for many years; but they are rare exceptions, and to them the great colleges of the country, as Harvard, Yale and Columbia, are no longer closed.

Accepting this fact, it follows that in the few years the average student can spare, he must be taught those things which are most essential, and which will be of the most practical use to him in after life. The course here (which some of our colored friends declare is not high enough) covers three years; in the first half of it are taught the rudimentary studies—spelling, reading, writing, arithmetic, geography and grammar; in the last half, in addition to those things which the students will have to teach, there are given such studies as will best afford mental training, and at the same time put them in possession of some of the facts, that every good citizen should know: among these studies are algebra, chemistry, agriculture, the elements of physiology, moral science, history, rhetoric, civil government, and political economy. Now if a great majority of the students who come to the Institution are found to be able to go through the course with only reasonable difficulty, then it is fair to say that the standard is none too high, and fitting to discuss the propriety of raising it: if, on the other hand, a great number of students find the course too difficult to master, then it is certain that the standard is high enough, if not too high. Now the facts of the case are (taking the last two years in particular) that less than half the Middle or second class have been promoted to the first or Senior class. To be sure, some have been compelled to leave through poverty and other causes, but the great majority, who have failed of promotion have failed, because they had not mastered the studies of the middle year; hence had either to go over it again or be dropped from the rolls. It needs no argument to show that if the standard were raised, fewer still could complete the course; and the policy of doing the greatest good to the greatest number, should underlie all schools of this sort.

Students are compelled to attend twenty-eight recitations weekly, and study thirteen hours a week "out of school." Now let us suppose for instance that Greek and Latin were added to the course, and, for argument's sake, grant that in three years students could learn enough of these languages to do them any good—they would require at least one recitation in each daily; this would reduce the time they had to devote to other things just two-sevenths. Now, if so many fail when all their time is devoted to their English studies, how many would be able to master them, if they only had five sevenths of the time they now have to devote to them? Thoroughness is a thing of vital importance to everybody and in everything; and in no one thing are the colored people more deficient than in this thoroughness; and any school for them is bound to be a failure, which fails to have "thorough work" as one of its maxims and practices. Giving an education does not consist in putting a student through so many text-books, nor putting so many text-books through him: but in causing him to make his own as many facts as he can gather from his books and teachers, and in training his mind, so that it is not only a storehouse of acquired facts, but a factory where new fabrics of thought can be wrought from old materials.

The object of normal schools is to train young men and young women to be able to teach others: and before anybody can teach another anything, they must understand it themselves. It needs no proof that special attention must be given to those studies then, which students, when they graduate, will have to teach; these must be deeply and clearly impressed on their minds, even if there have to be neglected, those studies, which are taken up more for the mental training they afford, then for any use, that may be made of them in after life. "Aim high" is a capital motto, but "aim straight" is a much more valuable one in practice: too much elevation of the educational rifle is just as bad as too great depression, so far as hitting the bull's-eye of success is concerned. A men who has a smattering of this and a smattering of that, and no thorough knowledge of anything, is a being to be pitied: nevertheless, there are plenty of such beings in the world, and any institution which wilfully adds to the number, is rather to be called a fool factory than a school. Ambition within certain limits is a most excellent possession, but a man whose ambition leads him to attempt that which is impossible, wastes his time and makes himself ridiculous.

Among the things necessary for a sale are these two: that a men have something to sell, and that somebody want to buy it: just so it is with supplying teachers for the colored schools of the South; teachers are wanted, but only that sort of teachers who can instruct the children that will be under them. We do not go to law schools to study theology, nor to singing schools to learn to paint; and a man who had slighted his arithmetic in order to say he had studied trigonometry is not the teacher for children who want to study arithmetic. A person who can blunder through some Latin verses, or stumble through a Greek chorus, may not be able to explain some very simple English construction; yet it is English, not Greek, nor Latin, that is to be taught in these public schools.

The certain way to raise the standard of a school is to increase its degree of thoroughness—to have frequent and rigid examinations, and to put back any student who proves that he has not thoroughly mastered the course over which he has been. If this plan were stiffly enforced, it would make a diploma far more valuable, and materially reduce the number who would gain them. Still, an unbending rule of this sort would work great hardships to a great many, and experience has proved that it is best to seek the highest possible, not the highest absolutely.

T. T. a.

THE PEOPLE SHOULD RULE.

When President Lincoln was urged, and at times was almost goaded, into signing an emancipation proclamation, he persistently refused on the ground that the nation was not ready for it. "I keep my finger on the pulse of the people," he said. He had decided opinions of his own, on matters of statesmanship, and often said that the administration of government was not what it should be, but he held to the principle that under a republican form of government, the acts of those in authority should, and in the long run would, reflect the sentiments of the people who made the government; that he had been elected not to instruct or give new ideas to the people, but to execute their will. And when in his best judgment, the majority of the people were ready for that splendid, though strictly unconstitutional, act of emancipation, he "dipped his pen in the sunlight," and signed it.

Under absolute forms of rule, the people, limited in their sphere of action, may rightly look up to and demand of their rulers the latest and best methods of conducting public affairs, but in a democracy like ours, where the people are rulers, there can be no shifting of responsibility. If the people rule, it must be their policy which shall prevail, and not the policy of their servants in office. No method of action will ever be a success permanently, in a democracy, which does not reflect and respond to the wishes and sentiments of the people. If the people are ignorant, this ignorance will manifest itself in the form of government. If the people are warlike, the government will be warlike. If the people are noble and generous in their sentiments, the action of the government will be noble and generous. There may not always be a quick response between the people and their elected rulers. In fact, there is often discordance for a time. But in the long run, this principle boldly asserts itself. No statesman in America was ever able to permanently maintain a "policy" of his own. He could as well control public sentiment by his opinions, as hold a three-decker to her anchorage with a thread of cotton. The safety of all self-governing communities lies in the inability of the rulers to capture men's opinions, and hold them arbitrarily. The Congress of the United States is a representative body to-day, not only in law but in fact. Whatever the manners, and opinions of the widely separated sections of the country may be, they are boldly illustrated in the House and Senate. The protectionists come from the manufacturing states. The free trade men come from the agricultural states. The silver money men come from the silver producing states. The anti-Chinese men come from the states where Chinese labor is disliked. At no time, in the history of the Republic, has the average culture, and character of the people been so accurately represented as in the Congress of the present time. Neither the best nor the worst social forces of the country are there, but the grand average is. The Southern representation is an exception; owing to the peculiar social organization of this section in times past, the best men represented it, and do now. But the causes which effected this result are ceasing to operate, and before many years, the average opinion of the white and black will be represented by a class of men greatly inferior to those now at the front.

Improvement in the administration of government should go from the people to the rulers, and not from the rulers to the people. The principal should instruct his agent, and not the agent instruct his principal. As the virtue and intelligence of the people rise in quality, there will be a corresponding rise in the virtue and intelligence of the ruler. If the ballot is bought and sold, the rulers will be bought and sold. If the people insist on integrity, the rulers will respond with integrity. Every new school house is a lever which raises the administration of the laws. Every new, broad and generous idea, which gets into the life of the people, finds an expression in the political machinery. The growth of intelligence among the people is the growth of the trunk which carries the branches and leaves up to a finer atmosphere. All experiments in elevating the character of the people by legal enactments are sad failures. Our statute books are clogged with laws which can not be executed.

Painfully strict as our usury laws are, they utterly fail in the mercantile communities. In a democracy, laws become dead letters, unless backed by public sentiment. A woman convicted of murder is sentenced to be hanged. Do we hang women? Although our theory of government is simple it is not yet understood by the majority of the people. Men expect new ideas, and plans of reform from their representatives. But the representative is only elected to carry out the will of the people. And the people fail in self government who keep their will and understanding in abeyance, and look for guidance to the rulers. If Mr. Hayes has a political "policy," and Mr. Sherman a financial "policy," and Mr. Shurtz an Indian "policy.", they say substantially to the people, as you have no policy of your own we will give you one ourselves." Make our government in fact, what it is in law, and these men would say, "what shall we do, we have no policy, for we are your servants." Successful as has been the experiment of the Anglo Saxon race in self-government, it is still a crude affair when held to really just and practicable standards of self rule. The people do not like to think. To remember, to investigate, to collate, to meditate thoroughly and patiently, are the highest and the noblest works of man.

It is, however, a most irksome and troublesome business, for most of us. It is a simple matter to fall in and march along roads which have been cut out for us by others. But roads so made lead in the end to party allegiance and party feeling, and take away our duty to the whole state. As we educate, and the individual grows in understanding, and does thinking for himself, the administration of government improves, because it reflects better ideas. Elected officers, and representatives put aside their policies and their platforms, and stand forth in their true and constitutional character, the real and humble servants of the people.

W. N. A.

WILLIAM LLOYD GARRISON.

The men who dare to follow the lead of their own moral nature and inmost conviction of right wherever it may take them, irrespective of friends or party or popular sentiment are, in all ages, the rarest kind of men, but it is only among them that are found the heroes and mighty men of all time, the men who turn the world upside down.

William Lloyd Garrison was one of these rare men. It was this loyalty to conscience and absolute fearlessness in obeying it which gave him power in his obscure and poverty-hampered youth, to stir society to its foundations. His peace principles of non-resistance were as radical and loyally adhered to as his anti-slavery principles. His appeals were only to the conscience, but men trembled as he went out single headed like a young David with his sling and stone from the brook of truth against the Goliath of a nation's sin, whose mighty fell shook North and South with convulsions the young peace lover never dreamed of.

It is seldom indeed that any reformers enjoy such signal triumphs of their ideas as Garrison and the other anti-slavery men—many of whom were inspired by his influence—lived to see. It is no wonder, therefore, that, as they are rapidly passing away from its scene, they are "sustained by an unfaltering trust" for the future of the race which has received the great gift of freedom.

So William Lloyd Garrison died, and every colored man who owns a home or holds a vote should not only remember him with gratitude but remember the great lesson and power of his life—loyalty to conscience

In this country, and five times that many depend

which could neither be terrified nor bought.

The principal facts of Mr. Garrison's life have been given in most of the newspapers, and are as follows. He was born in Newburyport, Mass., Dec. 10th, 1805, and was therefore seventy-five years old at the date of his death. A loving, brave and religious mother, formed his earliest habits of mind and heart. He always through life ascribed whatever good there was in him to her influence. A poor boy, he was apprenticed to a shoe-maker at ten years of age, going to school by working after hours, and at thirteen to a printer. At sixteen he began to write for the paper he printed, and at nineteen took the place of its editor. At twenty-one he published a paper for himself but made it a failure as a business enterprise. He edited after this, the first total abstinence paper in the country, the National Philanthropist, and still another devoted also to anti-slavery and peace principles. His first anti-slavery address was made in Park St. Church, July 4th, 1829, in which he avowed the doctrins of immediate emancipation. In 1830, having become partner in a paper published in Baltimore, the "Genius of Universal Freedom," he wrote an article denouncing the sending of a cargo of slaves to New Orleans, for which he was arrested for libel and thrown into prison, but was released by efforts of Mr. Whittier, Arthur Tappan, Daniel Webster and Henry Clay. In 1831, he started his famous paper the Liberator, which became known through North and South and was destined to live until the one mission to which it was dedicated was accomplished.

In 1832, the New England Anti-Slavery Society was formed with Mr. Garrison at its head, and he visited England to consult with Wilberforce and show the English workers the fallacy of the Colonization scheme. On his return, the American Anti-slavery society was organized on a platform which he drew up. This was followed by the series of riots, mobs, and disturbances which made the "old abolition days" so stormy, in which Garrison was of course a prominent mark for attack, on one occasion being dragged by a mob through the streets of Boston with a halter round his neck, and only saved by being arrested by the city police.

Believing that slavery was incorporated in the Constitution, he advocated the dissolution of the Union to get rid of it, but soon after the beginning of the war, seeing that the success of the Union cause would bring emancipation with it, he became an ardent supporter of the Governmeut, though without abandoning his personal views upon non-resistance.

Since the war, Mr. Garrison has received many tokens of the respect in which he is held both in this country and in England for his unselfish devotion to humanity. He has kept up a lively and untiring interest in the progress of events, and interested himself actively for the cause of temperance, the rights of women, the protection of the Chinese, maintaining always the side of every question which he honestly believed to be the right side.

He died very peacefully at the home of his daughter in New York, May 24th, after a life of which Wendell Phillips said, in the eloquent eulogy pronounced at his funeral:

"I never saw him unhappy; I never saw the hour that gloom poisoned his existence; I never saw the moment that serene, overflowing, abounding faith in the rectitude of his motive, in the certainty of his success did not lift him above all possibility of being reached by any of the clamor about him. This is the happiest life that God has granted in our day to any American, standing in the foremost rank of men of influence and effort."

A TURKISH LADY.

Our picture, for which we are indebted again to the Harpers, represents a lady of Constantinople dressed for the street, on which no Turkish lady may appear except thus closely veiled from the passer's eyes. The invasion of modern civilizatiou and Western ideas has, however, done much to mitigate the severity of seclusion in which Turkish women were kept. They are seen abroad more frequently and the ugly shroud custom wrapped about them has grown thinner and thinner till its transparent folds rather enhance than conceal beauty of feature when any exists, as well as add lustre and charm to the soft dark eyes.

Still a Turkish lady's life is apt to be a dull one, and a recent traveller thinks that life with her would be but dull, and that any man romantic and rash enough to bind himself to the owner of those gazelle eyes, would grow weary to death of the dull like beauty and empty, sluggish mind.

Christian civilization, however, is doing much for these poor Eastern women in their enforced idleness and ignorance. Lady missionary teachers have penetrated the seclusion of their harems where no man could go, and theirs is in the suburbs of Constantinople, a "Home" seminary for Turkish girls which cost fifty thousand dollars, given entirely by the women of America.

Green Feed for Horses.—Give a share of the green fodder when horses do not run at pasture. If at pasture at night, a generous feed should he given before they are turned out.

Corn should not be neglected in the hurry of harvest. Frequent cultivation hastens growth and the maturing of the crop. To see the difference, leave a row or two uncultivated. Much hand work later in the season may be avoided by a little work with the cultivator, and by keeping the weeds down.

Fodder-Corn may yet be sown. A rye or wheat stubble may be plowed and planted in drills with 3 bushels of corn per acre. The large Western or Southern corn, or Evergreen Sweet Corn, may he used. Some extra good ammoniated superphosphate, with potash added, or special corn-fodder fertilizer, should be sown broadcast and harrowed in before planting. Dropping the fertilizer in the drill does not answer well for corn when other manure is not used broadcast.

Blight.—If this appears, there is but one thing to do, cut away the blighted twig, branch, or whole tree, as the case may be. Cut down to bright sound wood, and burn the removed portions.

NEWS OF THE MONTH.

FOREIGN.

The Khedive of Egypt has been deposed. His eldest son has succeeded him.

The eruption of Mt. Etna has ceased, but the volcano continues to give forth smoke.

Bolivia has authorized privateers sailing under her flag to seize Chilian merchandise even in neutral ships and not contraband of war.

Peru has ratified the universal postal union This reduces postage to and from that country from 17 to 5 cents on half-ounce letters.

LONDON, June 10.—The council of foreign bondholders has sent a protest to the Governor of Louisiana against any attempt of the State convention to reduce the State debt as arranged under the funding act of 1874

PARIS, June 11.—The Prince of Orange, heir apparent to the throne of the Netherlands, who has been for some time ill in this city, died here at 11 o'clock this morning. The Prince of Orange was born on the 4th September, 1840.

LONDON, June 9.—The Times says the recent rise in cotton at Liverpool was a godsend to that long-suffering centre of inactivity, and though only transient, has enabled banks and speculators to avert a collapse that seemed inevitable.

The Liberian boundary commission has failed to fix the northwestern limits of that republic, and adjourned *sine die* No aggeement could be had between the Liberian and English members, and the latter finally referred the matter to Commodore Shufeldt as arbitrator.

LISBON, June 19.—The Cortes has ratified a treaty with Great Britain, establishing a customs union between British and Portuguese East Indies, and the custom-houses between the two will be abolished. The Portuguese will adopt British India's tariff, excise, money, weights, measures and extradition regulations. The British salt monopoly will be extended to Portuguese territory, in consideration of no indemnity to the latter of four lacs of rupees annually.

MADRID, June 1.—King Alphonso opened the Cortes in person to-day. In his speech he declared that the ministry will continue the practice of liberal principles; relations with foreign powers are satisfactory; the budget will contain no new changes; the government will submit measures to alleviate the effects of the ten years' war in Cuba, and with the assistance of the Cortes, will endeavor to assimilate the position of the colony to that of a province of Spain, and hasten the day for the complete abolition of slavery.

CAPETOWN, June 3.—A further advance was made on the 31 of June. Another of Cetewayo's envoys has reached Fort Chelmsford. John Dunn has gone to confer with him Cetewayo tried unsuccessfully to obtain ammunition at Delegoa Bay. A small British force was surprised on the Orange river by a large body of Basutos. Several of the British were assegaied in their tents. Six were killed and fifteen wounded. The enemy were pursued and heavy loss inflicted upon them.

LONDON, June 19.—Reuter's dispatch from Cape Town, dated June 3, via Madeira to-day, states that Prince Louis Napoleon, Prince Imperial of France, accompanied by other officers, left Col. Wood's camp to reconnoitre The party dismounted in a "mealie" field, when the enemy crept upon them and assegaied the Prince, killing him. The body of the Prince Imperial was discovered in a field of long grass. There were no bullet wounds upon it, but there were seventeen wounds made by assegai thrusts. The body was found stripped, and the clothes had been taken away.

DOMESTIC.

The bonds of Augusta, Ga, both six and seven per cent, are selling at a premium.

The annual report of the New York Cotton Exchange shows sales for spinning during the year 210,129 bales, all of here 102,650 bales. Sales of futures since May 28, 1878, amounted to 2,618,000 bales.

The bill authorizing the Secretary of the Treasury to contract for the conditional purchase of a site for a postoffice in Baltimore has passed both houses of Congress.

Hon Henry W. Blair, who has received the republican caucus nomination for United States Senator from New Hampshire to succeed Hon. B. Wadleigh, was born at Compton, in that State, December 8, 1834.

Advices from Texas, report the wheat harvest in full blast, and the yield of wheat avenging better than was anticipated a few weeks ago. Corn and cotton are growing finely, with gratifying prospects.

FOUR HUNDRED THOUSAND PERSONS, according to the Railway World, are employed on the railroads in this country, and five times that many depend upon the roads for support. It is also estimated that between $300,000,000 and $400,000,000 are annually paid to employes and to persons who furnish the companies with supplies of various kinds.

TEXAS ranks third among the wool-producing States, having 3,674,000 sheep, and so treading closely on the heels of Ohio, California leads, of course, Nueces county, Texas, has more sheep in its limits than any other county in the Union—356,000.

The last report of the auditor of Kentucky gives some interesting figures in regard to the financial condition of the colored population of that State, who number about 150 000. They own 181 139 acres of land, valued at $1 275,35?; 3,996 town lots, valued at $1,288,155, and stock and personal property of a taxable sort worth $?66,445. This includes $7,695 in carriages and $6,082 in watches. The total taxable valuation of property held by colored persons in Kentucky is therefore $3,376,337, which, supposing assessments to be on the basis of sixty cents on the dollar, will give an actual property held by them of over $4,500,000

The mayor of Montgomery, Ala, in his annual message, says the real estate market in that city is growing more active, that a large number of new buildings are being erected and others are under contract, and that transfers of real estate are being made with an activity which presages an early rise in values. The rate of taxation has been reduced to $1 25 on the $100. Other Alabama towns, particularly in the northern part of the State, furnish evidences of a revival in their increasing business activities.

Mrs. Jane L. D. F. Hull, aged 58 years, wife of Dr. Alonzo F. Hull, was found dead Wednesday morning, in her bed at No. 140 West Forty-second street, New York. Her hands and feet were tied, she was blindfolded, a gag was in her mouth, and her trunk at the side of the bed had been opened and rifled of its contents. An examination of the premises showed that an entrance had been effected in some way through the front door, as that was found open and all other parts of the house secure. The fingers of the dead woman's hands were found to be badly lacerated, and her friends say that one large diamond ring and one emerald ring had been torn therefrom.

The bark Monrovia sailed from New York Saturday June 14th for Liberia, carrying fifty colored people as passengers, embracing all ages. They have been collected by the agents of the Colonization Society, and most of them come from Arkansas and the Carolinas, although other sections of the country are represented. They were a healthy looking set of people, and appeared of more than average intelligence. Mr. A. A. Stanford, formerly a member of the Arkansas Senate, was one of the passengers.

Hand Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of fine meat. On every can will be found full directions how to prepare Crab Salad, and Deviled Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all seafood, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the meat causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than they have bought the crabs at the markets, even of our sea-board cities. By the process employed, a new manipulation from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For picnics, luncheons, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $5 00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft, with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $1.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

Hampton Normal and Agricultural Institute.

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable &c., &c.

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung up in every part of the Union for making an "Imitation Singer Machine."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken the FIRST Prize over ALL competitors more than TWO HUNDRED TIMES. *Why?*

After the Chicago Fire the Relief Committee undertook to furnish sewing machines to the needy women of that city. Applicants were permitted to choose from six different kinds of machines. 2,944 applicants were furnished with machines; 2,427 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines! These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The people bought Singer Machines as follows:

1870	127,833	Singer Machines
1871	181,260	" "
1872	219,793	" "
1873	232,444	" "
1874	241,679	" "
1875	249,852	" "
1876	262,816	" "
1877	282,812	" "
1878	356,432	" "

Many of the manufacturers of other machines refuse to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines, A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED.*

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

FOR the months of July, August, September and October, the SOUTHERN WORKMAN will appear in its present eight-page form.

From and after November next, the paper will be increased again to twelve pages, cut and stitched, until the following July.

WE welcome from a friend in Connecticut, a donation of a complete set of tinner's tools for the Indian Work Shop, in charge of Mr. G. B. Starkweather.

The outfit of tin-ware for this institution for the coming session is to be made by Dakota boys who ten months ago were little better than savages.

The Indian boys are now making a dozen red cedar tables, oval in shape, with inlaid chessboard of holly and black walnut. The legs can be folded and the tables sent by express to any who may desire to purchase them.—

It was thought best to turn to immediate account the Corliss engine given us; hence a saw mill and outfit was purchased and is rapidly being put in order.

No better educational force could be added. The sum of six thousand dollars will be required at the outset; but one thousand has been received.

How could money do more for men than in building a workshop where the discipline as well as the profits of hard work should be the basis of an education?

We appeal most earnestly to the friends of this work to supply the needed funds. The twelve thousand dollars asked for last fall, to prepare suitable buildings for Indian students, have been given. Donations for this purpose came within fifty dollars of the amount required.

Six thousand dollars was then stated as the cost of the shop to be erected. The necessity for this amount is immediate and pressing.

THE Normal School Steam Saw Mill is expected to be in operation by the middle of August. Young colored men without funds who apply for admission are informed that they can work in the mill till Oct. 1st, 1880, save their wages, go to night school steadily, and thus be fitted both mentally and pecuniarily to enter school and continue there at least two years

We encourage also applications from colored girls for a chance to work their way through school.

Indian boys will have work in the saw mill. Their homes are usually on streams near forests; they will have use for whatever skill they may acquire in preparing timber for building purposes.

ONE bearing of the Hampton work for Indians, for the welfare of that race, is illustrated in the effort made in the last Congress,—to be renewed next session,—to secure the use of a number of vacant army posts and barracks in Kansas, Dakota, New Mexico, Colorado, Wyoming and elsewhere, as schools for Indian youth. The argument accompanying the Bill states that,

"The efforts in this direction recently undertaken, and now in successful progress at the Industrial and Normal Institute at Hampton, furnishes a striking proof of the natural aptitude and capacity of the rudest savages of the plains for mechanical, scientific, industrial and moral education, when removed from parental and tribal surroundings and influences.

"The department has in course of training at the Hampton Normal and Industrial School in Virginia, sixty-six Indians, boys and girls, from eight different nomadic tribes; and although this work was only begun last year, the results already demonstrate that no better plan now exists. The Hampton school was established in the interest of the colored race, with the avowed purpose of teaching them the 'salvation of hard work.' This spirit seems to meet the needs of the Indian race equally well, and the very considerable number of agents, teachers, missionaries, and others engaged in or interested in Indian educational work, who have visited and witnessed the methods of Hampton, join in commending it as just what the Indian needs. The intercourse between the youth at Hampton and their parents and people on the plains has produced extraordinary interest and demands for educational help from these tribes."

Aside from the improvement of our Indian youth is the fact that we are working almost under the eyes of legislators, many of whom have visited us and have confessed to increased interest in, and hope for the Indian.

In some recent published articles, from missionaries to the Indians, there has seemed to be a regret that the money expended here was not given to schools west of the Mississippi, where it is "no experiment." The fact that this work is called an "experiment" is no sign that we have any less faith, or hope, or even success, than they claim to have.

The only doubt is in respect to the health of Indian boys; two out of the forty males who arrived last Nov. 5th, having died of disease contracted before leaving home, and others having had ailments. The girls enjoy excellent health.

Will any boarding school for Indians in their own country show a better health record? In no other respect is there ground for apprehension of failure.

On the other hand no more cordial interest in and approval of this effort has been expressed than by missionaries who are devoting their lives to the red men of the plains.

It is all clear gain; not a dollar has been drawn from the Western work and many dollars have gone to help Indians that without the Hampton effort never would have reached them.

THE Colored Educational Association of Virginia held its Annual session at Lynchburg on the 16th and 17th of July. We regret that our account of it is so meagre. Good speeches were made, especially by Mr. Cromwell of Washington, and Rev. Mr. Brooks of Richmond. The essay of the former gentleman upon Industrial Education, is reputed to have been admirable.

This Association has held regular sessions for nearly ten consecutive years, and is exerting an influence that is needed in these times when, under the pressure of poverty, many are giving up all hope of improving themselves.

It has an important work in its hands. We wish the Association every success and hope that its last meeting will be followed by cheering results.

THE "Exodus" is losing its place as a topic of general interest. The movement has passed its height and the conclusion seems to be that not over five thousand freedmen have changed their homes and that the crops have not suffered materially by it. It is as yet too soon to state what the emigrants have gained by their change.

They have of course, lost in substance, but have they not gained in opportunities? Will their last state be better than their first? That will depend upon the energy and thrift of each individual.

We may expect that a portion of them will improve, and that a part of them will live in the hand-to-mouth way to which the race so kindly takes. We have held that on the whole their situation politically was by no means a comfortable one, but that their chief distress has been the result of the credit system, which, to all men, is a snare, but especially to the ignorant and short sighted.

All that we can learn confirms our view that, in a large portion of the cotton region, in and about Mississippi and Louisiana, the ex-slaves are in a wretched condition, unable to get out of debt, victimized equally by their own ignorance and by a class of traders, merchants and planters, whose rapacity is boundless.

We quote from a statement of Gov. St. John of Kansas in relation to the exodus:

"I have the honor to state that, in my opinion, it was instigated by the southern planters and merchants. I arrive at this conclusion after having examined contracts of lease entered into between the planter and the colored man, in which I find that the latter has been required to pay from seven dollars to ten dollars per acre rent each year.

I further find from the hills that have been presented to me, made and receipted by the merchants of your state, which these colored men have been compelled to pay, that they are charged 20c per lb. for bacon, worth only 6c to 7c; 25c per yard for 6c domestic; $1 to $1.50 per gallon for 35c molasses; $1.50 per lb. for dog-leg tobacco; 12½c per yard for 6c calico, and other articles at equally outrageous prices.

These prices, independently of any other consideration, would drive any class of people from your state. When you take into consideration that as good land as the negro gives from $7 to $10 per acre *rent* for, can in this state be *purchased* for $3 per acre, I think you will have no difficulty in ascertaining at least one of the main causes of the exodus, and by whom it was instigated."

While political power in the South is in the hands of Southern men and ex-officers of their army, the financial power is in different hands. In the recent terrible overturning of things, the old masters and men of wealth have been, to a large extent, succeeded by speculators, or, at any rate, by a different class of men, whose eye is on the main chance, whose greed of gain has had more to do with the distress of the negro than race prejudice, and has driven many of the finest people of the South into great extremities. This has been unnoticed from the fact that political agitators could make no capital out of it, and found it easy to charge the inevitable sufferings of the ex-slaves, in a great transition, to the wilful wickedness of the men whose defeat at the polls was their object.

The "Solid South" is not so bad as the Sordid South. The spoils of the war, the choicest lands and the homesteads of those who staked their all in the struggle, have been in numberless cases bought by men solely "on the make."

The millions of earnings of the colored cotton raisers go not into homesteads and homes for themselves, not to enrich their former owners, but largely into the hands of men without convictions, who enrich themselves yearly by taking advantage of the poverty about them. The man who has the least capital to work on suffers the most: this is usually the black man.

Under this pressure, combined with real or imagined political grievances, the Exodus was natural, as was also the reaction that has set in.

But the idea of moving has entered into the thought of the entire colored race. Every negro in the land knows about it. The Exodus was preceded by a slow and steady march westward from the most disturbed States. It will be followed, we think, by a steady but rather increased flow of colored emigrants who, to escape from hopeless poverty, and for larger political freedom will sell out carefully, go quietly and settle comfortably beyond the Mississippi.

This will be a more serious matter than the Exodus itself. Not that the bulk of the freedmen will go, but enough to effect the labor market in places.

Pressing hard upon the working class of the South, is the money famine, the exhausted soil that cannot make sufficient returns to the farmer, the sad condition of the old aristocracy utterly unfitted, as a class, for the emergencies of the day, and the whole range of thought and habit produced by generations of ease and comfort. Men who could organize victory out of defeat on the battle field cannot yet organize prosperity out of the ruin about them. It is not only immigration and capital but new ideas that are needed. All classes will rise when these come in, for they fall and rise together; and when the stimulus of good and regular wages, based on better methods, and a fair chance, is before the negro the tendency to the West will cease. Till the times change, we believe that a steady current of negro emigrants will go to the states west of the Mississippi.

THE Fourteenth Annual session of the Educational Association of Virginia convened at Academic Hall, Hampton Normal Institute, on Wednesday, July 9th.

Some of the members arrived in Hampton on Monday, and secured quarters at the popular Barnes' Hotel, a place associated with good cheer and courteous treatment. The balance of them arrived by the various steamboat lines and were cordially received and handsomely entertained, some at the above named hotel and others at private residences.

When the association was called to order, the following members were present: Prof. William F. Fox, president; Rev. R. M. Saunders, third vice president; Prof. R. B. Smithy, corresponding secretary; Profs. Thomas R. Price, T. H. Norman, J. H. Peay, Jr., S. C. Armstrong, Harry Estill, and William O. English, Rev. C. H. Toy, D. D., Rev. J. Wm. Jones, D.D., Dr. Robert S. Hamilton, Profs. Charles S. Cocke, H. H. Harris, John S. S. Blackburn, Captain A. F. Couch, Prof. B. L. Gildersleeve, Johns Hopkins University; Superintendent M. A. Newell, of Maryland; J. C. McGuire, Major A. G. Smith, Professors T. P. Crump, E. W. Cone, N. B. Webster, B. S. Partridge.

There were quite a large number of ladies and gentlemen in attendance from Norfolk, Hampton, Old Point, and the surrounding country.

Professor W. F. Fox, President of the Association, made the opening address, dwelling chiefly upon the work and interests of the Association. He urged the need of Normal Schools, that teaching is a profession, and required special preparation; and pointed out the need of co-operation between educators of all classes. It is impossible in our limits to do justice to his paper.

The sessions of the Association continued from Tuesday evening till Thursday evening.

The "Spelling Reform" was discussed at length by Prof. Webster and Rev. R. M. Saunders of Norfolk.

"The discipline and training of Girls" was the subject of an essay by Prof. Harris of Richmond College.

"The International Metric or Decimal system of weights and measures" was learnedly treated by Prof. McGuire and Prof. Webster.

Prof. J. S. Blackburn of Alexandria read a report upon the subject of a Teachers' Life Association. Many other valuable papers were presented. The last session was occupied by Col. James Barron Hope, Editor of the *Norfolk Landmark* who delivered an able and very admirable address on the "Comparative Geography and Illustrations of the Commercial History of Virginia." The lecture was full of fine word pictures of the former commercial prosperity of this state and of suggestions for the future. The congratulations of the audience were tendered, by vote, to Col. Hope.

The Association adjourned to meet in July 1880, at the Hollins Institute in the western part of the State.

The *Landmark*, and the *Virginian*, the leading newspapers of Eastern Virginia, published in full the leading essays, and so gave a wide hearing to what was read and said at the meeting.

A feature of it was an Indian recitation in arithmetic, conducted by Mr. James C. Robbins, and Miss Olivia Davidson, both Hampton graduates, and an Indian song led by Miss Amelia Perry, also a graduate. The vigor and skill of the teachers were remarked, as well as the quickness of their pupils. The red skins made some new friends to the cause of their elevation.

THE proceedings of the National Conference of colored men of the United States, held in the State capital at Nash

ville, Tenessee, in May last, compiled by Mr. J. W. Cromwell, have been sent to us, and are worthy of note.

Passing over the minutes of the three days proceedings, we will only remark upon the unwisdom of calling upon the party in power for aid, and upon all classes to lay aside prejudice and ill-feeling, when during the conference, there was frequent language abusive of the party in power, and many indications of race prejudice, and of feeling quite as hostile as anything they had to complain of.

There were present many men of marked ability. The convention was brainy enough, but lacked sound discretion in some things. We will refer to a few of the reports printed in the appendix.

That of Dr. A. T. Augusta, a really able and eminent colored surgeon, on the *Sanitary Condition of the Colored People of the United States*, is both interesting and valuable. We print a few extracts:

"In 1800, a judge in Savannah, Georgia, in charging the grand jury, just after the city was turned over to civil authority, and subsequent to its occupation by General Sherman's army, said, among other things, 'that he deplored the abolition of slavery, because the freedmen could not take care of themselves, and would soon become extinct from starvation and disease, and that the Barnum of a hundred years hence would perhaps have a petrified Negro to exhibit to the world that he once existed.' * * * * * *
The mortality, as shown by the reports among the colored people, has been very great of late, and it is so marked, that if it was not for their great natural increase, as I will show you directly, the predictions of the Georgia judge might soon be realized."

Dr. Augusta accounts for this mortality in part by the crowding of freedmen into the cities into small, utterly comfortless tenements, amidst stagnant pools, with bad food. He is satisfied that the night meetings of the colored people produce great mortality; crowded as they are into badly ventilated churches in cold weather with closed windows and high heat; going thence into the cold air, often leads to fatal results.

Dr. Augusta gives the death and birth rates of a number of principal cities and declares:

"Now I have given you the figures of births and deaths from some of the principal cities of the country, and I have come to the conclusion, and I have no doubt you will, that, notwithstanding the incorrectness of the reports, and especially of the birth rate, city life is not conducive to the increase of the colored population, but rather on the contrary to the decrease, and we might as well look the matter directly in the face. For in nearly every instance where I have examined statistics I find the same results."

What are the remedies he asks:

"They might imitate the old slave holder, who made the old, worn out and superannuated slave women take care of the young children while their mothers were at work in the field or attending to other matters. And therefore houses might be rented in different parts of the city and be converted into nurseries, furnished with all the comforts for young children; and let them be put in charge of two or three old women acquainted with nursing, with doctors to look out for the sick, and allow mothers to place their children there during the day for a small fee, and no doubt in time they might become self-supporting. * * * * * *

Many lives might be saved by having some institution to care for young girls, who are often led by the unscrupulous to a premature maternity."

A matter of the utmost importance,

"is the great number of still births among the colored people, of which they furnish fully three-fourths of the whole number. Now, I have no doubt that some of them are produced by criminal practices, but a large majority of them are produced by accident, from the debilitated condition of many of the mothers, who are compelled very often to perform severe labor, such as washing, ironing and scrubbing during pregnancy and near their confinement, as well as to inhabit the miserable shanties they live in."

The Doctor inculcates early marriages as favorable for the numerical welfare of the race. Not only Dr. Augusta, but observers generally, believe the following:

"Now, notwithstanding that there has been such a large mortality among the colored people in the large cities, still that has not been the rule in the rural districts and small towns, and therefore let us urge upon the colored people to leave the cities and go into healthy localities where they can improve their sanitary as well as their financial condition. For to live in the large cities in such numbers breeds poverty, indolence and vice, and all the consequences attendant upon them, prominent among which are sickness and death."

The statistics of negro population, and other facts below, are of interest:

"The colored population of the United States has steadily increased, from their first introduction up to the last census, at the following rate, commencing with the census of 1700. At that time there were 737,208; in 1800. 1,002,037; 1810, 1,377,808; 1820, 1,771,231; 1830, 2,328,042; 1840. 2,873,648; 1850, 3,038,808; 1860, 4,441,830; 1870, 4,880,000. Here it will be seen that the colored population has nearly doubled itself in every thirty years, and no doubt the census of 1880 will establish the fact that there are six millions of colored people in the United States, being nearly as many as the white population of the South at the breaking out of the late rebellion. If, then, they should increase in the same ratio that they have in times past, it will be seen that in 1010 there will be 12,000,000; in 1940, 24,000,000, and in 1070, 48,000,000.

Now, this estimate is made upon the increase of the colored people, as reported by the several censuses that have been made, under the most unfavorable circumstances to us. It has been proven by the statistics of the District of Columbia, which are the most correct, as far as the colored people are concerned, that I have examined, that their natural increase is greater in proportion than that of the white population. From 1874 to 1878, the total number of births reported in the District of Columbia was for the white population, 9,022; and, for the colored, 6,030—the former composing two-thirds of the population and the latter one-third. So you will see that although the white population is twice as large as the colored population, their birth rate was only one third larger.

Now this estimate does not include the still births, of which the colored people furnished two-thirds, but which, under good sanitary regulations, may be largely reduced. Our increase is a substantial one, and I make use of the word substantial because in the increase of the white population it must be taken into consideration that there is a large emigration from all parts of the world, and especially Ireland and Germany, which swells their increase to a great extent every year, and therefore every decade these are all put into the census, whereas nearly ever colored person placed upon the census rolls is a genuine increase by birth."

The Political Status of the Colored People was the subject of an essay by Mr. J. C. Corbin, colored, of Arkansas. He says:

"The Negro occupies an essential position in the political economy of the South, and is not destitute of social influence. Year by year, as statistics show, he increases in number, wealth and intelligence, the instrumentalities which alone can render his ballot effective in protecting his rights and securing his enjoyment of life, liberty and the pursuit of happiness. It is an admitted fact that his labor is the basis of the wealth of the South. Time will certainly develop the truth that his real welfare must be the object of as studious solicitude on the part of Southern political economists as that of the laboring classes of the North is on the part of Northern statesmen. If this lesson can be learned in no other school, it will be in that of experience, to whose stern teachings the most refractory must at length yield their acquiescence. Political experience teaches that overwhelming majorities are ominous. The projecting part, in parties as in matter, has a tendency to crack and fall. This principle secures to the Negro at least the portion of the 'balance of power;' so that, as expressed by an Arkansas politician, 'it don't matter which end is up, he is surely worth something to somebody.' It should be his desire to make that 'something' a very great something, and that 'somebody' the body of his fellow-citizens; that is, he must by hard and persistent labor elevate his race to a higher plane of intelligence, wealth and morality. Let him become inspired with this as a purpose, may the purpose of his life, and he will soon learn to cling to those things that contribute to it, and to abandon those that tend in the opposite direction. First of all, let him have the moral courage to be poor at first that he may accumulate a competence at the last. Let him note well the ratio between his income and his expenditures, and dispense with all that is wasteful. One of his first objects should be to secure a home of his own, and in making the purchase, to not forget that it must include, if a farm, fencing, implements and seed, but reserve a portion of his means for these necessaries. Next, let him remember that 'righteousness exalteth a nation' and that 'knowledge is power,' and he will in due time see that a political status established upon these sure foundations is satisfactory and permanent, while that which depends solely upon the vagaries of political parties follows the fortunes of those parties, and like them is at the mercy of every caprice of public sentiment."

Mr. Wm. Stewart of New Jersey argued for the *Necessity of a National Review devoted to the interests of a Negro-America.*

"But through what channel can the whites of this country ascertain what are the opinions, the thoughts, the judgments of the Negro-American? I grant you there are a dozen—a score of tiny sheets fluttering in the breezes, and each little *kiteling* is battling away manfully and with all its little might for our people. They each and every one deserve more credit and greater support than they receive. I would there were dozens more of them, for many streams make a river. I say I grant you that there are a score or more of worthy little colored journals existing, but from their surroundings and the paucity of their supporters, the influence they exert either in the ethics of ourselves or the country is very small. We have not a periodical in the land of sufficient calibre to compel a quotation by the leading papers of the country.

If quotations are made from the *Christian Recorder*, *The National Baptist*, *The Louisianian*, *The Watchman*, or any other colored periodical by any white publication, it is on account of some purpose of its own, and not because of any respect the white publication may have for the rank or standing of those colored papers. None of those colored papers are in a position to *force* themselves upon the notice of their white confreres, unless, perhaps, they do so as mendicants."

Opportunities and Capabilities of Educated Negroes is the subject of an essay by Mr. William Still of Philadelphia, one of the foremost of his race in this land.

Referring to the Freedman's Bank he says:

"In this bold undertaking the most signal fact verified was to the effect that even under very great poverty and ignorance more than 70,000 freedmen could be found ready and willing, on simple faith, to intrust their hard earnings to the amount of some $57,000,000 to the custody of this concern, under the delusion that the Government was fully obligated for every dollar of its liabilities, when, in fact, the Government was not liable for a single dollar."

Mr. Still appreciates education:

"In recalling the fiery trials and great hardships which the freedmen have had to undergo from without and within, my sole motive is only to intensify the fact which has unwaveringly been paramount in my mind, namely: under any circumstances, even the most favorable that could be expected, there are great suffering and very hard work for the Negro to undergo, in whatever light his condition may be regarded. But under no circumstances is his elevation to be accomplished and his rights respected, except through the medium of education."

He shows in the following sentences how the Negro's opportunities and capabilities may be made available for his own welfare and for that of the country:

"He is about the only laborer in the South; he has been fully inured to hardships all his life; he need fear no greater danger of having to compete with any other class of laborers. In a sense, therefore, he is in an attitude, with the aid of some book knowledge, to understand the value of his labor—capital. With education, when he works he will know how much he earns. Many ignorant laborers cannot tell. When he spends he will know how much he spends; an ignorant man cannot keep his account. When he buys a piece of land or undertakes to build, he will first sit down and count the cost, to see if he is able to finish; or whether some one is going to palm off upon him a bogus deed or fraudulent agreement. In thousands of instances an ignorant man is imposed upon simply because he can be imposed upon with impunity, by men who would not fancy being caught acting thus toward an intelligent one. In ninety-nine cases out of a hundred this rule would be likely to hold good."

The need of knowledge by the freedmen, and the effects of ignorance are shown in Mr. Still's remarks upon emigration:

"With some book knowledge, a man in finding himself badly located could readily perceive how a change might better his condition.

"Every citizen, white or black, is free to exercise this privilege in this respect, no one will deny. If one place does not suit him he can go to another of his own choosing.

"Here I am reminded that emigration is exciting a good deal of attention at the present day.

"Never were men more in need of intelligence, in order that they might judge wisely concerning the present exciting crisis. If not wide awake, they are likely to jump out of the frying-pan into the fire.

"But if he can read he may study and learn what practical emigration has done for millions on this continent. The great Western States, for instance, afford an opportunity for a good illustration. Emigration certainly has been the making of all the Western States, if not of this entire country. It was never conducted under any *en masse* system, but generally on individual account or under the auspices of small voluntary companies.

"While the great majority of these emigrants at first went poor they carried with them a thorough knowledge of husbandry, mechanism, storekeeping, trading, and all kinds of industrial labor; besides very many had been inured to hardships, and were quite ready and willing to rough it in the woods, in log-cabins—to begin labor by cutting down and clearing up the forest under great difficulties.

"Now, I am compelled to say, with deep regret, that our poor people are not prepared to emigrate under any such encouraging aspects. They have been too long shut out from the light of knowledge to be ready for any *en masse* emigration movement. In going, with very few exceptions, they could only hope to find employment as hewers of wood and drawers of water, in fields where laborers might be sufficiently numerous to meet all demands either in rural districts or in the towns. Thus with apparently continued hard struggles only to combat, the road to success would still be dark and discouraging."

Mr. Still reminds his people that only by making progress, by conducting farms, stores, trades and engaging in literary pursuits can they retain their old friends and gain new ones.

The following quotation is refreshing.

"I feel quite convinced when looking at the attitude of our people, and the work before them, that there is but one way out of the old ruts into the liberty and prosperity that we feel naturally and legally entitled to, namely, simply "redeeming the time," by intense earnestness, by rigid economy, by encouraging one another in every honorable and commendable undertaking, by acquainting ourselves with the lives and labors of good men and women who have labored successfully to bring about great reforms, and have had overwhelming difficulties to overcome. Also by studying the lives of individuals who have had great poverty to begin with and no friends to aid them; but with undaunted courage, perseverance, and a firm faith, have removed the mountain, and established themselves among the foremost men of their day."

He says, further on,

"One fact all must agree upon, namely: Our condition is very lowly, and in many respects sad. And there are no signs discernible to my mind that we are likely to have our status improved very soon, either through politics or the liberal bestowal of land, money or the preferments of any positious by the Government. Hence, we have nowhere else to look but to self-reliance and to God."

In conclusion,

"Now, I ask, in conclusion, that you will compare the opportunities which I have presented with those of fifteen or twenty years ago, and see if there is no room for thankfulness and encouragement; see if there has not been very decided improvement, and see if there is not good reason for every one of us to renew our efforts to advance education and true and undefiled religion; to promote more economy, more union, more regard for morality, more willingness to seek out and extend a helping hand to the "million" who are of the most lowly and degraded."

The Rev. Dr. B. T. Tanner, of Philadelphia read a paper on the *Theory and Practice of American Christianity*, in which he claims that "there is a fly in all the precious ointment of American Christianity, the fly of caste." "Everywhere in the North or in the South, caste prevails, differing only in degree." "The churchman of the North thus reprimands the churchman of the South. 'You can ostracise the negro to the extent of keeping him out of your parlor, but don't kill him, especially don't keep him from voting the Republican ticket.' The colored American resents the spirit of both sections."

Dr. Tanner refers with appreciation to all the good work of the Christian people of the country for his race and believes that in the future caste will disappear and that a true Christianity will be practised.

Want of space forbids reference to other interesting and able essays and addresses.

BOOKS BEFORE BACON. TAKING UP HOMESTEADS. "A CURIOSITY FOR OWNING PROPERTY." EARLY MARRIAGES. A DARKER VIEW. THE KANSAS EXODUS. INTEMPERANCE. POVERTY AND STAGNATION. TEACHING READING WITHOUT BOOKS. AMONG THE CATHOLICS. VAGUE IDEAS OF POLITICS. COMFORT'S EXPERIENCE.

BOOKS BEFORE BACON.

The enthusiasm for an education which, blind though it often may have been, has given a great impetus to their progress, has by no means all died out even from the generation that found itself too old to be much benefited by the schools. One of our graduate reporters in the field, who has taught between three and four years in South Carolina, Georgia and Florida, writes of the latter State; "Schools there are on a very good basis, running from four to nine months for a term. The people are very industrious and pay strict attention to the schools. I have often heard them remark 'My child shall go to school and learn, if he have no bacon to eat with his bread and potatoes.'"

TAKING UP HOMESTEADS.

The thirst for learning seems to be accompanied by hunger for land. The same reporter goes on to say of the same people, "They have a *curiosity* for owning property; such as cattle, land, poultry, etc. They are homesteading Government lands numerously, especially in the State of Florida." Another young man, one of the first band of Hampton singers writes of his school district in Virginia, "I had as good a school as I could wish. Some of my pupils were remarkable in their studies, and the parents returned thanks to me for my careful instruction. The people have made some improvement as to getting themselves little homes. He complains, however, that the smaller children are the best students because, "When the larger boys and girls in that neighborhood arrive at the age of sixteen or seventeen, they get married."

The reports are not always as cheerful as these. Some allowance must be made for different temperaments and ways of looking at things, but there is, no doubt, a variety in the condition of different neighborhoods, and plenty of room for hard work everywhere. Another graduate, also a Hampton singer formerly, takes

A DARKER VIEW.

"I find by experience, that my people generally are not so much interested in the education of their children as they should be. Of course there are exceptions, but the majority of them are looking at the present and not at the future, and as soon as their children reach the age of twelve, fourteen or fifteen, they take them from school, and put them out to work for some white man for fifty cents, a dollar or a dollar and a-half a week and board. They think and say that money is of more value to them than going to school and getting an education; that they have gotten along in the world without any training, and their children can do so too. They don't stop to think how they got along, or how much better they would have got along if they had had an education. And it is hard for us to convince them that it is necessary for their children to be educated that their labor may command a higher value, or that they may be one day capable of holding office or filling other places of trust.

There is a great deal said about the mass of the colored people being imposed upon by the Southern whites, and to a certain extent it is true; but I have found that where a colored man has education, even if he has no more than he gets in a common school, and respects himself and attends to his own business, he is respected and treated better by the whites than by the colored. There is a disposition among a class of our people to pull back and hinder the progress of every rising young man or woman as far as they can. It is the disposition of the 'dog in the manger' and one very hard to fight with."

THE KANSAS EXODUS.

The same writer has these views of the emigration to Kansas:

"Our people at this time are very much interested in the Kansas emigration, but I think there are few from this section that would be willing to emigrate, and those few would not be missed. On the whole, I think it would be a good plan for a few thousands to go from our cities, and large towns; for it would make everything much better for those that stay.

It is my desire at present to continue teaching, but I feel the need of more education and try to improve all I can in my studies. I shall ever be grateful to you for the interest you have taken in the race with which I am identified and for the aid you have extended in my behalf while trying to secure an education.

I am, yours with respect,

——.

POVERTY AND STAGNATION.

A young man who is doing a good work, writes:

"Although I have succeeded so well, my work has not been without difficulties. I am situated away up in ——County, eight miles from the nearest post office. The people are very poor, so poor that they cannot furnish their children with the necessary books; in fact, I never before saw such real destitution. And, as is the general rule, where there is most poverty lies knowledge is found, so it is here. Ignorance, superstition and vice hold supreme sway. The changes of many years have effected little here. The people seem content to remain as they are, not striving to gain prosperity, not pushing to get power, but willing to live in ignorance and grope in darkness, they have no hope for the future, and live only for the present, satisfied with 'plenty to eat and drink.' Some will not send their children to school, others stop them at home to do the least bit of work, that they well could do themselves, and by none is education thought of as it should be. Talking to them does no good. Argument has no effect. But is it thus that the Negro race is to remain?" Nay, God forbid! There is one point to be stormed, that is the gate to future success. Only one way is left by which to redeem it and that is to educate its young. They are the ones which we, the Hampton graduates, are to get at. Ours is to carry the light of education. On us depends much of the work which is to be done. And what could we labor for that is more grand, more great, more Christianlike in its object than for the redemption of our race?"

TEACHING READING WITHOUT BOOKS.

In the dearth of school books and the inability of the people to buy them, this graduate found the instructions of Col. Parker in the Teachers' course at Hampton last year, very useful. He says:

"I had as many scholars as I could well attend to, and when I closed I had enrolled sixty-one. They were very backward, though I must say it was not their fault. None could write or do the simplest sum in addition. I saw that work was needed and plenty of it too, hard, patient and Christian. Setting to with a will, I commenced teaching reading and writing by the method of Col. Parker of Quincy, Mass., whose services we had during the Teachers' Institute at Hampton. Arithmetic I commenced at the same time, and succeeded admirably. I am certain that could all the colored schools be taught by this method, the chief disadvantages that now attend teaching in the South would soon be expelled for I can teach at least three times as much in the same time by this method, as I could by the dull and tedious a-b-ab, of the old school."

AMONG THE CATHOLICS.

Our graduates have taught now and then in Roman Catholic neighborhoods. One of them writes thus of his experience:

"In 1877, I commenced for the first time to teach school, and as a teacher I think I can say I was successful, at least in a degree. But I was disappointed, and sadly too, when I found that all the people were Roman Catholics there. Of course my Sabbath School and recitation of Bible texts plans became castles in the air and immediately tumbled down. Bible reading in school was offensive to the scholars and their parents, and strongly objected to by the priests. During the winter the greatest number enrolled was forty-five, all of which number was Roman Catholic, with three exceptions, viz., two Protestant Episcopalians, and one Methodist Episcopalian. I taught until the last of June, 1878, when I left and went home. I must confess that while teaching there, I came to love the work better than I anticipated. Before leaving Hampton, I always said that I never would teach if I could get anything else to do, but I think I need fear lest I become a slave to school teaching. At home during the last summer I failed to get a position in any of the schools for the winter, other work was dull, and the outlook for a livlihood was discouragingly poor. I wrote to a friend in Boston asking if a position could not be obtained for me there, and by means unknown to me Gen'l Armstrong got a clue to my letter, or the substance thereof, and immediately sent me means and a welcomed order to me to leave at once for my present field of labor. I came here in Nov., and began my now well-beloved work.

VAGUE IDEAS OF POLITICS.

"I have found the people both here and in Maryland very illiterate generally, and far behind the times, having only vague ideas of politics and political parties and what measures lie within the power of a party to enact and what do not; the unlimited power of the president, especially that of ex-president Grant, whom they say only gave up his seat to Hayes for a while, but since Hayes is letting so many Democrats into Congress, and turning out so many Republicans, Grant is going to take his seat again. In each of the places that I have taught in, I have also found that almost invariably they confound the State legislature with the National Congress, but as a general thing they are politically docile, and show all signs, many of them, had they a little better chance and teaching, of being very shrewd politicians.

A."

ANOTHER writes from Maryland,

"I have a very large school and am proud at the progress the children are making in their studies. The majority of my scholars being Catholics, at the beginning of my work among them I had a little trouble in carrying out those principles in teaching that were taught me at Hampton, but they have now become accustomed to my methods of teaching, and we are now getting along well. I told you in my last scholarship letter that my mission would be to help to raise my people from their low state of ignorance and immorality to a standard of respectability. I deem the community in which I am teaching an extensive field for my mission. The children, I may say, knew little or nothing; but that can be readily accounted for; there has not been any school here since 1873, and of course, how can we learn without a teacher? My moral work seems to be progressing equally as fast as my intellectual. When I commenced to teach here many of my larger scholars were accustomed to go to balls on Saturday nights and dance all night; but now it is seldom that I hear of any of them at a ball, and if they go, they don't dance any after twelve o'clock.

B."

COMFORT'S EXPERIENCE.

A young woman writes of her school in Virginia, "I found the people very desirous to gain instruction, both old and young seeming equally interested. I intended to return to it in the fall, but heard that a great many of the schools would have to be closed, and teachers would have to wait an indefinite time before they received their pay, so I concluded I could not afford to teach yet. Yet I mean to go back for I am more anxious than ever to teach, now that I see and understand more fully the needs of my race."

Another who bears the cheering name of Comfort writes:

"I had an offer of a school in Onslow Co. to teach ignorant children. It was a very hard place to go to. God sent me and I went. They haven't any railroad or steamboats so I went in a horse cart, forty-two miles with a man who came for me, a stranger. So the first thing I did was to ask God to guide me with this stranger to the place. We started in the afternoon and traveled all night. About midnight we stopped and camped long enough to feed our horses. Then we started again and traveled till the next day. I was glad to have a rest. Before I got rested the man came for me and said I must go to be examined. That made twenty-two miles more I had to travel with the horse cart. When I got to my schoolhouse, what was it? A little log hut with one door, and two windows cut in the logs to admit light and air. It was a rare thing to see window lights [glass] in that place. My school-house was not a tight one, by any means. You could put your arm through the logs at any time. Mosquitos were by thousands. Sometimes I had a pan set in the middle of the floor and burned some wood in it to make a smoke and keep them off. This was the way I taught for two or three months. How glad the children were to have some one to teach them! I didn't only teach them how to read, but how to live.

I am glad of the Hampton Normal School. It is one of God's blessings to the colored race. What I learned there will be beneficial to me all my life. I hope the Northern friends will never let it go down. We can't thank you Northern people enough for what you have done for our poor colored race, but God will bless you.

Your friend, COMFORT."

INTEMPERANCE.

Another sums up the chief obstacles in the way of his people's progress thus:

"1. General want of book knowledge. 2. Religious ignorance. 3. Intemperance.

I am trying all I can to enlighten them in book knowledge. When we, the Hampton graduates, come out to war against these three *giants* we are obliged to be well posted on all three of these points. Intemperance, I believe, is more indulged in than any other sin. It is a common sight to see at the stores Saturday nights, women and men "drinking and making merry" as they term it, in ways that more become a heathen or cannibal than people in our country. I have got up a temperance pledge and am proud to say have twenty-five names enrolled, many of whom are old folks and had followed smoking and drinking many years. After much persuasion and the reading to them some "Temperance Tracts" I have been blessed with the above result. They are trying their best I believe to keep their pledge. As for their religious ideas, I am trying to correct them by getting at the children's minds in Sunday School. I am certain the only means of making this race anything important lies not in *this* but the coming generation. I am the first graduate who has ever been here, so I am obliged to be very careful as to the influence I leave. I have on roll seventy-one pupils, and last month made an average attendance of thirty-six, and will, I am sure, do this month as well. I am satisfied I have been the means of a *little* good. When I first opened, I had nine little ones who could not say their alphabet, but by object teaching I have them so they can now read all through Holmes 1st Reader, and writs their names and other easy words. I am trying hard not to disgrace Gen. Armstrong, and you charitable Northern friends. I believe time will prove to skeptics that we, the Negroes, are men and women, nothing more, nothing less. May God bless you and others for your services and interest in our race is my prayer.

B."

From the Public Ledger.

VENTILATING SCHOOL HOUSES.

MR. EDITOR:—Under the above caption, in your issue of the 10th instant, "P. E." after deploring the absence of ventilation in many house rooms, suggests the plan of two pieces of pipe turned upward from a board inserted in the window. This answers fairly the purpose, but is unsightly, and does not allow of the sash being shut without first removing the whole apparatus. I have often made use of a plan costing a quarter of what the above mentioned one does, and one that works more effectually, is permanent, and can be carried out, under the following description, by any one who can plane and saw a board, one-half inch thick, two pieces of a length that will fit into the space between the two upright inside beads of the window that hold the lower sash in place; let one piece be four inches wide and fitted at the bottom, and one piece be six inches wide and fitted at the top of the window frame; these can be spriggged into their places. Now, if the lower sash be raised two or three inches, there will be a current of air passing in from below and going out above, thus keeping up constant circulation without direct draught on any one in the room.

This is not the best method to be employed in ventilation, but its plan is the cheapest and quickest way to cure a serious evil during the time necessary to perfect and carry out the best methods.

J. L.

THE BIRD'S FUNERAL.

The poor canary is dead, and children, full of sorrow, have brought it out to bury it in the garden. Long years afterward, when many joys and sorrows have passed over them, they will remember the day when they cried together round the canary's grave, and be glad even then if they can remember that their little hands were always kind to the pet bird, that they never forgot to bring the fresh water and seed, or neglected any wants of the little prisoner, who sang to them in its captivity.

Under my window in the early summer morning, a little free bird sings to me, "Be cheery, cheery, cheery—Oh yes—be cheery, cheery, cheery." I don't know what his name is. I haven't looked for him much, for though I know he is just a little bird, his sweet song brings to me a long silent voice from my childhood, and I like just to shut my eyes and listen.

And there is another bird who has taken to singing in the very middle of these soft summer nights. I think he must be a mocking bird tying his best to turn into a nightingale. First a low whistle and a twitter as if he thought the sleepy birds around might not like it; and then a pause and then a louder trill and burst of melody; as much as to say, "I didn't want to disturb any one. I know you are all asleep, and it isn't moonlight and the stars are all behind the clouds, and the night is very dark—and I didn't mean to do it—but really I can't help it—my heart is full, full, full of gladness, and love. Some One is taking care of us all. He is good. The world is beautiful. By and by the morning will dawn, the sun will rise, there will be a beautiful new day. So sweet, so sweet, so sweet. Rejoice, rejoice."

INCIDENTS OF INDIAN LIFE AT HAMPTON.

We are permitted to quote from letters written by these boys to friends.

Etahdleuh Doanmoe, a Kiowa, writes to and let you know that I have been thinking of you a great many times because you helping a great deal of the Indians and take care

Indian boys we come down together stay in one house to talking about work—by and by I will come back to Hampton. I want to go to school in Hampton. I think perhaps I

INCIDENTS OF INDIAN LIFE AT HAMPTON.

SENT TO THE RESERVATION.

What numberless thoughts these few words present to the mind. Many who look on the dark sida will conclude they ere right, in thinking that there is something in the Indian nature which cannot be tamed, and finding some untractable we have been obliged to send them home; it will be pleasant to know that this is not our experience. "Shellbanks," a beautiful farm situated about five and a-half miles from Hampton, presented to tha school by one of its friends, is a valuable reservation for the Indians, particularly during the summer months, as they need more freedom than they can get at the school. The boys are divided into squads of twelve each; each squad goes to Shellbanks and remains two weeks; on its return another goes out. The plan works well and is liked by the boys, who enjoy the farm very much. They cook their own provision (the favorite way is to boil it), wait upon themselves, and sleep in a tent. All are required to work a part of every day. The remainder of the day is devoted either to croquet, shooting, fishing, crabbing, swimming or sleeping. Although largely removed from all restraint, they do not forget their religious instruction. Every night they meet in their tent and, in their own language, listen to the words of Jesus; after offering a prayer they sing a hymn,—thus peacefully closes every day. Before taking their meals a blessing is asked; it is a touching sight to see these children of the forest thus reverently thanking the Giver: many who do less would blush with shame to think of their own ingratitude.

One Sunday morning the manager of the farm (a colored man) found himself short of meat; how to provide it for so many boys was a question. Finally he made up his mind to kill a sheep; wishing to know what the boys would think, he went to their tent and told them his intention. With one voice they cried out, "Don't kill sheep on Sunday, no good kill sheep on Sunday." This verdict settled the question and relieved the anxious mind of the farmer.

The first few days at Shellbanks the boys were not required to work; they were surprised at this and probably wondered if they would be put to work and who would give the command; they did not have long to wait. One morning the manager gave them hoes and told them to go and hoe the corn; throwing their hoes across their shoulders they went out in a body, singing "Hallelujah 'tis done." It is pleasant to add that the Indians have always done whatever has been required of them.

There can be no question as to the good effect of this life at Shellbanks; it produces a marked improvement in their general health as they come back to the school strengthened and fattened.

"TOO MUCH INDIAN TALK."

The Indians are very anxious to speak "good Englis'," and as they complained of "too much Indian talk" it was proposed that twelve of them be sent to different farmers to separate them and give them a chance to learn to speak English.

Through the friendly aid of Mr. Hyde, of Lee, Mass., homes have been found, for the summer, for twelve of the boys, with farmers of Berkshire Co., Mass. This experiment has thus far been a success.

THE WORKSHOP.

The great feature of the Indian education at Hampton is education in the industrial arts. To fill them with book knowledge and send them home is not Hampton's plan. The aim is to make each one sensible, practical, and self-reliant.

In the workshop they are working in wood, leather, tin and iron. They make good pine tables at the rate of one a day, and are preparing to make inlaid folding tables of cedar, black-walnut and holly. In tin, they are making things from the nutmeg-grater to the dust-pan and stove pipe; they excel in leather work. It seems almost impossible to believe that with only three or four weeks instruction they have made eight or nine pairs of shoes. One boy, Karunaeh, has made three pairs, and improved so much on every pair that he is ashamed to show his first ones, throwing them out of sight when visitors are in the shop. They are economical in the use of leather. The work in the shop is not spasmodic; it is continued application for ten hours each day.

ON THE FARM.

The work for the boys on the farm is much lighter than in the shop; they only work half a day, as we fear the effects of the hot southern sun. After the first year there will be less cause for anxiety, for they will be well acclimated.

AN INDIAN LETTER.

LEE, MASS., *July* 10, '79.

Dear Mr. R.:—

I em sitting myself this evening and thinking about you so I want to write to you and let you know that I have been thinking of you a great many times because you helping a great deal of the Indians and take care of them much, so we try to do the best unto you as we can do. We knows what you are doing to the Indians. I would have written to you before but I have been quite busy, is the reason I did not write to you soon when I got here at Lee. All the boys quite well and happy, they comes to see me quite often when they have time in the evening. You know we have to come together and goes to church, then in the afternoon we have the Bible Class and after class we have prayer meeting as we have when we was at Hampton. We had the Lord's supper last week but some of the boys not in so we went in only four, Koba, Tsadletah, Roman Nose and I. A great many people see us in church end they very glad to have us in.

Now I must close writing for it is time going to bed—Good-bye—God bless you.

I remain, with love. Please write to me very soon, you get this and tell me all about at Hampton how they getting along.

Your truly friend,
ETAHDLEUH DOANMOE.

The style and spelling of the above letter have not been changed in the least; they are given just as they were received from the writer.

HEALTH.

The experiment of transferring Indians to a warm climate to be educated is closely watched to see what effect it will have on their constitution. Thus far, with but one exception, they are all in better health and spirits than during the winter months. At their homes, consumption and scrofula are scourges, passing over the settlements in regular "death waves"; consumption is the disease we contend with at Hampton. We notice one peculiarity of the Indians when they are sick: they have none of that indomitable will-power which delays death; instead of battling for existence, they submit without a struggle to what they think is fate, but it is only the shrinking of their timid hearts. A. C. R.

INDIANS IN BERKSHIRE CO., MASS.

The twelve Indian boys placed in care of the farmers of Berkshire are pleasantly reported on by Mr. Alexander Hyde, of Lee, who says:—

"Am happy to report the boys doing well. The Lee Farmers' Club held a field meeting yesterday at Beebe's plantation on Bear Mountain. The club invited the Indians as guests, and all came but two, Cohoe and Soaring Eagle. Cohoe preferred to attend a pie-nic, at which a prize of $2.00 was offered for the best runner. Cohoe won the prize. Dr. Heath is much pleased with Soaring Eagle thus far. Tsadletah was sick again the fore part of this week, but was able to walk to Beebe's yesterday. They get sick and well again wonderfully quick. When sick they give up to it so completely that they appear much sicker."

We are permitted to quote from letters written by these boys to friends.

Etahdleuh Doanmoe, a Kiowa, writes to Capt. Pratt as follows:—

LEE, MASS., *June*, 1879.

Dear Capt. Pratt,

We all met together on this Sunday at Mr. Hyde's house and they had lunch here. We enjoyed much to see each other and we had meeting here as we use to have at Hampton in every Sunday afternoon. I asked the boys if they like to their new homes and they says that they like pretty well. The boys says that they have nice thing to feed on and have good room to sleep in; the boys are getting along very well. I am sorry to say this, I am not very strong to do hard work, but I would not tell Mr. Hyde about it, now I am getting stronger. I hes got a letter from home and it very nice letter, it from my brother, Mobeadlete and Kiowa Agent too—and they want me to come there. Capt. Pratt I wish I go with you when you goes that way and talk with them, what can be done for them.

When I think that way then I feel hurry—about doing something for the Indians. Capt. Pratt you know what I am trying to doing—I am coming to the light and never want to turn away from that light I have seen. I will do something for Christ that he died for everybody and for me. Please write to me when you get this and let me know about going out west. I am doing the best as I can.

Your truly ETAHDLEUH DOANMOE.

White Breast, one of the Mandans who came to the school last November, sends the following letter, which was probably written

THE BIRD'S FUNERAL.

by one of the Florida Indians; he has not yet learned to write, and as they do not understand a common tongue, the letter must have been dictated by the sign language, which is similar to that employed by the Deaf and Dumb:—

LEE, MASS., *June*, 1879.

Dear Capt. Pratt —

I was received your very welcome letter sometime ago, and was very glad to hear from you so soon. I like here very much and the people have been very kind to me, and I am going to try hard to do my best if I can and try to do right. One thing I want to tell you if you go out to Dakota of this summer to get more Indian girls and I shall be very glad to have my little sister to come here to Hampton to school. I am happy here to see a great many good things and good people here and I am enjoyed very much here to learn good many things here—One the man work with me he is very kind man he never speak a cross words to me, so I like him very much to work with him. that is all.

Your truly friend, WHITE BREAST.

Please my love to Kawhet. [One of the Indians at Hampton.]

Little Chief, a Cheyenne, sends the following letter to Capt. Romeyn:—

Capt. Romeyn,

I will sent you a letter. I am stay here this place Lee, I like it very much indeed. Sometimes I get very tired to work—All the Indian boys we come down to-gether stay in one house to talking about work—by and by I will come back to Hampton. I want to go to school in Hampton. I think perheps I cannot come back to Hampton. I hope you will write to me very soon—

Your true friend LITTLE CHIEF.

Koba, a Kiowa, writes as follows to Capt. Romeyn:—

LEE, MASS., *June*, '79.

Dear friend Capt. Romeyne—

I am write a letter for you and I think very often about you. All the boys seemed to like their new homes. One thing am very strange that I did not know anybody at Lee, and did not to talk with them much because I am a little afraid of them, and they afraid of me. I think Lee is a very nice little city—I think very often about my school mates at Hampton the Indian boys and colored boys—Please you tell them some of them that like me I think about them a good many times and wish to see them again—Now I must close writing with much love to you all,

Your truly friend KOBA.

White Bear, an Arrapahoe, who is unable to write, sends the following which was written by another:—

LEE, MASS., *June*, 1879.

My Dear Capt. Pratt,

I like here very well and work ont the doors in good air and getting stronger. I am happy here to see a great many beautiful mountains around here and the rivers. I want to do the white road as long as I liva and help my Indian people when I go back to them and show them how to do right. I shall be very glad to go back home when the two years over and see all my people and help them up in the right way. We are learning a great many things, milking, hoeing and doing all the rest things every day. We saw Genl. Armstrong yesterday and he went all over to see the boys and we very glad to see him—All the boys come together on Sunday at Mr. Hyde's house and have reading; we went to church to-day—Now dear Capt. I must close writing Yonrs

WHITE BEAR.

From Soaring Eagle, a Cheyenne:—

LEE, MASS., *June*, 1879.

Dear Mr. Capt. Pratt

I was received your good letter and was very glad to hear from you. I am trying really hard to working, what the man want me to do. we went over Sunday afternoon at Mr. Hyde house end we have reading in the Bible books and have prayer meeting too —Now I close writing.

Your friend, SOARING EAGLE.

The last is from Roman Nose, a Cheyenne:

LEE, MASS., *June*, 1879.

Dear Capt. Pratt,

I received your letter and was very glad to hear from you. I like my new friends here very much. I am going to try hard to work and to do some things every day, by and by I will be a strong man and a good man and learn e good ways. I am going to try to open my eyes and to learn to talk English much. White people talked with me and said you speak English and I said no, I cannot much speak English now, I will try hard to learn to speak English little. I will always remember your talk about the Bible that If ye love me keep my commandments: This is my commandment that ya love one another as I have loved you; ye are my friends if ye do whatsoever I command you—and another that is God helps the man who helps himself—I love that God and I do pray that God to help me and he will give the holy spirit and a good heart to do right—

I must go up stairs to bed end sleeps, so I must say good night. Your faithful,

HENRY C. ROMAN NOSE.

JUST STARTING, AND ALMOST HOME.

There seems to he e special attraction and sympathy between old people and little children, and there is something peculiarly touching in seeing them together. The little pilgrim just started on life's long journey, the aged traveller almost errived at home. The old man knows every step of the rugged way and feels compassion for the little one whose tender feet must so soon tread its roughnesses; he is weary too of the burden end heat of the day, and turns from the anxious discussions of those who are in the midst of the strife, to refresh himself again with the untroubled heart of a child. The child finds no one else so quick to sympethize and so ready to help in its own little joys and novel experiences. The eged need not fear to "outlive their usefulness." The Lord of life takes care of that. What mission more beautiful than to hear the full cup of a long life's wisdom for the comfort of so meny of these little ones? What home is not richer in all sweet end generous sympathies for this communion between the old and young!

THE OUTLOOK FOR FARMERS.

The Nation recently stated that "the history of agriculture in the most as well as in the leset prospérous parts of the world, lends strong support to the view, that on the whole the farmers cannot rise much, if any, above the "French and Belgian type" of laborer. Thia generalization is remarkably sweeping. Is it true? It is hardly worthy of a paper, usually so accurate and painstaking, to chill off the budding hopes of young men and young women who are now casting about for employment. Few people do much thinking for themselves, and the apparently deliberate opinion of a journal singularly honest and able in its treatment of subjects, will be apt to determine, finally, the career of somo of those who are now trying to thread their way out of the frightful confusion into which the last few years have thrown nearly all occupations, or ways of making a living. However, it is hardly possible, for a journal engaged in touching upon many events *currente calamo*, to reach the truth concerning many matters of grave importance.

It is a curious feature of the literature of the last two years, that in it, everybody has fallen into a discussion of the "situation." The dailies, the monthlies, the heavy quarterlies, the politicians, the men of the closet, the scholars, are at earnest discussion over the conditions of the most remarkable and widespread commercial crises known in modern history. It is a serious matter just now, as to what a man shall do for a living, if he have not a well established business, and especially important to that very large class of people, who, the College Professor said, "were never intended by Providence to do much of anything." The opinion of *The Nation* would drive back into the trade centres, not only those who have been recently thrown out of them, in the quiet working of some principle of natural selection, but it would call to these centres the remainder of the population, who have spirit and brains enough to refuse a life to be worked out on the "French and Belgian type" of existence. It has generally been conceded of late that the towns and cities hold an undue proportion of population, and the very best sign of the times, in the opinion of many is, the redistribution of population. The prospect held out by *The Nation* to the quiet and refined, of a life in the rural districts after the manner of the Belgian peasant is sad enough. In 1790 one thirtieth part of the inhabitants of these States lived in cities or towns. In 1878 one-fifth part had drifted into the cities and towns. There must be some definite and just proportion between the inhabitants of town and country. What is it? Possibly the two periods we have cited present extreme and undesirable proportions, and that somewhere between these extremes is the desirable point. If, however, the future of the American farmers' life means ignorance, painful economy, utter denial of luxury, a depressing, hand-to-mouth existence, the outlook for the Republic is bad enough. From any and every point of view we cannot justify this opinion of *The Nation*. Forecasting the future of American agriculture, by inferences from English experience, as *The Nation* does, is hardly fair. The factors of the problem are unlike. Any reader of the English journals of agriculture, will see that in England, the case is hopeless, under the present holding of land. Cultivable land is valued at from $200 to $500 per acre, vast tracts are reserved for pleasure or hunting grounds. The tenant system generally prevails. Successful farmers, like Alderman Mechi, say, the freedom of cultivation is hampered by harsh leases and short terms. The landlord is afraid of the tenant and ties him up. The tenant will not improve the land for the benefit of his landlord. The English tenantry, besides carrying these burdens, are foolish imitators of their superiors. They spend an undue amount of time in hunting, shooting, and visiting, and do not till the land themselves, or if they do, it is tilled badly. These charges have lately been made by the London Farmers' Club. The Journal of Agriculture, (English) says, there is no place where a farmer's son can study agriculture, in its scientific aspect, at a less expense than $750 per year, while ordinary instruction may be had for nothing. If these statements are correct, and there is no reconstruction in the method of farming, the Belgian type must be the end. *The Nation* says, farming does not pay in New England. Neither does "cobbling" pay, yet the wonderful wealth of Boston and Lynn comes from the manufacture of boots and shoes; or, in "cobbling" carried on as a "business." The village blacksmith in the rural districts of New England was never known to have made a fortune in pounding out horseshoes on his anvil. But when this same industry is taken up as a "business," and so conducted, it has brought out great fortunes. The village carpenter rarely makes a fortune. But business men put the same industry into new forms, with machinery and capital and it does pay. The agricultural papers of the country have one grievance which is with them always. It is the lack of business and scientific training among farmers The successful and economic working of land calls for knowledge and experience in mechanics, chemistry, natural philosophy, and medicine. To this must be added the need of mercantile training, no occupation known to man, is so exacting. But up to the present time there has been no occupation whose demands have been so shamefully neglected. The completion, of a liberal education by the farmer's boy is the signal for a professional life. The farmers are not trained thinkers, nor do they attempt to become so. The improvements in agriculture are usually thrust upon them by outsiders. Fine breeds of stock are introduced by the amateure. Experiments are made by the professional men and enthusiasts. The industry which calls for the best use of head and hand usually gets the worst. Several years ago Josiah Quincy said, in an agricultural address, that "the farm of the future would be a business affair. There would be departments and book-keeping and system." It is the blunders in farming which make the Belgian type possible. There are now men and women who not only make farming pay, but make it profitable. This is enough for our argument. Is it possible that in the progress of civilization, farming shall finally be the noblest occupation of all? It is said that the three professions, "divinity, law and medicine" are founded on the fall of man. If man ever gets over that fall, and becomes again erect, will not these professions disappear for want of use, and in their places stand one which more than all others, brings man nearer to nature, and which in its common demands, sweeps in all knowledge, and calls for an education almost universal. If business statistics show us that the vast majority of traders fail, and if the farmer's road leads down to the base Belgian type, the case is indeed hopeless. We cannot believe it. In the severe redistribution of the social forces now going on, we predict the most fortunate situation will fall to those who may be appointed to till the soil.

W. N. A.

RAISING COTTON ON CREDIT,

And what it has to do with the Kansas Movement.

An immense mass of testimony has been collected as to the migration of colored people from the cotton states bordering on the Mississippi. This mass of testimony carefully sifted, reveals the fact, that while political misrule has had much to do with the movement, the real moving cause was the wretched financial state of the negro. If the freedmen had been making and saving money, no amount of terrorism on election days or during a political campaign, would have driven them in such numbers, helter-skelter from their homes. To assume a state of political anarchy, as would alone banish so many people, is to assume that United States Courts have no existence in those States. If these people had been well off in a material sense, it would have required an uncommon amount of "bull-dozing" to have started the exodus. What then is the subtle poison that has been and is at work in these states? How is it, that the negroes and poor whites, dig and delve year after year in the most fertile lands in the world, and yet are deeper in debt at every year's end than at its beginning?

The question is not a difficult one; the poison at work is a dangerous compound of ignorance, and cotton culture on credit. Paradoxical as it seems, many crops are more than half paid for before they are half grown: the planters do not live on the proceeds of last year's crop, but on the crop yet to be made: they live on the distant future, and it requires no special brilliancy to know that this is a lean diet. Cotton is a crop that takes a year to make, and men cannot live a year without food and clothing. Suppose a man without capital enough to buy food, clothing, tools, mules, etc., takes it into his head that he will become a planter on his own account, what must he do? He must borrow what he needs. What security has he to offer as collateral? Here comes in the unfailing law of loans, the smaller the security, the greater the rate of interest. He has nothing to offer as security except the chances of his making a crop. Now this security is of the most risky sort—for no crop has so many enemies as the dainty cotton plant. Overflows, droughts, army worms, markets, and innumerable other enemies are ever lying in wait for it; and anybody who accepts such security demands, and rightfully too, large compensation. Such a planter pays very highly for everything he has to buy, whether it be merchandise, or money with which to buy merchandise. The seller of the merchandise or money has to wait the best part of a year for a return, and of course gets more for it, than if he could "turn it" many times in a year. Almost all the supplies a planter would get, would come from some "store," where the account would not be settled until the "crop" was in. In a majority of cases, the planter would keep no tally of what he bought, and of course at the year's end he surprised at the total. Let anyone permit an account to run for a year, without settlement, and they will inevitably be surprised at how much they have bought. When a man pays cash for merchandise, in nine cases out of ten, he buys in smaller quantities and more carefully, than when he takes the goods and the merchant "puts them down." It is clear, therefore, that everything such a planter consumes is at the highest possible price, even if we grant that all the business is done with the strictest honesty.

Now when the crop is made, it does not belong to the planter; it belongs to the man who has advanced the supplies to make it. This man sells the crop, pays himself if he can, and turns over the balance, if there be any, to the planter; if, as it quite often happens, the balance is on the wrong side, the poor planter has to mortgage his next crop, and so on to the end of the dreary chapter. Another point against him, is that he must sell his crop when it is ready, and as a myriad of other planters are ready to sell at the same time, the chances are that the planter gets a low price. The plain unvarnished fact about this system of planting is that a planter has to sell at the lowest and buy at the highest rates. Is there any wonder that they keep poor?

We have supposed the planter to be a person of average intelligence; but now let us look at it and suppose that the planter was unable to read or write, Does he not run a double risk? He cannot keep even a simple account, to say nothing of a set of books. The chances are that some rogue or another will swindle him, and he cannot dispute the accounts rendered. No section has a monopoly of rogues any more than of honest men. We hear of cases where negroes have agreed to pay ten dollars an acre rent for land that would not sell under the hammer for two dollars and a-half. All there is to be said about such cases is, that one party to the bargain is a fool; if the would-be tenant did not agree to pay ten dollars, there is no law that would compel him to do so. It takes two to make a bargain, and no State law can alter this condition. There are only two ways a State can prevent such transactions: one is to lock up as insane the people who make them; the other is to educate them so they will know better than to make them.

It seems strange that in this nineteenth century of ours, any State can be blind to the expensiveness of ignorance. Let us suppose the present movement is 20,000 negroes, and that each one was worth $500 to the State: what follows? That there is a loss of some $10,000,000: the annual interest on this sum at 7 per cent. is $700,000. Now it is safe to say, if this sum had been honestly spent every year for educational purposes, the present migration would not have occurred. For in no intelligent community will men, year after year, follow a system of agriculture or anything else, where they are compelled to buy at the top and sell at the bottom. Illiteracy is at the bottom of the present movement, and the one unanswerable argument in favor of the colored people going to Kansas is, that their children will have a chance to be educated.

Raising cotton on credit is a relic of the days before the war: even then it was risky; but less so than now, for factore could then take a lien on all the workers the planter owned, as well as on the crop—the natural increase of the workers was a fair guarantee of the interest, while the principal was doubly protected by a lien covering the workers as well as the work they did. Howsoever safe the factors were, the planters were living on a false system, and a very large percentage of them were always a crop or so behind: they lived on the bubble credit, and were pleased with its prismatic hues; but there is nothing very solid about bubbles; and if it had not been for owning their workers, there would have been nothing solid about planting cotton on credit even before the war. The days of plantations were numbered when the war closed, and slavery was dead. Yet it is surprising how large a number of persons fail to see this truth. Plantations are worked by slaves, or serfs; farms, by freeman. This fact seems more thoroughly appreciated in Georgia than in any other Southern State, and there is no question about her being the foremost state in the South. The colored people of Georgia do not make any fuss about "an exodus"—they feel an interest in the State, owning part of it, and the State in them. The distinction to be drawn between a farm and a plantation may be stated as follows: a cultivator controls the first, and is controlled by the second. If a man with capital and capacity to work ten acres, attempt to work one hundred, the chances are that the next possessor of the land will hold it under a sheriff's title. The plan of paying a field hand wages, weekly or monthly, involves the idea of so radical a change from the old system, that it is not surprising that its adoption is slow. Nevertheless, it is the only plan that will work well, never mind how many are ignorant of it. Agriculture is a science, and in the long run, the result of competition between scientific and unscientific cultivators of the soil can only be one thing. The substitution of serfdom for slavery was not the intent of the late Constitutional Amendment, though in some parts of the South such has been the practical result. Before the war planters fed and clothed their hands from self-interest, even if influenced by no higher spirit—and there are thousands of colored people in the South to-day, who are no better off, who earn only their "keep and clothing."

That many of the negroes are lazy and do not work steadily, is most true; but the system of paying them so much a month in store orders encourages this laziness in a marked degree. If a man contract with his laborers to pay them every week at the rate of fifty cents a day, he will only pay for the work he gets—if a field hand want to take three holidays in a week, he will get $1.50 instead of $3.00 on a Saturday night.

Credit is the most dangerous arm in the whole financial armory: those best versed in finance, handle it with the most caution, because they know its danger. Yet the foolhardiness that is born of ignorance handles it with its eyes shut, and is surprised at the result of its manipulations.

That political oppression is a potent cause of emigration all history proves: but common-sense sees clearly that the majority of men, particularly of ignorant men, think more about their material than political well-being: or, in other words, care more about their bread and butter than they do about ballots. That the negro emigrants have "hard times" ahead of them, there is no reasonable doubt; that the cotton States, whence they go, will be injured, is equally true; and the practical question is, how can these two evils be avoided? Long-winded speeches and frothy promises will do no good; but forsake the custom of raising crops on credit, and grant to all men political fair play, and the movement may be stopped where it is. T. T. B.

On the Farm.

From the American Agriculturist.

Late Haying.—The failure to gather the hay while it is at its best, is a too frequent and inexcusable neglect at this season. If farmers could be convinced of how much of the feeding value of hay is lost by leaving the grass to become ripe, hard, and woody, it would no longer be permitted.

How to Cure Ripe Hay.—Hay that has been cut late may be improved by curing it in the cock instead of drying it in the sun. Being comparatively dry when cut it is very soon cured; and if put up in cocks as soon as it is thoroughly wilted, it will heat and steam and become much softened, and will remain greener than if sun-dried in the swath.

Hay Caps will serve a good purpose upon grain shocks, and are much more secure than cap sheaves. *Rake the Fields* after the grain has been drawn; the labor will be well repaid.

Protect the Horses.—A cotton sheet will be found a great protection to the horses working in the harvest field. It screens

them from the heat, from flies, and from dust, and the labor of cleaning them is lessened. As mentioned last month, it will be found desirable, when horses are washed, to use a soft sponge and water in which some carbolic soap has been dissolved. This cools the skin, assists perspiration, removes the strong pungent smell, greatly refreshes the animals, and drives away flies. Where there is a river near by, a bath in the evening will be agreeable and safe, if the horses are kept in the water only two or three minutes, are driven home at once and rubbed dry.

Fodder Crops.—Hungarian Grass, common Millet, or the Golden Millet, may be sown this month for green fodder or hay. A bushel of seed per acre may be sown, though rather thick seeding, the fodder will be all the finer and better for it. Millet that is sown in May should be cut before the seed is ripe or the fodder gets hard, unless the seed is wanted. Millet seed makes an excellent addition to ground feed when mixed with corn and rye.

Buckwheat may be made profitable upon a piece of rough or newly cleared ground. No other crop is so effective in mellowing rough cloddy land. The seed in northern localities should be sown before July 12th; otherwise early fall frost may catch the crop. Grass and clover may sometimes be sown successfully with buckwheat this month.

Sheep.—Keep ewes intended for the butcher by themselves, and feed liberally. A quart of mixed ground feed or bran, and oil-cake meal, will soon bring them into marketable condition. Keep store sheep in a light pasture, and give a handful of feed daily. Provide shade of some kind.

Pigs.—Young pigs may be made ready for market, in 100 days if desired, by good feeding. The sow should be well fed with rich slop, to force a good flow of milk, and a feeding place for the pigs should be provided, in which they can get spare milk with a little fine ground barley meal or wheat middlings.

Poultry.—The flock should now be weeded out; all unprofitable fowls, poor layers, and poor mothers, should be used or marketed. Two weeks feeding in a coop will be sufficient to make them fat. A few of the best old hens may be kept over for early setting, but many in a flock are unprofitable.

The utmost cleanliness should be preserved about the premises in the hot weather. All wastes and garbage should be disposed of on a compost heap; a load of good soil and sods from fence rows will be useful, as the basis for it. Weeds should be gathered and added to the heap. Liberal additions of plaster will prevent disagreeable odors.

Thinning.—Though rather late, it will still pay in the apple and pear orchards. The first thinning is rarely sufficient. Better remove the excess even though the fruit is of some size, than which remains, will be enough better, to pay for the labor.

INTEREST NOTICE.

The tenth semi-annual Dividend of Interest due depositors in the Home Savings Bank, is now ready for payment. All savings deposits of one dollar and upwards, that have been on deposit for at least one month previous to July 1st, are entitled to interest of six per cent,

Interest not withdrawn will be added to the depositors account, and draw interest from July 1st like other deposits.

About one-fifth of the present deposits in the Home Savings Bank, are held by colored people and they represent over one-half the whole number of accounts. No special pains is taken to secure their business; they are treated at this bank precisely as other people are, —no better, no worse,—hence the popularity of the Home Bank among the colored people.

CANNING Crabs is a new industry, but the delicacy of the meat of the crab has led to some activity in this business. The shallow waters of Hampton Roads and the estuaries that lead into it, abound with shell-fish of all kinds.

Every morning early, a score of flat boats push out from these shores, and with their bait of salt tripe and red flannel, allure the greedy crab to seize what he cannot possibly make a satisfactory meal of. The victim stupidly clings to his fancied prize till he is caught with a net or pulled into the boat. In this way one man will catch hundreds every day.

The canning establishment of Mr. T. T. Bryce, on the grounds of the Hampton Institute, is employing nearly a score of its students this vacation in catching, steaming, picking, then canning, sealing and cooking, sometimes a hundred dozen cans per day. We invite attention to Mr. Bryce's advertisement in this paper.

NEWS OF THE MONTH.

FOREIGN.

Gen. Sir Garnet Wolseley arrived at Pietarmaritzburg on the 29th of June, where he was sworn in as high commissioner and commander-in-chief. He expected to leave Durban for Fort Dumford on the 1st of July.

The French minister of the interior estimates that in consequence of a bad crop the purchases of foreign grain by France would amount to £20,000,000.

Gen. Grant is in Japan.

LONDON, July 7.—A large capable of accommodating 8,000 head of cattle to facilitate the importation of American cattle, is about to be erected at Barrow, in Furness, Lancashire, which is connected with the whole railway system of England.

Thirteen hundred sheep infected with foot and mouth disease were slaughtered at Liverpool Monday. They were shipped from Boston on June 21 by the steamship Bulgarian. This discovery will probably cause the United States to be scheduled as an infected country for sheep.

LONDON, July 17.—Reuter's Telegram Company have advices from Cape Town to July 1, by way of Madeira, announcing that an envoy from Cetawayo reached Fort Napoleon on the 28th of June bearing peace proposals and a fine tusk of ivory as a present. He wished to stop the advance of the 2nd division, but was informed that peace proposals must be made to Lord Chelmsford, and that the advance would only be postponed on condition that the former demands were acceded to.

A Daily Telegraph dispatch says Cetewayo sent to the British camp the cattle demanded, and also an ivory tusk. The commanding officer detained the cattle, but refused to accept the tusk, (which was an emblem of peace.) Sir Garnet Wolseley immediately disowned the act, sent messengers to Cetewayo explaining that the refusal of the tusk was a blunder, and asked that three leading chiefs be sent to the frontier.

DOMESTIC.

Ex-Gov. Wm. Allen of Ohio is dead.

A severe storm passed over the Atlantic States on July 16 and 17 doing much damage to property and life.

The drought in Southside, Virginia, threatens disastrous results to the growing tobacco and corn crops.

Christine Cox the murderer of Mrs. Hullis New York city last month, was convicted of murder in the first degree.

The State auditor of Virginia has turned over to the State board of education $125,000 due to the public schools.

A Cincinnati coal firm has just purchased a tract of coal land in Kanawha county, West Va. containing 4,700 acres, which it is supposed will yield 200,000 tons of bituminous flint coal to the acre.

Edward Hanlan, the champion oarsman of the world arrived in New York by Str. Chester from England on the 11th of July.

The Duke of Argyll, daughters and suite, sailed from New York for Liverpool Wednesday afternoon in the Scythia, which was crowded with fashionable people

An engineer corps is now engaged in surveying a route for the proposed Nashville and Rapidan railroad, between Orange Court House and Charlottesville, Va.

A heavy rain and thunder storm at Charleston, S.C., Sunday night July 13th lowered the temperature over 20 degrees. Ten white men and five negroes died from sunstroke in Charleston Saturday.

Genl. Wm. T. Barry, U. S. A. died of malarial fever, at eleven o'clock on Friday, July 18, at Fort Mellenry, near Baltimore, of which post he was commandant. Genl. Barry was commandant at Fortress Monroe, Va., for many years.

All duties on quinine have been removed. The following is the text of the bill as passed:

"That hereafter the importation of salts of quinine and sulphate of quinine shall be exempt from customs duties, and all laws inconsistent herewith are hereby repealed."

The Lynchburg (Va.) Agriculture and Mechanical Society has decided against having a fair this fall, as it had a spring fair. Instead of a fair it is proposed to have a military encampment on the fair grounds, to which all the white military of the State will be invited.

The dreadful scourge, yellow fever, has again made its appearance in Memphis. The latest reports state that the disease is slowly but surely spreading, that business of every kind is suspended and the people are fleeing the city by hundreds. Fears of a general epidemic throughout the Mississippi valley are entertained.

RICHMOND, Va., July 17.—State Superintendent of Public Instruction, W. H. Ruffner has issued a circular to the teachers of the schools to-day, in which he says that he has enough school money to enable him to make an apportionment at the rate of 25 cents per head of the school population. He does not propose to make an apportionment of this fund until August 1, for fear that under a constitutional requirement the counties which have had but few schools during the year might be compelled to return a part, if not in many cases the whole of the sum allotted to them, to the treasury for redistribution. This announcement will be good news to those interested in the public schools in this State.

HALIFAX, N. S., July 17.—The steamer State of Virginia, from New York for Glasgow, went ashore at at Sable Island at 7.45 P. M. Saturday. Four ladies and and five children were lost in the surf while landing. The vessel had 74 passengers, 104 head of cattle and a general cargo. Sixty head of cattle were saved. The purser and a boat's crew of the steamer State of Virginia landed at Sherbroke, Guysborough. They left Sable Island on Sunday, when all the passengers saved were well. The weather had been fine since leaving New York till they got into a fog, in which the vessel went ashore on Saturday night. Assistance will be sent from here to the relief of the passengers on the island. The ship had eleven feet of water in her hold when the boat left the island, and is likely to be a total wreck.

The Jeannette, the ship furnished by James Gordon Bennett for arctic exploration via Behring strait, has started on its expedition from San Francisco fully manned and equipped, commanded by Lieut. Geo. W. De Long, of the U. S. Navy.

Hand Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad, and Deviled Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all seafood, far exceeding in finess of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the "Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $5 00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to night draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $3.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

For the months of July, August, September and October, the SOUTHERN WORKMAN will appear in its present eight-page form.

From and after November next, the paper will be increased again to twelve pages, cut and stitched, until the following July.

IN the coming fall, twenty more girls will be added to the number of Indian students at Hampton. Their due proportion is regarded as essential to the success and value of the effort. When the Indian prisoners from St. Augustine returned to the Territory, and their wives and families turned out to welcome them home with rejoicing, the long dreamed of meeting proved such a shock to the reconstructed braves, that some of them broke from the company and ran away to the woods, refusing to have anything more to do with their affectionate but very dirty squaws. The situation was humorous but tragic, and withal very natural. How could they walk "the white man's road" in such companionship? And how could they walk it alone? When the white frontiersman cuts loose from the restraints of civilized society, and takes no wife to represent it for him in the wilderness, what are the chances that he will keep himself up to exact pitch of civilization? Still less may we expect to lift a people to it without lifting its women. If they are hopelessly degraded, it is foredoomed, like some of the fading races of the tropics. This is far from being the state of the Indian women, and their stronger constitutions, habits of industry, and responsiveness to training, when they are not left out or slighted as they generally were fifty years ago in efforts for its improvement, are encouraging indications for their race. The co-education of the Indian boys and girls with its lessons of mutual respect and helpfulness in the class rooms and work rooms is the hope, and the only hope of permanent Indian civilization.

THE *Springfield Republican* seconds the Indian effort at Hampton by publishing a correspondent's letter based on the WORKMAN'S reply to the *Tribune*, and an editorial taking issue with the latter paper on the question of insuperable difficulties in the way of Indian education. After some most excellent observations upon the necessity and methods of educating Indians, the editor remarks: "The education in agriculture and the arts such as is attempted at Hampton, ought not, it seems to us, to be too far removed from the practical realities of Indian life and necessity, and that it is so in this case, we have no evidence." We shall be glad if this negative approval may be changed sometime to a positive opinion by a visit from the writer, and a personal inspection of the school and its methods such as has been given by some who sanction them.

The *Republican* publishes also, in a later number, a letter from Bishop Huntington of Central New York who has had supervision of four of the Indian prisoners from St. Augustine since their release a year and a-half ago. He supports the views of the *Republican* as to the *Tribune's* article, and gives a very pleasant account of the young men—one of whom was originally one of the most desperate of the prisoners,—of their improvement, intelligence and practicalness. Bishop Huntington says that after a few weeks' observation of them at first, he "decided that they could not be placed to advantage in any existing school; that they should divide their time between study and out of door life, for the sake of both mind and body, that a very large part of what they ought to learn is not to be found in books or any one house; that they ought to live in a family of refined, intelligent and devout people where there were adults and children, and, in order to preserve some of the sympathies and associations of their original condition, as well as a constant use of their own language, so that they might be the better fitted to act as leaders and guides in civilizing their tribes, no one of them should be widely separated from the others; and that they were worth all that their training would cost. They were accordingly committed to the care of a rector of a rural parish,'" where they are doing well; they have three or four hours a day of writing, reading and English lessons, with some vacations; are already familiar with most kinds of farm work, and favorites among the farmers and their families, as well as with the archery clubs of the vicinity. "They go about the shops of blacksmiths, shoemakers, etc., watching the trades and seeing everything without staring at anything."

If the Bishop ever visits Hampton, where we would be very glad to see him, he may be struck, as those who know it will be, with the remarkable similarity between his programme for Indian training and that of one "existing school" at least. Perhaps, too, he would agree that there is an advantage on Hampton's side in what seem to be the solitary points of difference, a more practical familiarity with "blacksmithing, shoemaking, etc," than even Indian observation can gain by merely looking on, and—a great point indeed—the education of the girls also. He touches one vital point of the whole Indian problem in the concluding sentence of his interesting letter when, alluding to the value of a comparison between the civilized Indians of the Onoadaga reservation in New York State, among whom he has conducted a mission for ten years, and the barbarians of the Southwest, he says: "One thing is certain—they are all men. *And the sooner they are made citizens, the better for the country and themselves.*"

Another fact as important to the question of Indian civilization is that it is not to be effected by an occasional experiment, however successful, with three or four youths of scattered tribes, or with a hundred. As well, when it was necessary to lift all Chicago to a proper grade, might the work have stopped with an effort to see how high all the power of modern machinery could raise a single church or school-house without tumbling it to pieces. The value of each particular effort should be, and this is Hampton's desire and aim, while making the most of those who are its subjects, to indicate the best and most practical methods of working toward the general purpose, and to incite and encourage both government and people to the many similar and simultaneous efforts which are necessary to its accomplishment.

THE New York *Tribune* thinks that "one of the most forcible arguments against compulsory education in cities appears in a report of Supt. Field of Brooklyn, who says, that 'in consequence of their long neglect of study it is found necessary to place the pupils whose attendance is now enforced, in classes with much younger children, and it is no uncommon occurrence to observe delicate and carefully nurtured little girls of seven to ten years sitting beside hard featured youths of twelve or fourteen, whose untidy dress and unclean hands and faces are their least repulsive feature.'" This is not a pleasant picture, but to call it an argument against compulsory education reminds one rather of the street boy's compassion for the gentleman's son: "Does your mother comb your hair every day? Then I pity you. Had mine combed at the Mission once, and it 'most pulled all my hair out." For, if compulsory education had always been the rule, it is evident that the delicately nurtured little girl need not have suffered from such propinquity; and the more thoroughly it is enforced now the better for the coming little girls.

Every reform implies some hair-pulling at the beginning, but it is a weak conclusion to talk of giving up before the first difficulty instead of putting forth more vigorous efforts to overcome them, so that the new order of things may work out its legitimate good results as quickly and smoothly as possible. The gathering of these thousands of long-neglected children into the schools might be expected to require new outlays: more classes, more teachers, more school-houses if necessary, some soap and water; but the only argument in the case is not against but most strongly in favor of compulsory education. Even as it is, it may be better for the delicate little girl to sit for a few hours a day in school, under a teacher's eye, beside the big, bad boy, than that he should be left to the education of the streets, to break into her house when they are grown up, or lie in wait for her on the highways.

NEWSPAPERS IN SCHOOL.

The New York *Evening Post* and New York *Tribune* have both within a few months called their readers' attention to the value of newspapers as educators. The *Post* commends as "the latest innovation in schools" the experimcat tried by some superintendents in Illinois and Iowa and followed in other states, of introducing newspapers into the schools to be used instead of higher readers, "substituting for the dry husks of well worn selections, real reading matter upon subjects of current interest."

Hampton Institute may perhaps claim the precedence in this "latest innovation," and can heartily testify in its favor. For seven years, the SOUTHERN WORKMAN has been used in all its reading classes above the primary, not entirely superseding the "readers," which have their value, but alternating with them as part of the regular exercise. All the advantages which the *Post* suggests, have resulted from this practice at Hampton; greater interest of the classes, increased intelligence and general information, and improvement in the useful and pleasant art of reading at sight, which, though it would seem the natural aim of all instruction in reading, is, often enough, its greatest deficiency.

There is still another use of newspapers in schools which Hampton has evolved from the special needs of her students, but which any school might find as sensible an "innovation" upon ordinary routines. Fifteen minutes every morning, after the opening of school, before the classes scatter, are devoted to reading, by one of the teachers, the general news of the day from some leading journal; with explanations if necessary, or sometimes an editorial, or extracts from the correspondence. This will be found a most excellent supplement to, or rather preparation for the slower reading of the classes. With a little care in selection, this time daily suffices to keep the students posted upon the leading events and vital questions of the day, and keenly interested in them. If in addition there is, as at Hampton, a reading-room in the school, to which they have access, they will seek it with heightened and discriminating appetite. Geography and history will become something real and living, as they grow familiar with the present state of the world, and they will not leave school as too many do, knowing a little of every age but their own. School compositions will be improved, as the *Post* suggests, and school debates too; and what is more important, the pupils will carry out into life with them wide-awake minds, and a thirst for "that varied information about the world and its doings, the possession of which," as it well says, "distinguishes intelligent men and women from those who are not so."

Due care should of course be taken in the selection of newspapers to put into the hands of classes, and, as it justly may, the *Post* recommends itself for the purpose. It keeps well up to the standard it sets up for such a paper "one which writes wholesomely of wholesome things, and uses pure English."

For schools which cannot afford such expensive journals, or more than the single copy that will answer for a daily or weekly news summary, we may without immodesty recommend the SOUTHERN WORKMAN, especially to colored normal schools and colleges. Among its regular contributors are writers who are welcomed to the columns of the leading New York journals; of Mr. T. T. Bryce's recent series of articles on political economy, gathered now into book form, one of these journals speaks of editorially as the clearest of popular expositions of the economic questions of the day; the sanitary series of "Hampton Tracts," the publication of which will be renewed in the fall, is endorsed by the American Social Science Association and contains instruction upon the laws of health; greatly needed in all schools; and the fresh information concerning the Indians and the letters of graduates teachers, from Africa and the Southern field, give it unique interest and value.

Some such training as has been suggested is of especial importance in the education of the freedmen. There is no danger that they will suffer from a plethora of newspaper reading. The taste for it must be created and cultivated, and will do more than anything else to arouse their minds to intelligent action upon their own interests and those of the world outside of them.

CAN THE NEGRO DO ANYTHING?

Those who are interested in the negro are disposed to ask that question frequently. By some it is made out of mere idle or philosophical curiosity. By many it is asked with direct reference to the future of the negro, and the obligations of the white race to him. If he has self-sustaining power, a capacity to not only hold his own, but to make headway against the pressure of the superior race. All fear as to the future may be dismissed at once. If, however, he is to display an increasing weakness, an inability to recover himself, in the conflict of races, new obligations will be imposed upon the white race which lives beside him. The historical argument is against the negro. He does not seem to have accomplished much in the past, with a continent to himself, having every variety of soil and climate, he does not appear to have made any progress. It seems as if there was a deficiency of internal force, in the power of self-help. The most advanced African community, excepting Liberia, is behind the lowest average European society in the elements of civilization.

Though the historical argument against the negro is strong, it is not conclusive. It must be said, however, that little is really known about the growth of nations. The study of the human species has only begun. The facts upon which any reliable judgement may be founded are wanting. In the growth of a race, as in the growth of an individual, "favorable conditions" are required. What these conditions are we do not fully know. It is certain that the Latin races remained in abeyance for centuries. It is certain that the original Britons were savages, and their practices, in religion, war and social life, were no better than those of King Mtesa's subjects to-day. There was, finally, a great and wonderful growth. External forces came in. New blood mingled with the old, in the end leaving the Anglo Saxon a thoroughly "crossed" race. The powerful Egyptian race was, likewise, the cross of the Caucassian upon the negro, or Ethiopian. There is ground for the conclusion that the pure races are deficient in energy. Some late developments have raised the question as to which is really the superior race in America. The Congress of the United States has declared to the world, that the supremacy of the American over the Chi-

ness is not assured, in fact, that the | This we shall not deserve or receive, unless we | Carlisle may be the pioneers in a new de- | 1858, and in the late civil war, which he

nese is not assured, in fnet, that the Chinese nre abundantly able to take the bread out of ths mouths of the Americens, and beat ths Yankee on his own ground even in the department of intelligent labor. It is possible thnt in a few yenrs the question may be asked, "Can the American do anything?"

Americe now holds the negro transplanted. His case has no parallel. The experiment begins hy suddenly flinging four millions of negroes on their own resources, without warning, without preparation, without provision. It was the work of an earthquake, an upheavnl more terribls than the eonvulsions of the French revolution. The experiment begins by leaving the negro on a soil, every nere of which is owned by another race. It finds bim without a dollar's worth of property, without inatitutions or traditions. The white race is trained in self-reliance for three hundred yenrs. The negro has been educated for a hundred years in Americe to be dependent. The white hns had three centuries of experience in organizing the forces about him, politicel, social and physical. The negro has had three centuries of experience in general demoralization, and behind that, paganism. In this way the experiment begins. Nevertheless, the negro has one source of strength—the habit of industry aequired in the time of slavery. Its importance cannot be over estimated.

Twelve years have passed since the new era. In the growth of a race it is but a second. But "favorable conditions," so essential to growth, do now exist. There is good climate, abundanes of land, and political, social, nnd religious freedom. Moreover, the white race is willing to aid by example and instruction. A hundred years from now the question may properly be asked, "What has ths negro done?" Till then there is only watching and waiting. Those who are interested in the experiment are apt to be like children, who plant seed in the morning, and at sundown are impatient because there is neither plant nor fruit. Forty years ago, it was asked in England, "Who reads an American book?" Though the Anglo-Saxon has held this continent for near three hundred years, it is only within ten years it has sent back to the Old World a musienl voice whieh could be rated as extraordinary. We surely cannot expect the negro to move more rapidly along the lines of growth than the white race.

W. N. A.

"NOT GUILTY, BUT DON'T DO IT AGAIN."

The Charleston *News and Courier* is standing up manfully to the position it took last winter when, in response to certain liberal and just remarks of the New York *Evening Post* and *Nation*—to the effect that the abnormal condition of affairs in the state ought to be taken into account somewhat in Northern judgments—it declared thnt

"Whether danying or not, that there was what is usually called "fraud" in South Carolina at tha last elections, every influential Democratic newspaper and politician is constrained to say, whether in eorrow or in anger, that "fraud" is utterly wrong, and must be prevented, if it cannot be punished. Public opinion compels them to do it, whether they like it or not. In other words, no public man who values tha present and has an eye to the future can afford to figure before the country as the champion of "ball dozing" or ballot-box stuffing." There are a good many persons in South Carolina who are not moved by such consideratians. The good or bad opinion of the outer world, with its affect on trade, commerce and manufactures, matters little to them. But even these are aware how important it is to avoid dissension and discontent here at home in South Carolina. Their political prefarment depends on the maintenance of Democeratic eupremacy, and they know it. We tell them in all frankness, that South Carolina will not tolerate lawlessness at elections. This revolution must move backwards. Steps must be taken to insure to *whites as well as blacks* absolute freedom of choice, and freedom in expressing their preferences; or there will be trouble in the Democratic camp before the next general election. Let the dead past bury its dead! There is no need to ask pardon. The State and the country are ready to render a verdict of "Not Guilty; but don't do it again!"

This we shall not deserve or receive, unless we give earnest of an intention to behave ourselves hereafter. Such an earnest is *the passage of a registration law.*"

No one who desires the peace and prosperity of the whole country more than to drive an opponent into a corner, need ask anything better than this substitute for a "plead-guilty," if lived up to; but the recent demonstrations by those "persons" in the state who, as the *News* says, care little for "the good or bad opinion of the outer world," have moved it to a still more candid avowal. Rebuking the Kingstree (S. C.) *Star* for publishing threats of vengeanee upon the colored politician Swails, il he should veuture to set foot in Williamsburgh County, the *News* says:

"Things were done in the canvass of 1876 nnd 1878 that cannot and must not he done again. It was a supreme necessity. The necessity no longer exists. To insist on taking, when this body politic is in full health, the kill-or-eure remedies that were swallowed with good effect when the state was *in extremis* will be to place everybody in South Carolina at the mercy of any set of men who choose to constitute themselves public prosecutors and public executioners. At that rate the state would soon be not worth saving."

This is not the loftiest argument of disinterested morality, but high enough quite, no doubt, to be of any avail, and, instead of twitting the *News* with its confessions, Northern papers had better consider the circumstanees, like the *Post* and the *Nation*. As the *Past* says, "These things work themselves out. Men must work up through their struggles with circumstanees." It is through hitterest struggles that the South will work up—is working up—as so lately in Yazoo County, to the pereception of the fact that fraud and violenee and outrage are very boomerangs of weapons, whieh they who take are extremely apt to perish by. Papers whieh are bold enough and sensible enough in the midst of such struggles, to make a stand for law and order and decency, like the Charleston *News* and the Vicksburgh *Herald*, should be upheld with not too exacting sympathy and respect. And this, whieh is the moral duty of the North, is the most vital policy of the South. The masses of her respectable citizens should let it be seen by the world that they are not represented—as we believe they are not—by the Kingstree *Star*, or the Okolona *States*.

We are glad to supplement the brief notice in last month's issue of a valuable gift of tinner's tools for the Indian workshop at the Hampton Institute, by stating that the bill of $257.75 was receipted by Peck, Stow and Wilcox, of Southington, Conn. Two hundred dollars was the gift of R. A. Neal, Esq., of Southington, the senior partner, and the balanee is from E. W. and E. S. Stow, of Plainville, Conn.

We are also glad to neknowledge the generous discount of Bickford and Curtis of Buffalo, N. Y., in their bill for belting, for the new steam mill, also donation of $115.00 on same aecount.

The goods above mentioned are of the best quality, are very useful, and we hope that this example of generosity, will stimulate others to aid by cash and in donations of material to the department for praetical training of Indians at Hampton.

We are very glad to announee that the Secretary of War has turned over to ths Department of the Interior, the U. S. Army barracks at Carlisle, Penn., to be used for the purpose of Indian eduea-tion, under charge of Capt. R. H. Pratt, who has been sent West to collect 100 Indian youth for his school as well as the girls for Hampton. Captain Pratt's wise, Christian philanthropy toward the Indian prisoners at St. Augustins was the origin of the present movement for Indian edueation, and has demonstrated his eminent qualifieations for the work. The Hampton ides of industrial training will be followed as far as possible at Carlisle, and we trust that Hampton and Carlisle may be the pioneers in a new departure for humanity and eivilization.

The experiment of Mr. T. T. Bryee in the way of estnblishing "a packing honse" on the grounds of the Hampton Normal and Agricultural Institute has proved a success, and in addition to crabs, he is now canning tomatoes, pears, and peaches; and will next month begin packing oysters. The best proof of suecess is the fact of persons who have ordered one eease, almost invariably ordering another. We would call attention to Mr. Bryee's advertisement in another column.

The papers have been filled for the last two months with a sad repetition of last summer's fever reports and lessons drawn from the terrible experienee The lessons get to be monotonous, but then the yellow fever has a monotonous way of repeating itself too, it seems, and npparently if the admonitions had been better heeded, the pestilenee would not have intruded its dreadful shape upon us again so soon. It must seem strange to those whose sympathy and aid flowed forth like water at the eall of the strieken South a year ago, to read that the new visitation of the disease this summer originated in a reckless defianee of the commonest, best known rules of prudence, and that its coming found not only Memphis but other Southern cities in a state of unelean-liness inviting to any infection; only ready, like poor Memphis, to make "herculean," but pitifully unavailing efforts to improve the sanitary condition of streets nnd houses after the plague is in the midst of them. If northern cities were in the same condition, the fever infected refugees woul l have carried the contamination to the friends who sheltered them, and have made the epidemie general by this time in spite of all quarantines. For there is no eertnin immunity in a northern elimate. Boston, New York and Philadelphia have all been visited in the last two hundred years. That it has not raged in either city for fifty years is owing, not to ehange of elimate, but to improvements in sewerage and eleanliness. Not that there is no room for improvement both as to eleanness and earefulness in the North. Professor Chandler of the New York Board of Health remarked recently that "it is wonderful that while we hear so much about yellow fever so little regard is paid to the ravages of scarlet fever. Last year two thousand eases of yellow fever in the South aroused the sympathies of the whole world, yet there are as many deaths in a week from scarlet fever and we hear little about it. People from houses in whieh there have been deaths from scarlet fever are allowed to mingle with the masses without the slightest precaution. They do not even change their elothing. The eonsequenee is that scarlet fever is spreading in all directions and the people quietly acquiesee in the state of things." But hy recent legislation, New York, at least, has put its plague breeding tenement houses under the power of the Board of Health, for radical improvements as to ventilation, overcrowding and other conditions. It has learned something by what it has suffered and what it fears, and so, let us hope, will the South. Shot gun quarantine is better than nothing n great deal, but the National Board of Health calls earnestly upon the eities of the Mississippi Valley not to let quarantine occupy their attention to the exclusion of municipal eleanliness whieh is the great object to be secured.

The death of Gen. William F. Barry, former Commandant, for nine years, of the United States Artillery School at Fortress Monroe, deprives ths Army of a gallant and distinguished officer. A New Yorker by birth, and a graduate of West Point in 1838, he has been almost constantly in active service in Indian warfare in Florida and Dakota; in the Mexiean war, in whieh he acted as side-de-camp to General Worth; in the Utah expedition in 1858, and in the late eivil war, which he entered as major in the 5th Artillery, and left as colonel of the 1st. In 1861 he was made brigadier general of volunteers, and organized the entire artillery of the Army of the Potomac, serving with it as chief of artillery in the memorable battles of 1862. He commanded the artillery defences of Washington in '62–3, and served as chief of artillery in the armies of General Sherman, aecompanying that officer in his famous March to the Sea, and receiving the brevet titles of colonel in the regular army and major general of volunteers for his gallant conduct at the capture of Atlanta.

In 1865, he was brevetted major general in the regular army for his services in the last campaigns of the war. At its close, he was given charge of the Lake frontier defenses, and in 1867 was appointed to command of the Artillery School at Fortress Monroe. This important post he held for nine years, a most able and popular officer. In 1876, he was put in command of Fort McHenry, Baltimore, where his regiment, the 2d Artillery, was stationed, and where, on July 19th, he died after a short illness.

During his long command at Fortress Monroe, Hampton Institute was indebted to General Barry for many acts of courtesy and friendship. He was a warm friend of the school and its interests; a friend of the colored race and its advancement, as in the progress of all humanity. He was very fond of the old songs. The Hampton Singers will remember many pleasant evenings when they sang for him in his parlor; one perhaps especially when, after he had called for one after another of his favorite melodies, they surprised him with "When we were marching thro' Georgia," when, as the last wild chorus died away, the General, laughing and wiping his eyes nt the same time, sat down among them and told them very simply the story of that famous march, and some of the scenes he had shared with its hero. The very pleasant friendship enjoyed with him by the officers of the school was not interrupted by his removal to another post, and his death makes it the more valued.

DIED, at the House of the Good Shepherd, in Syracuse, N. Y., August 21st, of consumption, John Robb, of Cheyenne River Agency, Dakota Territory, and a member of the Junior class of Hampton Institute; aged 19 years.

This dear boy, from the time of his admission to the school, in November last, has endeared himself to his teachers and comrades, who will mourn his loss with the friends he left in his Indian home. He was bright and intelligent, and very useful as interpreter for the Dakota students, having had two years of schooling in Ohio through the kindness of Mr. Robb, the post-trader, whose name he took.

His father, White Bull, described in Capt. Pratt's report as a tall, fine-looking, clear-headed Indian. Anxious that his children should have the best influences of civilization, though he had lost three, as we now learn, from the same dreaded disease, was willing to send his son away to learn "the white man's road." So eager are these people for instruction. May God of all love and justice compensate them for their sacrifices.

All that love and skill could suggest, was done for John as the disease developed. About a month ago, in hope that the change might possibly benefit him, he was taken to the Episcopal hospital in Syracuse, whose housemother had charge of some of the St. Augustine Indian young men, and is a warm friend of the race.

Here he was most tenderly cared for, and by his gentle, sweet and patient spirit won at once the love of those who watched over him. Two of his teachers from Hampton had the privilege of visiting him during the last week of his life and gladly testify to the loving devotion of the Sisters of the House and his grateful attachment to them and happy trust in God. John had learned to love the Lord before he came to Hampton. At his own desire he was baptized in Syracuse by Rev. Dr. Jennings of the Episcopal church, and received the communion. His faith was childlike and complete. To the dear Sister who watched with him, and asked how he felt one night, he said with a smile: "God holds me, Sister; I am all right." As I sat holding his hand, the quiet morning before his death, I said to him "You are God's child, Johnny. A look of the most perfect peace came into his face, and he whispered "Certainly."

In this blessed certainty, we leave our dear one on the bosom of his Father. H. W. L.

their suckling babes, and thus allow to tasta and cultivate a relish for the black powdar. I after I left Hampton. I was especially invited here by white men who owned slaves before

business. Education is very much needed here, and it makes me glad and more deter-

LETTERS FROM HAMPTON GRADUATES TO DONORS OF SCHOLARSHIPS.

WHERE THERE'S A WILL. NOT THROUGH WITH THE "CRAPS." JOINING FORCES. MARRIAGE OF SCHOOLMATES. THE DARK SIDE. LIGHT AND SHADOWS.

WHERE THERE'S A WILL.

Persistent, determined effort is a virtue not always accredited to the Negro race, but such as has been shown by the author of the following letter, would be an honor to a young man of any color.

NORTH CAROLINA, 1879.

Rev. ——:

Dear Sir: I am requested to write you an account of my work and experience in teaching. I wrote to a gentleman, in North Carolina, one of a committee on schools, asking him if he could procure me a school for the summer. He wrote me that the preference for home teachers, those of the State, was so strong that he could not do anything for me. Sad as this letter made me, I thought because of his position he could get more work of that kind than I could. I again wrote and sent him stamps to make a few more trials in my favor. His next letter was more favorable. I made every arrangement to leave the Institute so as to be able to reach my new home to open school at the time agreed upon. Two days before my departure, I got a letter stating that the parents of the children would not be willing to spare them before the 4th Monday in July. Not regarding this last letter, I started, and reached a small station on the Portsmouth R. R., at 4 the same day. I was disappointed at finding no one at the station, as was promised to convey me to my destination. So I found myself in a strange place, without money and without friends. Luckily, a few minutes before 6 I stumbled up with a young colored man with his team, who kindly consented to carry my baggage, while I did the walking to his father's house, a distance of ten miles, reaching there about 11 or 12 p. m. Leaving this house about sunrise next morning, I walked seven miles to get to my intended boarding place.

NOT THROUGH WITH THE "CRAPS."

On Sunday following my arrival in N. C., I met in the school house the discontented parents who gave me as their chief reason for keeping the children at home, that they were not quite through with their "craps." In this part of the South the last ploughing and grassing of the corn and cotton, have been done by the last of July, so that the farmer rests through the month of August and the first two weeks in September, when begins the harvest. Putting the question of opening to vote of those present they agreed to let me start the 2d Monday in July. If I had had the cash, I hardly could have got a horse at that busy season of the year; so I had to walk to a town fourteen miles away to be examined. On the morning I started the day bid fair and beautiful, but returned at 7, p. m., both wet and hungry, after walking twenty-eight miles for that day. I closed my school in September, with fifty five pupils, a run of forty-three days. Having concluded to stay in one spot a while and gather moss if possible there being no more school work at my hand, I turned my attention to farming—assisting in harvesting the crops, &c. On the 25th of November, I opened school in an adjoining county, and taught till the first of February following. Owing to the small appropriations, the school sessions are not but two months long in this State. In many districts, the colored people have but one session a year, in some, they have no schools. Salaries range from $15 to $20 the highest and board still high. Now I see no more chance of teaching till summer, if then.

Very few people within a circuit of twenty miles live on their own lands, the most of them making a moderate subsistence on the plantations of the whites for whom they tend on shares, and in some instances rent from them.

POLITICAL AND SOCIAL RELATIONS.

I could scarcely wish for any better treatment generally, and more apparently good feeling than are shown by the white people in these parts, towards the black. Politically, the Negro votes as he chooses with no one to molest him except his own conscience. I have been present at several elections, and from what the colored people tell me, I give the above as a fact. I speak only for the county in which I live.

DRINKING AND "DIPPING".

Among both white and black tobacco, whiskey and snuff, are used to a fearful extent. Both races and both sexes partake of the first two freely, women chewing the weed as well as the men, and also smoking it. I daily see women having in their mouths little slender sticks, one end chewed into little fibres with which they convey snuff to their mouths and apply it vigorously from the grinders on one side of the mouth to the remotest grinder on the other. Mothers frequently, after use of their tooth-brushes, give them to their suckling babes, and thus allow to taste and cultivate a relish for the black powder. I have seen little boys and girls between the years of four and five using the brush as expertly as their parents. As the parents are, the children are likely to be, and because of this close union between parent and child, I, as a teacher among my own people, find it quite difficult to draw the child off from the old habits and customs, foolish notions and ideas long indulged in by its parents. Especially, as I have seen a father come into the house having in his hand a quart flask filled with whiskey, help himself and then pass from his wife down to his six year old child. Yet my people with all their faults, are a hard working people and evidently mean to do well, and it is among these hardy and simple minded folks that I desire to dwell, for I believe I can do them good. My present and greatest aim is to get me a house and home though with no money to do it with, as from both the schools I taught, I could not get all the money due me. Faith in my Maker, accustoming my hands to whatever honest employment I can find, and a will to do the right, at all times are the only sources from which I rely for success. In Sunday School work, I have done but little, but hope to do more. In the cause of temperance my feeble efforts have been paralyzed by the stern refusals to my proposals in religious families to signing the pledge. I think it would require the life-long labors of a Murphy or a Gough to root out the habit of whiskey drinking which has so strongly imbedded itself in the people of the Sunny South. Wishing you many blessings and renewed interest in the Institution to which I am indebted, and hoping that I may have your good will in my success in the right, I remain, yours, R.

JOINING FORCES.

Some ten or a dozen marriages have taken place between Hampton students, as is most natural and suitable. The work of teaching is seldom abandoned by both parties and often by neither. And indeed the establishment of decent, intelligent Christian homes among the people is very greatly to be desired. There can be no better object lesson or centre of civilization.

PENNA., *March 28th*, 1879.

Dear Sir:

I write to let you know that your aid toward Hampton pupils is duly appreciated by me.

I taught in Southampton County a term of five months in 1870 from March until July. I enjoyed teaching in that county very much for the people were so anxious to learn and took so much interest in educating their children that I had a Sabbath School of seventy-five members, both old and young, and I tried by the help of our Good Father to lead them in the straight and narrow way. I came home in August of the same year, and there was a vacancy in the colored school in Williamsport, Pa. I got the department down stairs at forty dollars per month. I taught the school that term of eight months. I was then married to an undergraduate of Hampton and he's now principal of the school in the city, and also Superintendent of the large Methodist Sabbath school in the city. Schools are so scarce in the South is why we don't go down there. We have no family and we expect to start for North Carolina in the summer. We have always had an eye single to our people's welfare and have worked for their interest. And now I hope you will be encouraged to help Hampton and its students, for it is there the first seeds of learning are taught us, and we are led in the paths of integrity and sobriety. I think the General and corps of teachers are doing a grand work and one that needs the hearty co-operation of all good people at heart.

I am respectfully, M.

THE DARK SIDE.

The very opposite views expressed by some of our different graduate-reporters, represent, no doubt, to some extent varieties of mental condition and temperament—different ways of looking at and taking things. But there is undoubtedly a dark side to the picture, and less encouraging localities, and no full comprehension of the condition of the people and the work to be done among them can leave out either side. Want of trust in their leaders, and want of judgment to know whom to trust is a necessary result of their past, which only a long future may overcome.

——, VA., 1879.

My dear friend:

I have been watching the progress of the colored people here very carefully, trying to get some good report to write you concerning them, but in vain, and I think sometimes that before that good report comes, I shall be laid under the daisy. I have been teaching here regularly since 1875, the year after I left Hampton. I was especially invited here by white men who owned slaves before the war. These men expressed themselves of being disgusted at the immorality of the colored people. After hearing of my general character, they concluded that I was the proper person for this field. Accordingly they sent for me, and promised to aid me in the work of reform, and I am pleased to say that they have faithfully kept their word. I have been treated with great respect by the whites, and wish I could say as much for the blacks. They seem to hate me but without a cause. I try to do my whole duty, and if I fail in any point, it should be imputed to my ignorance. They acknowledge that I have done more good than any teacher that has preceeded me. Yet there are two points in which we differ, and those are immorality and their form of worship.

Immorality is the principal point, and that I publicly denounce, whenever I find it tolerated, and I believe that it is my duty to denounce it.

NO THANKS.

When I came here they did not have as comfortable a school house as the cow stalls are at Hampton, and the first winter that I taught here, I expected in the spring thereafter, some of my pupils would have died from colds, but, fortunately no lives were lost. When spring opened I attempted to build a school house, and they refused to pay one cent. But I pushed the work forward with what money I could get from the county—which was only twenty dollars—and by the next fall I had quite a comfortable country school-house. I did most of the carpenter's work myself. I organized a Sabbath school soon after, wrote to Hampton for Bibles and received seventeen very nice ones, sent to —— for song books, and I had quite a nice Sabbath School. Last spring their preacher called a meeting of *disinterested persons* together, and voted me out of the school, I could enumerate many other similar cases but deem it unnecessary. Two weeks after that disgraceful meeting I opened day school and taught until the 9th of this month. I expect to open day school in the next district in a few days. Also a Sabbath school, and teach until next October. I have obedient pupils in the school room, but the parental influence at home is so bad that I am much afraid that the next generation will not be much of an improvement on this one.

SUPERSTITION AND SIN.

Polygamy is tolerated in its very worst form. They have their conjuring doctors, and seem to have as much faith in them as we do in the Bible. Their meetings are considered very poor if a dozen don't "get happy" and utter sounds more like wild animals than human beings. And if you fail to be a participant, they don't hesitate to tell you that you got your religion from a book, and you had better go in the wilderness and try again. Or they will tell you that you have white folks' religion. I never get offended at their criticism, but try to do my whole duty and go to Heaven when I die.

NO SOCIETY.

Believe me, I am out of society, and only have an opportunity of visiting my aged parents twice a year. But the thought of doing good comforts me when I get low spirited.

I pray that the Father of light may pour blessings upon your head, for your generosity in helping to prepare me for this great mission. I trust that it was not given in vain. I hope to see you; if not on earth, may we meet where the wicked shall cease from troubling and our weary souls be at rest.

Hoping to hear from you soon,

Very truly yours, H.

LIGHTS AND SHADOWS.

A brighter experience, though with some shadows, is thus cheerfully related by a young woman graduate. It is a curious reversal of the preceding one, in both its lights and shades. Want of interest by a county superintendent is a very unusual report.

——, VA., 1879.

Dear friend:

The people have never had the advantage of school here as much as at some other places. The school only lasts five months a year. No school was given them at all last year on account of having no money to pay for a teacher.

My fifth month will be out at the expiration of this week. I shall continue to teach a while longer as the parents, and those interested in education have volunteered to pay me if I would stay and teach for them. I am very glad to stay as the little ones are improving so fast and it is very doubtful whether they will have any school next year. The parents see this and they seem to have their minds awake to interest, and are anxious to have them go on as much as possible to school, before they get so large that they will be compelled to leave and go to work. The children are nearly all small—the average age is eight years.

The white people nor even any of the school board ever show any interest in the school at all. The Superintendent has never visited my school but once, and then only because it was business. Education is very much needed here, and it makes me glad and more determined to continue when I see how anxious the children are to learn, not only anxious but apt. This is seen more among the little ones than large ones. The young grown people do not take as much interest as they should and there are few that have any education at all; all that is, known is mostly among the young children.

I attempted to assist them some in Sabbath school, but their parents do not seem to show much interest in it for they do not make the children attend. I like the place very much and I have no trouble at all with the people or the management of the school.

Your grateful friend, C.

The following letter is from a graduate of the Hampton Institute, who was sent to teach a colored school on application from the State of New Jersey:

NEW JERSEY, *July 4th*, 1879.

Dear ——:

Having finished my quarter, passed the required examination, and been thoroughly installed into the office of a teacher of New Jersey, I write to give general information.

The work to be done here is hard—not less hard than that in the far South; the same energy, tact, and all the numerous qualifications that serve to make a good teacher there, are required here; with a knowledge of the branches taught, more thorough than is required for the 1st grade certificates of Virginia. Jersey, as you know, is second only to Massachusetts in its public school system. The examinations are quarterly, and consist of sets of questions, ten each, of the different branches taught, made out by the state superintendent, Hon. E. A. Apgar. They are certainly hard; but any student of Hampton who is qualified for a graded school can easily, *if he will only study*, pass them.

I had intended to compete for a first grade, but upon looking over a set, which the superintendent kindly gave me for perusal, I changed my mind and at the examination held May 31st competed for the third, with the following results. Orthography 70, Reading 97, Writing 100, Geography 72, Practical Arithmetic 90, English Grammar 80. You can see that I took the wiser course and can judge of what would have happened had I applied for the 1st grade. Enclosed you will find sets of each grade.

CAPE MAY, *July 10th*, 1879.

On Saturday succeeding the day on which this letter was commenced, I procured to Salem to find the County Superintendent as I had urgent business with him. He expressed himself as well satisfied with my work and requested me to write concerning the schools here that need teachers. Your letter soliciting a school for Miss —— was received, and he is willing to engage her. Her school will not be far from mine: it is quite small. Another school situated not more than three miles from me will have to be supplied with a teacher. Salary will be from $60 to $75 per quarter. Good board can be had for $2. per week. These two schools prefer lady teachers. I am certain that any of our graduates could suit if they wished. You can therefore depend upon these two and get the teachers ready to commence Sept. 1st. I retain my school at a salary of $120 per quarter. It is very large. One hundred and five scholars are in the district and eighty-six were enrolled on the school registry. You may give the teachers to understand that it is according to merit that salaries are paid here. If they are thorough they may expect a rise on their salaries. Let them know that I only received $80 for my quarter and that it was by thorough work not only in the school house but outside, that caused fifty per cent. more to be added for my second quarter.

Now about the other three schools that are in the county. Mr. —— asked if I thought an earnest, capable, teacher could be obtained for the city of Salem. One that will exert an influence not only on the pupils, but on the community. I told him there could be such teachers found at Hampton. A gentleman is preferred, and I think could be satisfy the patrons, he could obtain a fair salary after his first trial quarter. Another school here is very small and therefore draws but little of the State appropriation; it cannot pay over $50 per quarter. I am satisfied that a teacher could hardly sustain himself there. The last school is near the superintendent's residence. I am not certain, nor is he, whether it will choose a Hampton teacher, but I will know soon. If any more information is required, I will cheerfully give it. I am now at Cepo May and entered Congress Hall to-day. After paying my expenses here (I had to board until I obtained a situation), I find myself without funds, and am sorry that I cannot remit the amount I owe for the books, but I shall send it in a week or little more.

Hoping to hear from you soon, I am,

Ever your devoted scholar,

F.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

A PEEP INTO THE GIRL'S ROOMS.

Although it is one of my duties to daily inspect the quarters of the boys, I have not been required or privileged to inspect the rooms of the girls, yet I believe that an occasional inspection would be a stimulus to the girls to keep their rooms in constant order, for with young women, some would have as believe, whatever is to be seen by masculine eyes will be kept, according to their taste, with perfect neatness. What I have written may make it appear that I did not find their rooms in good order. Miss Amelia Perry, a Hampton Graduate, has immediate charge of the Indian girls during vacation from June 14th to Oct. 1st; she is willing to go around with me, so if you will accompany us, we will go to their rooms and you shall see for yourself.

As nobody within answers the gentle tap, the door is opened and we enter the room. It is a double bed room with hard finished white walls, trimmed with yellow pine, and has one window. The floor is bare, but well scrubbed. The window, well washed, is partly screened by a white drop curtain; the walls are adorned with pictures, not by Rubens nor after Raphael, but cut from pictorial news-papers or magazines, they are mounted on paste-board and prettily framed with the remains of some old paste-board box. The pictures are all around the walls, not in confusion, there is a kind of order which gives a very pretty effect. Think of it! the tops of two Chinese parasols as pictures for this room; the girl says they are pretty and so do I. Two pine chairs stand in such positions as prove that the occupants must have had a little gossip before dinner; in the middle of the floor is a small oval shaped toilet table made of pine; in a corner stands a large wardrobe. I was curious to know if neatness ever got behind the wardrobe doors, so the doors were politely thrown open and I saw at a glance that the inside of the platter was also clean. On one side of the room is a pine bureau with a mirror attached; nicely arranged around the edge of the glass are little motto cards; there are two small iron bedsteads in the room, the beds on which are well made and covered with white spreads. As only one girl occupies this room, I presume that, like other fashionable people, she must have her resorts, one bed for summer and the other for winter. Going to the other rooms we see the same neatness and order, and a few more Chinese parasol tops. It was a good time to inspect, as I was not expected to visit the rooms. At first, I am told, one of the girls was sorely troubled about her wardrobe the question was—"Where shall it stand? It was tried diagonally with a corner, up against the wall, in front of the only window; and finally in the middle of the floor; this she thought the most fitting place.

"We extract the following from a letter recently received from Miss Perry who with others of her (colored) race is doing most excellent work in civilizing her Indian fellow students. The negro is a most efficient ally in lifting up the red man.

"'HAMPTON, VA., *July*, 1879.

"'Little Annie Dawson, the smallest one, has ever so much sense for a child of her age, and seems so willing to help her mamma. The other day she and her mamma were ironing and she happened to get through first and she said, 'Mamma, I iron for you, you go up stairs rest.' We have prayers in the chapel every evening, but on several occasions before they went to bed they have asked me to pray with them. I keep their clean collars in my room; one Saturday morning Lizzie got one while I was out; Sunday when the others took theirs she got angry because she did not have any; I told her I was very sorry; she did not listen to me, but went out of my room and shut the door very hard; about ten minutes after this she came back and before I could turn around, she threw her arms around me and said, 'I very sorry I my collar yesterday wear.'

"'Last Monday, while I was making a dress for one of the smallest ones she said, 'Won't you please make dress very long so when wish not be short? I thought this was so sensible that I made it longer then usual. I have a picture in my room of a boy who seems to be looking at every one; three of the girls were in my room; I noticed they were walking around but did not understand why, presently one of them said, 'That picture see me everywhere I go, what make?' I said no. They then said 'look, coma see, he see you.'

"'I read to them and teach them every day; I find they do not know the names of the different objects in their rooms and very often they come to my room, and ask me the name of such and such a thing.

"'I have been giving object lessons, taking the different things in their rooms; they seem delighted with this and during the day, come to me to spell different words that I have taught them, and ask 'Is that right?' When I first began to teach them I would say, the one that can write me a sentence about this raise your hand. I found that the little ones would be first, so now I begin at one end of the class and have every one write sentences. At first the large girls seemed a little backward and said 'I no write.' One of them went to the board and stood there a long time; she said something but I did not understand, so one of the girls said to me, 'She want make big Y.' 'Oh!' I said, 'you want to begin your sentence with a capital Y.' I made one for her and then she wrote her sentence.

"We have had a nice rain which has made every thing fresh and green again, so I take the girls out to work in the flower garden. One day while we were out there a white excursion party went by; several in the party said 'Those are the Indians' and one of the gentlemen said, 'Poor little things.' Annie and Sarah (two of the small ones) heard it and did not like it; they both said. 'That man, call us, Poor little things, we not very poor little things are we?' Last Sunday one of the girls went to church in Hampton with a colored girl; when she came back, she came to me and said, 'Colored man preacher no good;' then she showed with her hands and body how he did—'I think he drink whiskey, you think so?' I said 'oh no! he was shouting,' she then said 'Mr. Denison (our pastor) no do that way when he preach.'"

THE LITTLE MISCHIEF-MAKERS.

HARD AT WORK ON THE FARM.

A daily visit is made to the different work shops, and the farm, to see that all of the boys are at work and how they are getting along. The other day, looking up the farm boys, I saw through the bushes of the asparagus bed that six of the little ones were working away faithfully but the two larger boys were enjoying themselves in the shade of a peach tree, helping themselves to fruit that belonged to one of our neighbors. I walked on, as though I had seen nothing, when I looked up, I saw these two boys hard at work, pulling away at the biggest weeds and with a great flourish beating them on the ground to knock out the dirt. When I reached the place where the little fellows were, they kept right on with their work: I passed on to see the big boys; the little ones were probably anxious to see what I would do with these boys. It was dreadful to think, if these two boys have worked as hard all the morning as they are working now, they will be good for nothing for the next few days. Looking up from his work, one of the large boys saw that the little ones had stopped; he called out to them in Dakota; the interpreter was near, so I asked him, what the boy said, "He is telling them to work." This was too much for me; I reserved my reproof and left the grounds.

"PRACTICE WHAT YOU PREACH."

A careful daily inspection is made of the Indian quarters and at night at 8:10 the students are required to report for roll-call.

At one of the roll-calls the colored sergeant of the Indians voluntarily talked to them about neatness, particularly in their rooms. I have no doubt that the talk was good, but it seems to verify the saying, "I can easier teach twenty what were good to be done, than to be one of twenty to follow my own instruction," for if I remember rightly his is one of the rooms that I generally find out of order.

For the next four weeks the Indian boys are to enjoy the delights of Shellbanks. We hope to give an account of it in the next number.—J. C. R.

LETTER from Poor Buffalo to his Nephew at Hempton.

Poor Buffalo's expectations from his nephew will be realized, we trust. "He has made excellent progress in a year, at his carpenter's trade, and is doing well in all respects.

FORT SILL, INDIAN TY., *May* 22, 1879.

My dear Nephew:

I am very anxious to see you. I think of you every day, and will anxiously wait for you, and when I see your face my heart will be full of joy. I am still alive and well and I hope this letter will find you in same condition. Your father and mother, and all of your brothers and sisters are still alive and well, none sick nor none dead, we are all trying to do the best we can, and trying to follow the White Man's road. *I now place my future progress in your hands.* I think that when you have been there at school long enough to get a good education, our Father at Washington will send you home to us and then you can help us to do many things, and teach us very much so that we may be able to do and live better than we now are. Your mother, your Te-vits-a-Peah named Sa-foot is very poor Te-vits-a-Nas-su-tit-tat, and when you write to us again if you could send her a little money—enough to buy her a dress, she would be much pleased—but if you have no money to send her, it is all right.

This is all that I have to write at present, I would be glad to hear from you soon, tell all of the Kiowas there that I still remember them all, and would be glad to see them. *Pearoo* writes this for me. (*Pan Tandlety.*)

POOR BUFFALO.

THE LITTLE MISCHIEF-MAKERS.

Mr. and Mrs. Ægeriadae at home. Yes, only too much at home for our prospect of pears or peaches perhaps. What the caterpillars and other insect creatures which destroy the goodly fruits of the earth and the rewards of man's industry, are created for, it is difficult to tell. Perhaps to hint to vain man that not everything in the universe was made simply for his use. But whatever they were made for, Mr. and Mrs. Ægeriadae and the whole family of horiag caterpillars, certainly know how to make mischief.

But they are none the less interesting for all that, in their curious "homes made without hands," and the wonderful changes they pass through in their lives.

And here you have a picture of the little mischiefs at home and at work as you could see them if the bark of the tree they are ruining were sliced away, taking down the wall of their house, so to speak.

Yes, ugly looking things, perhaps you will say, but what are those pretty moths on the trunk above them?—well, I hope that some of the children know by their own observation that those pretty moths are responsible for the whole of it; that they are the parents of the crawling caterpillars, which are advancing to motherhood as fast as their many legs, or rather, their devouring jaws, can take them.

It is that pretty moth which stings the tree bark and lays the eggs from which comes not a moth but a crawling grub or young caterpillar. She is running up the bark now to find a good place for the eggs and then die, her life work ended. In a few weeks baby grub begins to eat his way in the world.

He has perhaps a whole year of caterpillar life before him, so you see he can make quite a hole of it. I suppose he enjoys the tender bark and sweet sap wood, but the tree that keeps many such boarders is sure to die. But to him a time comes when he stops eating and goes to work to wrap himself up in a queer little coat of gum and sawdust. All rolled up in this coat, you would think him dead; but wonderful changes are going on in it, unseen by mortal eye. Some of his legs shrink away, and six of them grow very long, his long body shortens, his strong jaws close up and he gets instead a long slender pipe only good to suck honey through. Most wonderful of all, four large downy (I think if your eyes were sharp enough, you would call them feathers—) wings grow on his back; and nothing of all this change do you see, till one day in June or July, the queer dead looking thing, the chrysalis, it is called, begins to move and wriggle itself half out of the hole in the bark, and then the covering bursts, and the full grown moth flutters out, rests a few minutes on the trunk, then spreads its wings and flies off to enjoy its short life of summer sunshine.

And the only way to do, if you want to spoil it all, but to save your tree, is to look for the grub in the spring time, in the bark or roots, cut them out, and kill all the grubs you see in the bark or ground; fill the holes with clay and bind sheathing paper round the trunk, letting it extend below the ground, and filling in with new earth. The time to stop all evil is in its beginning.

THE OILED FEATHER.

In the village of —— lived two neighbors, named Joseph Irons and Samuel Parsons. Joseph Irons went by the name of "Rusty Joe," and Samuel Parsons by the name of "Polished Sam."

Joseph Irons wouldn't put his hand to his hat for any man; not he! He wouldn't waste his time with paleveraig people with fine words;—no, not he! If people didn't like his goods, they might leave them; and if they didn't like his answers, they needn't ask him any questions. In a word, "Rusty Joe," though very honest, and very decent in his way of living, was disliked by almost everybody; and, in truth, no one could be surprised that it was so.

On the other hand, Samuel Parsons was a general favorite. He had a salute for every one that came in his way. He didn't think himself a bit the worse man because he put his hand to his hat to the minister or the squire, as well as bobbed his head to the old applewoman at the corner of the street. As to civil words, Sam's theory was, that they were quite as little trouble to pronounce as gruff ones; and they certainly slipped more pleasant like out of one's mouth. And so it came to pass that everybody liked Sam Parsons; and we may wind up this paragraph, just as we did the last, by saying, and with equal truth too, no one could be surprised.

Well, we will see how "Rusty Joe" and "Polished Sam" got through one day of their existence; for one day will be quite enough for a sample.

"Coma l bring the oil-flask, —thera's a pet," said Samuel Parsons to his wife, as he finished screwing on a naw lock on his front door. Sem, of course, needn't have said, "thare's a pat," unless he likad; but he used to think it was a great shame that women were called all sorts of pretty names before they were married, but nons afterwards.

We don't mean to tell all the names Sam called his wife before they were married; but now he called her "pet." And as soon as she heard the loving word, she threw down her duster on the chair, and off she went to the kitchen for the flask. The flask had a feather in it, as such flasks generally have; and Sam, taking the feather between his fore-finger and thumb, oiled the key of the street-door right well, and then locked it and unlocked it a dozen times. At first it went stiff, and required some strength of wrist to turn it; but as it was worked to and fro, and the oil began to make its way into the wards, it worked more and more easily, until at last Tommy, Sam's little son, who was standing by, was able to turn it almost with a touch; and then Sam affirmed that it would do.

This operation finished, Sam thought he'd just give his knife a touch of the end of the feather. Less than a drop ont of the flask would do,—just a mere touch, that was all it wanted; and presently, to young Tommy's great delight, his father made the blade go up and down, click! click!

Tommy evidently approved of the result, for he began to click, click with his tongue and the roof of his mouth in imitation; and how long he might have delayed his father we can't tell, if it were not that Mrs. Parsons caught him up in her arms and made off with him,—she calling Tommy a "saucy rogue," kissing him all the way, and he, on his part, click, clicking, as though his mouth were a cutler's shop and you were opening and shutting every knife in it.

Some people might think that Sam Parsons had done enough in the oiling line for one dey; but there was one thing more to do, and then he would be quite ready to take his potatoes to market. One or two of the wheels of his wagon had been a trifle creaky; and so he took the grease-pot and gave them a touch of its contents. You could have rolled all he put upon them into the size of a couple of marbles; but 'twas quite enough: the wheels gave over creaking; and, if the old proverb be true, that "Silence gives consent," no doubt they highly approved of what Sam had done.

"Now, then, I'm off to market," said Sam.

"Good-by, Jenny, pet."

Oh, that little word "pet!" Didn't the cunning fellow oil his wife's temper, and even almost her very joints, for her day's work, when he called her by that little name?

"Good-by, Tommy, my darling."

Oh, you cunning man! There you are with your oiled feather again; for when Tommy was naughty, and his mother reminded him that she must tell his father when he came home, and "father would be sore grieved if his boy was naughty," wasn't Tommy good? For, child though he was, he was able to reason thus much in his mind: Tommy is father's darling, and he won't vex him; darlings ought not to vex those who love them.

"I say, Polly," said Sam Parsons to his one servant-maid, as he left the house, "don't forget to clean up those irons, if you can manage it,—there's a good lass. You'll find the oil-flask hanging up behind the kitchen-door." And so, with a cheerful smile upon his countenance, Sam Parsons took his departure for market.

Now, on this very morning "Rusty Joe" was going to market also; and it so happened that before it was time to leave his home on this eventful day, he had as much misery as would fall to his neighbor "Polished Sam" in a week.

When Joseph Irons had finished his breakfast, he got up and went to the street-door to go out; but no loving word did he speak to his wife Betty, who, if the truth were known, was by no means sorry to get rid of him and his ugly temper for a while. She was a poor, down-hearted creature, who never basked in the sunshine of a little love; who never heard the music of an affectionate word; who had indeed all the machinery of a woman's heart, with all its great capacity for doing wonderous things; but there was just something wanted to set it all a-going: *it was a little love.*

"Mind you have my shirt finished to-night," said Joe Irons, as he laid his hand on the street-door; "for I may have to go to Pitbank to-morrow, and I don't want to go to the Squire's in this old concern." And, with this direction to his wife, Mr. Irons took himself off. The door was stiff on its hinges, and stiff in the lock.—ay, as stiff as if it had had the rheumatics for twenty years. After a little difficulty, Joe Irons opened his door; but he could not shut it again with as little trouble. Now, it was no new thing for Joseph Irons to pull the door with a good deal of violence. He despised such a small thing as a drop of oil. The door had hitherto yielded to main force, and his strength was in no wise abated:—so, "Here goes," said he, and he gave it a bang with all his might. There was no resisting such an appeal as this: and the door was shut with a noise loud ennugh to rouse the whole neighborhood. But, alas! Joe did not know what harm he did. He actually shook the house, and broke a glass shade upon the chimney-piece in the parlor!

This, then, was the way that "Rusty Joe" started forth to market. He met with trouble before he went to his street-door,—and when he arrived at it,—and, as we shall see with plenty more before he returned to it again.

Joe's trouhles lay thick before him. He He soon found himself a poor, limping creature, and every step he took seemed to have a corresponding pinch belonging to it. Presently he began to feel conscious that he would be late for market unless he could get on faster; and accordingly, at any hazard to his unfortunate ten toes, he smacked his whip and "gee-upped" his horses; but soon found that they could not make much more headway than himself. What was the matter? Was the load heavier than usual? Were the roads heavier? No; but "Rusty Joe" had not greased the wheels of his wagon for a long time; and now the vehicle went on creak, creak, as though it would come to pieces every moment.

Instead of making allowances for the poor beasts, which were really doing their best, "Rusty Joe" determined to make them pull the wagon up the hill whether they would or nnt. Accordingly, he took a piece of whip-cord out of his pocket, and his knife also, and while the horses stood puffing and penting and blowing with their exertions, he prepared to fit on a new lash.

"I'll tickle yon, my lads," said "Rusty Joe;" and, so saying, he applied his thumb-nail to the knife, to open the blade to cut the cord. The knife was stiff. In fact, the hinge of the blade was rusted; but the angry man would not lose any time over it. Force, with him, would do everything; and with a tremendous effort he half-opened the blade; but in doing so, he broke his nail down to the quick, and the pain soon became very severe. Still the angry man was not to be put off. He cut the whip-cord. He put on a new lash; and with the crack, crack, crack, he tried to start the horses with the creaking wagon uphill. But force will not do everything in the world. The horses made such a plunge, under the influence of the smarting lash, that the harness broke; and there stood "Rusty Joe," in a sad plight, able neither to go on nor to return. Joe! you should have greased your boots, and you would not have been lame or late. Joe! you should have oiled your door, and you would not have lost your temper. Joe! you should have oiled the wheels of your wagon, and then your horses could have pulled it up the hill. Joe! you should have oiled your pen-knife, and then you would not have torn your nail. Joe! you should have oiled your harness, and the leather would not have become rotten, and have broken, as it has done in your time of need.

"Rusty Joe" made a sad day's business of it: he never got to market at all! A little examination of the harness showed that it was completely useless; and he had to unharness his horses, leave his wagon there, and make the best of his way home. With one delay and another, it was coming on evening before this unfortunate man could get his wagon home again.

"Rusty Joe" tried one person end another in the village who had harness. He sent to some of his brother farmers round about; but no one seemed inclined to go out of his way to oblige him.

I am sorry to say, he cursed and swore; but that, like all cursing and swearing, did him no good; and at last he sat down by the roadside. "Rusty Joe" had not been there many minutes, when he heard the sound of wheels; and soon "Polished Sam" appeared in sight with his team. Sam was whistling like a bird, and he and the team seemed more like a merry family than any thing else. A moment's glance was sufficient to show Sam Parsons that there was something wrong, and he hastened as fast as he safely could down the hill, to meet his unhappy neighbour and offer him sympathy and help.

But "Rusty Joe" wanted no help; no, not he. Some were lucky, he said, and some were unlucky; and he didn't want others to be praying into and meddling with his affairs; and the ungracious man carried on in this style for full half an hour. As Joe would not be helped, of course Sam could not interfere; but he found various excuses for dawdling about until his neighbour had managed to get his horses harnessed and put to the wagon; than with a muttering curse or two, Joe started for home. But, oh whet a chorus of cranks came from his dry and squeaky wheels! And so stiffly and heavily did the wheels roll, that there is no knowing when it would have reached home, or whether it would not have broken down again by the way, had not Sam Parsons ventured to offer a little help once more. Sam in the kindness of his heart, had kept close to his neighbour; and now he made bold to suggest that the wagon could never be got home without a little grease. "You hear it creak, neighbour," said he to "Rusty Joe;" "and I believe it was just for want of a little grease it stuck so fast upon the hill." So saying, Sam Parsons produced a little oil from his wagon, and managed to get it well on the creaking wheels. Marvellous was the change: the creaks suddenly ceased, and the horses easily drew their load. Even the patched-up harness was quite equal to its work so slight was the strain put upon it.

With all his grumpy temper, "Rusty Joe" was not sorry to receive such substantial help: so he allowed Sam Parsons to walk by his side, Sam's wagon following close behind. Sam was not long before he noticed that Joe halted very much on one foot. "The hoots are as stiff as if they were froze," said "Rusty Joe;" —"ever since the last market-day when they got such a wetting."

"Whee-o!" whistled Sam; "I'll soften them in two minutes." And slipping behind his wagon, he brought fourth his oil-bottle, and gave the boots a good anointing with its contents. Of course the cure could not be perfect in so short a time: still, "Rusty Joe" could not but see that a little oil was able to do wonders: the boots seemed to have become quite good natured and it was a question whether a little more oil would not make them even frolicsome.

"I have great faith in oil," said Sam Parsons. "I oil almost every thing. This very morning I oiled the lock of my street-door, and my pen-knife, and I greased my wagon-wheels, and I oiled my wife and child, and gave the servant maid a touch too; and, I tell you what it is, neighbor Joe, I slip along famously where I find another sticks fast."

"Polished Sam's" observations were not altogether thrown away upon him. The contrast between his happy neighbour and his miserable self could not but strike the poor man's mind; and he made a desperate resolution to reform. Before he reached home Joe met the village pastor and invited him in.

The minister felt like a fish out of water in Joe Irons' house; but it was very well that he went in; for Joe's wife, irritated by the destruction of her solitary mantel-ornament, and by her husband's rude way of speaking, had not done his shirt, nor paid any special attention to what he was to eat. The minister's presence prevented any harsh words; and his wise and loving counsel led Joe and his wife to forgive end forget the past, and commence afresh that night, by asking for strength from heaven to speak, do and be like Jesus Christ.

Joe's choicest friend was, henceforth "Polished Sam;" and Joe kept as close to his skirts as though he expected to get some of the polish upon himself. Joe never forgot the minister's advice to seek strength for improvement on his knees; and, by way of a reminder that he should not forget his new principles, he hung something over his bedroom mantel-piece, to be the first thing that met his eyes when he awoke; and what do you think it was? Why it was just

AN OILED FEATHER.

CRABS.

Regarded from any point of view, a crab is a curious creature. If we look him in the face, we see that his mouth is between his shoulders, and that his claws or arms move in the same plane as his nostrils. If we look at him from behind, where we would expect to see a tail, we see a smooth surface, at either end of which is worked a flipper, that answers for both leg and tail. If we look at him side ways when in the water, he is either coming towards us or retreating from us, for in his native element, a crab is as perfect a double-ender as a ferry-boat, and anomalous as it seems, when he goes forward, he goes sideways. No one, at first glance, will admire the personal appearance of a crab, but his lack of comliness is largely due to his wearing the most of his skeleton on the outside, which, it must be confessed, is a trying fashion to any animal, especially one with so many legs. Clams and oyster carry this fashion to extremes, and have all their skeletons, on the outside, but they have no arms nor legs to manage, and if permitted to be wrept in a mud blanket and a sheet of water, they ask odds of no one. Crabs, however, are nomads of the sea, and except when they have retired for their winter nap, or are gorged with food, they are ever restless, darting, or sauntering through the water, where business or pleasure leads. This restless spirit is easily shown, by confining some in a barrel with slats over one end, and sinking the barrel in the tide. The constant efforts of those inside to get out are only equalled in zeal by those outside to get in. The parallal between the crab and a certain higher animal is too plain to need showing. It may ha a surprise to some, who are accustomed to think that crabs are "sea scavengers" and will eat everything, to learn that hardly any other creature is so particular in examining food, before putting it into its mouth. Its olfactory organs are of the most powerful kind, and are brought to bear on every bit of food before a bite is taken. The delicate mechanism of a crabs nose is hardly surpassed in nature. It is an interesting sight to see a crab approach a piece of bait, and note how dexterously it will brush away anything which its instinct or its nose says is unfit for food.

Crabs are as born warriors, as clams are creatures of peace. Their weapons of both offense and defense, are strangely powerful, no living man can hold open the jaws in the end of a crabs claw, if his crabship see fit to shut them. But even Achilles had to be vulnerable somewhere, and a crab has his point of vulnerability. Grasped by the thigh, or rather where the hind flipper joins the body, a crab is harmless, and the most ferocious of the tribe may be held by a small boy, if he only have faith that the snapping jaws cannot reach him. With so perfect an armory of offensive and defensive weapons, it is not strange that crabs should be quarrelsome customers, and pass most of their time in duels and the like. It can hardly be said that there is any "softer sex" among crabs, for the lady crabs are quite as vicious as the gentleman, and practice the arts of war quite as constantly: indeed, if there be any difference between them, the lady crabs are the more vicious. If any one were called upon to excuse the crab for this snappishness of disposition, the line of defense would not be difficult to select. The poor crab, since the year one, has been compelled to feel how differently it was constructed from all its neighbors, and how that every creature that can reach it, from men down to harnacles, lives with its hand raised against it, in a metaphorical sense at least. While other animals reach their growth by regular and easy stages, protected during that period with the greatest care, the wretched crab only grows by jerks, and has to loose all its shell to make that growth, and in making it, is exposed to countless dangers: for that delicacy, known to epicures as "soft shell crabs" is only the hard shell crab making one of his jerks of growth. A series of such hardships extending over countless generations, is enough to curdle the milk of any kindness. The strongest argument against this gradual souring of the crab's disposition, however, is to be found in the fact, that nature clearly recognized its warlike tendency, by providing, that if the crab lose an arm in honorable or dishonorable warfare, a new one should grow in its place. I have in my possession, the claw of a crab, who had evidently been slightly wounded in some engagement, and nature giving him the benefit of the doubt, had caused another jaw to grow on the wounded member and the original to heal, so the crab finally died with two hands on one arm. Crabs not only kill one another, but eat their dead foes; no anatomist can extract the meat from a crab more perfectly than one crab can from another. Seizing the dead body with one claw, with the other they pull out limb after limb, and feast on the flesh and muscle that attaches the legs to the body. The phenomenon of mesmerism may be more quickly shown with a crab than any other animal: if you seize one by the flipper as above directed, and rub your fingers over its back shell from left to right, in a few seconds its snappings will cease, and it will permit the manipulator to handle its dangerous claws at will; the stroking seems to throw it into a sort of trance, and a suspension of all muscular activity ensues. In a minute or two after the stroking ceases, the crab revives, and returns to its normal condition. Although the crab is to a certain extent amphibious, its behaviour on land is almost the exact reverse of its behavior in the water. On land, if man makes a motion toward a crab, it will at once turn to fight, but in the water it will scuttle away. On the contrary, if a person stand perfectly still in the water, crabs will approach him, and nibble or bite his toes; while if one stand still on land amid a company of crabs, not one will attempt to injure him. In the water if a crab seize anything, it at once pulls it under its nose to see if it be good to eat; while on land you may put its favorite food in its claws and it will not put it to its mouth. Another strange thing about crabs is, that if you put a stick or something like it in a live crab's claw, it will only hold on for a very few seconds, whereas if you seize it by the flipper and let it seize something itself, it will hold on, while you lift it and its burden to any height. In other words it seems to dislike to support itself by its claws, but will, if it has a chance, hold up ten or a dozen times its weight of other crabs. It is a common thing to see crab-bers unloading their boats, by means of letting one crab, which they hold by the flipper, seize another crab, and this second crab a third, and so on, till sometimes "a string" of a dozen is tossed into the basket. There seems no limit to the number of crabs that may be thus got on a string, except the weight which is needed to pull out the hind flipper of crab number one. The number of eggs laid by a single crab, is marvellous—they are carried beneath the under shell, and in the spawning

season, these bunches of eggs look exactly like pieces of fine Turkish sponge. It would take too much time to deserihe in detail all the changes which occur in the development of the crab, but it is sufficient to say that a single egg is hardly to be seen with the naked eye, wbils crabs grow to weigh over a pound.

Crab catching as a matter of pleasure, and crab catching as a matter of business, are two very different things—for the first, a summer dsy on the sea shore, or hetter still, in some quiet bay, a string with a bit of red meat on the end, a net, a hasket, and a little patience, are all the smsteur crab catcher needs as an outfit. He may try his luck from off a dock, or over the side of a hoat: in these waters, the bait will have hardly reached the bottom, when a vicions twich of the line will indicate the presence of a crab: all to he done is to pull the line stesdily, and the crab with the bait clutched in his claws will be drawn to the surface—slip the net under him and toss him into the basket. Then if the crab-catcher has time, and an eye for the beautiful, he or she may study with delight the many exquisite colors with which tha crustacesn is marked. To an old crab catcher these colors are as an open book, telling him the probable age of the crab, how long since its shell was shed, whether it bas been a long tima in the bay or whether it has just arrived from the sea, etc., etc. To the amateur, however, it will probably present only a curious blending of fresh tints, the most beautiful, being the blue, with which parts of the arms are marked. Until one has been tsught how to pick up a crab, it is well to admire him at a safe distance, for they hava an enormous "resch," as the prize-fighters say, and strike witb the rapidity of an arrow from a bow. Catching crabs for market requires quite extensive preparstions. In the first place, a boat has to be built on purpose for the business; it is flat bottomed, very wide in proportion to its length, and contains but two seats: one near the centre for the crabber to use, when he rows to and from the the fishing grounds, and the other, a small ons in the bow, to use when fishing. Thers is no seat in the stern of the boat, the space there heing used to coil up the line; between the two seats mentioned is placed a "dry goods" box, as a receptacle for the crabs caught. The line consists of a half-inch cotton or grass rope, varying in length from thirty to onc hundred fathoms. At intervals of eighteen inches or two feet, are hung bits of stout twine with loops on the end, into wbich the bait is fastened. These bits of twine are called "snoods," and the hait used is generally tripe. The line once baited, an anchor is securely fastened to each end, and to the anchors are made fast buoys, which enable the crabber to know just where his line is. Reaching the grounds, the anchor is thrown overboard, and the boat pulled away from it, causing the lines to "pay out" over the stern. When it is all overboard, the second anchor with its buoy is dropped, and taking his seat in the bow, the crabber begins pulling his boat back, hand over hand towsrd the first anchor, by means of this line. In this way every bait is brought to the surface, and the crabber, with his net, tosses over his shoulder the crabs caught investigating the baits. Over the hox are strewn green bushes, sprinkled with salt water, to prevent the crabs being sun-struck, for no amphihious animal is sensitive to the sun's rays as the crab. When cooked, (boiled or steamed) the shell of the crab, no mattek what may have been its color, when its occupant was alive, turns red, and this shade of red developed, is a sure guide as to how thoroughly the crab is cooked. When crabs are caught and thrown into a box or basket, they immediately take up arms against a sea of troubles, and snap fiercely at every thing within their reach: succeeding this period of wrath, comes onc of fatalistic repose —tbey crawl into some corner, fold their arms, and if not disturhed awak death with the utmost tranquillity. That they do this, they must be perf-etly undisturbed, a jar of the hox or basket, as by a kick for instanee, makes them apparently forget all their philosophy, and sets them fighting one another, as if every crab accused his neighbor of having insulted him. All sorts of salt water fish, except perhaps the shad family, are es fand of crab meat as the majority of men, and the blue fish, sharks, etc., would bring the crabs to a swift destruction, if it were not for the stout shells of the latter. The spear-like points on the cnds, and the deep serration of the sides of their shells, make them a very awkward morsel for anything to swallow. Hogs aro ravenously fond of crabs, but farmers hesitate to gratify this appetite, for although a pig can catch and crunch a live crab, the dead shell often gets the better of the pig, by wedging across his throat and choking him to death.

The meat of the crab is the most delicato of all the crustaceans, but varies amazingly; if taken from a crab, which has died a violent death, it is ona tbing: if taken from one which has been suffered "to drown in the air," it is another. The meat of the crabs cooked alive, is firm and smooth, while that of a crab, which died beforo it was cooked, is mealy or pasty, and unfit for human food. All death is a change, and in the crab it is a very great change, and the manner of the change has everything to do with the quality of food furnished. If a crab die a lingering death from sun stroke, or unskilful smputation, its flesh is only fit for hogs or fish bait. But let his death be sudden as by turning fifty pounds of live steam upon him, when full of fight, then the market afford no more delicious morsel.

T. T. B.

NEWS OF THE MONTH.

FOREIGN.

Mr. Henry M. Stanley, the African explorer, arrived at Sierre Leone, Africa, on the 24th of July and started for the River Congo.

South African advices of July 22 say that King Cetywayo has made another effort to ascertain whether his liberty would be granted him if he submitted. He said that he had been completely deserted by his warriors. Other reports however do not sustain his assertions.

A very serious accident occurred last week in France on the Argentan and Granville Railway. Fifteen were killed and thirty-six wounded.

A despatch to the *London Times* from Zermatt says Mr. Mosely, a young physician of Boston, fell and was fatally injured while descending the Matterhorn.

The Porte has at last appointed plenipotentiaries to negotiate on the question relative to the Greek frontier.

Two streams of lava flowed from Mount Vesuvius on Friday as far as the base of the cone, but there was no eruption on Saturday.

A despatch from Geneva reports that a waterspout occurred on the 18th inst. at Pays-de-Gex, causing the river Versoix to overflow its banks. Buildings at Divonne were damaged to the extent of 100,000 francs. Several persons were killed.

A correspondent at Vienna, discussing the chances of war between Russia and China on the Kuldja question, says that the Chinese have available over 100,000 men and 100 guns.

The first court-martiel at Moscow since the promulgation of military law was held on Thursday, and condemned a private gentleman named Zenkoff in twelve years at hard labor in the mines for attacking and insulting a sentinel.

Twenty-four persons, injured in the riot at Belfast, growing out of a Catholic procession on the 11th inst., had their wounds dressed at the Royel Hospital in that city.

The English Perliament was prorogued Aug. 15th.

The Iron trade is improving in Great Britain.

James McHenry, English capitelist and railroad director, has failed for $5,000,000.

The crops in England have suffered much from the recent heavy storms.

Within a few days there have been desperate and bloody riots in Dublin, Belfast and Lurgan, Ireland, and last week at Quebec a fight between the Irish and the French Canadians raged for two days, the wounded numbering scores.

DOMESTIC.

On Sunday night, Aug. 17th, a terrible tornado struck on the coast of South Carolina and followed the shore to Maine, leaving devastetion and ruin in its wake. The town of Beaufort, N. C., was badly damaged: many buildings were either completely demolished or badly injured. The Atlantic Hotel is a total wreck, not a vestage of the building remains to mark the spot where it stood. At Moorehead City, N. C., trees were blown down and houses unroofed. Wilmington and New Berne, N. C., suffered great loss. The storm was at its height at Norfolk at 11 o'clock on Monday. Trees, roofs, steeples and houses were blown in every direction in Norfolk and Portsmouth, and vessels were wrecked in the harbor. Hampton lost many trees and a few small houses. Baltimore, Philadelphia, New York, Boston, and intermediate points, sustained more or less injury from the terrific gale. Reports of shipwrecks and loss of life are numerous.

The yellow fever at Memphis has not abated, but rather made progress, during the last month, the new cases becoming more numerous. The place is now almost completely isolated. Dr Mitchell, physician of Memphis, describes the city as wholly cut off from the world. There are no trains running into or out of the town, and no steamboats land there. The supplies are all brought down the river on barges, which are dropped by the steamboats a couple of miles above the city and allowed to float down. When they arrive at the city men in skiffs or tugs secure them and bring them to the landing. This rigid seclusion has thus far prevented the spread of the disease.

The Department of Agriculture, at Washington, reports for August a slight loss in the general average of the crops of the country since July, but that the wheat crop for the whole country is 7 per cent. better than last year. The average of all the crops is put down at 91.

It is stated that during the five months since the authorities at Norwich, Conn., have withheld licenses for the sale of intoxicating liquors the arrests for drunkenness have fallen off from 161 to 38, and commitments from 137 to 37.

There has been great excitement among the Mormons at Salt Lake City since the announcement that the government intended taking measures to prevent their emigration from Europe to this country. The Deseret *News* uses the most violent language, threatening all who oppose the "Latter-Dey Saints" with the fate of Pharaoh, who would not let the Lord's people go. At the Tabernacle in Salt Lake City, on Sunday, Aug. 10th, Joseph W. Smith made a violent harangue, denouncing Judge Boreman for committing to prison for contempt of court three executors of Brigham Young, and advising the people to arm themselves and be ready to defend their rights.

The Mrs. Sartoris whose death was reported from London, was not Nellie Grant Sartoris, but her husband's mother.

The largest furnace of the Reading Iron Works, at Reading, Pa., which went out of the blast four years ago, was blown in last week. This company is now building a new tube-mill, which, when finished, will give employment to 200 additional hands.

News has been received at San Francisco by the steamer St. Paul, from Onalaska, that the Arctic exploring yacht Jennnette arrived there on Aug. 2d, all well. The season on the Arctic Ocean has been unusally favorable for exploration. The winter was warm and the ice broke up early. Lieutenant DeLong of the Jeannette, hopes to reach Wrangel Land before the ice closes again, and intends to winter there. There is some question as to his reaching there early enough, as on the way up the Jeannette will visit the coast in the vicinity of East Cape in search of tidings from Professor Nordenskjold.

Hand Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal school, in which he will prepare for market the ment of the hard-shell crabs, for which the watere of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad and Devilled Crabs,—two dishes concerning which it is superfluous to say onything to those who have eaten them; but to those who heve this pleasure yet in store, the reicpe will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond praventure, the most delicate and delicious of all seafood, far exceeding in fineness of flavor end of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meets in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $5 00 a case, net cash. Money may be remitted by Post Office order, registered letter, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $2.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung up in svery part of the Union for making an "Imitation Singer Machins."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken ths FIRST PRIZE over ALL competitors more than TWO HUNDRED TIMES. *Why?*

After the Chicago Fire ths Relief Committee undertook to furnish sewing machines to the needy women of that city. Applicants were permitted to choose from six different kinds of machins. 2,944 applicants were furnished with machines; 2,427 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines! These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The peopls bought Siager Machines as follows:

1870	127,833	Singer Machines
1871	181,260	" "
1872	219,758	" "
1873	232,444	" "
1874	241,679	" "
1875	249,852	" "
1876	262,316	" "
1877	282,812	" "
1878	356,432	" "

Many of the manufacturers of other machines refuse to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines. A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED.*

For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

BEGINNING, next month, with the November number the SOUTHERN WORKMAN will be increased to twelve pages, cut and stitched, until July, 1880.

THE "Hampton Industrial Works" now employ in the saw mill department ten young colored men, who are engaged to work one year at the rate of ten dollars a month and board, their wages to be saved for paying school bills during two years after they shall enter. They are to attend night school in which those who are capable and earnest can fit themselves for admission in October, 1880. Five Indians are also employed.

These "Works" are alive and promise success, but to start them has required a loan of five thousand dollars besides an expenditure of over four thousand of school funds needed for other purposes.

To complete them will require six thousand dollars more. The Executive Committee of the Trustees of the Hampton Institute have decided to raise if possible the sum of fifteen thousand dollars, to meet the needs of this department.

Over six thousand feet of yellow pine lumber are being sawed daily for the markets, and ninety thousand have already been sold at fair prices, besides a quantity prepared to complete the mill. The annual consumption of lumber in this immediate vicinity is about a million feet per year.

This is the kind of education, education in manual skill, and in self-help, that we wish to offer to our Negro and Indians youth, and we appeal to their friends to sustain our efforts. There never were so many applicants as now for a chance to work their way.

WE invite attention to the record of Indians, during the past summer, prepared by Mr. James C. Robbins.

While order, discipline, daily work, and devotional exercises have been kept up, the boys have been allowed plenty of play and a freedom to do as they liked that has resulted in improved health, and yet in eagerness to return to the stricter ways of school life. They are back again on school grounds, contented, cheerful, and a step in advance has been taken by way of requiring the farm hands to do a full days work, five days in the week. Those in the shop have always worked full days. Their progress has been satisfactory.

"Shellbanks" is a fine stock and grain farm of three hundred and thirty acres, presented to the school by a friend in Boston, managed and worked entirely by Hampton students, whose savings either pay their debts or provide for their future expenses. On it is kept a considerable herd of cattle for milk and beef, a hundred acres of corn are growing, one half of which was destroyed by the late tornado, and it has proved of the greatest benefit physically and industrially to our Indians. The girls are out there now for a short vacation.

Is there not enough money in the land to complete and perfect the Hampton method of training. Its agricultural department is established. The mechanical is struggling for existence.

THE citizens of Hampton, Va., have just organized a Town Improvement Society, with a constitution based on that of the well-known Laurel Hill Association of Stockbridge, Mass.

Capt. Jacob Heffelfinger is President. The Reverends Frank Bostun, J. J. Gravatt, Mngee and Scott, the leading clergymen of the place are Vice Presidents. Dr. Thomas H. Parramore and Mr. Jefferson J. Barnes are Secretary and Treasurer. They constitute an Executive Committee and will at once take measure for a public meeting to be followed by solicitation for funds for the improvement of the streets by way of covering them with oyster shells and keeping them clean, and planting trees. There is on the part of all appreciation of this effort and a determination to make Hampton the banner town of the State. Already, in activity, enterprise and in charm of situation it is second to none.

The spirit that led its citizens in 1861 to set fire to their own homes rather than let them fall into hostile hands, will now beget a better result, and "beauty for ashes" will be the thought of those who shall by and by behold the streets of this famous little town.

WHILE the Conservative party of Virginia is reading out of its fold the "Readjusters" and is squaring itself on an honest, debt-paying platform, we hear that a re-organization of the Republican party in this State on the basis of honest payment of the State debt is announced.

The ablest and best Democratic and Republican newspapers and men are making common cause to save the credit of this noble old commonwealth. The tendency of the more ignorant people of all classes is towards the mistaken policy of over crippling State creditors. There are, however, men of high character and ability among the "Re-adjusters."

The color line is broken: intelligence rather than complexion is becoming the turning point in politics. The political demi-gods have broken ranks and are at each other. The smooth tones of mutual praise formerly accompanying denunciations of the carpet-baggers, etc., have ceased, and strong language between the ablest of those "to the manor born" is heard on every stump and platform.

We ask attention to an extract from the New York *Commercial Advertiser*—reprinted in the *Norfolk Landmark*—printed in this issue describing the State of things in the "Old Dominion."

During the past summer its leading daily papers have been filled with argument and appeal in behalf of the late settlement of the State debt with its creditors, by voluntary concessions. The next Legislature will, if favorable to this plan, settle the matter forever, and make Virginia the standard bearer of the Southern States, in the struggle to meet their obligations after their frightful impoverishment by civil war. The outlook is now favorable; and it is probable that the State which was the arena of the contest, where blood and money were poured out like water, and where the work of devastation was worst, will stand first and highest in duty and in honor.

THERE is reason to expect, the coming year, a restoration of the public free schools from their sad condition last year during the debt agitation, to their previous thriving state.

Applications are coming in to the Hampton Institute for teachers from counties where, last year, the schools were closed.

The large "Butler" and "Lincoln" colored graded schools in the town of Hampton are to be re-opened—not a dollar was devoted to them last year. The Superintendent of schools in Chesterfield county has written that Hampton graduates are hereafter to be employed in the colored schools of that county. He has already called for four. Such information comes in gradually from regions heretofore not open to our pupils.

There is every reason to believe in the slow, steady and sure progress of Virginia as illustrated by her public faith and her public schools.

TEACHERS' INSTITUTES IN VIRGINIA.

The Educational Journal of Virginia for September contains an account of ten teachers' institutes held in July and August, in the counties of Augusta, seventy-two teachers present; Bedford, Botetourt, thirty present; Charlotte, Cumberland, twenty-three present; Fauquier, one hundred present; Franklin, thirty-six present; Lee, one hundred and twenty present; Richmond, large attendance; Wythe, twenty-nine present.

Among the subjects discussed were Corporal Punishment, Theory and Practice of Teaching, Grading of Schools, Geography and Map Drawing, Spelling and Reading,—especially by the Word Method. Many teachers made addresses.

In Bedford county there was a colored institute conducted by Prof. D. N. Vassar of Richmond Institute.

Supt. Graham of Lee, states in his report, "I found by examining that my teachers had improved from fifty to one hundred per cent in the last two years."

"I never was associated with a school in which there was more interest taken than in my last. Some of our pupils have been teaching for twenty-five years; they were as submissive and industrious as young men. I feel very much encouraged with our prospect for good schools this year. The people are alive on the subject of education. They are very willing to supplement the teacher's salary, if necessary; to extend the schools five months. We will open eighty or eighty-five schools in a few weeks. At the close of my examination we held a teachers' institute for two days. The people gathered in crowds to witness the examination and institute.

Supt. Thomas, of Wythe Co., writes as follows:

"My Institute came off on July 22d, 23d, and was in every respect anticipated a success.

1st. I am certain a fine impression favorable to school interests was made upon the citizens attending, of whom we had large audiences.

2d. The attendance of teachers was numerically good—(there were twenty) and of that class which gave character to the institute.

3d. The discussions of subjects assigned and of others brought forward by "queries" was much more professional (i e. it showed professional zeal and skill), than in any former institute in this county.

4th. The entire exercises gave evidence, clear and unmistakable, of the advance of the school work—in the ardor and equipment of the worker, and in the quickened interest of the audience, which latter was not only unabated to the last, but arose to the most gratifying state of deep interest.

5th. The subjects discussed were of such character as to bring out evidences of the advance of the teacher."

There are about four thousand public free schools in Virginia, maintained at an annual expense of nearly $1,200,000. Eleven hundred of them are colored, a little over half of which are taught by colored teachers.

The school system of Virginia has been built up chiefly through the efforts of Dr. W. H. Ruffner, Superintendent of Public Instruction, whose ability and energy are remarkable. He instructs and inspires his officers through the columns of the "Educational Journal" a well conducted monthly. Hampton graduates are supplied with it by their *Alma Mater*, to keep them in sympathy with the entire system and under the care of its chief.

Last year was one of exceptional depressions in school interests. The outlook for the coming year is hopeful.

To those from the North who are engaged in educating the colored people and can personally observe the condition of things, in the South, the course of the Government since 1870 in refusing to aid the new and struggling school systems of the Southern States, as a means of genuine reconstruction, and as a justice to the 800,000 ignorant voters whom it created, seems as great a wrong as the Mississippi outrages. Time will show this.

Under the peculiar circumstances the right to vote carried the right to know enough to vote intelligently. This will be better understood when bribery and persuasion will take the place of violence and intimidation in the South; when negroes will be driven not from but to the polls and thence marched to get their drink, or half dollar, or to a barbacue. This work has begun; it is not peculiar to the South; there is nothing to prevent its spread. We believe that in five years fifty per cent. of the colored vote will be controlled by appeals to their interests or appetites. Public opinion North and South will stop any extensive bull-dozing, and yet the South will be as solid as it shall choose to be so far as the negro vote is concerned. Should the whites divide, the marketing of the votes of the ignorant will be more lively than ever.

There does not seem to be in the land a statesman who is devoting his strength to arrest the evils inevitable from the vast illiteracy of the South.

The emphasis of Northern sentiment is "Let every negro vote." Neither press, nor platform, nor politician has a word for what he needs as much as the political freedom which may be as suicidal as helpful.

THE Hampton work for Indians is likely, as the following letters show, to meet needs from various quarters.

The young men referred to have all been accepted. The government will be asked to supply the needed help; should it decline the school will assume the responsibility, and appeal for aid in their behalf.

GERMANTOWN, PHILADA., 8–30, 1879.

Dear friend:

Elkanah Beard, who has been living among the Absentee Shawnees, in the Indian Territory, writes me that the tribe, numbering about seven hundred, have chosen two young men to be their future chiefs or leading men to do their business for them. They wish these youth or young men to go to Hampton. These Shawnees are self-supporting, live in houses and raise grain and cattle, have no annuities and little money. The Gov't school is a primary one; the boys have attended it. Now can these boys be admitted free at Gov't expense? If not at what expense per annum?

Thy friend,
JAMES E. RHOADS.

(The boys mentioned below are all colored).

TO COL. A. B. MEACHAM:

Dear Col.:

Which school would you advise colored boys to attend—Hampton, or Lincoln University? Robert Johnson has made up his mind now to send Coody to one or the other schools and pay his way the entire course. Cesar Bruner has a son he wants to send to Hampton and will pay his way also. I have a young man in view, Benjamin Nevus, a bright boy of nineteen years, a perfect gentlemen, who will make his mark if he has any chance, but is poor. He attended Mr. Leslie's school a few months, is one of their best scholars. Will you secure a place for him at Hampton upon our recommendation, and the Leslies? I would like all three to go to Hampton, if there "is room," if not for all Coody can go to Lincoln. Please let me know at your earliest convenience.

Benj. Nevus's mother lives at Brunertown—is a relative of Mrs. Johnson. His father is is a Cherokee half-blood, and the mother is a mulatto. He is a very intelligent young men, of more promise than any I have met in this Territory. He does not have the appearance of being lazy as many do. However, I will not vouch for any one without I know he is sober, temperate, gentlemanly, and willing to work for his people after others do so much for him.

NETTIE C. CONSTANT.

"INDIAN EDUCATION."

is in the air; it is all about the Indians. The Rev. Dr. Plummer of South Caro-

at Oberlin College, Ohio, made a creditable record as a teacher chiefly at Yazoo, Mississippi, where he had pastoral care of

their breed! That he and other public men were literally beset with Southern gentlemen, often finished scholars, begging for

"INDIAN EDUCATION."

"The Admiaistretion has a philanthropic impulse that is crossed with the Indian and Negro. Hampton Normal School is become a sort of model in their estimation, and the idea that it has been uncommonly successful in educating the few Indians sent there from Florida has made a great impression in Washington—insomuch that on Friday last the Secretary of War ordered that Carlisle Barracks, Pa., should be turned over to tha Interior Department to ha used as a school for the education of Indian youth, after the manner of Hampton Normal Institute. He detailed Capt. R. H. Pratt, of the army, to have charge of It.

Carlisle Barracks has had great fame in times past. It has been a great cavalry school, and has turned out some of the finest cavelry soldiers ever in the American army.

It is said that Secretary McCrary and Secretary Schurz are both much interested in the subject, and hope that the effort at Carlisle Barracks will be as successful as that at Hampton; but exactly how successful that has been we know not.

This Carlisle effort will be relieved of one objection at least—that of mixing up the Indians with Negroes. We doubt whether it is very advantageous to experiment upon the practicability of this fraternization. We doubt it.

The opinions expressed by the Secretary of War give rise to feelings a little sad. He suggests that it is the only way to save a remnant of the Indian tribes; contending that so long as the tribal relation is continued the Indians must gradually become extinct. He hopes by bringing the young generation to the pursuits of industry and civilized economy they will be influential in leading their people away from the pursuits of savage life. The rapid extinction of buffalo and small game upon the plains require this diversion to save the Indians from utter extinction.

It is sad to think how the lord of the forest, who held undisputed dominion in this continent before the white man appeared here, should be driven to this strait. And the question arises: Will even the expedient benevolently devised open the way to the accomplishment of the laudable object? The experiment is certainly very interesting, and will afford the opportunity to find out more of the Indian character than we have clearly known heretofore. We were decidedly prejudiced against the experiment of the mixed education of Indians and Negroes at Hampton. But this experiment at Carlisle Barracks, we trust, will be less embarrassed. The question is: Is not the Indian so averse by natural and ineradicable disposition and temper to civilization and industry that he will moan, and wilt, and perish in the process of the discipline through which he must pass before be graduates in civil life so as to be useful and comfortable?"

The above from the Richmond *Dispatch* illustrates the uniform fairness which has been accorded to the Hampton work by the press and people of this State.

The Indian is good caste among those who are proud of tracing their lineage back to Pocahontas. The arrival of Indian students at this school for Negroes was naturally not well received by many who had very different ideas of the two races.

There has been, however, no discourtesy, or complaint, or attack, but a readiness to let the plan be worked out, and from our nearest neighbors and newspapers a hearty approval and encouragement of the effort.

From individuals and Sunday schools in Virginia have, from time to time, come contributions in aid of Indian education here. In each case some specimen of the red man's crude and curious art has been sent in response. That is our practice.

We hope that when school is under way again, say in January next, the editor of the Richmond *Dispatch* will visit us and inspect at every point. Those who form public opinion are bound to search for bottom facts on the questions they discuss.

We claim that our colored students, selected as they are from a wide range, furnish the best practicable conditions for building up wild Indians in ideas, decency and manhood. What white school would receive and help them up, without a storm of indignation from weak and foolish parents?

Our class of Negro youth form a current of influence which bears the red children along. The latter are like raw recruits in an old regiment. The greatest difficulty is the English language. Here, it is not only taught, but talked; it is in the air; it is all about the Indians.

The Rev. Dr. Plummer of South Carolina, who attended the last Anniversary exercises at Hampton said to us that he did not hear a single *negroism* in the public utterances of that day. There is no danger of the Indian getting a bad accent or a low dialect.

Capt. R. H. Pratt is already in Dakota Territory selecting twenty Indian girls who are expected here about the tenth of October.

He is to bring eighty boys and forty girls, mostly Sioux, the rest from the Indian Territory, to Carlisle Barracks, Pennsylvania, there to be educated at government expense under his charge.

Capt. Pratt is the original mover in this recent fresh impulse to Indian education. His thorough and successful work on his savage prisoners of war at St. Augustine, Florida, has placed him at the head of the most important single move ever made in behalf of Indian civilization. He deserves the opportunity and will succeed.

The Rev. C. L. Hall, missionary to the Agency of the Congregational Church at Fort Berthold, Dakota, in common with many earnest workers for the Indians in civil, religious and military service on the plains, advocates a temporary separation of Indian youth from their people, and a contact with Eastern ideas and people.

The danger is of course, that they will be spoiled. Unless wisely directed, and returned before they shall he so wedded to Eastern ways as to be unwilling to go back as much harm as good may result from this change. Such errors are however needless and no one need, on that account, fear the recent effort at Hampton, Va., and at Carlisle Barracks, Pa. We quote from a recent letter from the Rev. C. L. Hall.

"We need a higher school—such as we have at Santee, to train Indians for missionary work, and teaching, and for educated Christian influence among their people. We need to bring Indian youth as far as possible into contact with life in Eastern communities, in such a way that they may take to the habits and occupations of white people, and impart to their people a good knowledge of white men, as they are at home in the East. I regard all that can be done in that direction, by any one, as *plus*, even though the result turn out no better than with one now here, whom an army officer kept in the East for some years; very little good seems to have come of his education but he is no worse than he would have been, I think; his people cannot fail to get some knowledge of whites, through him, and the more knowledge they have of us as a whole, the less will be their prejudice against us.

"We gave Capt. Pratt our school, that is, the nucleus of it, to start your company, but we lost nothing by it, in my judgment. I hope you will keep at it. It will take a great many years to make industrious, intelligent Christian citizens of all the Indians. Perhaps you could do best with our more southern tribes, and leave some others, *if they will*, to take the northern."

New York, *Sept.* 20, 1879.

Gen'l. S. C. Armstrong,

Dear Sir:—Yours of the 15th is at hand. I cannot take a school at all this year in the South. I am teaching on the U. S. ship Constitution. I suppose I am the only colored teacher of a white school in the United States. I have about fifty boys under my care, all white. I heard an unknown white man say, "A school teacher is wanted on the Constitution in the Navy Yard." I went and applied to the Lieut. Commander. He said, "All the boys are white but three." Said I "I supposed so; but the U. S. Government ought to distinguish its citizens by their qualifications and character, *not* their color." Looking up thoughtfully he said, among a few other things, "that is true." In less than an hour after this I was examined and am now at my duty. The pay is $36.50 per month, no expense for board, room, etc. If you would like to know how I was received by my boys, the sailors, officers, etc., let me know. It was not very provoking, but will cause you to laugh for a week.

We are supposed in the Hampton Roads Oct. 15, I understand; if so, I'll try to come to see you.

Your sincere friend,

S. C. Winsor.

The above is from a Hampton graduate of the class of 1873, who, after some study at Oberlin College, Ohio, made a creditable record as a teacher chiefly at Yazoo, Mississippi, where he had pastoral care of two churches and kept two schools.

He was well-known to the notorious Dixon who twice warned him to leave, which he declined to do, declaring that he must die somewhere, and that it might as well be there.

He stated his occupation, that he had no part in politics and he meant to stay; he was in no way terrified, finally gained general respect, and made many friends. Mr. Windsor's story is most interesting, and we hope to get it for publication.

While a firm believer in outrages, knowing many terrible things, he realizes that the low, ignorant condition of the blacks is their worst trouble, and that to lift them up by education is the only hope for them: for this he has worked nobly.

Losing his wife, also a Hampton graduate, himself prostrated by malaria and having fears of heart disease, after making a year's provision for his two little children, for at one time he had accumulated considerable money, he sought medical treatment at the New York Hospital. Being finally out of funds, true to his school training, he obtained employment for a while as cook and at last by good fortune was appointed a teacher on a navy school ship.

The following from the Southern correspondent of a Northern newspaper is important if true.

"It is said that freight can never be carried from the Southwest to New York by way of New Orleans, cheaper than it can go by land across the continent. One steam tug lately passed down the mighty river towing freight in barges which, if taken by rail would have filled twenty-three hundred cars. The towns along the river are all coming to life with this revival of trade, and New Orleans and other cities already begin to cast off the sackcloth and ashes which the desolations of war have so long caused them to wear; again our beloved South shows signs of rejoicing, and 'the wilderness and the solitary place begin to blossom as the rose.'

"This revival of prosperity in the Southwest, depresses the North-east in proportion, and a great struggle may be foretold between the railroad rulers of the North and the water-carriers of the South.

"With comuercial recuperation every interest of the South improves, except that of the old aristocrat, whose evil star forbids him, like the hapless Bourbon, 'to learn anything or forget anything.'

"The new comers into the land, chiefly Germans and Northern men, the over-seer class of the country, all indeed who are capable of self-help, are fast rising to affluence, while in almost every case the ex-slave holders are sinking, yearly, deeper in poverty and wretchedness. One firm in Memphis holds mortgages, which they will soon be compelled to close, upon thirty valuable plantations, all these debts having been contracted because the unhappy lord of the soil cannot change his habit of life, blinded by prejudice and the slave of luxury he cannot or will not adapt himself to the new order of things, and is destined to learn, alas, too late, that God 'has rent the kingdom from his hand to give it to' another."

The tone of many Southern newspapers and orators, in these days is illustrated, by the following extract from an account of a recent speech in Lynchburg, Va., by Ex-Governor Vance of North Carolina, now U. S. Senator. The account was printed in the *Springfield Republican* of Massachusetts.

"He implored the parents of the land to give their children such education as would enable them to earn a living—to leave off Latin and Greek, and teach their sons trades, make them learn to till the soil and use machines. He gave a hasty but comprehensive sketch of the grandeur England has attained by reason of her skilled mechanics, and declared that the $3,000,000,000, now waiting investment in her coffers was the product of these trained artisans. Probably he went as far as he could expected to go in saying that at the close of the war, the people of the South were the most miserable creatures that God ever made made or permitted to live! That in proportion to population, Virginia had more colleges than any other state, and in the same proportion, more men who could not earn their bread! That bar and other public men were literally beset with Southern gentlemen, often finished scholars, begging for some pitiful office and latting fine estates go to waste! That the whole system of education, now in vogue, was ruinous, and unless practical methods were adopted, there was no hope for our people. The senator ended by observing that Solomon had said, 'Train up a child in the way he should go,' but he thought Josh Billings had improved on this maxim when he said, 'If you want a child to go right go a little that way yourself,' and he would commend that remark to his Virginie friends for further consideration."

We hope that the school-mates of our missionary to Africa will see what he says at the close of this letter—"I would like to hear from them all."

Good Hope Station, Mendi Mission,
West Coast Africa,
June 29th, 1879.

Dear R——:

I hardly know how to commence, for since I wrote you last, you have taken a trip to Europe, and, I suppose, were so carried away with what you saw, that you have forgotten all about the *White* missionary in Africa. Right here I want to give something which is often given but seldom taken, that is advice. When you go to Paris again either carry some paper or learn how to ask for it. When I was at H. you used to read and talk to me in French just because I did not know whether you were right or wrong, but when you get before a Frenchman, you are not understood when you say "*Avez-vous quelque papier?*"

Well, I have taken a visit, though I did not have to ask for "*quelque papier.*" Dr. James and I have been to Liberia. March 1st, we started for Frectowu to take a steamer from there to Monrovia. Rev'd Mr. Gomer of the Shangey Mission was to go with us, so we stopped at Shangey for him. We reached Freetown on the 7th of March, and learned that a steamer would leave that day for down the coast; it would not stop at Monrovia, but would stop at Grand Bassa, about sixty miles below Mourowia; as the steamer had not been at all regular (caused by the strike) we thought best to make sure of this one, and try to get to Monrovia from Graud Bassa, we got our tickets and went aboard; we learned from the Captain that she would not not sail before the next morning; at six a gun would be fired to let us know, so we went to a mission house and remained all night. A little after six tha gun fired and we went aboard, but it was half-past nine before she started. We had quite a rainy day for the trip, as it was about the middle of the dry season. After two days and two nights, on the water we reached Grand Bassa. The people there received us very kindly and took us to many interesting places. Grand Bassa is the name given to tha lower part of Liberia, there are three towns: Edina, on the south bank of the St. John River; Buchanna on the north bank of the river and about one mile from Edina; Fishtown or Low Buchanna, situated on the sea about three miles from Buchanna. Off the coast, is a great bar; the water rolls over it with a noise like thunder. We were taken from the steamer to the land in a small boat, as they have no wharf; we had to cross this bar; in crossing the bar the boat seemed to go up step by step, till she got to the top of this rolling hill, then we looked down into a valley about an eighth of a mile deep into which our boat must go at the mercy of the angry waves. At the top of the great billow the boatmen all stopped pulling and held on to the sides of the boat, and she swiftly glided down. Had the boat turned one foot either way, all on board would have been lost, for it is said no one has ever been saved out of that place, but that hundreds have been lost. This is a dangerous place, for many lives are lost here every year, yet it is one of the grandest scenes of nature I ever saw. To stand and see those mountain waves rise as though going to meet the clouds, then all white with rage go rolling down with awful thunder, makes one think, "How wonderful are thy works, O Lord."

After spending a few days here we were kindly taken to Monrovia by Senator Williams in his schooner: we stayed there about two weaks; going up the St. Paul River we met some of the people who came out about three years ago. Some of them seem to be doing well; they have put out coffee trees since they came, and when we were there they were picking coffee to sell, and the trees were not three years old. I would like to tell you more about the Negro Republic but shall have to leave it till the next time. Please remember me to all the boys I know, and tell them I would like to hear from them all.

With many kind wishes, I am,
Yours in Christ,
Ackrel E. White.

LETTERS OF HAMPTON GRADUATES

he said "I never saw children learn to read in each other, as if perplexed at their new teach- ——, Va., and taught a private school in

LETTERS OF HAMPTON GRADUATES TO DONORS OF SCHOLARSHIPS.

RECORDS OF HAMPTON SINGERS. THEY EXPECT NO "FLOWERY BEDS OF EASE." HAPPY IN HARD WORK. COUNTRY AND CITY SCHOOLS. THE NEW BROOM SWEEPS CLEAN. A GENEROUS LITTLE BARE-FOOT. A BRIER-GROWN PATH TO THE SCHOOL-HOUSE. HELP YOURSELF AND PAY YOUR OWN WAY.

In concluding this series of Scholarship letters which have been running through several numbers of the Workman, we repeat once more, for the benefit of new readers, the explanation that they have been written by request to those who, by the donation of scholarships, aided these students through school, and frequently express a desire to know how they are succeeding in the field of work for which they have been trained.

A Hampton "scholarship" means a gift of $70 a year, or $210 for the course, which is the estimated cost of a student's instruction, and quite beyond his own abilities to meet in almost all cases. His board bills, washing, etc., estimated at $10 a month are paid by himself, half in labor (on the average) and half in cash. The giver of a scholarship is put into direct communication with the student to whose benefit it is applied, by a letter of acknowledgment from him, giving some account of himself in his life and efforts for an education. The interest thus aroused in the recipient of a generous gift is often so great as to create a desire to watch his future course in his life work.

NOT EXPECTING "FLOWERY BEDS OF EASE."

The fear was expressed by some who met the Hamptou Student singers in the North, that the notice they received, and the life of unwouted advantages and luxuries in some respects, would unfit them for the future they must meet and the work they ought to do for their people. In no case, we think, has this fear been realized. Their studies were kept up to a great extent with a teacher while they travelled, and on their return they dropped into their places in the school without affectation and with much zeal. Most of them have since done excellent work as teachers, meeting hardships bravely; among them, the writers of the two following letters:

KING AND QUEEN CO., VA.

Dear Friend:

My first work after leaving school was in the North. I was one of the "Hampton Students" [singers] who went North in 1873 to help raise money for Virginia Hall, I came back to Hampton late in November of the same year, and tarried till Christmas.

I then felt very desireus to ge out teaching. Learning through Genl. Armstrong that there was a vacancy in —— Co., I quickly got ready and went. The superintendent of schools had not asked many questions, before he asked if I was from Hampton Institute. Being informed that I was, "Well, sir," said he, "we are glad to get teachers from that school, and we have been fortunate to get eight or ten from there this term. They do good work and generally give perfect satisfaction where they teach."

A COUNTRY SCHOOL-HOUSE.

I passed a satisfactory examinatiou. I found my school in a very out-of-the-way place, about twelve miles from the nearest railroad station. The house was very frail and rough; the floor made of legs split and fastened to the sleepers with wooden pins. There were no windows but one, very small one, and no blackboards or desks. Some of the people told me it was a very poor neighborhood, and if they were in my place, they wouldn't go. I told them I had come to teach my people and did not expect to "sail on flowery beds of ease." I opened my school, but soon found I must have windows, n blackboard, etc. I went to the trustees and presented the case. They said there was no money in the treasury, and I must see the patrons of the school. I went to them. Some were willing to do what they could;—others said they had paid their taxes, and thought the trustees ought to put the house in good order. I said "I agree with you, and have endeavored to get them to do so, but in vain." After n while I succeeded in showing them the importance of helping themselves. They went to work, and raised money enough to get the window sashes. We were then without lights (window panes); I went to the trustees ngain and asked them to give me an order on a merchant for them. They did so and I got my blackboard in the same way. I went to work and made the desks myself, after which I felt that I could accomplish much more good. The children improved remarkably. Talking with an aged white gentleman one day about the modes of teaching, he said, "I never saw children learn to read in so short a time as your scholars." Children who knew nothing when they came to me, were, at the end of the term of five months reading in the second reader, and could write to me after I went home so well that it could be read without any trouble.

COUNTRY BOARD.

My place of boarding too was very uncomfortable. The best room in the house had only one window and that was boarded up, which rendered it impossible to see to read—(it being n rough log cabin, not white-washed) without opening the door. The room up-stairs in which I slept had no windows save the cracks in the slab cover, which were large enough, some of them, for me to put my hand through. On clear nights I could lie on my bed and see the stars. And on rainy nights I have been waked by rain drops falling on my face, and, when it was snowing, by flakes sifting in my ears. I had been accustomed to nothing like that, and of course it went very hard at first, but, by being well provided with bed-clothing, and on rough nights throwing over me my heavy cloak, I stood the roughs.

One of the trustees told me that was the best place I could find within three miles of the school-house, probably.

SEED AND SHEAVES.

My second school in that county was about four miles from the first, and about three times as large. Some of the young men and women as well as the children were very, very rude, and some of the people told me they did not think I could do anything with them. I did have some trouble at first but after a while their behaviour was altogether better. After I had left there, and gone to another place about five miles from them, to teach, I met one of the prominent citizens of the place I had left, who said to me, "Well, brother D., we had teachers at —— Creek before you but they couldn't do anything with the people. They have had teachers and preachers among them but none did them much good. You have accomplished more than they all. For before you went there both the young men and women behaved ridiculously—even sometimes while the preacher was in the pulpit. Now there is a marked change in them; they are not like the same people. I hope you may come back and teach for us again, for I don't see what we can do without you." His description of the people, I believed, from what I had seen, was authentic. It made tears come into my eyes; not of grief but of joy. For then—

"My heart that was heavy and sad.
Was made to rejoice and be glad."

I felt amply repaid for all of the very hard work I had done, and the disadvantages and suffering.

The enrollment of my different schools up to last fall, '78, not counting any name more than once, public, private, day schools, Sunday-schools and singing schools, amounts to 735. In winter and fall I am teaching public schools. In summer, I generally teach vocal music.

MORE TEACHERS NEEDED, THO' NO MONEY TO PAY THEM.

Much has been done by the friends in the North in the way of educating the colored people of the South, but n great deal remains yet to be done. The Hampton School is doing a great work in preparing young men and women for teachers, and sends out some every year, but nothing like enough to supply the needs of the people. There are many earnest young men and women who desire to be educated at the Hampton Institute, for teachers, but, because they have not the necessary means to go with, have to remain at home.

Though we are too poor to pay you, God, I believe, will amply reward you for all you have done and all you may do.

Respectfully yours, D.

A COUNTY SCHOOL AND CITY SCHOOL.

The next Hampton singer's letter is from a young woman who has been the chief support of her family, and met all difficulties with a brave spirit. She gives a graphic account of varied experience in city and country schools.

——, VA., *March 26th*, '78.

My dear, kind friend:

I left Hampton in '76 to enter on a new field of labor. In the fall of the same year, I sent in an application for a country school situated in a very pleasant village. I was examined by the superintendent of the county, who said I passed very creditably, and the principal of the school told me to go to work when I got ready. Monday, Oct. 8th, I started with very little knowledge of how to begin. I think an education is something valuable to have but how to put it to use is the most important; and I felt that whatever I knew of books and the world I scarcely knew how to put it to use. I sent word to announce it in church by the minister when the school would open.

A BRIER-GROWN PATH TO THE SCHOOL-HOUSE.

I had not seen the school-house, and with very little difficulty I found it situnted in a clump of trees and briers. Vines had matted themselves together in such a manner that an entrance to the door was hard to find. There were a few children in the place, and with them I set to work. They looked askant at each other, as if perplexed at their new teacher. We borrowed an old hoe and with the help of a few strong pulls managed to make quite a path. I opened the door and to my disgust there was not a bench or chair to be seen. On looking around the room, I found twelve window panes broken, the room full of every imaginable thing in the shape of spider webs and dirt,

THE NEW BROOM SWEEPS.

There was no broom so one must be made, which was n new business. I get a large hunch of straw and tied it up, and with it cleaned up. The benches I learned had been carried off to be used in church, they came back however in time. I soon began to wonder if all teachers met with the same hearty reception. Thus I began my first day in teaching. My school soon grew to a good size, numbering fifty in one month. I began to love the work in spite of myself. I managed them in four classes, for as a general thing no nine had a set of books alikn. For the younger children, I'd print words on the blackboard. Some were very busy planting cabbage and corn and even then could not afford to buy books; with such I hardly knew what to do for it seemed like trying to build a house without tools. The weather was warm and school went on there nicely for a while.

A GOOD STOVE BUT NO FIRE.

When cold began to creep on we were satisfied with a good wood stove, but we had no wood. The school heard said they could not afford to furnish it, so we gathered a few pennies and bought a little. I had the large boys go in the woods, and cut some. Oft times I would make up the fire for them. The house was very open and we could scarcely keep warm, the air piercing through in every direction from top and bottom and side. You could see the sky above, and any one walking outside. I toiled on, and trusted in God, hoping and praying that the small number in my charge would yet be blessed. It was said for me to look around and see some with scarcely enough clothes on to keep them warm, some with no socks or stockings on, and what we may call only remnants of shoes. The kind people of Hampton gave me a few stout jackets and woolen socks, which I gave to the poorest.

A GENEROUS LITTLE BARE-FOOT.

One little boy I gave two pairs to. Next morning, he came without any on, and said "I gave mine to my sisters, did you care?" I told him no, and gave him another pair, for he had worn none the whole winter. I encountered a very severe winter, and having a long bridge to cross made it more severe.

HARD WORKED BUT HAPPY.

Still I was so interested in the work, and glad to be of some use in the world, that I went every day. I had at the time an invalid father, and, being the main support of the family, I could not well give up. Every day I could see my classes advance and I was exceedingly happy. March 25th, I felt a bit sick and during the day was obliged to close school. I was too ill to go next day, so they called in a doctor who said that the work with the walk, was too much. I had typhoid fever, and rheumatism, which kept me in bed near two months. I was not able to return to my school after that. Through all this the friendsat Hampton were very kind, for which I am very thankful.

A CITY SCHOOL.

The ensuing year I applied for a city school, which I succeeded in getting. The examination was very rigid, but with God's help I passed, and was given a grammar grade. I was much pleased with myself, and so were my friends, but the happiest of all was my father. School opened in September and I had just taught two months when my father died, which was a great shock. I continued to teach, and at the end was re-appointed to the same school.

The term in the country was only five months; the city term ten. I was treated very nicely by both white and colored in the country. Country children are kept out of school a great deal to pick berries, while the city children are compelled to go or lose their places. My classes in the country were in multiplication, division, second and third readers. In the city, I have two grades (3rd and 4th, maximum numbers, 50), and take them through decimals and denominate numbers, modes and tenses in grammar, drawing outlines, physiology and natural philosophy. We have two examinations a year and two promotions. I am glad to have had a little experience in both city and country schools so as to give you a more varied description.

LOVES THE WORK.

I am very much pleased with my choice in life. I am not anxious to give up, although my health is failing. I hope you feel that the work at Hampton is a noble one, and that it is like bread thrown upon the waters to return in its due season. With this I close, and remain,

yours truly, L.

CARRYING LIGHT TO DARK CORNERS.

The young man who writes the following letter has been teaching among his people for six years, and knows their needs. He is an intelligent observer as well as a faithful and self-sacrificing worker

——, VA., 1879.

Dear Friend:

I left Hampton, in June 1873 and came to ——, Va., and taught a private school in the city three months.

In October I applied to the county superintendent and obtained a school in one of the darkest corners of —— Co., where the colored people were groping in almost heathen darkness. Their condition was deplorable. They drank and got drunk, and gambled, and did most everything that was mean. It was not strange to have a riot at the church in the time of service. I am glad to be able to say that we have no such conduct now. They seem to have more respect for God and themselves. I had quite an interesting school all the while. The children made rapid progress in their studies, and considerable improvement in their manners.

A SACRIFICE FOR THE PEOPLE.

After teaching there thirty-eight months I went back to Hampton to take the post-graduate course, but feeling that my service was so much needed here, I could not content myself to remain all the term, so I left Hampton and came here about five miles from where I first taught. My school is in a prosperous condition. I have also an interesting Sabbath school. The parents are beginning to appreciate it more than they did last year. A great many of them are opposed to Sabbath school, and care very little about the moral training of their children.

WHAT THE PEOPLE NEED.

I think my people need teachers more than they need silver or gold. They need something to enable them to protect themselves. In their blindness they can be persuaded to say yes against their own interest.

There are a great many in this vicinity who work hard all the year, and live just as economically as they can, hoping to have something at the end of the year, but they most always come out only even, or behind. Sometimes they are very much dissatisfied and say that the whites have cheated them.

You can see the work yet to be done. In this work, we teachers have a great many disadvantages to encounter. As ignorance and superstition go hand in hand, it is very hard to convince the people that we mean to do them good. They imagine anything to be wrong that they do not understand. It requires a great deal of patience and prayer to enable one to do much good among such people.

After teaching four years in the country, alone, I came to the conclusion that a help-mate would add to my usefulness. The 28th of last April, I received my better half—a wife. We are getting on very well. My wife assists me in the Sabbath school.

Yours truly, W.

GOOD SOIL BY THE WAYSIDE.

In the short time she has been teaching the young woman who writes the next letter has shown herself to be one of the best and most devoted of Hampton graduate teachers.

——, VA., *March 22nd*, '79.

Dear Sir:

Two years ago I wrote to you from Hampton, thanking you for paying my scholarship there and telling you of my purpose after leaving school.

If there are any at Hampton now that are receiving your aid, I hope they may be benefited as much by it as I am; and may they lend a helping hand to others who are now labering, for their aid is greatly needed. My first school was taught in the country and was of a five months term. In the edge of a small body of woods by the roadside, sat my little frame school house. It was the church there, and could not be fixed very comfortably for a school room, as there were no desks, but I got along quite nicely after I obtained good attendance, which was a task, as the parents had never really taken an interest in sending their children to school before. I visited the parents often and talked to them of the importance of sending their children regularly and kept the children interested that were coming regularly, and soon had no trouble at all.

ENCOURAGEMENT FROM THE COUNTY SUPERINTENDENT.

The Superintendent of the county schools visited my school once; he asked me what kind of attendance I had. I told him that I had at last obtained regular attendance though it was quite a task. He said he was very much pleased—for that was more than had been done there before—for the parents had never seemed to take an interest before. He spoke a while to the children, praised them for their improvement, and told me I should have a position in the town school the next year, which I commenced October 14th, 1878. This was my second school. It closed about three weeks ago, but I am teaching a private school at the same place and hope to continue it until June.

THIRSTY FOR KNOWLEDGE.

I did not have any trouble with this school for they were very thirsty for knowledge, and I am anxious to impart it as fast as they can receive it. There are many in our school who are willing and know enough to enter higher schools, such as Hampton, and might aid in the great work, but the low circumstances of their parents will not allow them. We who are able feel grateful to the Northern friends for *they* are the great cause of it all.

Respectfully yours, L.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

ALL ABOARD FOR SHELLBANKS!

Beds, blankets, sheets, pillows, crockery, provisions, tents, stova and three thousand bricks all carefully packed awey in a sloop lying at the school wharf; a hasty lunch just finished, when the esptain's cry, "All aboerd for Shellbanks," made tha merry laughing boys' race for the hoat and crowd aboard.

The yawl was filled with boys wild with delight as the waves tossed them up end down

FIRST NIGHT IN CAMP.

After supper the boys were ¢oo tired to pitch their tents so they had a dance; they made a lively noise for some time when, weary in throat as well as in limbs, they wrapped their blankets about them and threw themselves dowu to sleep. There was a good circulation of air and no compleint about natnre's great dormitory.

THE FIRST DAY.

The hoys were pitching their tents, pumping weter, cutting wood, rowing, cooking, and at proper times—eating. They were divided in regular squads for tha farm and hoat work, and as cooks and waiters. The Indisns have as good an idea of law and order as any other people, in fact, it would be almost impossiblo to manaqa them without these forces on our side.

CAMP REGULATIONS.

Thero were three squads—two of nine each, and one of ten; each squad had a captain, who reported with his men for work, and also all neglect of duty. There were four cooks who served as waiters as well. One boy was made first sergeant, and performed duties similar to those of e policeman. The cooks rose at four o'clock and prepared breakfast. At quarter to five the bugle was blown, when the other boys got up; breakfast was served at five o'clock; at half-past five the squad to go for sea-weed reported for work. At half-past six another squed reported for farm work. During tha morning the cooks were busy washing dishes and preparing dinner. At a quarter to twelve the hugla sounded, when the boys came in from the farm; quarter past twelve the dinner was put on the table and the two squads eat their dinner; they hardly finished before the hungry boat hands came for theirs. At half-past one the third squad went to work on the farm while the hoat squad took the sea-weed from the boat. At six the bugla was blown again when ellleft off work, and at half-past six sat down to supper. At eight the first sergeant blew a call; the boys came to the front of tha cottage for roll call and inspection; after inspection they marched to their dining quarters whera we had prayers—the service was in Dakota; thed after giving out tha arder of work for the next day they were dismissed for the night. The allowance of provisions was a little larger than army rations and was issued at 10 a. m. and at 4 and 8:30 p. m. The washing was done in camp.

FIELD GAMES.

The Indians hava accepted as a fact that all work and no play will make Jack a dull boy; when we find them playiog after putting them to work our greatest fear is, they will take an over-dose and so lose the good effect of the remedy. When at work in the corn field they would strip to the skin and with a handful of weeds forming a kind of shield, run about the field chasing each other, shoutiog, laughing and dancing.

CAMP DRESS.

We were not long in camp before the boys began to get rid of all superfluous clothing. All had been supplied with good woolen shirts. The coat was the first thing to remove; then it became painfully evident that many of the boys were fast working their way in all directions through their pants; how to stop the ugly development was e serious question: patching checked it for a time; but many of them gave up the difficult problem and rejoiced that they were free to wear nothing but shirt and drawers. Two of them made a pair of Indian breeches for themselves; the style did not take, as it was not as cool as the other. The feet had bravely struggled at the toes end sides of the shoes and finally made their escape. At the evening war dances only a shirt was worn.

DISCIPLINE.

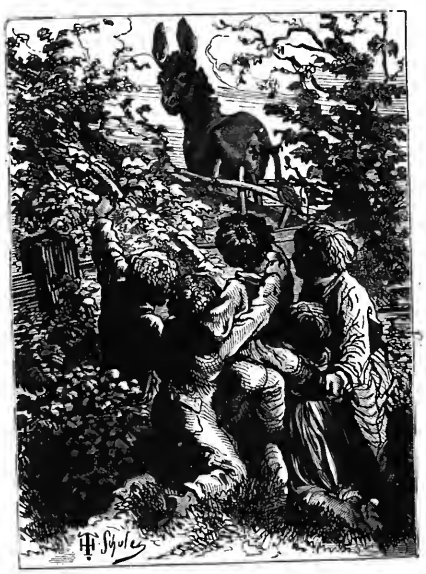
The hoys were given the freedom of Shellbenks, not in a formal way, auch as writing it on sheepskin and encasing it in a box of gold or silver, with a big presentation speech, but by removing the stiff rules which regulate their life et school. Two or three ebnsed this freedom hy returning to the school without permission, where they did as they pleased; no one was thare to look after them. When they returned to camp they were compelled to work all day whila tha other boys were having a good t'ma with the Indian and colored girls who had coma out on a picnie.

FISHING.

Wa started with the hoat about eight o'clock in the morning; every boy had a fishing line; the cooks had put in a big lunch of whita hread and molasses, as we intended to stay out all day. Going down tha river the boys asked to take a swim; tha word had hardly been given before they were stripped and in the water, sporting about like so many porpoises. We cast anchor near a fish-oil factory and went ashore; wa saw how fish-oil and fertilizers sre made, but our olfactories were so disturbed that wa were glad to leave tha place and its associations behind us. Sailing ont into the Chesapeake we dropped anchor and hegan to fish; took lunch at twelve and continued to fish until ahout three in the afternoon; we had very poor luck taking only about two dozen little fishes and six balloon fish—so we stopped fishing and took a sail; got to camp about seven in the evening.

SUNDAY.

At first there was an inclination to make it one of the six days. A prayer meeting was held in the morning, and in the afternoon Sunday-school; all the boys who wished to go to Hampton to church could do so; those who remained attended camp services. All were very much interested particularly in the Sunday-school; the boys returning from Hampton flocked in full of interest, anxious to hear.



THE JERUSALEM PONY.

THE STORM.

Much of the damaga done by the great storm which swept over the coast a few weeks ago has already been reported, but in none of these reports did we find an accouut concerning the destruction of an Indian Camp at Shellbanks.

After breakfast I went arouud the tents, to see if the rain was beating in and to have them tightened; the wind was gradually increasing. The hoys thought that if the ropes were tight enough to hold them then, they would be tight enough to hold them at the end of the next hour: this was poor philosophy and was proved so the next minute by a great gust of wind which blew down a tent. The boys now hecame excited; their wild shouts could be heard above tha roar of the wind and waves; every boy turned out and tried to save bis tent, but it was evident that they would soon fall; the order was given to take all hedding and clothes into the house. The scene now beggared deseription; the rain water was standing in great pools throughout the camp while every minute the water from the river threatened to submerge it. Everything had to ba moved back from the bank; the tents wera struck and canvas, boards, logs, tables, benches and stovo ranmoved to a place of safety. A faw of tha boys, with their blankets around them, were huddled np against the sida of the house watching the wreck, while others, with only a shirt on, ran ont of the house. As a war horse capers and dances to the sound of battla so these Indians capered and danced to the sound of tha storm.

THE LAST NIGHT.

The supper, inspection and prayers were over and an unusual quiet reigned in camp. In ona tent tha occupants were playing games, in the other tents all had gone to bed. About half-past eleven it occurred to the players that it would ba an excellent time to give a mid-night serenade: a drum, which had been made the day before from tha skin of a dead sheep and an old cheese box, was brought out, then forming themselves into line marched to the tent of the cooks; they played such lively eirs that not only the cooks, but the boys in the other tents came out and danced: it was the morning aurora, tha daybresk to the hoys; they did not go to bed again. The cooks began to prepare breakfast while tha boys carried all the logs and boards which made the floors of their tents to proper places. About twelve o'clock mid-night I heard the farm manager knock at my door—the confusion without had already disturbed ma so I hastened to hear what had happened. The boys were coming in from the barn, running and yelling in the wildest manner; the manager was afraid that they were out on a raid, and had killed some live-stock. I suggested, they have been to the harn to empty the straw from their ticks; this was not satisfactory as he knew tbey had been out to the sheep pasture. I got my field glass and from my window examined the ground; no signs of slaughter were to be seen. I turned my glass on the camp lire and saw boys drying sheets they had just been washing; what might have been a pot of mutton was only a pot of coffea and the hoys soon sat down to a breakfast of cold beef, boiled potatoes, hread, and coffee. By two o'clock everything had been put away, they were now ready for a regular war dance; tha drum was beaten, a circle was formed and with feathers in their hats and clothes the hoys danced to the music, making the most hideous noise.

About half-past five they formed into line in front of the cottage all ready to start for the school; every boy was told to take his bed tick and fill it with straw as soon as they got heck.

I asked ona boy what tha others were doing in tbe pastura last night; "We was playing with a dog, he coma round our tents and we chase him a long way, by and by we ceught bim and ploy with him then we let him go."

They started for the boats and were rowed across the river and then walked about four miles to the school.

RESULTS.

In dealing with the Indians ona of the greatest possible mistakes is to withhold credit when it is dus them. We are all more or less inclined to shape our ideas by the expressed opinions of some ons else. I asked the manager what he thought of their work? He said I will tell you what they hava dona then you shall decide for yourself; aftar he endad his list, I said, I think they have done well.

Their health is much improved and all ara in fina condition for their winter work.

J. C. R.

THE JERUSALEM PONY.

Isn't that a funny name for the donkay? So they call him in England sometimes, and just why, I don't know; perhaps because he is the sort of pony chiefly used in Jerusalem; perhaps hecause some people like to maka the most of what they have.

I think all these children meen to have a ride on their Jerusalem pony, one after tha other, if they can catch him, and thet the Jerusalem pony hesn't quita made up his own mind whether thay shall or not. What do you think?

Children always like donkeys. They are such amusing little fellows, and not so high as to make one feel he is riding on the ridgepole of the barn, as you do the first time you ride on horse back. Tha English children are very fond of riding on them. On a pleasant breezy hill outside a little of the greet city of London, called Hempstead Heath, a string of donkeys always stand ready to be hired to children for a short ride, a boy running beside to see that the donkey trots along and does not roll his little rider off.

Tha Italian children are just as fond of riding on donkeys as the English children. But I am afraid they are not generally as kind to the poor *asino* as they call him. The donkey is a very much abused animal, and yet he is patient and kind and gentle. And for a donkey as well as for every other creature, brute or human, kind words are better than blows.

VIEW OF SACKVILLE STREET IN DUBLIN.

Thackeray says of Dublin, "A handsomer town it is impossible to see on a summer's day," and its handsomest street is Sackville street.

The general appearance of Dublin, says the guide book, invariably wins the admiration of every visitor to this capital city of Ireland. From many points it commands a noble prospect; it is situated on tha banks of a noble river; the neighboring scenery is of rich fields and meadows, and tho city itself is adorned with stately edifices. Carlisle Bridge is one of the best points to command a fine view of Dublin. East and west ripples the Liffey, spanned by many bridges, thronged with tapering masts; northward extends the long line of Sackville street with its ranges of stately buildings and tha Trafalgar monument in the centre, a handsome granite column raised to commemorate the great British Admiral, Nelson, the hero of Trafalgar. It is one hundred and eight feet in height, and is surmounted by a colossal statue of Nelson. The column is hollow, and the visitor may ascend it by e winding stair-case of one hundred and sixty-eight steps, and enjoy a view of great extent and beauty. The city with its towers and spires and palaces, its streets and the broad shining ribbon of tha Liffey guiding the eye inland to green fields and thickly wooded hills, and blue, distant mountains, or seaward to the beautiful cliff bounded Bay of Dublin. Opposite the Nelson monument, to the left, stands tha General Post Office, a fina granita building; at the northern end of the street stands the Rotunda, a large circular building containing one great apartment, eighty feet in diameter and forty feet in height, used for e public lecture and concert hall. Its receipts go toward maintaining a large hospital adjoining it. Beyond the Rotunda lies Rutland Square surrounded by the houses of the nobility and wealthy citizens. On its right the elegant spire of St. George's church rises to a height of two hundred fect. Sackville has been called the first thoroughfare in Europe. Through the kindness of Messrs. Harper Bros. our readers may judga of it for themselves.

A farmer wished to borrow a gun from a naighbor for the purpose of killing some birds in his field of wheat, eating tha grain. His naighbor declined to loan the gun, for he thought the birds useful. In order, however, to satisfy his curiosity, he shot ons of them, opened its craw, and found in it two hundred weevils, and four grains of wheet, and in these four grains the weevil had burrowed! This was a most instructive lesson, and worth the life of a poor hird, valuehls as it was.

GARRISON.

The life of a man like Garrison presents some curious questions in ethics. His fundamental belief was, that slavery was wrong, and ought not to be tolerated. But the law of the land not only tolerated it; it protected it. So he declared himself an outlaw, and denounced the Constitution of the United States as a "league with Hell." If every man refuse to obey laws which he considers unjust, there is anarchy at once. If he submit to laws which violate the rule of his conscience, his moral nature is in peril. Social anarchy is a terrible evil. So is a refusal to obey conscience. It is the duty of society to enforce its laws and punish the transgressor. It is likewise the duty of the individual to refuse obedience to laws which he deems unjust. The community may be wrong and the individual may be right: there is no one to judge between them. Garrison boldly accepted the issue and obeyed his conscience. He accepted the consequences without flinching. He saw no compromise. He violated the law in spirit, and in fact, whenever he had the opportunity. His self-sacrifice was sublime. It was martyrdom in its best sense. He placed the law of conscience above all human law. But his position was a dangerous one. A community made up of such active consciences pitches into anarchy, or leaps into reform, at once.

Conscience may itself be wrong. It needs light and education. The Hindoo woman who throws her child into the Ganges obeys her conscience, but it is dark and falsely educated. The pilgrim fathers drove the Quakers out of Massachusetts in obedience to the law of conscience, but it was dark and imperfectly trained. Garrison's mind had a marvelous insight into right and wrong. There was no crookedness in it. It moved in straight lines. The tracks upon which his moral forces moved were not deflected to meet this point and avoid that point, or rising and falling on grades. They were like the railway built between St. Petersburgh and Moscow, by order of the Emperor of Russia, who drew a straight line between the two cities, and said, "Build me that road." His moral energy was immense. Neither time nor circumstances could impair it. He did foolish things, but he always acted according to conviction. The pilgrim fathers had the choice of yielding up obedience to the dictates of conscience or of abandoning their native land. They chose the latter. Garrison did neither. He planted himself in front of the nation, and fought the battle, almost alone.

W. N. A.

EXODUS NOTES.

Letters like the following (more from North Carolina than elsewhere) have been received from the graduate teachers of this institution indicating how wide-spread is the emigration idea. A colored colony of about sixty, recently left the western part of Virginia for Kansas.

The negro once believed in the ballot as a cure for all his ills, but this illusion is over. He has now taken up with emigration as a panacea.

While there is a bright and hopeful side in this movement, there is a very dark one resulting from his ignorance which makes him in many ways the dupe of his excitable nature. His ideas are based upon floating rumors, knowledge being to the race at large as a sealed book.

The Negro is bewildered; he is as likely to move West when his low condition is his own fault as when he has been kept down by wrong and ruinous contracts or by ill treatment at the hands of others. Before many months, however, the colored people will find the "true inwardness" of emigration. Enough can write to send back accounts of the new country, some will return, and there will be a basis of judgment for wise action.

Maney's Neck, Hertford Co., N. C.,
July 22nd, 1870.

Dear Sir:

I have not been ready in writing to you since I left the Institute as others, as I know how busy you are kept in receiving letters from the students. I am still teaching within the neighborhood of Newsom's Depot, Southampton, Va. The people in the above named place seem to be completely carried away from news of emigrating to Kansas, and they have made choice of me to seek all the information I can on the subject. I deemed it expedient to write to you as a proper source. You will please do me a kindness in writing me all the important information in your possession and oblige,

Your obedient pupil,
Thomas H. Scott,
of the class of '75.

P. S. General, I don't wish to be troublesome, but allow me to ask an early reply as possible owing to the condition in which the people seem to be at present.

Thomas H. Scott.

"In a general conversation Representative Casey Young of Tennessee has expressed himself freely respecting Southern affairs. Respecting the negro exodus. Representative Young says the Northern people and press misunderstand the real feeling of the Southern whites, especially those in the Mississippi Valley. All the stories of their opposition to the colored emigration, he characterizes as 'stuff and nonsense.' He declares that there is not an intelligent white man in the whole region who would not be rejoiced to see the blacks leave till those remaining did not outnumber the whites. In the first place, the Southern people believe that so long as the colored men outnumber the white voters in any Congressional District, it will be impossible to make the North believe otherwise than that every white Democrat returned to Congress is elected by fraud or intimidation. Another reason is that the negroes are unprofitable laborers, and so long as they remain it will be impossible to induce white people to settle in the South."—*N. Y. Tribune.*

"Four or five of the Mississippi steamboats which carried colored emigrants North while the exodus was at its highest last spring, have been siezed and libeled for violation of the law in taking more deck passengers than their registers allowed them to carry."

Governor St. John of the State of Kansas, president of the Freedmen's Aid Association of Kansas, writes that the tide of colored immigration northward continues in an almost unbroken strain, and unless checked by quarantine regulations on the Mississippi river there is no telling when it will stop. The Freedmen's Aid Association has expended $6,000 in aid of the destitute refugees, but its fund is now nearly exhausted and outside assistance is needed. The Governor complains that the North is not sufficiently interested in the movement, and says that while Cleveland has given $1,600 to aid it, New York City has not given that many cents. The Governor says that young Kansas will not in any event falter in her duty toward these people.

Congressman Chalmer's advice to the negroes of his Mississippi district: "You are now freemen. Nobody has a right to restrain you against your will from going where you choose. But, as regards this migration to Kansas, let me advise you not to be rash and precipitate a movement of such importance to your future. You should send forward a few good, intelligent men to ascertain what advantages present themselves to the colored emigrants. But of one thing I assure you—you will have the white man to contend with wherever you go. The sun is the colored man's friend. In the land where his rays drive the white man to shelter, the colored man has the advantage, but in the cold climate of the North he cannot compete with his white neighbor. Stay where your friend, the sun, aids you in the contest."

Recently quite a large party of colored men passed through East St. Louis to Kansas last night, got up by merchants and planters of Mississippi with the view of giving the negroes an opportunity to judge of the country for themselves. Many planters apprehend that after the present cotton crop is picked there will be an extensive exodus from the South. Those who got up the excursion believe the representative colored men who might go would be disappointed with Kansas and return, and their unfavorable accounts prevent an extensive migratory movement. Quite a large number of whites have also joined the party.

The Charleston *News* speaks hopefully of the future of the South Carolina low country, and says that the prospect is that the general cultivation of rice and long cotton will be hereafter regularly profitable, and that this will be augmented by the cultivation of jute and of wheat, oats and hay, which, it claims, can be made under the revenue system, to better advantage on the sandy lands of the South Carolina seacoast, than on the farms of New England or the prairies of the West.

A BOOK WANTED!

The thought in the following article is well worth general attention. We hope its publication in this paper, with but limited circulation, will create some interest and do good.

Wandering through the vast halls of the Centennial Exhibition, I was oppressed with a sense of ignorance. Here were represented "all the kingdoms of the world, and the glory of them" displayed to the admiring gaze of the assembled throngs, but what did I know about the countries whence they came? Standing a moment in the Russian department, I was bewildered with the magnificence around me. Scattered in rich profusion were glittering jewels, costly furs, gorgeous webs of woolen and silk, beautiful furniture, elegant house-furnishings of rare and costly materials, covered work in metal and stone, a good-sized house, containing a thousand useful articles within its walls, all manufactured from India rubber in St. Petersburgh, specimens of varied arts, useful and ornamental, figures representing forty different nationalities, all tributary to the Czar! Pressing my hand to my head, I vainly tried to recall what I had learned from school books about Russia. I had a general impression that the Czar ruled over an extensive savage empire, ordered free use of the knout among his subjects, and occasionally shipped parties of them to Siberia. Yet here before me were indisputable evidences of a people far advanced in mechanical arts and possessing boundless resources within their domains. Passing into China, with the thought, that somehow my geography must have been mistaken about Russia, I found I was again to be astonished, and have all my ideas unsettled. "The Chinese raise and drink tea, kill off most of the girl babies, cramp the feet of the women, wear their hair in long queues, have embroidered shawls and carve ivory toys," such was about the sum of my information in regard to the celestials. But here were beautiful manufactures in great abundance, and very like our own, giving token of refined and luxurious tastes, and great national wealth. The figure of the Chinese lady of rank almost the counterpart of her American sister, arrayed in expensive garments so made as to impede every movement, and render the wearer useless except to look at. The figure of the Mongolian peasant was clothed in scant attire of simple style and adapted to easy motion of every limb and muscle. Surely the civilization of these people shows much the same ideals as ours was my conclusion, as a thousand thoughts rushed through my mind, a thousand desires to know more of the densely populated land on the other side of the globe. Turning into the English department, where I expected to find myself at home, and supposed I did know something of the history, habits and condition of the people, I was overpowered afresh with the sense of knowing so little where so much knowledge was needed.

Apart from the deep interest attached to Great Britain proper, what a vast field of research was opened by an inspection of the exhibits from the various colonies dependent upon the British Government, representing every climate, from the frozen North, to the sunny tropics. Such lumps of gold from Australia, that it seemed as if all the people in the world should have money in abundance; such supplies of raw material for cloth fabrics that one felt as if every human being should be clothed with ease, such bounteous display of food that it seemed as if none should be hungry! And then the beautiful exhibitions of every kind from countries not even put down on the maps of my youthful days! As I gazed, lost in admiration, at the exquisite carvings from Italy, the noble iron work of Sweden, the unrivalled silks and linens of Belgium, the rich jewelry, of Switzerland, the dainty leather cloth of Hawaii, the handsome leather work of Brazil, the curious fishing boats from the Baltic, the beautiful stuffed birds from Kaffirland, how I longed to know more of the various peoples, who had sent such fair handiwork from afar to testify their interest in our young Republic. How do all these nations live? Do they worship the Great Unseen Creator of earth with all its wonders and beauties? Do they love the living, and sorrow for the dead as we do? What sort of rulers have they? Are the common people frugal, industrious and happy, or are they weary, oppressed and over-burdened? How do the men treat the women of their families? Can those who have bright minds and thrifty habits improve their condition, or are a favored few possessed of every privilege, while the masses of the people labor in hopeless toil for the maintenance of the dominant class? These, and a thousand other questions passed through my mind as I traversed those gorgeous halls, adorned with such wondrous treasures from all the nations of earth, and I grew weary and sad as I realized the long years of patient study that must elapse, before I could gain any adequate knowledge of this vast field. Having the good fortune during the exposition to spend a day with General Walker, the distinguished Judge of Awards, I anxiously inquired of him if there was any one book, which could give such an ignoramus at least a glimpse of the present condition, religions, political, social, commercial, economical, of all the countries of the globe, a picture of the world as it is to-day. "There is no such book" said Gen. Walker after a moment's reflection, "It has not yet been written."

Surely such a book is greatly needed. The world goes on so fast in our day, the wonderful inventions of modern times bring individuals and nations once remote from each other, into constant intercourse. The wealthy Chinaman sends his son to college in Massachusetts. The missionary in Africa selects his pet pupil for scholarship in Howard University. The Indian hunter of Arizona gives up his son, trained to hunt buffalo that he may learn the printing-trade at Hampton. The idle Englishman wins a wager that he can go around the world in 80 days; even the delicate and luxurious young lady of the 10th century scarcely deems her education complete until she has journeyed to some distant land. A party of New England teachers make up a holiday excursion to Paris or the Sandwich Islands; Jerusalem has become a railroad station. English newspapers are printed in Japan. How shall all the poor people, or those whom sickness or family cares keep ever at home, know of the progress of the world without such a book? A great opportunity is here offered to the educated colored man or woman of our country to aid humanity in the acquisition of knowledge by undertaking all or some part of this service for man. What better life work offers to the earnest student and thinker of our geueration? The Negro-American, possibly the descendant of the ancient Egyptian, that nation which stands first in the ranks of the world's old-time civilization, possessing the tropical imagination of Africa the home of his race, with the progressive spirit of America, the land of his birth is well fitted for such a task. It has been the reproach of the Negro among men, that he has done nothing for himself or others—that the good which has come to him has come through others—that he has invented nothing, accomplished nothing. Cannot some member of the Colored Educational Society of Virginia take away this reproach from his people, and by patient study, and persistent labor furnish food for eager minds, in giving to the world the book so much wanted?

Fred. Douglass tells you "with leisure comes thought, with thought progress."

Now that many among you are becoming independent and intelligent citizens of the Republic, which has bestowed freedom upon you, and offers you equal privileges to rise to places of honor among your countrymen, let it be yours to aid the forward march of man.

Orra Langhorne.

TO THE SOUTHERN WORKMAN.

(FROM A GRADUATE.)

Dear Workman:

Thy welcomed columns find me monthly and are read with much interest. In addition to thyself, a copy of the Educational Journal has been coming to my address, in which I find valuable instruction for teachers. I know not from whence it comes, but I wish to tender my thanks through thy columns to the person or party who has been kind enough to favor me with its information, and also to assure the benefactor that it is welcomely received, and carefully read.

At present I am teaching near Enfield, N. C., and have a very interesting school.

With many good wishes for thee and success to the Hampton Normal and Agricultural Institute, I am,

Yours respectfully,
J. P. Weaver.

A MULATTO NOT A NEGRO.

A case in which the question of inter-marriage between the races had been raised, came up last week in one of the courts of St. Louis, and the presiding judge held, that the plaintiff not being a Negro, the legal prohibition did not apply. The judge thinks that a person whose blood is one-fourth Negro and three-fourths of the Caucasian race cannot be classed as a Negro, and he quotes in support of his views a statute in force before the abolition of slavery making a distinction between Negroes and mulattoes, and defining a mulatto to be any person other than a Negro, anyone of whose grandfathers was a Negro, and every person of one-fourth or more Negro blood.—*Exchange.*

POLITICS IN VIRGINIA.

We publisb below, an articele from the *New York Journal of Commerce*, reprinted by the *Norfolk Landmark*, presenting a political picture of Virginia during the past summer.

Ths war between the Conservatives and tbe Forcible Readjusters wages in Virginia. Abis representatives of ths two parties are traversing the State in every direction and combatting each other on the stump. Not a night passes but some battle-royal takes place between these picked champions. Ths Virginia papers sre full of reports of tbe contests and of editorials and communieations relating to the all-nbsorbiug question. Our judgment may not hs wbolly unaffected by our sympatbies: but we tbink, tbat the Conservatives are getting the better of their antagonists at all points in this great public discussion. They havs the best newspapers nnd ths best speakers on their side. They have the law, tbs logic, and the right. And they are adopting ths tactics which generally win in political campaigns. They do uot defend; they attack. The speeches of their candidates and spokesmen ars aggressive and fierce. They brand with the proper opprobrium tbe bypocritical schemes of repudiation uablushingly advocated under the name Readjustment. In these denuneiations there is aconfident ring tbat bespeaks victory. This is the way in which such campaigns should always be conducted. Words should not be mineed; imfamous things should not be called by soft names. Ths attempt of a party in Virginia to put that State back in ber record, to rstrace the steps she has always taken for the preservation of her henor, and give her over to repudintion outright, is disgraeeful in the extreme. It would be an instance of bad faith for which no Southern State, however poor, would have a good exeuse, and for which Virginia with all her resources of wealth would have no excuse whatever. It is good to see the conscience of the Old Dominion aroused on this question. Tbe sense of honor, where the payment of just debts is concerned, is none too keen in any part of the country. It has been badly drugged by political demagogues and sophists for many years at the North and West as well as at the South. There are repudiators everywhere. But circumstances have made tbe South the principal field of their operations at this time. It cannot be truly said that the Waterloo of ths great struggle is Virginia. For each Southern State which is unpleasantly hampered with debts will do as she pleases about them, irrespective of Virginia's action. But if that State decisively puts her heel on tbis pestileat heresy in the coming electioa, tbs effect of her example cannot but be bracing to the nerves of honest men in all parts of ths South, impelling them to still more gallant efforts for the honor and good faith of the States now hesitating on the brink of repudistion. For this reason we do not exaggerate the importance of the present election campaign in Virginia.

A LATE spring and heavy rains have brought unprecedented disaster upon the crops of all Europe. England, Germany, France, Italy, Spain and Hungary have suffered alike, and in Russia what the drought and hail spared, grasshoppers and corn-beetles have devoured. In the economy of commerce one nation's necessity is another's opportunity, and this time tbe balance is in our favor. In this emergency a greater demand than ever will be msde upon the United States, which bas long been the feeder of Europe, and to meet it we have been blessed with another season of wouderful crops. The vast grain fields of the West teem with rich harvests of extraordinary msgnitnde, the estimate reseling 44,000,000 bushels for Minnesota alone. The effect of this happy conjunction of great crops and ready markets will be felt through every nerve of our national life, in trade and industries and politics.

From Our Dumb Animals.

THE HORSE'S PETITION.

"To the coachmcn, truckmen, drivers, masters and owners of horses and oxen:

"Oh, man, God has created me for your good as well as for your use, but in so doing he recommcnded mc to your charity. All my wishes aim at proving my love for and desiro to serve you; therefore do not make me uuhappy by cruel treatmcnt. I like to be attached to you, and am grateful; but I cannot speak. I am often troubled and in fear, because I do not know what you wish of mo. I should be glad to understnnd you, but my head is aching from ths heavy blows with which you overwhelmed me in your anger, and wbich were aimed mostly at my sensitivo nose; or I am dizzy from tbe bard kicks wbicb your heavy boots inflicted on my body. Yes, my whole body is suffering from the powerful strokes of your thiek whip; mouth and teeth are aching from the iron bit that you continually pull too hnrd. The collar, which st times presses me like iron about my neck, strangles me and takes away my breatb. Look at the sore places under my neck, open to the bone, and this wound near my tail, both covered by insects that sting and torment me. I am lame because I have been poorly shod—so poorly that s nail entered the flesh; therefore, I am unable to run eight hours a day up and down on stone pavements, in the burning heat or icy winds. I would willingly do it, if I were not weak and sick. When you hand me over to the hostler, it often happens that he entirely forgets me, in his hurry to get through his work, that he may go away. Almost overeoms by hunger and thirst, tired and overworked, suffering sore pains, I return home, hs forgets to give me water, and my fodder is poor and scant. My bed is the hard, cold, moist esrth. I am tired to death. I would like to sleep, but am in too much pain.

"Alas! if you do not love, as I wish you did, consider, at least, that all rich and good people always choose the handsome and well-kept horse for their use, whilst they set aside a poor animal like myself, for whom they only feel pity and disgust. Therefore, the well cared for horse is a source of profit to his owner. Remember, if in time, you are as poor as I am, it is your fault, not mine. For this reason trust me as a friend, and do not continue to be my tormentor. Take good care of me, and you will see that I shall bold out much longer and do twice as much work to gain money for you in compensation for your kindness. If each of us does his duty we shall be contented and happy together.

"And now let me conide a secret which has been whispered in my ear by the best friend we horses have. There will soon he a happy time for all well treated horses and oxen, also for nll good and kind drivers and owners; rewards will be distributed; let us take the trouble, you and I, to try for the prize.

"(Signed) THE HORSE,

"As the most tortured of animals, together with its fellow sufferer, THE OX."

L. n. U.

At tbe sixth annual meeting of the stockholders of The Home Savings Bank held Sept. 1st. the following Officers were elected for tha easuing year.

Geo. E. Bowdsa, President.
Geo. S. Oldfield, Vice President.
H. C. Percy, Cashisr.

Directors:

H. B. Nichols, Saml. Hoffiin, Geo. E. Bowden, F. Riehardson, J. R. Gillett, S. E. Bickford, B. F. Bolsom, Capt. E. Pickup, Geo. S. Oldfietd, Rev. E. G. Corprew.

Tha Annual report shows tha Bank to be in a flourishing condition, and rapidly growing. A Stock Dividend of ten per ceut. was declared from tha csrnings of the past year.

Ths Homa Saviogs Bank, continues to pay six per cent. interest on Savings deposits.

A smsll party desiring to spend a winter in Virginia, where there is good weather for rowing, sailing, or riding in every month, and the oysters are perfect, would do well to apply to Mr. Daniel Cock of Hampton, who has for his guests, two large well-lighted rooms, with open fire places. His place is beautifully situated on Hampton river, opposite the Normal Institute.

NEWS OF THE MONTH.

FOREIGN

The Emperor William has returned to Berlin, having completed the inspection of the autu an maeuvers.

It is reported that Suleiman Pasha, the prominent Turkish general of the Russo-Turkish war, died Saturday, Sept 13, at Bagdad.

LONDON, Sept. 16.—The number of cotton operatives on strike at Ashton is now estimated at fom 8,000 to 11,000. The streets are crowded by unemployed operatives, but little exeitement is manifested

The German Official Oazette publishes a decree dissolving the Prussian Chamber of Deputies. The minister of the interior also publishes a notification fixing the election of direct electors for September 30, and the electica of deputies for October 7.

The North Lancashire Cotton Operatives' Association has issued an exergetic appeal to the masters against the contemplated reduction of wages. Twenty mills are practically closed at Ashton because of the strike, which is also assuming serious proportions at Mosley.

Relative to the apprehended distress among the working classes in the thickly populated towns in the northeast of England, it is estimated that 30,000 persons in the district referred to have been thrown out of work during the last three years. There are thousands of empty houses in Darlington. Stockton and Newport are also seriously affected. The climax of distress has been reached at Middlesborough.

GLASGOW, Sept. 18.—In consequence of the resolution arrived at by the Scotch iron masters last week aot to accede to the demands of the workingmen for an increase of wages until the price of iron exceeds fifty shillings per ton, fifty-four furnaces have been blowa out in various parts of Scotland, readering 3,000 mea idle.

LONDON, Sept. 17.—King Joha, of Abyssinia, writes to the mercantile firm representing him in London stating that he has written to Queea Victoria complaining that the outcets of his territory are closed by the Egyptians. He says that Gea. Kirkham, the English general in her service, was poisoned at Magdewah, while on his way to England with letters to the Queen.

The News's St. Petersburg correspondent announces that the Kuldja treaty has been signed. It provides for the evacuation of Kuldja by the Russians by installm nts during three years, and the payment by the Chinese of five million roubels. Russia retains a strip of land including the military road in the direction of Kashgar. The Chinese embassy will shortly go to Livadia, to thank the Czar for the conclusion of the treaty.

The war in Zulu is rapidly drawing to a close. After a along chase and much hard fighting the dragoons under Major Marter surrounded the kraal where the King had takea refuge, and Major Marter then rode up and called out to Cetywayo to come out of the hut. The King, after some parley complied. He preserved a dignified demeanor and asked to be shot.

A despatch to the *Times* from Cape Town says:—"Sir Garnet Wolseley hopes that Chief Secocoeni will yield without fighting, but those oa the spot say that this is doubtful, as it has transpired that the chief has lately only with difficulty been dissuaded, after a five hours' couacil, from murdering two officers who had been sent to treat with him concerning prisoners."

Indian officials telegraph further details of the attack on the British residency at Cabul. It is related by a trooper who escaped that when the mutinous troops were making an entry for their pay a soldier shouted, "Let us kill the envoy and tie the Ameer." The mutineers then rushed upon the embassy, and stoned some of the servants. The troops composing the escort of the embassy fired upon the mutineers without orders from the British officers. The mutineers then went for their weapons. The fight lasted about a quarter of aa hour, during which time the British officers might have escaped. The residency was defended from the windows. The frontier tribes have partially interrupted commuaications between the Khyber Pass and Cabul.

POLITICAL.

The official vote of Kentucky for Governor is: Blackburn, democrat, 125,799; Evans, republican, 81,882; Cook greenback, 18,964. Blackburn's majority, 43,917. The democratic majority four years ago for Governor was 36,181. Governor-elect Blackburn was inducted into office at Frankfort Tuesday in presence of a large crowd of people.

The returns of the legislative election in Maine give the following result; In the Senate the republicans have chosen 19 members and the democrats and greenbackers combined 12 members. In the House of Representatives the republicans have chosen 90 members and the democrats and greenbackers combined 60. In one district the result is in doubt. The republican majority on joint ballot will be 47. Under the constitution the Legislature on joint ballot chooses the executive councilors and all other State officers.

Returns from all except 39 small towns in Maine give Davis (rep.) 68,691; Smith (greenback) 47,688; Onrcelon (dem.) 24,181. These figures will not be materially changed

The Butler democracy of Massachusetts met at Worcester Wednesday and nominated Gen. B. F. Butler for Governor, A. C. Woodworth for Lieut. Governor, and other candidates for State offices. Gen. Butler has already been nominated for Governor by the greenback party. Resolutions were adopted reaffirming devotion to the time-honored principles of the democratic party and the right of the majority to rule; regretting that a portion of the democracy during the last year have refused to be governed by the decision of the majority, and inviting them to reunite and make commoa cause against the party which now rules Massachusetts, and deprecating the discussion of natioual issues in the State campaign.

DOMESTIC.

Genl. Grant arrived in San Francisco late Saturday afternoon, Sept. 20th, on the Steamer Tokio, and was received with great enthusiasm by a concourse of citizens numbering fully fifty thousand.

Twenty-one clergymen returned home from foreign travel in three steamers arriving at New York Sunday 13th inst.

Comptroller General Goldsmith and Assistant Treasurer Murphy, of Georgia tendered their resignations to the Governor, but he refused to accept them. Goldsmith has since been impeached.

The amount of tobacco sold in Danville, Va., for the year ending September 30, will aggregate at least 29,000,000 pounds, which will be the largest receipts for one year ever recorded.

It is announced that the Mammoth Cave, Ky., has been purchased by a company of Eastern capitalists for $300,000. The interior will be illuminated with electric lights, and telegraph wires will be introduced in the cave.

A rich vein of silver ore has been discovered near Meredith, N. H., assaying $62 silver and $30 lead per ton. Gold has been discovered at Burk's Out, N. F., and a copper mine at Harbor Main, Conception Bay, N. F.

Arrangements for laying the corner-stone of the monument to Sergeant Wm. Jasper, of the revolutionary army, who fell at the siege of Savannah, Ga., on October 9, 1779, on the centennial of that event, are completed. Senator John B. Gordon will deliver the oration.

At a meeting at Yorktown, Va., on Sept. 4th, it was resolved to hold a national celebration of the coming centenaial of the surrender of Cornwallis in 1881. Addresses were made by Hon. R. H. Fowers M. Oleaman, Esq., Col. Robert T. Armistead and Judge R. L. Henley. Resolutions were adopted calling on all the cities of the commonwealth to participate, and the various States to send delegates to Philadelphia on October 19, the next anniversary, and form a national association to bring about a successful celebration. The Gover-or of the State is asked to invite other Governors to take part, and efforts will be made to have the troops at Fortress Monroe or other milithy vessels to be reviewed in Hampton Roads prescat at the centenaial.

Twenty-three new cases and four deaths from yellow fever were reported at Memphis Saturday, Sept. 20th, making 124 new cases and 48 deaths for the week. The total number of cases to that date is 1,126. The national board of health announces for the week that the comparetive difference betweeo the epidemics of 1878 and 1879 becomes more and more marked as the season advances. During the past week there has been no increase of cases at the chief centres, and but one local outbreak beyond them, viz. at Tunica, Mississippi. Texas. At New Orleans there were only two new cases and no deaths last week, while for the corresponding week of 1878 there were 1,526 cases and 593 deaths, and at Memphis 587 deaths—(cases not available) Against 51 deaths in all other places in 1878 the fevor is now confined to the three points mentioned. But one new case and five deaths were reported at Memphis Suaday.

DENTISTRY.

Dr. T. H. Parramore has permanently settled in Hampton, and is prepared to perform all operations on the teeth, and insert artificial sets. Rooms, over H. L. Schmelz & Co.'s store, on Main street.

Hard Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The andersigned takes this method of advising the public in general, and the lovere of good things in partieular, that he has this day opened a Packing House on the grounds of the Hampton Nermal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad and Devilled Crabs,—two dishes concering which it is superfluous to say anything to those who have eaten them; hnt to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all seafood, far exceeding in fineness of flavnr and of grain, lobster, salmoa, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, eveа of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready fer use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, linches, exenreions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a snrprise to some to know that every case ceatains the meat of about twenty dozen crabs! In spite of the amonnt of labor and material used, I have determined to offer them at the low rate of $5.00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at sendere risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $3.00 per dezen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung up in every part of the Union for making an "Imitation Singer Machine."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken the FIRST PRIZE over ALL competitors more than TWO HUNDRED TIMES. *Why?*

After the Chicago Fire the Relief Committee undertook to furnish sewing machines to the needy women of that city. Applicants were permitted to choose from six different kinds of machines. 2,944 applicants were furnished with machines; 2,427 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines! These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The people bought Singer Machines as follows:

1870	127,833	Singer Machines
1871	181,260	" "
1872	219,758	" "
1873	232,444	" "
1874	241,679	" "
1875	249,852	" "
1876	262,316	" "
1877	282,812	" "
1878	356,432	" "

Many of the manufacturers of other machines refuse to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines. A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED.*

THE FIRST THANKSGIVING IN AMERICA

THE FIRST THANKSGIVING DAY IN AMERICA.

We hope that the observance of our Nation-

ly contribute all you desire.

Truly yours,

D. A. Wilson.

rious immortality, with his latest breath thanking his old slave for revealing to him the truth of the gospel.

My informant dwelt much upon Uncle Israel's strength of mind, high character

examinstion hy presbytery, which was more than pleased—"it was delighted with him." The doctor added that, though the first colored church of this sect in Virginia, this was hy no means the first work of the kind in the

THE FIRST THANKSGIVING DAY IN AMERIOA.

We hope that the observance of our National Thanksgiving Day will become more and more general in all parts of the country. Not because it is a New England idea, but because it is such a good thing to give thanks unto the Lord, and to exalt His name *together*. A common worship, a common remembrance of common blessings, draws all hearts not only nearer to God but nearer to each other. As Christmas Day is a time for forgetting old feuds, and renewing old friendships between man and man, so a National Thanksgiving if generally kept, year by year will quicken the pulses of the Nation's heart, heal old wounds and clasp tighter the hands of the family of States.

The artist of the Christian Weekly has well caught the spirit of the first Thanksgiving Day in America, which the Pilgrim Fathers made as general as was in their power, by inviting the red men of the forest to sit with them at the bountiful board which their common labors had filled.

Governor Winslow of the Plymouth colony thus chronicles this first American Thanksgiving Day, in a letter dated

"This 11th of December, 1621.

"Our harvest being gotten in, our Governor [Bradford] sent four men out fowling, that so we might, after a special manner, rejoice together after we had gathered the fruit of our labors. They four in one day killed as much fowl as, with a little help besides, served the company almost a week. At which time, amongst other recreations, we exercised our arms, many of the Indians coming amongst us, and among the rest their greatest king, Massasoit, with some ninety men, whom for three days we entertained and feasted; and they went out and killed five deer, which they brought to the plantation and bestowed on our Governor, and upon the captain and others. And although it be not always so plentiful as it was this time with us, yet, by the goodness of God, we are so far from want that we often wish you partakers of our plenty."

It will be seen that this first Thanksgiving was especially for the preservation and enjoyment of "the kindly fruits of the earth,"—a harvest festival. The wonderful crops which, in every section of our country this year, have made America "a field which the Lord hath blessed," and the raviving prosperity of trade and commerce, make peculiarly appropriate a National Thanksgiving, for all American citizens.

The red man may still have a place at our Thanksgiving feast. Great as have been his wrongs and bitter as have been his retaliations, there is reason for thanksgiving that his "question" is before the American people, and the American spirit of progress and fair play is rousing in his behalf.

OHRISTIAN LIBERIA.

We are in receipt of a pamphlet upon "Christian Liberia," published recently in England to interest the public in the enterprise of Mr. Edward S. Morris of Philadelphia to establish an industrial and agricultural school for sons of native African Chiefs, upon his coffee plantation near Monrovia. His effort has been very successful in attracting the attention of distinguished philanthropists and men of wealth in Great Britain, and we do not doubt that it will find sympathy and aid in this country. Industrial training combined with elementary school education is undoubtedly the right start in the advancement of any race, and we hope that Mr. Morris's efforts may accomplish much in this direction. He sends with the pamphlet, a letter from a former laborer in the African mission field, who thus endorses his project.

"When in Liberia myself as a Christian educator, I was convinced that both the mission schools among the the natives and in the Republic needed more than instruction in letters and religion. The country was not, and is not now prepared to sustain schools. Habits of industry must be formed and encouraged by the visible results of labor. There can be no prosperity of any kind, until labor is esteemed honorable. Liberia needs profession al men, merchants and mechanics. But where she needs one lawyer, or physician, or clerk, she needs ten who are not ashamed to work with their hands in the field and shop, or wherever manual labor is required.

The $2,500 to be raised in this country in order to make available the balance of a like amount, will surely soon be forthcoming. If the Christian people of this country are made acquainted with your plan, and the fact that from your own resources you have already expended twice tha sum now asked from both countries in preparing the way for these schools, they will, I think, gladly and promptly contribute all you desire.

Truly yours,
D. A. Wilson.

OORRESPONDENOE.

PLEASANT PICTURES OF SOUTHERN LIFE.—A LIBERAL DEMOCRAT IN NORTH CAROLINA.—UNCLE ISAAC.—INCONSISTENCY NOT ALL OF ONE COLOR.—AN ASTONISHED DELEGATE.—DEDICATION OF THE FIRST COLORED PRESBYTERIAN CHURCH IN VIRGINIA.

Our correspondent is a Southern lady who some years ago sent a family of her former slavee to Hampton to be educated. Her bright letters, progressive views, and sympathy for the colored race are well-known to the readers of the SOUTHERN WORKMAN.

To the Editor of the Southern Workman:

During a short visit to the Bedford Alum and Iron Springs, a pleasent wetering place near Lynchburg, a few weeks ago, I had the pleasure of meeting with many Southern people, and it was interesting to hear the citizens of Dixie's land express their views, quite without reserve. Among the guests was a young gentleman from North Carolina, and I gained much information from him in regard to the colored people in his district. This gentleman was a Democrat, but extremely liberal in his sentiments. He gave a very favorable account of the Negroes in his part of North Carolina, and thinks their progress has been remarkable, considering their disadvantages. They are nearly all Republicans, but there has been very little political disturbance in his county and there are many signs of a break in the harsh "border lines," both as to color and party. The Democrats have lately nominated a Negro candidate for the legislature, and at a public meeting where the colored candidate appeared on the platform with several white Democratic speakers, it was the general opinion of the audience that the Negro was the orator of the occasion. Mr. ——— thinks the Negroes usually show more interest in education than the lower class of the white people, but says the public schools are very poorly managed; sometimes teachers entirely unfit for their places are employed, and frequently a hundred pupils are assigned to one teacher, so that it is almost impossible for the children to learn anything. This gentleman talked most affectionately of the Negroes, as is very common with the old slava-holders.

He said many of his former slaves lived on his estate, and his manager is a very shrewd African, who has been his companion and friend from childhood and in whom he feels entire confidence now.

I learned during my short acquaintance with this gentleman, that he had lately joined the Baptist church, and I could easily see that his religious feeling was very earnest. In the course of conversation he remarked that the Negroes had intense sentiment about religion, but did not know how to apply their principles to common life. It has often struck me that this is the difficulty with all Christians, but I made no remark, as he went on to give an illustration of African piety.

It seems that Mr. ———'s father had had an irreligious life, until far advanced in years, while his mother had been from her youth up an earnest Christian. When quite an old man, and very sick, the old gentleman was seized with remorse for an ill-spent life, and suffered great distress of mind. The pastor of his wife's church visited him frequently, and kindly read the Bible and prayed with him, but could afford him no comfort. Among the slaves on the plantation was an old Negro preacher, "Uncle Israel," who could not read or write, but was naturally a gifted man, beloved by black and white people and much respected in the neighborhood. Uncle Israel, one day appeared in his master's room, and informed him that he had thought and prayed much for him in his sickness, had grieved greatly at hearing of his mental trouble, and had now come to ask permission to offer a prayer at his bedside.

The sick man consented, and the old slave poured out a most heartfelt petition for God's mercy. After the prayer was ended Uncle Israel sat long beside his suffering master repeating passages of scripture, of which he had committed to memory an astonishing amount, and talking of mortal responsibility and the great hereafter in a manner that thrilled his hearers.

The next day the sick master sent to the field for Uncle Israel to come and pray for him again, and these prayers and conversations were continued for two weeks. At the end of this time the sufferer professed his faith in Christ, sent for the minister and joined the church, declaring that the old Negro had made religion clear to him as no one had ever done before. He lived nearly a year after this, enduring agonies of pain, but hearing all trials with the utmost meekness, and at last died triumphantly in the hope of a glorious immortality, with his latest breath thanking his old slave for revealing to him the truth of the gospel.

My informant dwelt much upon Uncle Israel's strength of mind, high character and many virtues, "and yet" said he "with all these admirable traits, after the war, when he had set up for himself and began farming on his own account, he stole two bags of guano! He would have been tried for it, as there was no doubt of his guilt, but he fled the country." The young man spoke with genuine sadness of this defection of his old friend from the path of virtue, and said the affair had been much discussed in the neighborhood—many white people had been greatly shocked, as Uncle Israel had been widely known and respected, and some declared they should never believe in Negro religion again. Mr. ——— asserted, however, that he had not yet lost faith in the old Negro preacher, but thought he had been overcome by sudden temptation, arguing in defence of the backsliding African that Peter had denied his Lord.

The end of this story was amusing enough as a picture of Southern life. Uncle Israel's wife had been my young friend's mammy, and great affection had existed between the old Negro nurse and the child of her love. When her husband fled from justice, after the unlucky guano business, the well-beloved mammy mysteriously disappeared, none could tell whither, and "the place that had known them knew them no more." Mr. ——— supposed they had left the State, and the Negroes professed entire ignorance of their whereabouts.

Some years after all trace of the old couple had been lost, Mr. ——— was sent as a delegate from his church to the Baptist Association of North Carolina, which met in a distant town.

As a party of the brethren one day stood around the door discussing things temporal and spiritual, a huge black shadow suddenly enveloped young ———, a pair of brawny black arms were flung about his neck, and a shining black face showered tears and kisses upon the astonished delegate, to the amusement of the other members of the Association. When at last permitted to draw breath and look about him, Mr. ——— recognized his long lost mammy, who insisted on taking him to the comfortable home close at hand, where she and Uncle Israel were living in peace and plenty. Nothing was said about the unfortunate transaction in fertilizers, and the most harmonious relations were resumed between the amiable young master and the affectionate ex-slaves.

Our correspondent encloses her account (published in the Springfield *Republican*) of the dedication of the First colored Presbyterian church in Virginia which was recently established by the assistance of the white church of which it was originally a mission chapel.

NEGRO PRESBYTERIANISM.

The church, an old tobacco factory, nicely refitted and furnished, was adorned with flowers, the choir sang harmoniously to a fine organ, the organist being the brother of the colored preacher and his assistant in a private school which holds both day and night sessions for the benefit of such of their race as are too far advanced for the amount of learning allowed colored pupils in the public schools, or are forced to labor for daily bread and seek a little mental food after dark. The house was crowded with a well-dressed and respectful audience, white elders filling one corner by themselves. The pulpit was occupied by Rev. Dr. Hall of the white Presbyterian church, Rev. Dr. Pitzer of the Central church in Washington, and also professor of theology in Howard University, and Rev. William Johnson, the colored brother who was about to be installed pastor of the first colored Presbyterian church of Lynchburg. The two first were born slave-holders, the latter born a slave. The service had begun, Mr. Johnson was reading Solomon's impressive prayer at the dedication of the temple in Jerusalem, and the words which attracted my attention, "Moreover, concerning the stranger, which is not of thy people Israel, but is come from a far country for thy great name sake—if they come and pray in this house," seemed curiously appropriate. A hymn followed the reading, and as Dr. Hall and the young Negro sang from the same book, and later the three ministers sat together on the sofa, I thought it was a pity that Sumner, the great advocate of civil rights, Wendell Phillips and other apostles of this new liberty, could not have witnessed this scene in one of the old slave-marts of the South. After the singing Dr. Hall made an interesting address, stating that this was the first church founded in Virginia since the war by the white people for the colored race, and that the two white Presbyterian churches of the city had given the funds to buy the church and employ the preacher, who was a graduate of Howard, and came highly recommended from Washington, where he was well-known—that he had successfully passed "a searching ordeal" in the examination by presbytery, which was more than pleased—"it was delighted with him." The doctor added that, though the first colored church of this sect in Virginia, this was by no means the first work of the kind in the South; that he was born in Carolina, and had lived in several other States, and in all of them had seen many colored Presbyterians, and aided in work among them. He described the custom common in the rural districts of the South of holding all-day services, "in the morning the white worshippers using the body of the church, and the colored people the gallery;" this order being reversed in the afternoon.

Dr. Pitzer's address was instructive and impressive, and so animated withal, that all were interested, and when he closed by presenting a large, well-bound Bible to the pastor of the church, solemnly invoking him "to keep what was committed to his charge, as one who should give an account," there was complete stillness in the house. The young minister, in a few graceful remarks, delivered with much feeling, accepted the trust, and then remarked that it was growing late, and the services would be closed by singing, during which, those who wished, could contribute to the treasury of the church by placing their offerings on the table in front of the pulpit, the whole congregation rose, and most of them filed past the table, making the coins ring upon its marble slab until it was nearly covered with piles of silver, showing conclusively that specie payments are resumed among us.

This move for a Presbyterian church, among our ex-slaves, marks a great advance in material prosperity among them. While I think having a seperate church for the colored people is a mistake, the white people who have spent $2,000 and given much time and labor to this work deserve much praise. It is a long step forward, and there is not a very long distance to go in this line, quite to bridge over the chasm of race hatred and render the color-line like the equator, an imaginary boundary.

Ohra Lanohorne.

FROM AN ATLANTA GRADUATE.

A friend of both schools, and all good work sende us with permision to publish, the following letter from a graduate of Atlanta University who has been remarkably useful and successful in his work as teacher and home missionary. We take the occasion to say again, as we have frequently said, that we should be exceedingly glad to receive more such letters from this or other institutions.

Atlanta University,
Atlanta, Ga., *May 17th*, 1870.

My dear friend:

Your very beautiful and edifying letter has been received, also your papers. Thanks. Shortly after the International Sunday school convention, I said here last month, I promised myself to write you, but school duties and missionary work in the city prevented me from doing so. I wanted to tell you of the fresh and mighty impulse I received in the study of the scriptures and in Sunday School work after having heard such eminent ministers as Dr. Vincent, John Hall, Rev. Chamberlain and others.

I derived great profit from the two days spent at this convention.

I cannot say yet where I shall be this summer. Parties in this State have written me offering a school and church. Last week I received an appointment from the State Baptist Convention of South Carolina as a missionary for a part of that State. The Spartanburg High School, Mr. Lewis, and my little church there wrote some weeks since to engage me for the summer. Before I leave here I shall tell you my post.

I have been elected by one of the largest Sunday schools and churches in our city as a delegate to the Georgia Sunday School and church Convention to be held at Brunswick, Ga., about two hundred and fifty miles from here, on the 22d, 23d, and 24th inst. I shall leave here with two ministers from the city on Tuesday the 21st.

Mr. Ware has not been well this term; has not been able to be at school for two weeks. The fact is he has worked himself down: he is a *wonderful* man. My progress in studies this year is great. The Lord has blessed me.

Praying you well, I am,
Gratefully and truly yours,
J. L. Dart.

The Gilfield Baptist Church, Petersburg, Va. (colored), was organized in 1803, and its membership is now 2,268, being the largest church in the South, with the exception of First church in Richmond. The building is Romanesque in style, will cost $17,000, contributed by the colored people, who have also manufactured the bricks, and dug the foundation for the structure.

Southern Workman, appear after one year's schooling, in November, 1879.

ally, as interest on the Colleges Land Fund, $10,000.00. The rest is given by Northern friends, usually in the form of

from ex-students or graduates, who pay up moderately well. A steadily improving sentiment in the school regarding

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

THE SOUTHERN WORKMAN re-appears in twelve page form, and will so continue till July, 1880, when it will return again for four months to the eight page form.

To many whose subscriptions expired during the summer the WORKMAN has been sent, including this issue, but will be discontinued to all in arrears who shall not renew.

Each number will contain, as heretofore, letters from Hampton graduates who are working in Virginia and the adjacent States, helping their own race and serving the State as teachers of colored free schools. No other paper in the land has such direct and reliable information upon the condition of the ex-slaves. The character and reliability of such correspondents is thoroughly known, and their word-pictures of Southern life are "inside views."

With the expected recruits from Dakota Territory, the number of Indian students will be about seventy. A record of their monthly progress covers usually a page of the WORKMAN. It is prepared by the teacher in charge.

The publication of the *Hampton Tracts* is renewed and will be continued for several months. We call special attention to No. IX, in this month's issue, "How to Cleanse and Disinfect," written for the Hampton series by Dr. Elisha Harris, of New York, Secretary for many years of the New York Prison Association, and member of the National Board of Health. Dr. Harris is a well-known authority upon the subjects he treats, and his practical "reasons and rules" for sanitary cleansing will be found of interest and value.

The good offices of the friends of this paper and of the Hampton School are requested in bringing the WORKMAN to the notice of others who may become subscribers to it and possibly help in the cause to which it is devoted. Copies will be sent to any who shall communicate their willingness to distribute them. The WORKMAN costs a dollar a year. To each subscriber so desiring will be sent a photographic group of Indian students; or for two years' subscription ($2.00), the same group as they appeared on arrival from Dakota in November, 1878, and as they appear after one year's schooling, in November, 1879.

THE NEW YEAR.

The Hampton Institute has opened with brighter prospects than ever.

Never has there been such a demand for admission to it, or for its graduates, 316 in number, most of whom are now teaching. Never has it been so difficult to meet the calls that come from all over Virginia for colored teachers. Schoolhouses are ready, salaries are ready, but there are not enough teachers, and a large per cent. of those employed are incompetent.

Every available graduate has been placed, and there are on file requisitions for eight teachers, with no one to send. These are, in all cases, from County Superintendents of education, Southerners, and ex-slaveholders, whose earnest efforts throughout this and some other States for Negro education is a fact ignored by most who write up the Southern question.

The school system has rallied under the new arrangement with the State creditors which is reviving hope and business.

Salaries are moderate, from $20.00 to $30.00 per month; sessions last from five to seven months.

In the cities, white and colored schools have generally prospered since their opening in 1871.

Students have entered with unusual promptness. The enrollment so far is as follows: Colored boys; 136; girls, 89 (a decided increase over last year); total, 225. Indian boys, 33; girls, 7; total, 40. Boarding students, 237; day students, 31; grand total, 268. The Senior class numbers 39; the Middle class, 65; the Junior class, 76; the Preparatory class, 24; the work students, 24, and the Indian class, 40. The latter labor in the saw-mill and knitting-room, and on the farm; fit themselves, at night school, for the Junior class of 1880, and by saving their wages ($10.00 a month and board), can, with their earnings while in school, complete the three years course of study without a dollar from charity. No part of our work is more satisfactory than this which educates the hand and creates self-reliance and character.

The enrollment will be increased during the year by about twenty-five colored and twenty-nine Indian youth—all to be boarders. Boarding students receive by far the most thorough training; their entire living is covered by school discipline.

Capt. H. S. Thompson, Superintendent of Schools in South Carolina, has selected and sent, as beneficiaries of the Peabody Fund, ten students to be fitted to teach in that State. Commissioner of Education Orr, of Georgia, has done the same at the Atlanta University, Ga., under the auspices of Dr. Sears, Agent of the Peabody Fund.

Twenty-nine Indian students, for whom separate provision is made, are reported, in charge of Agent Crissey, awaiting a rise of water to bring them down the Missouri river to Yankton, to take the cars for Hampton.

This new work gives fresh life and force to the school: it is better for the Negroes with than without Indians. There is not the slightest basis for the notion that the officers of this institution are "weakening" with respect to the education of the colored people. The utter poverty of this rich country in suitable and sufficient schools for Indians, as well as its falseness and injustice to them in the past, justifies the Hampton School in lending them a hand, especially since no other one has its facilities for industrial training. The Negro will be richer and stronger for doing a good part for the Indian, and the Institute is a greater educator as it is a greater power for good.

This school organization numbers 28 teachers and officers, 9 of whom are gentlemen, and 19 ladies, 2 are graduates; 5 clerks and 4 assistants, of whom 5 are graduates—these do the night class work; 6 are devoted to Indians.

The yearly expense of the Institute is, in round numbers, $35,000.00, of which the State of Virginia contributes annually, as interest on the College Land Fund, $10,000.00. The rest is given by Northern friends, usually in the form of annual scholarships of $70 each. They also provide all building and endowment funds.

Giving a scholarship (cost of instruction) is helping one who helps himself. The cost of instruction last year (teachers' salaries) was $20,980.17—a sum utterly out of the power of students to pay, who have to meet their personal expenses, board, etc, the total charge of which for all students for the year ending June 30, '79, was $32,884.51 (less $7,453.52 for Indians,) of which they paid by labor $17,691.23. The remainder, $7,739.76, excepting 2,194.38 from the Beneficiary Fund, was paid by them in cash. Less than one-eighth of their bills were cancelled by charity. To *give* instruction in response to such effort will not pauperize; it is a wise charity and, in the light of the past, a duty. A detailed account of receipts and expenditures for the school and fiscal year closing June 30, 1879, will be sent as usual, in November, to all contributors.

THOMAS WILDCAT and John King, Absentee Shawnees from the Indian Territory, recently elected chiefs of their tribe, sent here by Philadelphia Friends to be educated, appear well. Wildcat having entered the regular Junior class, and King, the Preparatory. Having attended the schools at home, they come because the Hampton course of study begins about where theirs ended, and here they can get an industrial training.

GOVERNMENT has reduced its annual aid for the Indians whom it has sent to Hampton from $167.00, last year, to $150.00, the current year. This not quite covers the cost of board and tuition, leaving no provision for clothing, the yearly cost of which, for a boy, is $60.00; for a girl, $50.00. For this provision the Institute appeals to the charities of their friends.

The following is the annual outfit of an Indian boy. The wear and tear of clothing by Indians is unusual.

* 1 Uniform suit; blue gray; all wool; up to government standard	$12 50
* 1 Ordinary mixed suit	10 50
† 1 Overcoat	5 50
‡ 5 prs. of Shoes @ $1.50	7 50
* 1 pr. Overalls for work	60
† 1 Uniform cap	1 40
† 1 Felt hat	1 00
† 1 Straw hat	90
† 6 Cotton Shirts, linen bosoms @ 80 cts.	4 80
† 8 Linen Collars @ 15 cts.	1 20
* 2 Flannel Shirts, for work, @ 80c.	1 60
† 3 Woolen Undershirts, knit, @ 75 cts.	2 25
* 2 prs. Drawers, light, @ 60 cts.	1 20
* 2 prs. Drawers, heavy, @ 70 cts.	1 40

Total,	$59 35

* Made in the School Industrial Room.
† Purchased and held in stock for issue.
‡ Made in the Indian Work Shop.

COLORED students at the Hampton Institute, in the various labor departments, have earned as follows:

	Total.	*Average.*	
In 1875-6,	$ 7,629.97;	Boys, $59.23;	Girls, $27.92.
" 1876-7,	9,580.53;	" 59.23;	" 29.00.
" 1877-8,	14,491.91;	" 82.52;	" 35.01.
" 1878-9,	17,691.25;	" 85.11;	" 60.59.

The average attendance in these years respectively was: 110 boys, 59 girls; 125 boys, 73 girls; 138 boys, 87 girls; 154 boys, 74 girls.

In the school year closing June 30, 1879, total charges to colored students were $25,430.99. Their payments in labor and in cash during that time (including $2,194.38 of Beneficiary aid) amounted to $25,354.62, leaving unpaid on the entire year's account the sum of $76.37—the best showing since the school opened. While labor payments have steadily increased, beneficiary aid (direct charity) has steadily decreased, in spite of rapid increase of students from year to year and the terribly hard times in recent years in the South. There are over $5,387.91 due from ex-students or graduates, who pay up moderately well. A steadily improving sentiment in the school regarding debts leads us to expect over fifty per cent. of payment of the later and not over twenty-five per cent. of the earlier contracted debts. The school is in a clear business relation with every one now or ever connected with it, and its education in respect to debt payment is a constant and important care.

We pay from six to eight cents an hour, according to age and capacity, making in some cases more liberal rates to prevent discouragement and to piece out the efforts of those who are willing but weak.

The value of student labor is at a discount of from 20 to 40 per cent. from that of trained labor at the same wages; but in our theory instruction is primary, production secondary; yet financial necessity compels us to push the latter with every energy; the balances of our labor departments the past year are encouraging. They will appear in the coming report.

As a rule, students are divided into five working squads, each squad working one entire school day each week, and on Saturdays; each pupil thus having four days of continuous study, and the farm and other labor departments having a steady working force, thus making profit possible.

This plan is, we believe, peculiar to the Hampton Institute, is not the basis of its industrial success, and was established by Mr. F. Richardson, former Farm Manager, now in Norfolk, Va.

Do not the results of the manual labor experiment at this Institute justify its appeal for $15,000 for a Mill and Workshop?

Hampton's appeal is, "Give us the farm, the shops, and the needed working capital, and we will turn out men and women whom the country needs for the redemption of its poor and ignorant."

The organization that shall afford such opportunities cannot be a week one or cheaply run. It must be strong in men, strong in resources.

EDUCATION OF THE HAND.

Within the past year the friends of the Hampton Institute have most generously responded to an appeal for twelve thousand dollars to provide buildings for our Indian pupils. A fresh appeal is excusable only by the most pressing needs.

We ask for the sum of

FIFTEEN THOUSAND DOLLARS.

in order to complete a Saw and Grist Mill and Machine and Workshop, 140 x 50 feet, two and a-half stories in height, the first of (home-made) bricks, known as the

HAMPTON INDUSTRIAL WORKS.

They are now in operation, with temporary shelter, the brick story being nearly built, and consist, so far, of a sixty horse power Corliss Steam Engine with a forty horse power boiler (the gift of Geo. H. Corliss, valued at $4,000), a Saw Mill, and Matcher and Planer.

They are cutting daily from six to eight thousand feet of yellow pine lumber (readily procured in the forests near by and in North Carolina) which is selling well at fair rates.

Ten colored and five Indian students, with two skilled hired hands, do all the work, under the management of Mr. C. D. Cake, a Virginian, who has constructed all our buildings. Negro and Indian youth are thus getting valuable ideas and habits. The latter work half of every day, going to school mornings: the former work the entire day, attending night school, for one year; they will enter the Junior class in October, 1880, and, by saving wages, and by work while in school, can complete the three years' course of study.

The above has been accomplished by a loan of five thousand dollars (the

of the manner in which it is conducted convince me that it is doing exactly what

nal over nations with effective authority to enforce its decrees, as the ordinary

the Alabama case, know that arbitration was accepted because two nations were afraid of each other: "one afraid, and

The above has been accomplished by a loan of five thousand dollars (the school has no other debt), and by using four thousand dollars of school money needed for other purposes.

This undertaking is justified by constant appeals from destitute Negro youth to work out an education; by the needs of the Indians, and by good business prospects.

Five nine thousand dollars already need should be at once paid up, and the balance of the Fifteen Thousand Dollars asked for, be put into new machinery, tools and outfit, steam power being abundant. The number of worthy students can then be doubled.

The completion of the Hampton Industrial Work is regarded as a most pressing need, in view of the condition of the races for whom we are working.

With its five hundred acres of fine land, a good barn, stock, and general outfit, the Agricultural part of this school is established, and is most satisfactory and effective, employing over fifty students. The Mechanical department should be at once created. The peculiar and difficult feature of the Institute, *Education of the Hand*, would then be more fully realized, and its power for good greatly increased.

S. C. ARMSTRONG, PRINCIPAL.
J. F. B. MARSHALL, TREASURER.

THE Thirteenth Annual Report of the Trustees of the Peabody Educational Fund presents on the whole an encouraging view of the progress of education in the South, especially in the States in which it would perhaps be least expected. In South Carolina, Georgia, Mississippi, and Louisiana, as well as in Tennessee, West Virginia and Florida, public interest is waking up, common school attendance and efficiency have increased, and opposition to the system is reported "dying out." On the other hand, some of the more advanced States show a falling off. While, in South Carolina, 57 per cent. of the voting population cannot read the ballots they cast, in North Carolina and Virginia also, the school attendance numbers less than half the children of the State. In North Carolina it is difficult to induce young men of character and talent to devote themselves to teaching, salaries being uncertain, and scarcely more than the wages of a common laborer.

In Virginia, in the colored schools, there has been this year a falling off of 3,271 compared with the previous year. Over $250,000 of the school money has been diverted to other purposes, but three-fourths of the appropriations are secured for the future.

In presenting the report, Dr. Sears, the general agent, urges the necessity of aid from the Government to this and other States laboring under heavy pressure of debts, and suggests the special claim of the colored population who, having been given the right of suffrage, should be qualified by education to use it judiciously. He thinks that the free school system is now so thoroughly established that the appropriations of the Peabody Fund should be henceforth directed chiefly to the encouragement of the Normal schools for the training of teachers, and remarks that much good has been accomplished for the colored schools by such institutions, one association having already sent out from its numerous institutions, 5,627 teachers by whom about 100,000 pupils have been instructed. The shrinkage of of investments, bringing down the income of the Fund from $100,000 to $83,000 makes its judicious appropriation the more important, and gives the greater weight to Dr. Sears's advice. Some of the States are anxiously asking for Normal schools of their own, meanwhile sending what students they can to those of other States.

The State Superintendent of South Carolina says. "The agent of the Peabody Fund has placed at my disposal, ten fifty-dollar scholarships in the Normal and Agricultural Institute at Hampton, Va. A visit to this Institute and observation of the manner in which it is conducted convince me that it is doing exactly what it professes to do."

These scholarships are represented in Hampton by ten students selected by Capt. Thompson himself, the State Superintendent, who promise well to swell the number of Hampton graduate teachers.

We may supplement the above report by saying that the Virginia schools are looking up. Schools closed last year are reopening with a promise of longer sessions and surer pay. There is a greater demand for teachers, and while twenty-one of the class of '78 were obliged to find other employment than teaching, there are schools this year for all. The importance of this difference will be appreciated by all thinking minds. Up to 1878, out of two hundred and twenty-two graduates of Hampton, but seventeen had failed to devote themselves to teaching. Over 30,000 children had come under their instruction, a leverage for good upon this the rising generation whose advantage can hardly be overestimated, and whose loss would be most disastrous. As Dr. Sears well remarks, "The evils that are certain to grow out of popular ignorance, if the public schools are suffered to languish, or if they reach only a part of the population, will not be limited to the States where they first appear but will cast their blight over the whole country."

ANGLO SAXON BRUTALITY.

The Anglo Saxon people always think the better of Napoleon, because he said, "If you scratch a Russian you find a Tartar." This Anglo Saxon, of all races, is the most tender hearted, humane and sympathetic, so long as its own interests and prejudices are not touched. When it looks upon the banishment to Siberia and the sharp, swift punishment for nihilism, it becomes solemn and gives thanks that it is not Russian. Scratch the Anglo Saxon in the right place, and he, too, is a Tartar. This race, in the pursuit of its own advantages, or when it deems itself injured or insulted, is as brutal, obstinate, unjust, warlike and inhuman as any of the savage races of the world. It does its revengeful work more thoroughly.

This is a bold statement. A recital of its history is the only necessary and all-sufficient argument. It has been said, "no wonder the Anglo Saxons are brutes. They are the issue of Scandinavian pirates, Norman adventurers, and rough savages of Briton." The mingling of this blood makes a "blood and iron" nature. The history of the American nation dates from the landing at Jamestown in 1604. The English settlers found the soil in lawful occupation of the Indians. Then commenced that series of brutal outrages upon the weaker race, inaugurated by shooting the Indians to get their corn, continued through two and a half centuries of broken treaties, and national dishonor, down to the present moment when the pulpit and press are beginning to wake up to the crime of the Republic.

As to the Negro race, the Anglo Saxon in America, has not only shown all the ferocious traits of the blood and iron character, but for a hundred years incorporated in the ground work of his civil policy, in the Constitution of the United States, the right to hold human beings in bondage. The savages of Australia, the Czars of Russia could not have shown more selfishness. Though bondage was abolished a few years ago, the words of President Lincoln show that the Anglo Saxon race was looking out for itself. "If I can preserve the Union without abolishing slavery I shall do so. If I cannot preserve the Union, without abolishing slavery, then I shall abolish it." It was not Lincoln speaking for himself. He held his finger on the "pulse of the people," and spoke for them only. The abolition of slavery was a "war measure," intended in the first instance by the Anglo Saxon for his own benefit. He was not unwilling, of course, that incidental good should come of it. Though bondage is ended, does this great and proud race still do justice? Does not every one know, that if there were a supreme tribunal over nations with effective authority to enforce its decrees, as the ordinary courts of law enforce their decrees, and the Negro entered that court and demanded damages for the loss of his labor for a hundred years, the judgment of the court would go against the Anglo Saxon, Northerner and Southerner alike, for some thousands of millions of dollars? Of course such a proceeding is now utterly impracticable, and it would be folly for the Negro to dwell upon the idea. But we are discussing the traits of a race, and it does that race no harm to hold this looking glass up to its face, sometimes.

During the last session of Congress, both houses, the representatives of the same great Anglo Saxon race, passed a law which trampled a treaty under foot, and forbade the Chinaman from doing just what the Anglo Saxon likes to do, settle wherever there is land and trade. The Anglo Saxon race battered open the gates of China with shot and shell, because it would not trade. Now that the Chinese are doing just what they were forced to do, and in doing so have got the best of the Anglo Saxon, they are treated with sheer brutality.

Now cross the sea and look at the British Anglo Saxon. He shows lustily enough the blood and iron traits.

He holds India as a conqueror, and holds his power by the title of power and sword. An English writer has just said, "the rule we have set up in India belongs to the worst order of despotism, and we have failed even in that." For himself, for his own right to liberty and property, the Englishman pledges his life and fortune. When it comes to the Hindoo, he pledges the same life and fortune to hold him in a despotic grip. And *Punch* makes an angry English woman speak thus concerning the Afghans:

"How dare they dispute what we said,
Or how dare they resist what we did?
The whole duty of scum such as they,
Is to do as we Britishers bid.

To snivel of mercy is muck,
And to talk about reason is rot,
We must down on 'em like a tornado
And drop on 'em heavy and hot.

Shall one thought of the faith we profess,
Cause the heel of vengeance to halt?
No! Slaughter the murderous horde,
Sow the site of their city with salt!"

Perhaps it is "best" that the Hindoo be so ruled. Would it not be equally "best" if some of our cities were ruled in that way? Will the Anglo Saxon accept for himself the principle which he puts before others? Of course not. In the supreme tribunal of which we have spoken does any one suppose there would be a decree in favor of the British? The plea that "I can rule you better than you can rule yourselves," would hardly be accepted.

Some years ago, with blood and iron, the British forced upon the Chinese the opium product of England. It returns a revenue of nearly forty millions of dollars per annum. It kills the Chinese. Their rulers have said so, and protested against it. Time and again true Englishmen have denounced the injustice of it. The object in forcing this trade upon the Chinese was gain. In a very recent number of the *Pall Mall Gazette*, the question was asked, "Do these philanthropists know what the effect of the loss of the opium revenue would be on our Indian finances?"

The Anglo Saxon does not hesitate to poison myriads of people, provided there is money in it. Here is not simple profit: It is death to a people. Only when the Chinese nation, equipped with breech-loaders and iron-clads, and with trained sailors and soldiers, asks justice of the Anglo Saxon at the mouth of the cannon, will they get it. The terrible Maori war in New Zealand was brought on by British injustice to the natives. No intelligent Englishman denies it. So far, the Anglo Saxon, as a race, knows nothing of the golden rule. It will deal fairly with people as powerful as itself. Under such circumstances, it has a sweet and amiable disposition. Even between the two branches of the race there is displayed towards each other the same ferocious traits. Those who have studied the history of the Alabama case, know that arbitration was accepted because two nations were afraid of each other; "one afraid, and t'other dare'nt." Had not Lincoln and Seward given up Mason and Slidell, the two nations would have flown at each other's throats, in spite of civil war. When we shall hear of the Anglo Saxon race offering to leave out to arbitration, questions at issue with other nations which may be easily conquered, we shall really believe that there is a modification of the blood and iron traits.

There is, however, another side to the question. The strong feature of of Anglo Saxon civilization is the individual life. While the average national life may be low in quality, owing to the large majority of inferior and ignorant people who make it up, there is still a strong and wonderful growth in individual character. With education, and culture, this wise and healthy growth of individual qualities will, in time, control the nation. There never was an injustice done by the nation that did not meet with a prompt protest from sober, thinking men and women. They were and are in a minority still. What can a hundred intelligent, humane people do against a majority of a thousand unthinking voters? Right growth changes all, and as the years go by, out of the ranks of the thousand illiterate step one by one the reconstructed. In the end the hundred will hold the majority. In founding nations, in building cities, in recovering the wilderness, in grappling with obstacles, in consolidating institutions, the aggressive traits of this race have been of great and splendid use. Now that it has settled itself, marked off its geographical claims, done its rough work, made itself supreme, and perhaps spent its brutality, there are indications of a rapid development in the qualities of generosity and humanity. The great strength of the blood and iron traits will be transformed into nobler attributes, which will make it the most powerful and just race of the earth. The time will come when justice will be the law of the world, and the Anglo Saxon, the strongest race of all, will be its minister and high priest. W. N. A.

THE UTE WAR.

Another Indian war has swept our frontier, adding what it could to the one hundred and eighty-one millions which the Government has already spent upon the Indian establishment, the long list of bloody massacres and gallant lives wasted, and the aggregate of cullen hatred and defiance in savage breasts. The "causes" attributed are, as usual, suspicion and resentment engendered by old wrongs and new invasions of their territory, and distrust of their best friend because he promised more than he could perform.

It is not very flattering to modern progress to confess that a civilized nation of forty millions cannot manage three hundred thousand barbarians in the midst of it.

The trouble seems to be that as some people have just enough religion to make them miserable without reforming them, so we have just enough civilization to make us weak, as far as the Indians are concerned. Our conscience will not quite allow us to hew them all to pieces with the sword and dash their little ones against the stones, as the children of Israel settled the Canaanite question, but we are not good enough, or wise enough yet, to treat them with uniform justice and humanity. The consequence is that in a hundred years we have not been able to impress them with fear or trust.

When a man like General Crook, no sentimentalist, or enthusiast, but the best Indian fighter on the plains, declares "The hardest thing about Indian warfare is to be forced to fight and kill the Indians when I know that they are clearly in the right," it is time for those who stay at home and make up public sentiment to consider that the Indian question may have more than one side, and a claim to serious and vigorous thought. General Crook's letter to Mr. Tibbles, the Omaha editor who called attention to the wrongs of the Poncas, may well be studied by such. For more than a quarter of a cen-

tury, and in more than twenty-five tribes, General Cook has studied Indian character in close contact, in peace and war. His judgment comes with weight when he declares, that the red men act under the same impulses and reasoning as white men, and when he asserts "without hesitation" that they have adhered to treaty stipulations, all progress seems but the day-break of a coming higher civilization. J. C. B.

THE NAVAL REVIEW.

THE review of the North Atlantic Squadron and training ships in the Hampton Roads, by the Secretary of the Navy and Admiral Porter, was a most interesting event. The Secretary's address of welcome to the officers and men of the squadron, and the response of Admiral Porter, were both happy and appropriate. The Secretary's address was as follows:

"Admiral Porter and Officers and Men of the North Atlantic Squadron:

"I am glad to welcome you to Hampton Roads, and to the Chesapeake Bay, which has been the scene of so many naval victories. I am glad to see you in such fine condition, and to know that you are so well disciplined. I am glad to see the training ships here, and to know that the boys on board of them are receiving such excellent instruction. I am glad to see the Marine Corps here, and to know that they are so well drilled. I am glad to see the Naval Academy here, and to know that the midshipmen are receiving such a thorough education. I am glad to see the Naval Apprentices here, and to know that they are so well trained. I am glad to see the Naval Militia here, and to know that they are so well organized. I am glad to see the Naval Reserve here, and to know that they are so well prepared. I am glad to see the Naval Academy here, and to know that the midshipmen are receiving such a thorough education. I am glad to see the Naval Apprentices here, and to know that they are so well trained. I am glad to see the Naval Militia here, and to know that they are so well organized. I am glad to see the Naval Reserve here, and to know that they are so well prepared."

The representatives of the other States made friendly speeches. The French citizens of America were represented by Prof. Charlier, of New York, and Major Beamish, an English officer, made an amusing and cordial address on the part of the Mother country.

A barbacue on the lawn in front of the Net-

tury, and in more than twenty-five tribes, General Cook has studied Indian character in close contact, in peace and war. His judgment comes with weight when he declares, that the red men act under the same impulses and reasoning as white men, and when he asserts "without hesitation" that they have adhered to treaty stipulations more closely than the white man has ever done. He declares that the leading chiefs clearly see that they can no longer depend on game for support, and are anxious to obtain cattle, seeds, and implements, and to have their children educated. But they have learned to distrust all promises and treaties; they have learned that our policy is to starve and abandon them when they are at peace with us, and only to coax and make concessions, when they take to the war-path. Worst of all, they have absolutely no protection under our laws.

In the last year, the Red Cloud and Spotted Tail bands of Sioux, whose head men General Crook knows intimately and believes to be honestly anxious for peace, have been robbed of over 1,000 ponies by organized companies of horse thieves, and the law gives them no redress. Under the *Posse Comitatus* act, the military arm of the Government is paralyzed to aid them and cannot, as General Crook understands the law, seize Indian property in the hands of well-known thieves.

We ought to have learned by this time that we cannot trust our human nature with the rights of others. We must give them the right to protect their own.

This is General Crook's most forcible conclusion; that "the true, the only policy to pursue with the Indian is to treat him just as one should a white man," if he breaks the law punish him, but if he keeps it, give him its protection. Let him see that peace means progress, that he has a market for every pound of beef and sack of grain, and, General Crook's word for it, he will make rapid advances. Self interest will compel him to imitate us, to send his children to school and eventually qualify himself for citizenship.

That the Government is roused to a consideration of this view of the question, as indicated by its recent encouragement of the efforts for practical Indian civilization at Hampton and Carlisle, is a fact of great significance, and all the more because Government never leads but follows public sentiment. And for this reason, it is only fitting also that its action should be supplemented and encouraged by the people. The results of such efforts are incalculable.

We hope to have regular reports from Carlisle to lay before our readers. Thus far, we can only say that Capt. Pratt returned from Dakota with about 80 boys and girls for his school, and left almost immediately for Indian Territory to bring back those who had been collected for him by E-tah-dle-uh, the Kiowa young man whose "talk" at the last Hampton anniversary excited so much interest. All the St. Augustine young men but two, who remain at Hampton, have gone to Carlisle to strengthen the hands of Capt. Pratt, and form a nucleus of civilization and and English speech for the new school

Concerning E-tah-dle-uh's work in Indian Territory, a lady teacher from there writes:

"We had quite a surprise last 5th day evening. John Richards (our acting Agent) brought over a young man named E-tah-dla-uh; he is from Hampton and has come to get some children from here. I was very interested hearing about Hampton; he looked well and behaved very nicely. I was present at a council the Indians had the day after he got here. It was quite affecting to see some of the women embrace him. I suppose they were all related to him. At one time I noticed tears in his eyes. He tells us "he likes to be at Hampton." Captain Pratt is to meet him in Wichita, Kansas. Capt. Pratt has been to Dakota to get children. E-tah-dle-uh has persuaded *twenty-five* to go with him, and I hope several from the Agency will go too.

I hope we shall see him again before he leaves."

A SOUTHERN TRIBUTE TO THE COLORED TROOPS.

The gallant rescue of Lieut. Payne and his party from the Utes by Company D, Ninth Calvary of colored troops, under Capt. Dodge and Lieut. Hughes, has justly roused the admiration of the whole country, while it can have surprised no one who, during the war, commanded colored troops, or watched their record, which abundantly proved them capable of soldierly discipline and soldierly heroism. This latest gallant achievement is thus handsomely acknowledged by a Southern paper, the Norfolk *Virginian*, under the heading, "A Gallant Defense and a Noble Rescue, All Honor to the Colored Troops." Remarking that Lieut. Payne is a Virginian, and describing the terrible situation in which he found himself with his command—all their horses lost—surrounded by hostile Indians—the *Virginian* enthusiastically says of his rescuers:

"The conduct of these colored troops is beyond all praise and reflects the greatest credit on the officers and men engaged. With forty-five men, Capt. Dodge made a forced march of thirty-five miles to succor Lieut. Payne, and in the face of five hundred Indians these gallant colored troops joined Lieut. Payne and linked their fortunes to those of the beleaguered garrison. This is an exploit in military history which deserves the notice and applause of all who admire noble deeds, and we do not hesitate to say that not since the war, and rarely during the war, has equal heroism been displayed."

MUST HIS PAST KEEP THE NEGRO DOWN?

BY A HAMPTON GRADUATE.

I believe that every man moulds his own future; it is what he makes it, not his ancestry. Past circumstances make it easier or more difficult, but they do not make it impossible for any people to rise. I don't believe in fate, but in ever-present pluck; let the dead take care of its dead. We must look out for ourselves; the tombstone memorials for the dead, are no reputation for the living. We are fighting the grandest battle of history and our triumph will make it most glorious.

If we are making great strides in the line of development, it is because the result of past centuries of progress of other races is benefitting us as much as them. In these days of trade, travel, and Christian civilization, there can be no slow progress from the Dark Ages. We are not to begin where others began, but to start and go on with them from where they are. Letters, printing-presses and the telegraph are not to be invented by us, they are ready for our use.

We are situated far differently from the barbarians of Northern Europe; remote from all civilization, their development was slow, there was not the stimulating influence of a civilized people among them; as they knew but little of any progress made by others, they were encouraged by every successful effort, however small the result, and were not disheartened by any unfavorable comparison of races; every achievement was weighed in the scales of their own past and present. Although there existed a semi-civilization in the East, its sun traveled very slowly towards the West.

But we are surrounded by the light of a great civilization; on all sides there is a tremendous force pressing upon us, yet urging us on; every one must act as though the whole race question depended upon himself; as spurs make a slow horse go faster, we trust that the hard sayings concerning us may incite us to greater effort. We have slept for more than twenty centuries and have awakened to grapple with this immense power.

Nation after nation in the past, has gone up the historic double-step-ladder on one side and down it on the other, and if time continues, what is true of the past will probably be true of the future. However, a nation is but a part of the race. Every race has its stages of development; there seems to be no topmost step beyond which it is impossible to go; there will always be heights above, and although we may faint and fall back for a time, a motive within and a force without will stimulate and urge us on; we will struggle for the above, until time shall be no more.

Our first efforts are unjustly compared with the crowning results of the day. Who would think of comparing Egypt's Hieroglyphics with Raphael's Cartoons, yet each is perfect of its kind but represents a different stage of civilization. After a twelve years' struggle, we are told that we have done nothing and can do nothing, because of our mental inferiority. Compared with the achievements of the Anglo-Saxons, the result of our effort is obscure; but compared, as it should be, with our condition twelve years ago, the advance is clear and the future looks very promising. The leaven of progress has not permeated the mass of the colored race. Twelve years are not sufficient to raise so large a lump, or to prove its quality or capacity; it must have more time. The enfranchisement and development of the negro will be one of the boasts of the Nineteenth Century.

The Anglo-Saxons have been more than two thousand years reaping the harvest for our use as well as theirs; so now we go on together; the ignorant of to-day may become the parents of the scholars of the next generation. When we look at the centuries before us, all progress seems but the day-break of a coming higher civilization.

J. C. R.

THE NAVAL REVIEW.

The review of the North Atlantic Squadron and training ships in the Hampton Roads, by the Secretary of the Navy and staff, October 13th and 14th, was an interesting and beautiful scene from ship's deck or shore. Among the fleet were several famous vessels: the *Constitution*, "Old Ironsides," her "tattered ensign" replaced by bright new colors, but keeping enough of her old timbers to preserve her identity and glory of 1812; the *Kearsage*, of Alabama fame; the *Minnesota*, flag-ship of the squadron in these very waters during the encounter between the *Monitor* and *Merrimac*; the present flag-ship, *Powhatan*, flag-ship of our flying squadron during the war. The *Tallapoosa*, the Secretary's vessel, was a captured blockade runner.

The first day's review was conducted on board the ships, each of which was inspected and went, through the forms of repelling an attack with guns and torpedoes, abandoning a sinking vessel, &c. Prizes were awarded to the boys of the training ships, one young fellow on the *Minnesota*, Thomas M. Johnston, of New York City, carrying off three, including the highest.

We hope to be able soon to give our readers a full account of this very interesting and useful branch of the service that is preparing educated seamen for our navy. The second day the review was conducted on shore, in Fort Monroe. The landing of the several brigades, 1,000 strong, in small boats, in one bold dash, as if making simultaneous attack upon a hostile shore, made a picture under the brilliant sunshine that will not be forgotten by the throngs who witnessed it.

INAUGURAL CELEBRATION AT YORKTOWN.

The celebration at Yorktown, October 23d, of the 98th anniversary of the surrender of Cornwallis was a great success, and will accomplish what was designed in preparing public sentiment for the grander centennial celebration in 1881.

The weather was perfect. On the broad expanse of the river before the town, lay five vessels of the North Atlantic Squadron, dressed with flags streaming gaily in the sunshine; while crowded excursion boats steamed about, bringing military companies in full uniform, and throngs of visitors from Norfolk, Hampton, Old Point, Richmond, and Washington. It is estimated that 10,000 persons were present. The Governors of New York, Massachusetts, Pennsylvania, and North Carolina sent representatives. Admiral Wyman and General Getty and other gallant officers represented the army and navy, and many other distinguished guests were present.

A National Salute at noon from the flag-ship *Powhatan* announced the landing of Governor Holliday and his staff, and representatives of the States, who were welcomed by Hon. R. H. Power, president of the Yorktown Centennial Committee, and escorted by the army and marine corps to the speakers' stand in the great common near the General Nelson mansion.

Eloquent speeches were made by Dr. Power, Governor Holliday, and the orators of the day, General Taliaferro, of Gloucester Co., and Capt. James Barron Hope, of Norfolk. Many liberal and patriotic sentiments were expressed. In the course of his interesting address, Captain Hope made pleasant allusion to Hampton Normal School, hoping that the introduction of slavery into Virginia, as a temporary aid to one race, but a grave affliction to the other, might, through God's blessing, work at last a blessing to both, and "glad to know that to the attainment of this result, Virginia lende her best endeavors, through her free schools and her contributions to the admirable institution planted at Hampton." Captain Hope made a suggestion, received with great applause, that the people of America should restore William and Mary College to its ancient glory, and Hon. John Goode seconded his suggestion by a series of resolutions recommending the appointment of a committee to collect funds for the purpose.

The representatives of the other States made friendly speeches. The French citizens of America were represented by Prof. Charlier, of New York, and Major Beamish, an English officer, made an amusing and cordial address on the part of the Mother country.

A barbacue on the lawn in front of the Nelson house put a characteristic finale to this occasion.

MORE INDIANS!

Just as we are going to press a party of six Indian boys has arrived, as follows:

James Murie and Jonathan Hcustice, Pawnees from the Indian Territory, the latter pure blood; the father of the former is a Frenchman. Charlie Soman and Michael Oshkcnaniew, pure blood Menemone Indians from Wisconsin; two more are expected soon from the same tribe. These four talk English quite well, have attended school at home and, like the Absentee Shawnees, will find in the two lower classes of the Institute just the grade they need. They will not enter the regular Indian class. The Hampton school seems peculiarly adapted to Indians who have exhausted home opportunities for education, whose qualities and capacities have been proved, and who, with a three years' course of plain book knowledge and industrial training, will be likely to be useful among their people. At least two of to-day's arrivals are here at private expense and funds for their education are yet to be raised.

With the same party came White Breast and Ashley, former Indian students here. The former, with twelve others, passed his summer in Berkshire Co., Mass., with a farmer, and appears much improved in strength as well as in English; the latter has returned from a visit to Dakota. Both were heartily welcomed.

A note from Miss S. A. Mather, who accompanied Captain Pratt on his western tour to secure Indian pupils for the school at Carlisle Barracks, Pa., which now numbers 180, mentions the many trials and hardships of the work.

The coolness, decision and marvelous sagacity of Captain Pratt are at the bottom of this new movement for educating Indians in the East.

We hope to give some account each month of Captain Pratt's School.

Dr. Blyden, the distinguished African who was educated in Liberia, and afterward became the Secretary of State in that settlement, and who is now its minister to Great Britain, has been cordially received in England. On one occasion he, King George of Bonny, Bishop Holby and Mr. J. H. Smyth, all of pure African blood, were asked by the Dean of Westminster to meet a distinguished party at dinner, who treated them as "men and brothers." The Athenæum Club has made Dr. Blyden an honorary member. He writes very well and has contributed to *Fraser*.

DIED, in York Co., Va., October 1st, after a brief illness, Willie C. M. Morse, aged two years, four months and seventeen days, beloved son of Mrs. Lucie E. Morse and nephew of Mr. Major Wright, both formerly students at Hampton Normal School. "And Jesus called a little child unto Him."

DIED, at Lee, Mass., October 6th, from the effects of an old injury, Tsadletsh, one of the St. Augustine band of Indians, a Kiowa. A fall from his pony which trod upon him, years ago on the plains, had occasioned an injury to his lungs, and recurring hemorrhage. He had seemed to improve last year at Hampton, but the fatal result was supposed to be but a question of time. He was kindly nursed at the house of Mr. Alexander Hyde, and buried among the graves of his household.

DIED, at Crow Creek Agency, Dakota Ty., in October, Charley Stone, aged fifteen years, grandson of Bone Necklace, Chief of Yanktonese Sioux. Charley, like Tsadletsh, was classified by the examining physician, on his arrival at Hampton, among the six who showed signs of chronic organic disease. Although he had gained decidedly in appearance during the summer at Shellbanks, it was thought safest to send him home when Capt. Pratt went back to Dakota last month. His death there, ths agent writes, occurred very soon and suddenly; but it was a comfort to his friends to have him at home.

LETTERS FROM HAMPTON GRADUATES.

We have one more scholarship letter on hand, giving a general record of a

ceriulg the progress of thair children. Their reasons for giving it to them was that it made them strong, able to stand cold. I succeeded in stopping them giving it to their children.

THE CONDITION OF THE COLORED PEOPLE.

The largest portion of the colored people are renters, some have come in possession of comfortable homes and are getting along very

heart than any words of mine. I feel their sentiment. It begins, "When all Thy mercies, O my God," &c. I know of no equal number of words that move as well outside of the Bible. Pray for me and for my people.

LETTERS FROM HAMPTON GRADUATES.

We have one more scholarship letter on hand, giving a general record of a graduates experience since leaving school, and a graphic picture of a dark corner of the South in exciting times, in South Carolina.

———, S. C. *September*, 1879.

Dear Sir:—Thinking it probable that you would like again to hear of my work down here, calls forth this communication. Soon after reaching my home in June, '76, I went to ———, S. C., and was there thrown among a populace, who, it seemed, dreamed not of goodness nor felt willing to tolerate "Negro Education;" not that there was a settled conviction on their part that it should not be dons, hnt a trying experience had tanght them that his education coupled with his "Right of Suffrage," made the Negro doubly powerful; for every man who could blunder over a newspaper wanted to be *Road* Commissioner any way; or, if he could write, and many who could not, aspired to Legislative honors. The more intelligent, with some honorable exceptions, were satisfied to be tools for Northern sharpers who came down "to do what they could for the poor colored people'—they "felt it duty." At that time when prejudice was rife, their honds removed and they left like sheep without a shepherd, it was quite easy for those pseudo-apostles of Father Abraham to mount the rostrum, and "With their white, pleading faces turned upward," proclaim that the bottom rail was on top. Their success in winniug their hearts and minds, and the result we know. They established a University and did many other things which looked like advancement, but failed to establish good common schools—they were neglected. Had they been let alone, the better classes of both races would doubtless have been ruling to-day, and the government would have been managed in a manner satisfactory to all. Being thrown among such a people at such a time, efforts to make myself one of their number with the avowed purpose of teaching the young minds how to shoot, it was doubted whether or not that was my true motive. They said, I was a liar—that I had just come out of a Northern college and would not content myself to sit down and teach thirty or forty children at $1 per month each, when those who could present no more of a comparison to me than I could to John C. Calboun, were making from 12 to $1500 a year with a certainty of it being paid. In consideration of the above *supposed* facts, I was informed that it was best for me to make my tracks cold about there. Being slow about quitting, I was waited upon by three of the more friendly and less suspicious who said I had better close school and get away, as preparations were being made to take my tongue. I obeyed upon the assumption that, "A word to the wise is sufficient." This happened soon after the Hamburg Massacre. I have since found, that I was somewhat at fault (though I donbt it), for I was non-communicative, said nothing much to any one, but wanted my actions, self-carriage, to do that which words only could do among those people. I got papers from the office on Saturday (when the gentry loll arouud to hear the news and indulge) and it questioned, would reply that duties of the school so used up my time that I could give politics no thought. When questioned by the colored on the subject, would speak of education, or read and explain a portion of scripture, so they could *hear* of nothing said to them on politics. My whole self was a mystery to them; therefore they were fully persuaded that I had come a secret spy. I went to———and taught till tho Spring of '77, when I went back. Tho Wade Hampton March being at an end, the whites were busy striving to re-establish harmony between themselves and the blacks; were telling them fanciful stories about Liberia in order to dissuade them against "Gwine to Liberia." Whether it was, that they thought I would be instrumental in re-establishing that principle of locativeness which characterizes the race, or that having gained possession of the reins of government, they feared that I could present a formidahlo opposition to them politically, that I was returned with welcomo, I cannot tell. I taught four months with tolorahle success, as I noted improvement in my pupils. The majority of the whites at———are land-poor—the soil is of clay, with here and there loam with a subsoil of clay. Cotton is late opening on such soil and many hands must be employed to gather the crops. Every man plants as much as his horse-power will allow him; there a class of day lahorers are spread through the country, who have no farms of their own, depending upon such jobs, which are aliko unprofitable to employor and employed. Both races are a set of gourmands, whiskey drinkers, tobacco users. Their ministers will preach a sermon for you, take you home with them and set the decanter before you. They go to town, come back, and as soon as they reach the settlement, are met by the settlement folks who inquire about the price of cotton, the news, and lastly but all important "You got any eye water?" Ho has a jug for them, sometimes well watered, and one in reserve for the family—every one being treated to a glass, from the granny down to tho hahy. Whon my landlord went and returned was the time for interested parents to call and inquire concernlug the progress of their children. Their reasons for giving it to them was that it made them strong, able to stand cold. I succeeded in stopping them giving it to their children. There was but one Bible in the settlement among the colored. I went to———, stated their needs and got 25 or 30; they then needed readers. I left there and taught two months in another portion of their county where I found a very different set of people; many of the whites were well educated and appreciated intelligence wherever found, if under a black skin. The colored there eat more and dress less than in———. Many families are striving to accumulate property, therefere the women spin and weave all the clothing worn, make all they eat, and only buy sugar and coffee. They keep continually an open account with their stomachs, taking only a piece of bread before going to their fields in the morning, and the sun always rises upon them there. They are advancing despite the high rent paid by them. They either furnish or are furnished with horse power, pay a portion of crop for rent, hy a valuation of which, I found they paid from $4.20 to $5.50 a year for rent of land valued on the auditor's books at from $5 to $10 an acre. Some there, in order to pay for land, would boil the pot to-day, eat the cabbage and bread for dioner, take bread and pot liquor for supper, bread for breakfast the next morning and save the meat for dinner—sometimes boil it with peas. There are many of that kind if they could get land sold them on time.

I'll now take you down to my next school, begun 15 May, '78. This was in the river swamp of———Co., on a rice plantation where civilization is much wanted and letters needed to be taught. I cannot tire you with a long account of those people their peculiar ideas of the Godhead, &c. I arrived at 10 A. M., carpet-bag in hand, walked seven miles to see the Trustees, four miles back to the people at———. It haviog rained in the morning they had not gone out to work. I called them together, addressed them, after which they had a conference with me in their midst, which was unintelligible to me. Caught a few words—"Him talk well—city geman—we no hah nuffin fur suit um." Finding that something to eat, was the only thing which caused them to parley, I told them I could put up with anything, they agreed to open school. I bought some yeast powder and taught the old lady how to make decent biscuit, tea-cakes &c., how to put the ahundance of fruit they were blessed with to a good use and how to iron a shirt bosom—thanks to my mother for the knowledge. After giving them as great a push as my time there would allow, I was engaged in the Aiken school in Oct., 1878, where I taught up to the present. This is a school established hy Miss Martha Schofield, of Darby, Penn., a most estimable lady, who has done a work among the colored people of this place which will ever gain for her their respect and admiration. After having nearly worn herself out teaching a common school, she is about to establish a school on the Hampton plan for which three hundred acres of land have already been bought. She is assisted by W. Rodenbach, a graduate of the college of the city of New York, an untiring, earnest worker who has been laboring with her since '73.

I could fill as many more sheets about———and have said nothing of the other places, but will not tire you more. You see there is work for us to do, and that there is an immediate need for an educated ministry; for the preachers wield an influence second to none in extent. The old heads are wholly governed by their ministers, the children hy their teachers. The only trouble we have is the parents rely so firmly upon the correctness of their ministers, that to be successful we must cater some to that worthy personage and not oppose him openly—in other words, "Wise as serpents and harmless as doves."

Very repectfully yours,

D.

WHAT HE THINKS NOW.

"Comparisons are odious," and there may be a little touch of human nature in the writer's enjoyment of his discovery that common-sense and thoroughness must finally triumph over superficial show. It is a discovery that many make.

———, *Oct.* 19*th*, 1879.

Dear General:

I commenced teaching, Sept. 8th with 18 pupils; now I have fifty-four on roll, which gives an average of forty-five daily. We have had some very highly educated colored teachers in this county. They could speak Latin and Greek as well as the Hampton students can English, but had very little common sense. I believe it is a very good plan to have the head well stored with Greek and Latin, providing that you have a plenty of common sense in the lower story. The whites of this vicinity compliment tho Hampton school as being the only Institution (of the many in the Union) that sends forth coussecrated teachers. The County Superintendent has given me permission to try Col. Parker's method of teaching. I have tried it for nearly two months and think it much better than the old way. I find by associating the objects with the words gives them more energy and teaches them how to think upon what they see.

THE CONDITION OF THE COLORED PEOPLE.

The larger portion of the colored people are renters, some have come in possession of comfortable homes and are getting along very well. A good many think that liberty consists in the little brown jug (as they call it) and tha good whiskey. If I could get them to stop drinking and dressing so fine, they would soon be able to purchase homes. I am identified with my people, and it is my determination to strive and do all tha good I can in bettering their condition. If the colored people had enough education to make them law-abiding citizens they would not have so much trouble. For fear that you are getting tired of my story I will close.

Your old pupil, ———.

P. S. I do not want you to think that I am a repndiator. I shall be able to settle with the school before long. Please send the *American Agrieulturist* and ehlige.

THE young man who gives the following account of his post graduate studies is taking up Latin and Greek in the right spirit and way, after having secured a solid foundation of English and a preparation for actual needs and work of life. Such preparation Hampton is pledged to give its students. This secured, any man black or white has a right to extend his studies in any direction consistent with his means and duties. The wisdom of his selection will depend upon circumstances and be discovered by experience. A Hampton graduate who has done as noble work as any of his fellows, and pursued a more thorough classical course perhaps than any of them, since leaving Hampton, remarked recently to the Principal—"I have learned the wisdom of the Hampton ideas of practical edueation. I fiad that my Latin and Greek do not give me the advantage I thought they would, and I wish I had spent the same time in study bearing more directly on my work."

———, VA. *May* 4*th*, 1879.

My dear friend:

I appreciate your words in respect to my duty to and the obligations which I am under to the Lord. You were informed I have no doubt, by my instructor relative to my studying. He is of the Friends, as yourself, and is a man of remarkable ahility. The cashier of the leading hank here was educated by him. I began the 24th of September to study the Latin language, and used Andrews' Latin Lesson, which I finished the 29th of January. I afterward took up Cæsar, and will finish the 2d book in a week or better. I would have finished the 2d book before this time hut Mr. ——— was sick, nearly three weeks, in March. In Greek I am giving attontion to irregular verbs. I like the study of languages very much. The desire of a liberal education, dates back to my boyhood. I may never obtain it but I mean to try. I don't think I could employ my afternooos better than in studying. As a rule, in communities of this size, the teacher is the only person of any intelligence, among the colored people. He cannot as a rule have a great deal of solid enjoyment after his day's work, unless he does read and study. While I could do without Latin and Greek as a common school teacher, my studying is having a good effect upon the colored ministers here. One who could not parse a single sentence, he it ever so simple, but thought he knew a great deal, has studied long enough to gain a very fair knowledge of the elements of English Grammar. Another, equally as deficient, as the one just mentioned when he began, will begin Monday. The colored ministers are learning that to be able to read, write, and talk a little, is not education. Every year confirms my opinion and supports my experience, that until the standard of intelligence in the pulpit is raised very much higher the work of the teacher will fall far short of what it might be. I have not given up my long cherished hope of attending school at Oberlin yet. I am young yet, just a little over twenty-four. In respect to a high school here, there may be a day when such a school will be needed, but not at present. It would not be appreciated, if we could obtain it. In some respects this is the hardest place I ever visited or worked in. There are a very few here who have any respect for progress. Only a few of their former teachers stayed here two years. One must yield to the caprices of popular notions if he desire influence of a low type among a very low class. I am trying to organize a Lodge of Good Templars here. I held a meeting, on Wednesday night, the 1st. Only thirty or forty were present to the meeting, though we have three colored churches here. I admit that I had those who represeot the best intelligence and moral qualities in the place. "Intellectual gain would be a poor compensation for spiritual loss;" such a loss I trust I shall never suffer, for I realize more and more each day the worth of holy living to myself and mankiod. That most beautiful hymn of Addison's, which is my favorite, will more fitly express the deep and fixed purpose of my heart than any words of mine. I feel their sentiment. It begins, "When all Thy mercies, O my God," &c. I know of no equal number of words that I love as well outside of the Bible. Pray for me and for my people.

Your most sincere friend,

S.

THE following letter, from one of the older and most careful observers in the corps of graduate observers, points to a principal cause of Negro Exodus and the only remedy for it: such practical education in agriculture and the laws of property as shall enable the people to improve their homes and keep them after they get them.

———, VA., *Sept.* 10*th*, 1879.

Dear General:

Your letter is at hand. I was glad to hear from you. With reluctance I write according to your request.

It is painful to say that the condition of the poor farmers in this vicinity is quite deplorable; especially that of the colored. Very few of the whites about here rent land; most of them work their own little farms, upon which they make a scanty living. It is not so with the colored. They rent land from the rich farmers, taking the white men's teams and tools; work the land and give one-half of what they make in rent. Some few of them work their own teams, and give one-fourth of what they make for rent. Very few of them make more than an even living, and many fall short of that. There are not more than three or four colored men about here who own land. Some have bargained for land, and worked it three or four years, and paid the interest on the amount they were to give for it, and then have lost it. Others who might do better see this, and become discouraged, and will not attempt to get themselves homes. They say it is no use to huy land, the white people will not let us have it. Some of them have a horse and cow, and some a cow and no horse.

Many a time they set in with the white men without food and clothing and depend on the whites to support them until they make the crop. When they settle up, the colored owe more than they have made; not being able to move they are compelled to stay another year. This second year they may pay up and have something over. If so, they are induced to stay again. The third year ends like the first: they are in debt. Unless they stay another year, they go somewhere else and work the same way. You can perceive that there is no progress made in accumulation. It seems to me that their chances are not so good as they were five or six years ago. As I don't like to grumble, I will not say any more on the subject. If this is not satisfactory, I will try again. I don't know when I shall begin teaching, or where I shall teach. I hope to teach here another year.

Yours truly, W.

———, N. C., *July* 29*th*, 1879.

General Armstrong,

Dear Sir:—It has been quite a while since I have written to you anything about my progress in teaching. Through the kindness of Mr. ——— of ———, Mass., I am teaching school at this place to-day, Mr. ——— is so kind as to pay me so much salary, besides supplying my school with clothing, books, etc., for the children. I began to teach in June; my school will continue through August, by the aid of Mr. ———. I am doing all I can to bring our race out of darkness into light. I find the children of ——— progressing very fast in the way of education. The people here seem to appreciate sending their children to school. I have sixty-one pupils on roll, daily average forty-five to fifty. I am kept quite busy and am pleased to say I delight in teaching school. I teach arithmetic, grammar, reading, spelling, writing, &c. I have quite a number of small children to teach. My friend, Mr. ——— was so kind as to send me one of Monroe's primary Reading Charts. I find it quite a treat in my school. I do not see how I could get on without one now. The children learn very fast from it. Mr. ——— is not only helping my school, but a number of others. He has been so kind as to aid my sister in the good work. As one of the Hampton Graduates I am proud of my title. Always consider me as one of the Hampton workers. Old Hampton has been the cause of me being where I am to-day. I shall alway give it praise. I do not regret the time I spent there; only wish I could have been able to receive more knowledge than I did. I had the pleasure of reading the "SOUTHERN WORKMAN," to-day, which was very encouraging. It did my very heart good to read the programme of May 22d and also some very interesting letters; of Hampton graduates, about the Indians, and other interesting events. Of the speakers on the programme, Della Chadwick, Charlotte McAlpine and Lucy Smith were the only ones I knew; I want to be able to be present next May in order to renew my acquaintances. Will you be so kind as to send me a catalogue of the school. I have a sister I want to send there next fall.

Your pupil, M.

RECORD OF INDIAN PROGRESS.

noon; this equalizes the labor system. The other boys work around the barn or out in the

flowers," or "I like pictures." To her surprise the shy Lizzie held up her band to answer. "Well, Lizzie, what do you like?"

RECORD OF INDIAN PROGRESS.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

EFFECTS OF VACATION.

During the summer vacation of the school, the Indian girls have made marked improvement in house-work, and general neatness. They received daily instruction in the English language, and their progress is wonderful; some of them can carry on quite a conversation in English, aven using it in talking to each other.

The boys were not required to study, they worked and played; their life at Shellbanks was for the most part a long holiday; the war-dances, games, and songs afforded endless amusement; they were kept up until the boys were tired of them, and were ready to surrender the relics of barbarism for the stricter rules of civilized life. Returning to the school by their own desire, two weeks before it opened, they at once conformed to its regulations, going daily to their work; on no occasion did we have to remind them about propriety in dress. The freedom of Shellbanks did not demoralize them, but rather taught them some useful lessons, as is evident.

THE SAIL.

Before the school opened, we gave them one more treat. A soil boat was engaged for two days; as the boat was not large enough to carry all of them, we took half out one day and the others on the next. We sailed about ten miles, and passed the ships of war, anchored in the Roads. We were much interested in the target shooting from one of the ships, but, after passing it, our interest changed to anxiety, for although we were not in range, we were afraid that, if the shots continued to go so wide of the mark. we would make a second target for some gunner, who having failed to hit the legitimate target, to prove the accuracy of his aim, would declare that he intended to hit us.

We landed on a fine sandy, beach, and, pulling off their shoes and socks, the boys had a good run, while one or two others assisted in preparing the coffee and making the sandwiches for our simple lunch. The boys and girls were called in, and, seating themselves in a semi-circle, the coffee and sandwiches were passed around—and molasses to those who wished it. After lunch, the dishes were washed. Hampton Roods makes an excellent dish pan; of course the middle is a little too deep, but the Indian boys who work in the tin-shop will doubtless profit by Nature's mistake, and not make theirs of so great a capacity.

AT WORK.

There has been quite a change in the labor system; formerly, the boys worked two hours every week, going in regular classes to the work-shop. This system was well enough for a beginning, until the Indian boys had shown some decided preference for some trade; now that their tastes are known and that we have discovered in what branch each will most excel, they have been put to work at it, not so much to draw out of them as to put into them. To do this work well, the teacher must have more time, so now, instead of working only two hours a day, the boys go to school from 8:30 A. M. to 12 M. and work from 1 P. M. to 6 P. M. every day except Saturday and Sunday. Saturday is a holiday. In educating these boys and girls, we are trying to keep before ourselves their coming future; their present can be provided for, but their future must be largely determined by themselves; it will be more or less influenced by their efforts and attainments here; they must struggle on that they may be able to stand alone by and by. A half-day's work system is a good preparation for the whole day's labor that awaits them at home.

In the Indian Work Shop, the boys have lately made three doz. pint cups, six doz. dust pans, three doz. wash basins, one and a-half doz. slop buckets and one hundred lengths of stove-pipe; they are making and repairing shoes, and doing plain harness and saddle work.

The manager of the shop says "They are exceedingly willing to do what they are told." The head shoe-maker worked by the fading twilight, to finish a pair of shoes that he had promised to repair for one of the colored boys. They go out from the shop in squads to do little jobs that are required around the place, and do better work when out alone than they do in the shop.

In the Saw Mill another squad is engaged in carefully piling up the lumber while the eye is trained to judge of its quality and its breadth and thickness. A boy assists about the large Corliss Engine which was generously presented to the school by the great machinist.

The farm boys take turns in watching the cows; two boys go out every morning and work all day; the day following they go to school in the morning and play in the afternoon; this equalizes the labor system. The other boys work around the barn or out in the fields among the weeds.

STOP THIEF.

We were about to retire for the night when a violent ringing of the annunciator caused us to pop our head out of the door to ask what was the matter; no immediate explanation could be obtained, but the cry Stop thief! Stop thief! rang through the building louder than the bell. Without stopping to dress the Indians ran out, some in their underclothing, others in their night dress. What? What? and eager questioners pressed around me on all sides. The alarmist answered for me by using more effective language, "Stop horse thief! Stop horse thief!" That was enough. The cry of horse stealing seemed to kindle their indignation, and away they went with the fury and madness so common to their race. When I saw them again, they were running wildly around the grounds with great sticks in their hands, filling the air with their wild war songs.

The report of a pistol increased the excitement. What was to be done? A boy may have been shot. I started for the residence of the Commandant. Away the boys went dashing past me. Reaching the house, I learned that two prisoners from Warwick were being carried to the jail in Hampton, but somehow they had managed to escape and were concealed somewhere in our grounds. The constable was over from Hampton looking for them. Not caring to have the boys run the risk of receiving a stray shot, I called them back to the Wigwam. They were very much excited, but soon quieted and went to bed.

too much leisure would make great gaps in our building, so the evenings are also used for instruction. There is much amusement and a great variety of instructive games; in other words, there are more arrows used by night than by day, yet all are aimed at the same target. Its a pretty sight to see them sitting around the tables playing games, spelling words, making sentences, and talking English. Soon the time comes to leave; and as they go out, the little Indian choristers begin to sing. As their voices die away I hear the last of their song "I left it all for thee."

J. C. R.

OUR INDIAN GIRLS.

We believe, at Hampton, in giving the girls as good a chance as the boys, for the girls' own sake and for the boys' sake too. So when Captain Pratt brought us our Indian boys he brought as many girls as he could get to come with them. It was harder to get the girls than the boys, for their fathers and mothers wanted them to stay at home and do all the work, as Indian women always have to. Only nine would come, then, but since these have come and found what a good thing it is to go to school, many more want to come and, we hope they may.

This is a picture of the nine who came first. It was taken just after they got to Hampton, a year ago this month, and they have learned a good deal in a year. These are their names, beginning at the back and counting each row from left to right:

Zie-wie (in English, Yellow Moon), Rosa Fleets, Annie Dawson, Mary Dawson (Annie's mother), Josephine Malnourie, Mary Kettle,

OUR INDIAN GIRLS.

Sarah Walker, Lizzie Spider, and Carrie Anderson.

When Capt. Pratt went back to Dakota for more girls and boys, a month ago, Mary Dawson and Mary Kettle went with him. Mary Dawson came to Hampton because she would not let her little girl come so far away without her, but after she found how happy Annie is at school, and how much she is learning, she thought she would rather leave her here and go back to her own old mother in Dakota. Mary Kettle was not very well when she came to Hampton, and though she had grown somewhat better, it was thought best for her not to stay in school. All the rest are doing very well indeed, and improving in every way.

When they first came they did not know very well how to take care of themselves or their rooms. They would put their sheets on top of their blankets, and leave off their warm underclothing some of the coldest days, and go to bed with all their clothes on, and put on three neck-ties of different colors all at once, and make other funny mistakes, as we would perhaps if we went into the woods and tried to live like Indians. But now they know all about these things, and try hard to do what is right. Zie-wie and Rosa and Lizzie are still rather shy of answering in the class before the boys, but they make very good answers, and sometimes very pretty ones. Their teacher one day was trying to teach the class what *like* means. "I like apples, I like pictures," and so on. To see if they understood, she asked them at last, "Do you see anything in this room that you like?" There were some flowers and pictures in the room, and she thought maybe one of the brightest boys would think to say "I like flowers," or "I like pictures." To her surprise the shy Lizzie held up her hand to answer. "Well, Lizzie, what do you like?"

"I like *you*," said Lizzie, quite clearly, with a smile.

Now don't you think that was pretty? I think you can guess what her teacher said.

The three little girls are dear little things, sweet and pretty and bright. Sarah has worked a beautiful little sampler on canvass and sent it home to Dakota. Carrie and Annie are working theirs now. They had little flower-gardens this last summer and took much delight in them. They have dollies and make all their dresses. They talk English quite well. They even talk it to each other sometimes. "Come along—hurry." I heard Sarah say to Carrie, the other day. They are all "coming along."

We hope to have some more girls soon. We hear they are on the way to us, and we shall be glad to see them.

L. & B. AGENCY, WYOMING, *August* 12, '79.

GEN. S. C. ARMSTRONG:

Dear Sir:—The letters published in the "SOUTHERN WORKMAN," from graduates of Hampton, now laboring as teachers among their brethren in the South, and from the Indian boys among their new-found friends in the East, are well worthy the attention of the public. We do not refer to their literature, but to the lesson given us in the simple truths therein enunciated.

These people, long bound in ignorance, being denied the common rights of manhood, are now seeking the light, and calling upon us to aid them. Shall we longer withhold the aid that we are able to give?

It has been fully demonstrated that these down-trodden races are susceptible of the redeeming influences of education, a few Army officers, and the New York *Tribune* to the contrary notwithstanding. The graduates of Oberlin and Hampton, and other educated freedmen can testify for the black man; and the scores of intelligent and well-to-do red men in Indian Territory and elsewhere, who have become good citizens from a good education, ought to close forever the mouths of those who persist in declaring that the only thing to be done with the Indian is to keep him down, and exterminate him. One great hindrance to the red men's becoming self-supporting is that he has never been taught to place a proper value on property, holding it as his individual right; and especially on the necessaries of life. A portion of his living is given to him, and another portion secured in the hunt, all of which is used and wasted as a kind of common stock. The system of licensing Post Traders to monopolize the trade with the Indians, doesn't help the matter. The almost entire stock in trade of the Indians—furs and robes—is turned over to this trader, and they receive in return a large amount of costly trinkets, of no real value. We are not blaming the trader for trying to gather a good harvest from the distant plains; but if the government wants to make the Indians self-supporting, it will be seen, on a little reflection, that better means can be devised, than that of licensing men to make fortunes out of the Indians' ignorance. Why could not the government furnish them with all the necessaries of life, including tools and farming implements, and receive for the same their furs and robes at fair prices? Put young Indians in these government stores as clerks. Teach them to weigh out and measure out goods and receive the pay. When they become competent let them set up in business for themselves; and thus be enabled to keep some of their wealth among the tribe, to build comfortable homes and to beautify and adorn them, instead of putting all around their necks in the shape of beads. These traders are not allowed by law to furnish the Indians with whiskey; but they are allowed to sell it to army officers and soldiers; and the shrewd Indian often manages to get it.

The Hampton plan of teaching them to farm, instructing them in the arts of manufacture, and fitting them to go back to their tribes as competent teachers, and workmen, is a work in the right direction. Every useful trade and profession should be taught them speedily as possible. The people of Boston in a convention presided over by their Hon. Mayor, have decided to have the matter tested as to whether or not the Indian *is a man*. If it shall be found that he is, let us treat him accordingly.

Very respectfully,

E. BALLOU.

CHEYENNE RIVER AGENCY, D. T.,
July 25th, 1879.

GENL. S. C. ARMSTRONG—

Dear Sir:—Having been personally acquainted with, and having selected the boys who left here about a year ago for the purpose of attending your school, I have been very much interested in your benevolent efforts in their behalf.

THE DECORATIVE AGE.

In their wild state, they are very fond of decorating themselves; at Hampton, this taste is bestowed upon their rooms; anything that looks like a picture must have a place on the walls; illuminated advertisements of Blacking, Yeast powder, Fish Balls, Baked Beans, and Nast's ridiculous caricatures of the Indians were indiscriminately put up to beautify, the room. When I found the greatest decoration, I saw that less attention had been paid to the requirements of neatness. But all of this has changed; a talk with the boys made them see it as I did and they had a good laugh. The next morning, when I went around to inspect, I marked the unusual tidiness, and saw that the bronded pictures had been removed.

A VISIT TO THE SOLDIER'S HOME.

The Indians were recently invited to attend a lecture to be delivered by Mrs. Bland, at the Soldier's Home. Mrs. Bland, who has been actively engaged in teaching Indians in the Indian Territory, brought with her some fine magic lantern views of that section of the country. The boys and girls were much pleased with them. After the entertainment, Mrs. Bland had a very pleasant talk with the boys, and in return they sang, "Nearer my God to Thee," in Dakota. We walked to the Creek, and, while waiting for the boat to return to take over another load, the little girls sat down and, in perfect English, without discord, sang three verses of the "Sweet by and by."

STUDY HOUR.

There is a great deal to occupy the time, as well as the hands and brains of the Indians;

Anyone conversant with the habits and disposition of the Indians, fully realizes the el-

"The eagerness of Yankton youth of both sexes to go to Hampton to school is very gret-

not be pulled back by the dense ignorance of a large part of their people in the backwoods

will establish themselves. But until such moral, mental, or physical qualities show themselves, social barriers will exist, higher

Anyone conversant with the habits and disposition of the Indians, fully realizes the almost insurmountable difficulties with which you have had to contend, and the marked and rapid improvement made by the Indian boys in your charge will be all convincing proof, with such persons, of the manifest excellence of the system of training adopted by you.

A manly confidence in himself is what it is imperatively necessary to instill into the Indian in order to successfully convert him into a useful and civilized citizen.

We exhort him to give up most of the habits and customs he has been taught to believe are *indispensable* to a *manly* Indian, and to adopt a mode of life repugnant to his tastes and hereditary ideas of the sphere of action of a manly Indian; hence it is that we find the work of civilizing the Indians, so attended by utter failure; resulting in great measure from the loss of self-respect by the Indian, whom we have persuaded (too quickly?) to adopt the ways and customs of the whites.

Nothing increases a man's self-respect so much as the knowledge that he is capable of performing an action useful in its results to himself and others, and it is therefore manifestly the best policy to endeavor to teach the Indians, young and old, such things as are of every day utility, and, to impress upon them the fact that the performance of certain things will redound to their *personal advantage*. Our boys returning home from your school, will be able to show their parents or friends how to fix a plough, wagon or some other utensil that may be slightly out of repair, to make a table, a bench, bedstead or house; how and when and in what soil to plant seeds, and the proper mode of cultivating the same; to read and talk English, which will enable them to trade understandingly with passing steamboats, traders, or other white men with whom they may desire to sell or buy.

I do not wish to decry the efforts of anyone who may be working for the good of the Indians. I recognize the fact that it is the duty of everyone interested in the Indians to encourage earnest and faithful effort everywhere and by everyone; but I regret exceedingly the attempt made to lessen confidence in your work, as I am fully convinced that you have adopted a course of training with the Indian boys under your charge which must inevitably wield a powerful influence in favor of the work of civilizing and rendering useful citizens of them, their relatives and friends.

Enclosed find $1.00, for which please send your paper to my address.

With hearty thanks for your persevering efforts in behalf of Indian boys from this Agency, and good wishes for the ultimate success of your benevolent undertaking.

I remain, sir, very respectfully,

Your obedient servant,

GEO. LE R. BROWN,
2d Lieut. 11th Infantry.

AN anxious aspirant to Hampton writes thus from Indian Territory to his friend here:—

"I am thinking about going to school where you are. Tell me how many Boys and girls in school there and what kind of Book do you study. Tell me what you has seen. I know you has been see the great water and I hope you has saw these great fish swim in the water. Tell me how many Teachers are you all got, how big the School house is how Big City are you in tell me all thing I like see those thing I know it is very large City This is all I can said I am your friend

"JOHN BROWN, COMANCHE."

A MIXED SCHOOL IN INDIAN TERRITORY.

AN INTERESTING TESTIMONY.

A lady teacher in the Seminole Nation, Indian Territory, writes as follows:—

"You ask me, 'How do the Indians and the blacks get on together?' My experience is—that the Indian makes more rapid progress in classes where colored pupils recite, or in attending school with the blacks, than at an Indian school. I can only speak for the Seminoles, with whom these blacks have lived. There is no difference in capacity, taking them on an average. The blacks have the advantage of our language, while the Indian has to learn the language before he can comprehend what books are designed to teach. What the effect would be to admit Indians speaking other than the Muskogee tongue, with which these blacks are familiar, I cannot say. The colored element is the life of a school here. There is no prejudice of color among the loyal Indians. Mine is the only mixed school in this nation. I have tried to make cultivation the standard—not color.

"I am, very truly,

"Yours in the work,

"MRS. NETTIE C. CONSTANT."

THE *Anpaho* (Daybreak,) published in the Sioux language in Dakota, says:—

"The eagerness of Yankton youth of both sexes to go to Hampton to school is very gratifying. The people have always been ready to let their boys go, but were more than indifferent about the girls. From great difficulty in finding any girls to go, more are offering now than can be accepted, and *all* the boys apparently want to go. Would that we might send all that wish to go."

MAKE HASTE SLOWLY.

The Italian original of this proverb (*Festina lente*) pecks snugly away in two words a vast volume of truth. Even our English version contains but three words, and it may be, that its very compactness causes so many of us to pass it unheeded. Of all people in the world we are probably the most in a hurry; we want to get through; to overcome in a trice every obstacle that is before us: if that obstacle be distance, express trains and telegraphs are just a little too slow for us, and we pine for something quicker; if there be mountains or deep valleys, we are uneasy till we tunnel one or bridge the other. This characteristic is one of which Northern Americans are justly proud, but it is well to remember how dangerous are all extremes, and that the boundary between the sublime and the ridiculous is the merest film. Within bounds, this energy is admirable; but without bounds, this overweening hurry, this push and drive, this sixty-miles-an-hour sort of business is very apt to result in unfinished work, in fine conceptions but half wrought out, in neglected details, in short—in what is called "a botch."

In the Northern Anglo-American this spirit runs all through; it permeates every vein and fibre of his body; to be sure, it varies in degree in different individuals, but in all, it exists. In the Anglo-African, however, it exists in a far less pronounced degree, and crops out only in particular times and places. It is now it appears in certain educational, political, and social ways that I want to say a few words.

In educational matters the majority of the colored people have no regard for the proverb, "Make Haste Slowly;" in this particular they are more impetuous than the most caricatured of Yankees, and regard a pell-mell rush at or through a number of text books as commendable efforts in pursuit of an education. It would be base flattery to say that this theory of theirs is born of anything but ignorance, or that it is anything but nonsense; nevertheless, it exists, and, like many other peculiarities of the colored people, is explainable by being called the result of that "Peculiar Institution" which put men and women in the neuter gender. No doubt, generations hence this theory will be dead in this country, but that has nothing to do with its present existence, and the grumbling that is constantly going on, because students are not pushed ahead faster, and do not have more books with longer names given them. So far as education goes, we may compare the human mind to a cornfield. Suppose a man had a field of corn, and should begin and hoe a few hills at one end, and then rush off to the other end, and hoe a few hills there; that he should then go in the middle and hoe a few hills there;—what sort of "a patch" would it be? To say the least, the crop would be "spotted," and no doubt the popular verdict would be, that So-and-so is a poor farmer. Now if a student study a little of this, and a little of that, and a little of the other thing; in other words, if he start to hoe many rows and complete none, his education will be as "spotted" as the farmer's crop, and everybody whose opinion is worth having will say, he is a poor scholar. Strange as it may seem, one of the most serious drawbacks a colored student has, is the ignorance of a great majority of his race. Mathematically speaking, a very small quantity is infinitely greater than zero; and a colored student who may know very little, comparing his knowledge with that of his neighbors, feels how much more he knows than they, and if he has no influences to counterbalance, falls to thinking, "How much I know!" which is only another way of saying, "What an ass I am." I remember one instance of a student, in many respects a most worthy young man, who studied physiology for some four months, and never distinguished himself as being particularly proficient in his class; but when vacation came, he saw fit to deliver a public lecture, somewhere in the rural districts, on the subject. Now to have such a thing come to pass, there had to be an audience who knew less than he on the subject, and he had to feel that the little he knew was vastly more than his hearers knew. In places where education is almost universal, a young man with only a smatter of this and a smatter of that, would not be led into such an extrema of self-satisfaction, as would cause him to make public the thinness of his educational veneer. "Comparisons are odious" to be sure, but how can we judge except by comparisons, either with something real, or with an ideal? It is asking almost too much to expect that the colored students, who have begun their education at any of the schools of the country, should not be pulled back by the dense ignorance of a large part of their people in the backwoods districts, which are almost of necessity their fields of labor.

It is by neglecting to "make haste slowly," that so many of our colored friends expose themselves to the batteries of ridicule, which their enemies are ever ready to turn on them: they not only expose themselves to the fire of such batteries, but actually furnish ammunition to the gunners. It seems almost a law of nature, that those things which are to be lasting are of slow growth—it takes years for an acorn to become a useful oak, but a mullen-stalk grows and dies in a summer. A mullen-stalk kind of an education almost any sort of a being can acquire, but to gain an education of the oak sort, one that can be useful to the possessor and to others, requires a very different length of time, and a very different course of procedure.

In matters political we find that "Make haste slowly" is a proverb to which the colored people pay but little heed—it seems not uncommon for them to believe that any man is fit for any office he can get. It is a notorious fact that in the legislature of South Carolina some years ago, a goodly percentage of the members could not sign their own names. The same thing is true of many minor offices; and the story of the Louisiana postmaster, who could not read, and held that this was an advantage, as Postal-cards going through the office would be safe, was founded on fact. The idea that a man to be a good officer must have some education and qualifications for the office, seems almost unknown, and the ruling spirit is, or perhaps it would be more accurate to say, *was*, that one man was just as good as another, and just as fit to be president, senator, or representative That this is utterly absurd goes without saying; nevertheless, it is an absurdity that has pervaded the political atmosphere, and to some extent yet taints it. An officer, in the strict sense of the word, *is one who has a duty to perform*,—and to say that any man is fitted to perform all duties, is to go to a physician for legal advice, and to a lawyer for physic. The real meaning of officer is nine times out of ten misunderstood, and people regard an officer as one having certain rights and powers, forgetful of the fact that he is vested with those rights and powers only on the ground of filling certain duties. No person who has watched the improvement in the colored people for the last fourteen years can reasonably doubt their capacity for still greater improvement; but all improvement is a matter of growth, and in all growth time is a factor. It has taken the Anglo-Saxon nearly a thousand years to acquire even his present capacity for self-government—a thousand years of trial, blood and effort. Would it be anything short of a miracle, if all the Anglo-Saxon has done in a thousand years could be done in fifteen or twenty by a race that endured two hundred and fifty years of slavery in this country, and whose ancestors in Africa were lower than the Anglo-Saxons at the Norman invasion? Every ancient civilization is marked by ruins, but where in those parts of Africa whence came the American slaves, are any ruins of civilization reported? All this goes to prove that the only course open to the colored people of this country, if they seek political advancement—that is, an advancement that will stick—is to make haste slowly; to remember that Rome was not built in a day; that all history shows that progress has only been made through suffering and baffling repulses; and that those who have progressed, have done so by surmounting their difficulties—and those who have gone backwards, have been surmounted by theirs.

In social matters, this idea of making haste slowly presents itself in perhaps its most difficult phase. Men associate with one another from the pleasure or profit they mutually find in such association; this fact lies at the bottom of the social edifice—mutual pleasure or profit. The profit or pleasure cannot be one sided, or association will not occur. A cat might like to walk with a king, but the king might not like to walk with the cat, and unless the liking was mutual there would be no association. A good many colored people had the idea that the fifteenth Amendment and the various statutes that grew out of it, would cause a social revolution, and that everybody would be socially the equal of everybody else. The idea was about as sensible as the Pope's Bull against the Comet; but the discovering it to be a mistake has taken time, and caused no little suffering. That there is a strong prejudice against color in this country is no doubt true; it is a prejudice founded on the fact that for generations, people have associated a black man with ignorance and servitude, and an association that has been growing and been handed down for years, cannot be wiped out in a day or a week. The social elevation of any part of a race is difficult; but the idea of the social elevation of a race *en masse* is about as chimerical as a railway to the moon. When a man or woman can show their in him or her are qualities in which a neighbor can find pleasure or profit, and that neighbor has similar qualities to offer in return, then, barring prejudice, social relations will establish themselves. But until such moral, mental, or physical qualities show themselves, social barriers will exist, higher and sharper than any patented picket fence. To develop these qualities is a work of time and effort, or what amounts to about the same thing—education. Here comes in the Make Haste Slowly: and with still greater emphasis does it appear in the doing away with prejudice. To put one's self where one is not wanted is the very depth of bad manners, and the only way to get into any social circle is to so conduct ourselves that the social circle will find as much delight in us as we in it. No amount of human legislation can make an ebb tide flood, nor make society tolerate a man who seeks to take pleasure or profit out of it, without putting an equal amount of profit or pleasure into it. To do this, one must Make Haste Slowly. T. T. N.

Agricultural.

FARM WAGES.

The average rate of pay in New England for farm laborers on yearly engagements, without board, is $20.31 per month, against $22.60 at the beginning of the year—a decline of 10 per ct. The average cost of living has fallen from $9.13 to $8.02 per month—a decline of more than 13 per cent. In New York, farm laborers receive 8½ per cent. less than they did a year earlier, and pay 10 per cent. less for their living. The South Atlantic States reduced labor 15 per cent. and subsistence 16 per cent., and in the Gulf States labor fell 5 per cent. and subsistence only 3 per cent.; the average pay in the former being $11.19, and in the latter $14.80 per month. In the nine Island States east of the Mississippi, the monthly pay varies from $15.50 per month south of the Ohio, to $20.90 in the north—the rate of decline in wages being a fraction less than that of the cost of living; while in the six States west of the Mississippi the present average pay for farm labor is $23.81 per month—a slight increase over that of a year earlier—and the price of subsistence falls off about 2 per cent.

West of the Mississippi, the increase in the rate of wages is chiefly due to the extension of mining operations. In this region a large number of artizans have appropriated public lands, and seek to pay for their claims by working a part of their time at their trades. Quite a number of farm laborers have done likewise, and they work part of the time for wages on the farms of others. The large immigration has enlarged the stock of labor, but it is to a great extent somewhat inefficient in character. All who desire work can get it No surplus is reported from any county in Colorado. In the two Pacific States, the average monthly pay of farm laborers is $38.22, against $36.62 one year earlier—an increase of 4½ per cent.—while the cost of living has increased fully 18 per cent.

A statement of the average rate of wages paid to agricultural labor in several countries in Europe is of interest as affording a basis of comparison between the condition of the American and European farm laborer. From the tables prepared for the report of Secretary Evarts upon this subject, the following information is gathered, the figures referring to the year 1878: Agricultural laborers in England receive without board or lodging, an average per month of $15.00 in Ireland, $14.73; in Scotland, $19.42; in Normandy, $12.44; in Italy, $15.19; in Spain, $14.95; in France, $13.65.

From the Southern Planter and Farmer for October.

WINTERING SHEEP.

Much has been said and written in regard to the successful wintering of sheep, and to those that have been long engaged in the business no advice on the subject is necessary; but there are a few facts connected with the winter management of sheep which it would be well for a new beginner to know. One is that a sheep well started in the fall is already half wintered. Wintering sheep merely for the purpose of keeping them alive is a poor way to look for profit, let prices be high or low. If they are allowed to go into winter quarters in a declining condition, the result is a demand for extra food and care the balance of the winter, and a light clip of wool in the spring. When a sheep is thriving, the wool grows rapidly,

but from the moment it begins to decline, the growth of the wool is checked. To keep them, therefore, in a thriving condition ,sheep should have alittle grain from ths time grass begins to fail in ths fall until it has a good start in tbe spring. A gill of corn or oats given them daily from now until the first of April, will do more good than a pint a day from January till June.

Good shelter, too, is another very important point in wintering sheep. Not that we favor closs harns or sheds for tbe purpose, for they are very unhealthy placee for sheep; but, whils they are often condemned as snch, it is not so much the closeness as it ie the want of proper ventilation that is to blame. Nor ie it any argument against sheltering sheep because the shelter ie improperly used. To shut sheep up closcly in any huilding without proper ventilation ie clearly wrong, but to bave warm, comfortahls quarters at night and allowed the run of tbe field through the day is another thing entirely.

Keeping too many in one flock is equally objectionable. Forty or fifty are as many as can be kept to advantage in one lot on any common-sized farm. And then, as soon after harveet as possible, the lambs should be eeparated from the older sheep and put in a field by themselves, while tbe grass is rich and nutritiue, instead of allowing them to run with the ewes until ths grase becomes dry or frosthitten. Many farmers do not seem to realize that this is the most critical period of a sheep's life, consequently, if weaned at all, the lambs ars usually turned into a vacant lot by themselves, and no furthsr attention paid them until put into winter quarters along with the older sheep. No matter how good the feed may then be, they will not thrive unless they have had a little extra care, and tbe most successful breeders of sheep are those who feed their lamhe a ligbt ration of oats two or tbree timee a day from ths tims they are taken from their mothers until spring.—*Baltimore Weekly Sun.*

Prof. Farrington, in a summary of the experiments, begun in 1870, hy the Maine Agricultural College, to ascertain which has tbe greatest value as a food for swine, cooked or uncooked meal, says: "We have, hy an experiment which has been continued from three to four months each of tbe nine years since its heginning, obtained evidence that all the money and labor expended in cooking meal for swine are more than thrown away."

A most valuable remedy for hoarse and said to be a sure curn: Forty sumac buds, one pound of rosin, one pint of ginger, half a ponnd of mustard, one pint of nnslacked lime, one pound of epsom salts, four ounces of gum guiacum, six ounces of cream tartar. Mix thoroughly and divide into thirty powders, and give one every morning in their feed hefore watering.

The Richmond *State*, representing the liberal side of Southern Sentiment, takes the following view of Negro labor.

The fear that with the loss of slave labor we should lose the grip we had obtainod upon the commerce of the world through our immense cotton crop has heen entirely dissipated by the result of actual experience. During the ten years preceding the war—the last ten years of slave labor—the cotton crop of the South was in round numbers thirty-five million hales. During the last ten years, inclnding 1879, the crop was forty-onc and a half million, valued at $3,000,000,000, a solid increase of six and a half million bales The doctrine of the ex-slave-bolder tben, tbat the free Negro would not, and the white man could not, work the cotton fields, falls entirely to the ground. Wbite men dnring the last few years have done not a little in the cotton fields of the South; but the arm of the free Negro bas been the chief instrument in bringing this revenue of $3,000,000,000 to the cotton-growing States. The free Negro is bappy on corn meal and bacon, and it bas been clearly shown tbat his paid labor is cbeaper than his free labor. The United States now raises nearly balf the cotton grown in the whole world; yet each year's crop for the world could be grown, says Mr. EDWARD ATKINSON, of Boston, one of the bigbest authorities on cotton statistics, on a twelftb section of the arable land of Texas, or on the good lands of any other two cotton-growing States, without over-taxing them. If, then, cotton is not king to-day there is no reason why cotton shonld not he in a few years. If tba Sonth will develop her resonrces like the West, she will clothe the world while tha West feeds it. Snch a developmant is, of course, only consistent with peace, union and harmony, whicb must he restored on the basis of onr ancient friendship and fraternity of feeling.

SOUTHERN PLANTER AND FARMER for OCTOBER, publisbed at Richmond, Va., at $2 a year, is received. Among other interesting articles hy prominent Southern farmers, we notice one of special interest to snch farmers of the South, as wish to improve their worn-out lands, by Dr. Elizy, on "Green Fallow Crops, Animal Manures and Commercial Fertilizers." The Doctor discusses with great interest and originality the scientific and practical action of pea and clover fallow, and grasses generally—the best time, mode of seeding, &c. His discnssion on the action of plaster, lime and commercial fertilizers exhibits great scientific research and practical experience. This series of articles should be read hy every Southern farmer who desires to improve his lands hy the most economical and efficient means. The *Planter and Farmer* is a leading agricultural journal for Southern farmers, and we advise our readers to subscribe to it.

"*Our Cashier's Scrap Book*," hy Henry C. Percy of Norfolk, Va., is very entertaining. Mr. Percy has had, during the past ten years, nnmerous facilities for observing negro peculiarities, and has recorded the numhcrless funny sayings at his counter. An old colored woman, surprised at receiving interest on her deposit, thinking that, of course, she had to pay for the care of it hy the Bank, illustrates a daily experience at the Home Savings Bank.

NEWS OF THE MONTH.

FOREIGN

The Ameer, of Afghanistan, Yakoob Khan, has abdicated.

The reported defeat of the Russians at Geog-Tepe is confirmed.

On Friday Oct. 17th, snow fell at Vienna to the depth of six inches. At Gratz the snow is several feet deep. Snch weather is unprecedented at this time of the year.

Four of the largest trades unions in Great Britain have, during their comparative brief terms of existence, spent over $1,500,000 in relieving the wants of members on striko.

A Paris despatch says the *Gaulois* asserts that the ex-Empress Eugenie, notwithstanding all efforts to dissuade her, will embark next February for Zuinland to prey on the spot where her son was killed.

Sir Garnet Wolseley has publicly declared that the annexation of the Transvaal is irrevocable. The Committee of Boers have adopted a resolution that nothing will satisfy them but the restoration of independence.

The Provisional Government in Hayti has been overturned and a new one formed under the lead of F. Hyppolite. Two members of the late Government are in prison. Montmprency Benjahin has fled to the Dutch Consulate-General, and L. Fanis to the American Legation.

Destructive storms and inundations have occurred in Spain. In the Malaga and Alicante districts 2,000 houses have been desteryed. The damage to property is estimated at $6,000,000. A telegram from Murcia states that 570 bodies have already been fonnd. It is believed that over 2,000 people have perished.

A statistical abstract relating to British India from 1868 to 1878-9, which has just been issued, gives the area of British India, exclusive of native States, as 899,841 square miles; the number of inhahited houses, 37,043,704, and the population, 191,096,603. The area of the native States is stated at 575,295 square miles, and the population at 49,161,340. The area of the French possessions is 178 square miles, and the population, 271,460; and of the Portuguese possessions, 1,086 square miles, the population being 407,712. The total area of all India is thus 1,475,879 square miles, and the total population, 240,937,315. The total revenue in the year 1878 was £ 58,969,301, and the total expenditure, £62,512,388.

POLITICAL.

The elections of State officers in Ohio and Iowa, on Tuesday Oct. 14, were looked forward to with great interest throughout the country. The official returns have not been made up, but the general result was as follows:

In Ohio, Foster, Republican, was elected Governor by a majority over Ewing, Democrat, of about 20,000. The Republicans have a majority in both houses of the Legislature and a majority, on joint ballot, of 31. This insures the election of a Republican as successor to Mr. Thurman in the U. S. Senate.

In Iowa, Governor Gear, Republican, was re-elected by a plurality of 75,000 over Trimble, Democrat, 100,000 over Campbell, Greenback, and a majority of about 25,000 over all. The Republicans are reported to have elected all the Senators excepting three, and about 90 of the 100 members of the lower house of the Legislature. The Greenbackers have elected one Representative and have lost four.

The republicans of Cincinnati at the late election, elected the first colored man to the Ohio Legislature.

In Louisiana there are 160,000 voters: 82,000 are colored, 60,000 cannot read.

DOMESTIC.

YELLOW FEVER.—Forty-nine new cases of fever were reported last week at Memphis—32 whites and 17 colored. This makes the total nnmber of cases to date 1,840. There were 31 deaths during the week, swelling the nnmber thus far to 456. The Howard Association has 101 nnrses on duty attending 60 white and 31 colored families.

Latest reports state that the frost has reached Memphis, and the fever is at an end.

Despatches from Forest City, Ark., report eight deaths from yellow fever in that place, and the local Board of Health has issued a proclamation warning the people from coming into the city.

The Georgia State school commissioner has appointed fourteen colored pupils to the Peahody scholarships in the Atlanta University.

It appears from figures furnished the committee on railroads of the New York Assembly that the elevated railroads of New York city did a profitable business in the last three months. They carried 12,012,956 passengers and received $906,862,20. Their receipts will probably foot up $4,000,000 a year in a very short time.

WASHINGTON, Oct. 1.—A dispatch from Milk river, Col., states that Major Thornhurgh's command, composed of three companies of cavalry, was attacked in a bad canyon, September 29, near that place, by soveral hundred hostile White River Ute Indians, and retreated to the wagon train and entrenched. During the retreat Major Thornhurgh was instantly killed, Capt. Payne was wounded in two places slightly, and Lieut. Paddock and Capt. Grimes were each painfully, but not dangerously wounded. Thirteen enlisted men, Lowory, a courier, and Wagonmaster Middleware killed, and twenty soldiers and teamsters wounded. The hostile Indians pursued, and, beside picking off the horses and mules wherever seen, fired the grass all around to hurn ont the camp. Gordon's freight outfit of Indian supplies, which was near, was harned by the fire, also the wagons of company F. Capt. Payne had his horse killed, and Lieut. Cherry's was shot during the engagement. About three-fourths of the horses and mules were killed.

Reinforcements under Gen. Merritt relieved the besieged command Oct. 5th. At the sight of fresh troops the Indians fled and are still hiding. A portion of the command are colored, who fought nobly. Agent Mecker of the White River Agency, Uto reservation was murdered.

NORWICH, CONN., Oct. 24.—Two inches of snow fell here during last night. Weather is cold.

POUGHKEEPSIE, N. Y., Oct. 24.—Snow squalls prevail along the Hudson to-day, and the Catskills are covered with snow, the first of the season.

ST. THOMAS, ONT., Oct. 24.—Six inches of snow fell last night, accompanied by frost. It is still snowing.

YORKTOWN, VA., Oct. 23.—The ninety-eighth anniversary of the surrender of Lord Cornwallis was appropriately celebrated here to-day, the occasion being preliminary to the contemplated centennial celebration in 1881. The weather was pleasant and the attendance of military and civilians large, brilliant and enthusiastic. Many of the most distinguished citizens were present from different sections of the country, and the army and navy and the volunteer military organizations from neighboring cities lent their aid to the display. The occasion passed off most agreeably, nothing occurring to detract from its interest.

THE NEW ORLEANS SCHOOLS can not accommodate, as now managed, the large number of pupils applying for admission. The superintendent proposes, therefore, and very wisely, that only the lawful number of sixty scholars shall constitute a class in the primary department, and that applicants in excess of that number shall be organized into a separate class for the afternoon session, the others to be dismissed at the close of their morning session. This period of instruction will be as long as it is desirable to inflict upon little children. The city appropriates this year $200,000 for the support of the schools.

DISAPPEARANCE OF THE TRAMP.—A NEW YORK letter says: "One of the most noticeable incidents of the present general improvement in business and industry is the almost total disappearance of street mendicants from the highways and byways. The professional tramp also appears to be a thing of the past. He is well-nigh invisible. The commissioners of charity, moreover have fewer applications for relief than has been the case in many years, and at the police stations the testimony is uniform touching the rapid decrease of after-dark suppliants for lodging and food. These are important facts. One inference is that that class of persons are now finding employment, and are in no further need of charity. All the leading manufacturing establishments in and about the city, it is well known, are increasing their hands, and some of them are running until late in the evening to complete orders. The tobacco factories, which employ vast nnmbers of people of both sexes, are notably busy, as likewise the upholsterers, the plumbers, the cabinetmakers, the boot and shoemakers and the clothing manufacturers. It is a public and private blessing that everybody should thus be at work, and, if the improvement can be maintained on its present basis, we may look forward for a comfortable winter for working people of every class."—*The* (Baltimore) *Sun.*

Oysters! - Oysters!

The canning of steamed oysters has long been an important branch of industry in Baltimore; but the canning of the very best oysters in the Chesapeake, almost the finest oysters there are caught, is an enterprise just established. The undersigned feels confident that in opening a Packing House at this point, he is affording his fellow-citizens and visitors of the country, an opportunity, (which he hopes will be appreciated) of getting the best and freshest of oysters, prepared in the most healthful way, at the most moderate prices.

An Oyster may remain out of water many hours, say days, before it be completely spoiled; but from the moment it is caught and exposed to the air a process of deterioration goes on. It needs no argument to show that the sooner an oyster is hermetically sealed after being caught the better it will be in taste, solidity saltiness, and healthfulness. Within a radius of fifteen miles of this point, are millions on millions of bushels of oysters, from the best of which will the stock used, be selected. The time consumed in transporting the bivalves from their beds to the Packing House is not worth considering, especially as the majority of the boats employed are the little "canoes" peculiar to these waters.

My packing is at present divided into three grades, according to the size of the oysters used; the same care, however, is taken in the preparation of all grades. A case of one pound cans contains 4 dozen; a case of two pound cans contains 2 dozen. Owing to the unsettled condition of the market, I can only quote to-day's prices, which are as follows:

Giants of Hampton Roads, No. 1—No. 2 $3.00 per doz.
Beauties of Hampt'n Roads, " 1 $1.30, " 2 $2.00 " "
Cove Oysters, " 1 $1.00, " 2 $1.75 " "

The above prices are net cash, and remittance may be made by drafts on New York, Chicago, or Norfolk, or else by P. O. order. Authority to draw at sight with Bill of lading attached will ensure the prompt forwarding of any goods ordered. If preferred, cases may be sent by Adams express, C. O. D.; but unless specially directed, all shipments will be made via Norfolk, Va.

Direct all telegrams, via Fort Monroe.

Hand Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad and Devilled Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all seafood, far exceeding in daintiness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $5.00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $3.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

Normal School Press, Hampton, Va.

Hampton Normal and Agricultural Institute,

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all. Board, &c., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 12 years of age. The first year is prebationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable &c., &c.

For further information address,

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung up in every part of the Union for making an "Imitation Singer Machine."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken the FIRST Prize over ALL competitors more than TWO HUNDRED TIMES. *Why?*

After the Chicago Fire the Relief Committee undertook to furnish sewing machines to the needy woman of that city. Applicants were permitted to choose from six different kinds of machines. 2,944 applicants were furnished with machines: 2,497 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines! These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The people bought Singer Machines as follows:

1870	127,933	Singer Machines
1871	181,260	" "
1872	219,558	" "
1873	232,444	" "
1874	211,679	" "
1875	249 853	" "
1876	262,316	" "
1877	283,312	" "
1878	356,432	" "

Many of the manufacturers of other machines refuse to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines. A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED.*

How to Cleanse and Disinfect.

BY ELISHA HARRIS, M. D.

CLEANLINESS AND HEALTH.

FILTH is the name we give to most offensive things. It is something more than "misplaced dirt," for whatever is putrefying, or, by its contact, causing decay or disease, is essentially filthy because offensive to life and health, as well as to the senses. A great physician and medical officer in England has described the Filth Diseases, which kill about one-half of all who die in that country, and these are diseases most common and most dreaded in our American towns and homes; they should be well described, and all their causes must be treated as the foes of life and health.

In this little book we will make an attack upon this enemy of the homes and the cities and villages of our prosperous country. It is our purpose, indeed, to arouse all readers to make continual warfare against uncleanness. These pages are written to show why and how to make the warfare for the protection of the health and comfort of the people.

There are moral and religious reasons for requiring and teaching all the means of cleanliness, for the Bible shows cleansing and purity were enforced by the laws of Moses. The pious John Wesley exclaimed in one of his great sermons to the common people, "Cleanliness is, indeed, next to Godliness!" These religious reasons for cleansing and purity of the person, the home, and the city or village, may well be repeated and enforced as duties of education and habit, if we would preserve and honor the Divine Image of our Creator.

The duty, the reasons, the means and the consequences of thorough cleansing and disinfection will now be described under the name of

SANITARY CLEANSING.

The duty and reasons for such cleansing and purity go together, for health, comfort and the public welfare are so dependent upon the cleanliness of people both in their persons and in their communities of dwellings and streets, that the reasons seem to be obvious and the duty an imperative one. Some of the reasons, however, which are not everywhere understood, must here be mentioned, as follows:—

There are several kinds of waste and decay in vegetable and animal matters which are not always offensive to sight or smell, but which will produce disease, or injure the health of persons who are exposed to it. For instance, the oozing or soaking that may escape through the soil from a common privy, or from excremental matters, wherever cast away, especially if scarlet fever, typhoid fever, dysentery, or cholera is present in the house, and such fluids are left to soak or drain through the soil to a well or spring, will poison the drinking water and may destroy hundreds of lives. It has been proved that even so unsuspected a cause of such poisoning with an unseen and unsmelled infection as the rinsing of an empty milk-can with water from a well or spring so contaminated, will so infect the fresh milk when put in and conveyed to customers, however far away or near, that numerous families have thus become infected; and as the infection has spread from person to person and street to street, or family to family, the malady has become *epidemic*, or, *upon the people*. Like the increasing heat and fierceness of a raging conflagration, the destructiveness of an epidemic often becomes more and more terrible as the number of the sick increases.

Many fatal diseases depend upon the operation of contagious matter that is invisible, and which will not operate to any great extent where everything is clean and pure. Yet there are some kinds of contagion which will long remain in porous substances, like the clothing or bedding used by the sick, or in the carpets and cloths, and even in the floors and wall-paper, or unwashed walls of the sick-room. Some diseases, like cholera, dysentery and scarletina, infect the grounds and sinks into which the matters which the sick discharge are poured; and there are several diseases, especially scarlatina, diphtheria, small-pox, yellow fever and typhus, which so infect the confined air of a room and any package or chest, that the poisonous contagion is very apt to remain many months, and may remain even more than a year, if not thoroughly disinfected. Numerous instances have occurred this summer (1879) in which clothing, bedding and sick-rooms, and even houses in which there had been no sickness, which were infected last autumn with yellow fever, have given that terrible disease to unsuspecting persons. So well are the people of Memphis and New Orleans convinced of this fact now, that their health officers of the National Board of Health are fully determined that everything and every place which has been exposed to the yellow fever infection shall be effectually purified, and all such infection be destroyed in the affected towns and cities that have suffered from this cause this present year, or even the year before.

We have thus called attention to invisible dangers because it is possible to apply visible means of destruction and control of them, and these means are all in the nature of purification and disinfection, such as we will presently describe.

The surface of the human body, and even the delicate membrane covering the eye, as well as the mucous lining of the internal passages of the human body, may, and often do become diseased in such manner, by neglect of purity and careful cleanliness, that they will give off contagious matter. The contagious disorders of the skin, the eyes and mouth are results of neglect of cleanliness, and are justly esteemed very disgusting. We will give some plain rules which will prevent them.

Decaying matters, whether vegetable or animal, and not unfrequently the still living but unhealthy and unclean surfaces and tissues of both animal and vegetable bodies, are apt to become infected with parasites which prey upon and injure or destroy the tissues. Even the tenderest parts and juices of vegetable substances and the skin, the muscles and blood of the animal, may be harmed in this way. It was a little invisible parasite which destroyed the potatoes at harvest time throughout the country many years ago, and there are some foul waters and infected kinds of meat which will breed disease in persons who partake of them. Therefore, it is a duty to be cleanly in food and drink, as well as in our breathing and personal habits.

MORAL AND RELIGIOUS REASONS FOR CLEANLINESS.

We have now seen abundant reasons why the merely animal nature of human beings requires cleanliness and purity in their persons, habits and habitations. These reasons might with propriety be applied to the domesticated dumb beasts; and, indeed, the owners and masters of fine stocks of the domestic animals order the care and management of such animals upon these sanitary principles of perfect cleanliness and watchful disinfection. But as the Divine Image has been stamped upon human beings, the mind and moral feelings—the spirit which makes man "a living soul"—have the highest importance in regard to all that affects the health of individuals and communities. It is because "Cleanliness is, indeed, next to Godliness" that we need to regard it as a supreme duty to provide for and enforce the rules of cleansing, purity and disinfection.

It is doubtful if persons who become filthy in their habits and neglect to provide for the purification of their bodies, clothing and premises, will ever be found pure and sweet in their thoughts, language and influence. The writer has had occasion to observe many facts in regard to this matter, and to express some bold conclusions concerning neglected causes of impurity of thought, of manners and of life among the common people, and especially in youth. The blessed Redeemer, when beginning his sermon on the Mount, declared the grandest of all religious truths when he said:

"Blessed are the pure in heart, for they shall see God."

With reverence and great truthfulness it may also be said, that the cleanly and pure in their lives and homes *are blessed*, for they can fully realize the happiness and sweetness of purity in their thoughts and acts.

There is no hiding the fact that a great many persons who really wish to be morally pure and who yearn to be delivered from impure and unholy thoughts and feelings, utterly fail to become pure in heart, fail to overcome their evil imagination and disturbing thoughts and wrong habits of speech and life, because they do not know and obey the rules of purity and perfect cleanliness in person, clothing and habitation. The good physician, the religious teacher, the good mother and faithful father often has occasion to bear this truth in mind and to act upon it.

Diseases of the body, the fatal contagious and pestilences which destroy thousands of precious lives suddenly, the discomforts, domestic and personal unhappiness chargeable to uncleanliness, ought certainly to lead all persons to adopt the rules and regulations of sanitary cleanliness and purification. The moral reasons for doing so should lead every religious person to enforce and inculcate the duty of such cleanliness and purity. Even if no moral considerations were mentioned or thought of while teaching and providing ways and means for securing the sanitary blessings of cleanliness and purity, the desire for health and comfort, and the duty of decency and a true regard for the welfare of the community in which we reside, would seem to be enough to make all persons both thoughtful and faithful in whatever is necessary for protection against sickness and discomfort.

In preparing the simple rules of cleanliness and sanitary purification which here follow, we have kept in mind the fact that the community and the public generally, the household or family and the individual, are mutually concerned, and in some sense mutually responsible for a faithful observance of these duties. We have to keep constantly in mind, also, that the *air*, the *water*, the *streets and grounds*, the *clothing and dwellings* of individuals, the *waste and decaying matters*, the outflowing or sewerage, the sick-rooms and hospital-wards, the *remains of the dead* and the *sanitary care of domestic animals*,—all, in their respective ways and times, require the faithful application of these Sanitary Rules.

WHAT TO CLEANSE AND KEEP PURE.

We will follow the list just given, and must here refer to the human body as the house which man resides in while living on earth, and which must itself be kept sweet and clean and well defended and repaired. This living body, wonderfully made, the earthly house of the living soul, is worthy of all the care and protection we give it. The skin which covers it has to be kept clean and healthy by bathing and fresh air; the eyes, ears, teeth and mouth and nostrils, ever exposed to the dust without and the outflowing secretions that are local irritants when lodged and dried upon the parts from which nature designed them to be washed away; delicate mucous linings of the lungs, the stomach and bowels; the flesh itself, and especially the blood as it comes through the body, all require to be preserved pure and cleanly,—for if not so preserved they will become diseased, so that discomfort, inflamations, disease and pain will follow. The air, the water, the food and clothing that are supplied for the human body—or the house we live in—should be clean and fresh, so that perfect health and comfort shall be enjoyed by the body and the mind.

The Air.—The right to fresh, pure air is a natural and inalienable right, as precious as liberty itself. Foul vapors and gases, smoke and sickening odors must be prevented from defiling the air in any region where it is to be breathed. To preserve the cleanliness and purity of the atmosphere about our dwelling houses, shops and streets, requires all inhabitants and the operators of business to see to it that by all suitable means they themselves prevent any defilement of the air. The sanitary care of cellars, stables, and all excremental matter and manures, must be understood, and all gases and odors of decaying matter must be neutralized or absorbed by suitable means, as we show in the annexed Rules of Cleansing and Disinfection.

The Water.—The wells, springs, cisterns and reservoirs of water used for drinking and in households must always be *protected against defilement*. If a well or stream is used for these purposes, its actual purity and protection should be looked after at once, and the fact should be settled by the family physician or some other competent person—that the water is pure and the means of its protection against any foul soakage are sufficient. If any fertile field, or a privy, a cellar, a barn, stable or pigpen drains towards the well or stream, there should be some means of protection devised, or another and safer source of supply of water be sought. The utensils, such as pails and pitchers, in which the water used for drinking is contained, should be kept constantly clean; and when any sickness occurs in a house, the water and drinking cups must be unused by other persons.

Food.—Various articles that are used for food are liable to become impure. Even fresh milk and cream so rapidly absorb foul vapors and so readily take up and hold the invisible contagious poison of fevers, that great care is necessary in preserving the perfect purity of milk. The cleanness and sweetness of meats and of all bread stuff should be preserved. If in the presence of decaying matter and putrid gases, meats, and especially fish and butter, quickly become unwholesome. Some people try to restore such hurt food to sweetness by immersing it in water containing an equal quantity of lumps of charcoal, but it is better to prevent the defilement and putrescence altogether.

Streets and Grounds.—The pathways and grounds about dwellings, and all roadways, are best kept clean and free from nuisance, when so graded and sloped as to give easy and certain flowing off for the water; but there must be under drainage to make grounds, pathe and roadways dry. The removal of all decaying matter—animal and vegetable—from the vicinity of dwellings and streets is a sanitary duty. The freshness and healthfulness of pathe and grounds is improved by an occasional layer of fine gravel; but never by sawdust, chips or planks. Decaying wood, even chips and sawdust, is unwholesome.

Clothing.—The modern practice of boiling as well as washing all undergarments, is the best of sanitary rules for such clothing. The frequent ventilation and brushing of all other garments; and a long exposure to light and wind, with most thorough brushing of all clothing and upholstered things that cannot be boiled, is the proper sanitary treatment for such materials, if they have been exposed to any sickness or foul air.

Dwelling-houses.—Through and through ventilation, sunlight, the hot scrubbing of wood floors and the hard wiping and dusting of walls, as well as the lime-washing of common ceilings, are essential means of cleanliness of habitations. Closets, storerooms and pantries and the cellars require equally effectual opening, cleansing and ventilation. The proper use of fresh lime, carbolic acid washes, etc., will be described presently.

Waste and Decaying Matters.—The removal and prevention of such causes of nuisance is the first duty, but the immediate arrest and prevention of the putrefaction and the control of the foul emanations must be secured by the best means at hand. (*See the Rules for Disinfection.*) It is entirely practicable to keep all kinds of refuse matter, even the common garbage of the household, in such manner, by the help of disinfectants or anti-ferments, that it will not have or become offensive before its final removal. But it is important that there should be no needless waste and garbage, and that the regulations for disinfecting and removing such refuse matter shall be faithfully observed. The putrescence of refuse materials used for food is not only excessively offensive, but may be the cause of sudden and even fatal sickness. The sweet and nutritious articles most used for food become putrescent poisons when rotting as garbage; therefore such decay or fermentation should be prevented altogether until removed to the field and covered in the soil. Many a valuable life has been lost and many a family been prostrated by sudden sickness, by the putrid emanations of a few bushels of rotting potatoes or cabbages, or by putrid animal matters and melons.

The Outflow and Sewerage from Dwellings, and Domestic Animals.—Sewerage matter is very dangerous stuff when stagnant and sending off its gases into dwelling houses, shops and other occupied buildings; and, if it is not completely washed away (flushed) by flowing water, it should be led deeply into porous ground at least 200 yards away from the house. It must be kept far away from wells, springs and streams which supply water for household use. The waste pipes within the house, and all the traps and cess-basins, as well as every water-closet and privy, should be carefully disinfected at stated times. (*See Rules.*)

Sick-rooms and Hospitals.—There is something given off from the bodies and in the excremental matters of sick people, which tends to produce disease. All diseases of the bowels and all the fevers, seem to have this tendency. Therefore, all such matters should be disinfected as soon as voided. (*See Disinfection of Sick-rooms.*) The apartment or the ward in which the sick lay should be both cleansed and disinfected, during the sickness and immediately after the removal of the patients. The clothing and vessels used by the sick of any fever or infectious malady, should be thoroughly disinfected in the sick chamber, before removal.

The Remains of the Dead.—The last service given by

the living to the remains of those who die is designed to give protection against the decaying elements of the

Light, as well as ventilation, is necessary for preserving the cleanliness and purity of a dwelling or any apartment. Fungus or mould, which gives a musty smell,

are allowed for each inhabitant daily, there need be no lack of such flushing of the house sewerage.

The special drying of a damp apartment is best secured

the living to the remains of those who die is designed to give protection against the decaying elements of the dead body. Buried deeply in the earth, the putrid flesh returns to dust and becomes a part of the common soil. Before the burial, and as soon as death occurs, the cleansing of the surface of the corpse and wrapping it in cloth that is moistened with a suitable disinfecting fluid, so as to delay the beginning of decay, is a sanitary duty which common regard for the deceased person, as well as the welfare of the living, requires. The ancients, who wrapped the corpse in the incense cloths and spices, thus delayed the decay and endeavored to render the dead body inoffensive. Simpler and more effectual means are now used; but such means, even, are too much neglected, yet they are infinitely cheaper and less troublesome than ice packing which is the most common method. The dead should be buried out of our sight without needless delay; but, while the corpse awaits its burial, it should be wrapped in a cloth saturated with a disinfecting solution which any physician can order.*

Domestic Animals.—The health, beauty and usefulness of domestic animals depend greatly upon their cleanliness and the cleanly keeping or care of them. Not only can they be taught to be cleanly and decent themselves, but they become docile and agreeable in proportion as they are cleanly. Suitable means of cleanliness, especially for their voluntary daily bathing in water, to the extent that each species of such animals desires to bathe, should be provided by the persons who keep them. Nearly all quadrupeds seek opportunities to walk about in fresh water. Birds and certain fowls baths with deliberation and pleasure, and all the domestic animals instinctively seek fresh, clean bedding or nests. To neglect the duty of providing for these instinctive wants of such animals is cruel, and will cause disease in them, besides endangering the health of the family and any human beings who have much to do with them. Physicians know that the diseases of domestic animals are chiefly "filth diseases," and those of the dog, the horse, the swine and the cat cause much injury to the human family. Give such creatures all the means of living most cleanly and healthfully, if you would be protected against the loathsome maladies which they aid in propagating when unclean and diseased.

Finally, we should observe our own *instincts of cleanliness*, and should quickly correct any neglect or habit that leads to filthiness of person, clothing or habitation. Offensive odors and filthy things are but other names for rottenness. They offend our senses and our health, and therefore should be avoided.

The following Rules of Cleanliness and Disinfection will make everything plain and practicable in regard to these duties.

Rules For Cleansing And Disinfection.

The Ways and Means.—Pure water and fresh air, and means for applying these elements for cleansing, are the first to be provided for every person and every dwelling. Purity and health are not to be enjoyed without them.

From twenty to thirty gallons of water is the allowance needed daily by every individual who is to be kept perfectly clean in person, clothing and premises.† It is the prescribed allowance for hospitals and asylums, and no family can reasonably provide less quantity. The Croton Aqueduct brings to the inhabitants of New York City from seventy-five to one hundred gallons for each person daily, but more than half of the whole quantity is devoted to other uses than those of the household and the individual.

Every person must have from 25 to 100 cubic feet of fresh air supplied every minute. That is, if a person were to be placed in a small room measuring ten feet from floor to ceiling and being ten feet square, the supply of fresh air brought into such an apartment should be sufficient to refill it every ten minutes, if the person were seriously sick, and at least every forty minutes if perfectly well, while the external atmosphere was pure and cool. Only let this requirement of from 25 to 100 cubic feet of fresh air every minute be remembered by every person who would keep the blood and the surface of the body bathed with fresh air—sufficiently for the necessities of health. This amount of ventilation can be kept up by night and by day without any perceptable or chilling current. In one of the great church edifices on Fifth Avenue the forced volumes of fresh air are sent to the seat of every one in a congregation of 1,800 persons, at the ratio of nearly 100 cubic feet every minute, without any noticeable current.

It should be kept in mind that the blood flows constantly through the lungs, spread through hundreds of square yards of mucous membrane, for the purpose of being washed in fresh air and absorbing pure oxygen to cleanse and invigorate the body. This real internal cleansing is a necessity of health and safety which no human being has a right to interfere with or diminish.

Persons who neglect to secure these abundant supplies of pure water and fresh air endanger themselves and may become so impure and diseased as to injure other people. No dwelling, no parlor, bedroom, kitchen, school-room, work-room or hall, is fit for occupation unless it has such ventilation as will supply from 25 to 100 cubic feet of air per minute to each occupant, when demanded. Windows must be large, and some portion of two of them on different sides of the room must be kept open to secure this degree of ventilation where there are any occupants.‡

Light, as well as ventilation, is necessary for preserving the cleanliness and purity of a dwelling or any apartment. Fungus or mould, which gives a musty smell, will grow to even stain a room and its furniture when closely shut up in darkness. Sunlight, fresh air and pure water are the means of cleanliness and purity. The ways of applying these agents of health should be simple, but never be neglected. The ample supply of water so provided, stored and readily drawn by faucet or hydrant, or so kept at hand that the habit of freely using it is a sanitary and domestic duty. The bath-tub, the convenient lavatory, or wash-bowls, sponges, dippers and cups are essential to the habitual and sufficient use of water.

The habit and duty of *revolting* against foul or stagnant air, and the study of available means for supplying fresh air, should be established by all. The person who politely attempts to supply needed ventilation in a stagnant atmosphere where several or many people are suffering the want of fresh air, need not fear offending. The writer of this always does it and never was rebuked.

Light is necessary as a means of purity and health of the body, and, as before mentioned, is necessary to the cleansing and wholesomeness of dwelling apartments. Many an ailment of complaining and feeble persons may be cured by sunlight and fresh air, and not a few may be purified and made both decent and healthy by the sanitary uses of air and water.

Sewerage, and all the outflowing or excremental matters of the habitation, the individual and the community, must be re-united intimately and under cover, with the earth, or be wholly and ceaselessly washed away far from habitations, and far from such streams and wells as are used for drinking.

Disinfectants, what to disinfect, and how to use them.

Disinfectants are not substitutes for cleanliness and the use of water and fresh air. We disinfect those things and places which cannot at once be cleansed and ventilated sufficiently to prevent decay, nuisance, disease and infection. The chemical and other agents which are employed for this sanitary purpose are termed disinfectants; but they are not alike and will not be applicable alike under all circumstances.

Disinfectants are employed to destroy germs of the fungus and minute animalcular parasites, also to arrest and prevent the fermentation and decay, and to overcome as well as prevent the gases and vapors of decayed and putrifying substances. The most important use of disinfectants is that which destroys the infections and invisible signs of the contagious or infectious diseases. This special application of disinfectiou is now called "stamping out" the disease. *Burning* destroys all infectious matter, but it is found that a *boiling heat*, especially if long continued, or two or three times repeated, will also destroy infectious or contagious virus in clothing and infected apartments.

Chemical substances are employed for this purpose also, and their usefulness depends upon their power and certainty to destroy all living vegetable and animal matters. The high heat of steam which was forced into the ships infected with yellow fever off the coast of Mexico in 1848, immediately and completely destroyed the rats and vermin of the ships and at the same time disinfected the vessels, so that no persons again took yellow fever by going on board of or serving in those ships. Dry heat is sometimes more readily applied than steam or moist heat, but, generally, boiling is the readiest mode of heating, and, so far as we can ascertain, the boiling of clothing and any articles for from twenty to thirty minutes will destroy whatever infection they may contain.

The *Sulphate of Zinc* (White Vitriol) is a powerful and easily applied disinfectant and entirely safe to use. It is colorless, produces no stain and readily dissolves. In the sick-room and whenever the boiling of the clothing from the patients is in the least delayed, the infectious virus in them can be destroyed by packing them in a solution of 4 ounces of sulphate of zinc to the gallon of water. In the care of contagious and infectious diseases, it is best to have this white zinc vitriol on hand for disinfecting clothing. But the boiling of all clothing and cloths, which have been upon or exposed to the sick, is a sanitary duty not to be neglected.

Carbonate of Soda (Sal Soda), or the *Borate of Soda* (Borax), will serve very well as a disinfectant if the solution is as strong as can be made in cold water, but the zinc solution is surest and cheapest.*

Chloride of Lime, or *Carbolic Acid*, are useful where they can most properly be employed, but the lime injures and may destroy clothing, and the carbolic acid is offensive to smell, and unless of a very pure quality it stains. The chloride and the carbolic acid must never be used together. Whatever requires extra cleansing by washing, and particularly when such things have been exposed to any infectious disease, should be washed in the borax or sal soda water.

Water and *Fresh Air* are the great purifiers. Whatever else may be applied to unclean things, infected clothing, foul places or unhealthy houses, these two purifiers must be so applied as to make every part clean and fresh. Boiling water, with or without one of the disinfectants, and strong currents or breezes of fresh air will speedily remove all mouldy, slimy and musty conditions and bad odors that are common in houses, closets, &c. The cooling water may be applied with a stiff wiper or mop, and the currents of fresh air should be so turned on through open doors and windows as to *ventilate through-and-through*.

Wet cellars, damp rooms and all dark places will breed mould and fungus growths which make the air offensive and unhealthful. Light and ventilation, with thorough drying, are the remedies. The drainage and cleansing of cellars and of the grounds about the house are very necessary to healthfulness of premises, and every house-drain should be completely washed out or flushed with water daily. If 20, 50, or 100 gallons are allowed for each inhabitant daily, there need be no lack of such flushing of the house sewerage.

The special drying of a damp apartment is best secured by the continual and strong currents of air, blowing through and through. But if other means have to be used, there is nothing more effectual than finely broken unslacken lime and charcoal laid about on trays, etc.

Fresh Air is the chief defense against the causes of disease in and about our dwellings and all places to which we resort. Even the grounds upon which we walk, or that are under and about our houses, contain common air which is found to be *nearly one-fifth* of the entire volume or quantity of every solid foot or yard of earth. This *ground-air* and all the *house-air* circulates freely and comes into the rooms and all places to which we go. It is clean and fresh or it is impure and sickening, according to the condition of the grounds and the places out of which it comes. The atmosphere of the open country and above our houses, under the open sky, is clean, sweet and refreshing. The theory and practice of ventilation depend on this fact of the purity of the "open air"; but the healthfulness of "house-air and the "ground-air," as it comes into the house or is breathed at the doors and along the pathways and premises of a dwelling spot, must not be overlooked. The perfect drainage and cleanliness of the house lot and surrounding grounds should be most carefully provided for. The personal and domestic habits and rules of cleanliness are necessary to this end.

In conclusion, whatever else is resorted to for purifyeation, or for the prevention or removal of infectiou or other causes of disease, these uses of fresh air and of water, and these faithful habits of cleanliness must be the main sources of sanitary protection and comfort.

The *habit* of daily and continual care to prevent and provide against the waste and neglect, or slovenliness which *cause filth;* the habit of personal and domestic cleanliness; the systematic opening of doors and windows, the cleaning of all apartments and house premises; and the washing and flushing away of all the liquid outflowing or sewerage of the premises, will all together, as a habit of sanitary practice and a daily regulation of the house, whether it be at the poor man's cottage or the rich mansion, make domestic and personal cleanliness easy, and health and comfort secure. Like habits of personal virtue and the right uses of our time and thoughts, these *habits of cleanliness* and the sanitary regulation of houses, become sources of personal and domestic happiness and health. To secure such results, who would not adopt such *Habits and Rules of Health?*

SIMPLE RULES OF DISINFECTION.

(1.) Quicklime.—To absorb moisture and putrid fluids, use fresh Stone Lime finely broken; sprinkle it on the place to be dried, and in damp rooms place a number of plates or pans filled with the Lime powder; whitewash with pure quicklime.

(2.) Charcoal Powder.—To absorb the putrid gases, the coal must be *dry and fresh*, and should be combined with *Lime:* this compound is the *Calx Powder*, as sold in shops.

(3.) Chloride of Lime.—To give off *chlorine*, to destroy putrid effluvia and to stop putrefaction, use it as lime is used, and if in cellars or closets the *chlorine gas* is wanted, pour strong *vinegar* or diluted *Sulphuric acid* upon plates of Chloride of Lime occasionally, and add more of the Chloride.

(4.) Carbolic Acid.—This may be diluted at the rate of from forty to one hundred parts of water to one of the fluid acid. Use this solution for the same purpose as copperas is used; also to sprinkle upon any kind of garbage or decaying matter, and on foul surfaces of any kind. For sprinkling foul or unhealthy streets and alleys, mix one part of this crude Carbolic Acid with a hundred parts of the Copperas solution, and sprinkle the entire surface every four or five days during the summer and autumn.

(5.) Sulphate of Iron (Copperas) and Carbolic Acid.—To disinfect privies, cess-pools, drains, and sewers, and especially the vessels, grounds, or places in which the discharges from the sick with any fever or diarrhœal diseases are evacuated or cast away. Dissolve eight or ten pounds of sulphate of iron in three or four gallons of water, and add half a pint of fluid Carbolic acid (if it can be had), stir or agitate it briskly, to make a complete solution. Use this disinfectant as follows:

To keep privies and water-closets from becoming infected or offensive, pour a pint of this solution into every water-closet pan or privy-seat, every evening.

To disinfect masses of filth, privies, sewers, or drains, gradually pour in the solution, hour by hour, until every part of the mass or foul surface has been thoroughly disinfected.

To disinfect the discharges from the sick, let a small quantity of this solution be constantly kept in all vessels into which the diseharges are voided from the body, and let every privy and every place where the diseharges are cast away be thoroughly saturated with the disinfecting solution. Wherever cholera is present in a house or neighborhood, and wherever persons are arriving from infected places, the daily use of this disinfecting fluid should be maintained. *Bed-pans and chamber-vessels* are disinfected with this strong solution, using a gill at a time, and emptying and thoroughly cleansing as soon as used by the patient.

---

* Three ounces of crystalized Carbolic acid dissolved in a pint or more of Camphor spirits will serve to saturate a thin cloth for such a disinfecting wrapper.

† This estimate is for the household and premises, or for a community, village and city, providing for all uses.

‡ If the *outlet* and means for the egress of the foul and confined air of a room provide for the *outflowing* of air at the rate here mentioned, the *inflowing of fresh air* can be readily secured. Even a single small fireplace in a parlor will conduct from 6,000 to 10,000 cubic feet of air away from the apartment every hour the fire is kept up; and as much more will enter through crevices and a narrow opening at the top or bottom of a window or by a screened ventilating inlet. The chief point is to make sure of a steady and sufficient outlet: for this a chimney flue is the simplest.

* Borax is an excellent and safe disinfectant, as well as a good substitute for soap, whether for the surface of the body, the hair, or for clothing. Use from ¼ to ½ a pound in a gallon of water.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. VIII. HAMPTON, VA., DECEMBER, 1879. NO. 12

WE WISH YOU A MERRY CHRISTMAS.

WE WISH YOU A MERRY CHRISTMAS.

We wish you a merry Christmas,
Little Sister and I.
We're going to look at our stockings,
Hung up by the chimney so high.

All the big people are sleepy,
And it's most too dark to see;
But we couldn't lie still one bit longer,
We're both wide awake as can be.

We hope you've all hung up your stockings,
We hope you have tried to be good,
So Santa Claus wouldn't forget you,
But hring you just all that he could.

We hope you don't mind that we waked you,—
I don't b'lieve you do, for you smiled.
Mamma says that the very first Christmas
Was brought to the world by a Child.

And He was the first Christmas present,
The dearest and sweetest and best;
And now He has gone back to Heaven,
And sende every one of the rest.

And all that He wants for His present
Are children, she says—If you'd try,
Could you grown people be little children,
D'you think, such as Sister and I?

H. W. L.

THE BRIDGE AND ITS KEYSTONE.

(See page 123.)

Is not this a beautiful bridge, its one great arch sweeping the river, so graceful and airy yet so massive and strong. But do you know the whole great bridge would tumble into the river, if you were to take away just one of the stones, the top stone in the middle of the arch? That is the keystone, the stone against which all the rest on each side lean for support. Take that out, and down goes your bridge, with everybody on it.

We must remember that, for we all try to build bridges sometimes. This Christmas week at the end of the old year is a great time for bridge building. Some people sit up all the last night in the year, trying to build their bridge in a single night; a bridge from the old year to the new year, from a rather poor life to a better life, from bad ways to good ways. They look back, and around them, and think, "I haven't been walking in the right way exactly—this is a pretty worthless, barren land I have been living in, this land of selfishness and sinfulness.—I wish I could get across the stream of my bad habits into that pleasant, safe ground where some I see are walking—I wish I could have some of the pleasant fruits of goodness and unselfishness." Yes, wishing is all very well, but how shall we get there. A bridge—that is the very thing of course—a bridge all built of good resolves, the best and strongest.

A sheet of clean white paper, to write them all down; that will do for the scaffolding, you see, to hold the stones till all are laid. So we lay the stones in order—how beautiful they look! First, all the "I won'ts:" I won't ever lie any more; I won't ever steal any more; I won't ever cheat in my business any more; I won't ever be mean any more, or give place to evil thoughts; I won't drink any more; I won't swear; I won't speak a cross word to my wife—or may be it is, to my husband—this whole year; I won't be selfish any longer.

That is fine, that gets us half way over already. Now for the "I wills." I will be honest in everything—truthful in the smallest, faithful in the least; I will go to church regularly; I will listen to my conscience; I will give to the poor; I will make my home happy; I will live for others and for God."

This is grand. How good we feel already! This will take us all the way over, and land us in the ways of pleasantness and the paths of peace.

Alas—the very next day, when we take down our scaffolding and try to use our beautiful bridge to walk on, and not only to look at, down it comes tumbling to ruins, and we with it, into the strong stream of bad habits again.

Isn't this the way it has been with us all, over and over again, till some of us have stopped bridge building altogether, and let the floods of habit sweep stronger and stronger around us, benming us in to our narrow, fruitless lives, without any more effort to cross them?

What was the matter with our bridges of good resolves, the best and strongest? Ah, friends, didn't we forget the keystone? And what is that but God himself—God's help, God's grace, God's life in the soul, for all its good resolves and longings to lean upon, and only in leaning find their strength? And how to get it? In this world of buying and selling and bargaining for gain,

"'Tis heaven alone that is given away,
'Tis only God can be had for the asking."

Friends. If we build our bridge again in this closing year, let us not forget the keystone.

CORRESPONDENCE.

PLEASANT NEWS FROM CAPT. PRATT'S INDIAN SCHOOL AT CARLISLE.

We are very glad to lay before our readers the following encouraging letter from Capt. Pratt's noble enterprise in Indian education at Carlisle Barracks, Pennsylvania. The writer, Lt. G. LeR. Brown, 11th U. S. Infy, having been granted leave of absence for six months, has gone to Carlisle and is assisting the Captain in his arduous task, and through him we are happy to expect regular reports from this very interesting work of our friends and fellow-laborers

CARLISLE, PA., *Nov.* 18th, 1879.

Editor Workman:

We find that the location of the school at Carlisle Barracks gives it many advantages. The site is very beautiful, the buildings are commodious and comfortable, supplies of all kinds obtainable at cheap rates, the city of Carlisle a few hundred yards away, with its kindly disposed people and highly cultivated surroundings, will have a benign influence upon the Indian children and, most important of all, the climate is healthy.

The buildings have been thoroughly overhauled, many repairs made, the old fence about the post torn down, a new one built, one of the rows of buildings, formerly occupied by the officers of the garrison, has been converted into a dormitory for the girls and lady teachers. One of the rooms in this building is the common sitting-room for the girls, and here they assemble every evening and led by one of the teachers, join in singing, knitting and games. In another large building, an industrial department for making clothing, etc., has been arranged. One of the rows of buildings, formerly occupied by soldiers, has been fitted up for the boys, the upper rooms for sleeping, and the lower for the laundry, wash-room, reading-rooms and office. The upper rooms in the other barracks have been fitted up for recitation-rooms, the lower rooms being used as store rooms. The building formerly used as a *Theatre* and *Chapel* has been converted into a comfortable and convenient dining-room and kitchen. The children are supplied with plenty of wholesome food. The boys have been formed into three companies and deport themselves in an orderly and satisfactory manner.

Under the through and efficient management of Miss Semple, the school-room work is moving steadily forward. On Sundays, delegations of children, under the care of teachers, attend the several Sunday-schools and churches in town.

A building has been selected for the purposes of mechanical instruction, and will be duly fitted up, at an early date.

During the recent visit of the Honorable Commissioner of Indian Affairs, he expressed himself well-pleased with the work thus far accomplished, and, being struck with its necessity, he ordered Captain Pratt to build a chapel 36x60, and foundations for this building are being laid. He also authorized uniforms for the boys.

Owing to the hearty co-operation and earnest, persevering efforts of all engaged in the work, the school is beginning to assume a business-like look, and, from the stand-point gained, it appears full of promise and bids fair to realize the best anticipations of its many friends.

G. B.

THE EXODUS TO LIBERIA.

The American Colonization Society finds itself constrained to appeal for aid, in order to ensure the effective prosecution of its work; the late years of business depression and shrinkage of values and income having largely reduced the contributions to its treasury.

Applications for passage and settlement in Liberia, comprising several hundred thousand respectable people of color, are upon our records.

Every emigrant costs the Society one hundred dollars, of which $50 is for passage and support, and $50 for rations and shelter during the first six months after arrival, including ten acres of land to each unmarried adult and twenty-five acres to every family. Toward this outlay, the preference is given to such applicants, all other things being equal, as will contribute $10 or more *per capita*. Added to this is the expence of travel from their homes to the vessel, which is often considerable, and in all cases is borne by intending emigrants.

Funds are especially needed for the outfit and dispatch of our customary Fall expedition, at this time in active preparation and to embark on the ship *Monrovia*, expected soon to arrive at New York from Liberia, where she landed, in July last, a company of select families, sent by the Society.

Donations may be sent to the undersigned,

Colonization Rooms, Washington, D. C.
By order of the Executive Committee.

Sec. and Treas. A. C. S.

THE AMERICAN HUMANE ASSOCIATION.

The President of the United States in his last annual message made the following statement and suggestion.

"The abuse of animals in transit is widely attracting public attention. A national convention of societies specially interested in the subject has recently met at Baltimore, and the facts developed, both in regard to cruelties to animals and the effect of such cruelties upon the public health, would seem to demand the careful consideration of Congress and the enactment of more efficient laws for the prevention of these abuses."

A bill to prevent cruelty in the transportation of live stock, passed the Senate but failed in the House.

The need of such legislative action, and of rousing public sentiment to compel it, is most painfully shown by a report read before the third annual meeting of the American Humane Association, at Chicago, in October. Through the generosity of two Massachusetts ladies, Mr. Zadok Street, a member of the Executive Committee was sent by the society to travel all the important Western roads and testify to the condition of stock in transportation. His report, shocking and sickening to humanity, all the more should be carried home to the the heart of humanity, because the worst of it is that it is true.

The following are a few extracts from Mr. Street's Report.

"I have traveled more than eighteen thousand (18,000) miles, in going over some of the principal railroad lines, and over some of them a second and third time, and had different men with me a part of the time, as witnesses.

We have seen one thousand three hundred and forty (1,340) local stations where animals are collected and shipped. In many of the pens cattle and hogs were standing in mud from four to eight inches deep, and exposed to the hot sun, or storms, for days while the owners were collecting their full shipment, and no arrangements of any kind for feeding or watering the animals were made while thus confined. We have seen cattle drink the filthy water that was standing in their tracks, showing their extreme thirst, before being loaded in the cars. At different times we have witnessed large cattle, cows, young calves and hogs in the same pen, to be loaded in the same car. We have seen hogs greatly over-crowded in pens, where there was not space for them to lie down for rest regardless of their tired or hungry condition. At different times the owners did admit that their animals had been driven from ten (10) to eighteen (18) miles without feed or water, before getting to a station, and that they were then loaded into the cars in that condition. We have seen at a station in Kansas, large, fine looking, fat cattle, which the owner expected to sell for exportation, that had been confined in small pens for three days and nights continuously, exposed to the hot sun, without feed or water. A man in charge of this lot said he had just received a dispatch from the owner to ship them to St. Louis without giving them feed or water, and he said that after arriving in St. Louis, he could get one hundred (100) pounds or more of water into each one before they were sold and weighed.

OVERLOADING.—It is no uncommon thing to see from eighteen to twenty head of large fat cattle in a car twenty-eight feet long and eight feet wide, and thirty-six to forty-eight of one end two year old cattle in a car. Also, 120 stock hogs in each deck of a double decked car, and from eighty to ninety large, fat hogs in single-decked cars, where they did not appear to be standing room for them.

We have seen more than one thousand dead animals taken from a single train; dead because of overloading and confinement day after day in the cars in the hot weather, and hundreds more nearly lifeless when unloaded.

We have seen a few humane dealers and shippers, who condemn in strong terms the general manner of treating animals in transit, and who never permit their animals to be overloaded, nor to suffer for want of rest or food, and the result is, they seldom have a dead or injured animal.

The treatment of cattle in cars is more visible than that of hogs; this causes more comment by observers, but we believe that the cruelty to hogs generally exceeds that of cattle.

POULTRY.—We have seen twenty-five hoxes or crates filled with chickens which were shipped from stations on the Missouri River to Denver in Colorado, six hundred miles distant, so overcrowded there was no standing room for them, and in a few hours many of them died.

We find there are more than one hundred millions of animals consumed annually for human food in the United States. Within a few years there has been a demand for our cattle in foreign lands, which will greatly increase the value of our exportations, if the cattle are rightly cared for. The Mississippi Valley, as all know, is one of the most productive agricultural regions on the globe, and a large portion of it is naturally adapted to the culture of corn and grass, and to the raising and feeding of domestic animals.

During the nine months of the present year, there has been received and sold in Chicago alone, one million head of cattle; four million two hundred thousand hogs; two hundred and forty-five thousand sheep, and one thousand horses.

From five to ten per cent. of the real value of cattle and of hogs is lost by shrinkage in weight, and by death and injury done to the animals between the feeding lands of the West and the Atlantic cities.

The commission men, the men at the feeding yards, and indeed all parties in the trade have large interest in this question. It may be feared that unless animals are better treated, their exportation, and the packing and canning of meats will be largely reduced. The cruelty concerns the farmer, the feeder and the laboring man, both in pecuniary and sanitary ways. All the civilized nations have taken action in favor of the better treatment of animals and to prevent diseased meats being sold for human food. Our own citizens are *more and more* awake to this fact."

IN the light of these terrible disclosures the Executive Committee will appeal to press and pulpit and school room co-operation, and suggests that "addresses should be given in each State," and that "there is probably hardly a considerable town in this country where a humane organization would not be a field of useful labor."

The Massachusetts Soc'y for Prevention of Cruelty to Animals, older than the General Association, and the second of the kind established in the Union,—the first being in New York—has done admirable service in the holy cause of humanity. Its Secretary justly claims that "giving has become a hereditary habit in a great many families there." Up to the close of its 11th year in March last, nearly $150,000 had been poured into its treasury to flow forth in streams of benevolence.

"The Society has paid in prizes to the children of public schools, for compositions on the proper treatment of animals and for humane inventions, $960.00.

It is now offering $600 in prizes for practical acts of kindness in various ways, the particulars of which may be seen in the September number of 'OUR DUMB ANIMALS.'

It offered $500 last year to any one who would lessen the sufferings of animals in transportation; but the judges ruled that no competitor was entitled to the prize under the condition of the offer.

It publishes 5,000 copies of its small monthly paper, 'OUR DUMB ANIMALS.' This it does at some loss, but its publication might be a profit if the friends chose to double its subscription list.

Its tracts are sent over the United States and beyond, in answer to calls, whether money be sent with the orders or not. Of course this is a department which does not pay unless it is returned through unknown givers; but in any event it is a sowing of the seed, and that our Society has thus far considered a part of its own self-imposed duty.

The names of its tracts are:
"Cattle transportation."
"Protection to Animals."
"How to kill Animals Humanely."
"Five Questions Answered."
"The Check Rein."
"Care of Horses."
"Poems" for School Exhibitions.
"A Service of Mercy," for Sunday Schools.
"Massachusetts Statutes."
"Insect-Eating Birds."

More than 237,000 copies of our several tracts have been printed and circulated at an expense exceeding $2,100.

The number of copies of 'OUR DUMB ANIMALS,' printed since June, 1868, when it was established, exceeds one million four hundred thousand, a large proportion of which were gratuitously circulated."

The new post office at Raleigh, the finest building in the city, was finished off by colored men. The entire contract was awarded to Ellison and Irving, both colored.—*N., C. Republican.*

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

THE North is solid for the negro vote. Its delegation in Congress is a unit for freedom of the ballot, and has, for years, championed the bull-dozed blacks. So much for the vote. How much for the man? How much for the ex-slave thrust into freedom, which meant freedom to live or starve, to rise or fall,—unable to read or write, in a state of enforeed mental blindness, weak, credulous, and though well-meaning to the last degree, the easiest subject for designing men, whose work on his fears, his passions, or his preferences, made him a victim of violence, or a tool, under the guise of friendship, for political adventures.

What have the wards of the Nation received at the hands of their keepers since their freedom and enfranchisement were secured by the Constitution?

Under the Bureau for Refugees, Freedmen, &c., about thirteen millions of dollnrs were dishursed, of which three and a half millions were expended under Gen'l. O. O. Howard's direction, for education, the balnnee going to physieal relief and to administration. The simplest rudiments of lenrning were taught to nearly a million of negro children, and the foundations of such institutions as the the Atlanta, Fisk, Howard and Straight Universities, Hampton Institute, Talladega, Tougaloo and other high schools and colleges were laid; northern religious societies doing the work, and the Freedmen's Bureau supplying a large share of the funds, giving over $50,000 to Hampton alone. On the foundations thus laid, Northern charity has been, for the past ten years, steadily building, and many nohle institutions now attest the wisdom of General Howard's appropriations. These and other similar facts have appeared in his public statements.

Since 1870, the Government has done nothing for the blacks by way of edueation. Henry Wilson said, the "Freedmen's Bureau was too big a load for the Republican Party to carry," a kind of load it did not care to carry, and never has taken up again.

To the host of office-seekers and politicinns the results of the war were opportunities for profit; moral obligations were nothing to them; the ex-slave, grateful to his deliverer and faithful even unto death to the party that emaneipated him, was told that the way he voted was practically choosing between slavery and freedom.

He never was told that, in his ignorant and low condition, he was liable to be his own worst enemy, and that those who helped make him a better man were his true friends.

Excepting that of the Hon. Geo. F. Hoar of Massachusetts (in 1870, we helieve), which was a failure, we know of not a single notable persistent effort on the part of a Republican politician, since the war, for the betterment of the freedmen by way of edueation.

To say that the South is responsible and ought to have provided education for them, is meeting the ery of the ex-slave with mockery and senseless exeuse. A part of slavery was its fallacies regarding negro capacity; human nature made it impossible that the ex-slaveholder should at onee proceed to instruct his former chattel.

Yet, in the State where John Brown was hung, there were in 1878 over a thousand freedmen's schools, and about six hundred colored teachers, one-quarter of a million of dollars being annually devoted to them from the public treasury. There is, according to Dr. Sears, agent of the Peabody Fund, a forward movement in all the Southern States in respect to colored schools. For every dollar sent by Northern charity to colored schools there are now three dollars through Southern taxation.

Not a politician has seemed to realize the truth that reconstruction is a question of moral as well as of political forces. Acts of Congress are conditional, indispensable to the higher work; is it not possible that that higher work may be appreciated and pressed in legislative halls? History will assign the highest place in the work of reconstruction, America's greatest problem, to the statesman who, doing his whole duty for the rights of every man, fearless and active against all injustice, shall be equally earaest and active to lift every victim of the slave system from the ignorance and the weakness in which he stood when emancipation found him, and from the danger as well as advantage in which enfranchisemeat placed him.

In Virginia there is no bull-dozing. The negro goes peacefully to drop his ballot. There is nothing to stir the eloquenee of his politieal champions. But when, as in the reeent eleetion, many voted one way beeause they were told that the other party would, if successful, tax them ten dollars a head; when many understood nothing, were confused and remained at home; when many thought that having been slaves at the formation of the State's debt they had no obligation in the matter now as freemen, there is better seen the blunder of the nation's reconstructive policy.

They needed laws, and they needed light too. But they were in the hands of men whose chief concern was their own reelection to office.

The effect of the war upon right minded people was a sense of the sacredness of their duty to the freedmen, whose condition was not their fault; and of the demands made in their behalf by practical Christian philanthropy.

Since 1860, the sum of Northern charities for negro edueation had reached the sum of nearly five millions of dollars. While the ease of contributions for negro schools is not very popular in the North, there is yet, every year, a noble stream of aid for that purpose, mostly for those of high grades, which, in some cases meets a like stream by way of State appropriations. The present ruling class in the South has steadily advaneed in practieal appreciation of good work done by Northern teachers. Beginning with dislike, suspieion and even hatred, they are increasingly fair and liberal. Political differences are counting for less and less, and negro teachers, by hundreds, are welcomed and employed by those who once owned slaves.

The work, so far, is utterly inadequate. The freedmen, as a whole, are unable to see for or to guide themselves. We have nbout 800,000 illiterate negro, nnd multitudes of low white voters; they are not safe. Cases of bulldozing in the South will soon be hard to find—it does not pay. While that means peace at the ballot-box, it does not mean n peace that *is* peace. Quieter but equally effective means will control the ignorant; means that are not peculiar to the South, that are everywhere used when skilled and determined men wish the votes of the low and poor The South may divide, but not because it cannot control enough negro votes.

The ignorant classes throughout the land will drift steadily together. The neglect of our reconstructive legislation will appear better when the ex-slave shall become a puhlic danger.

To-day the manhood, the real improvement of the hlaek man in our country appears to he a matter of uneoneern with those who most loudly elaim puhlie support as his champions.

It is to he hoped that these men will at last redeem themselves hy supporting a measure likely to he pressed upon this Congress which shall provide Government aid in behalf of the illiterate elasses of the South

ON AN EVEN KEEL.

A Frenehman read the Amerieau papers during a Presidential eanvass. The journals and orators of each party demonstrated that the candidate of the other party was ignorant, unpatriotic, dishonest and ineapahle. The Frenchman exclaimed, "What scoundrels the Americans nominate for President!" De Toequeville also said, "It is strange how ealm and submissive the Amerieau people are the day after the eleetion." The older men only, know the white heat reached in party frenzy in the early days of the Republic. Rumors were takea as faet. Scandal was believed to be the honest truth. Each member of one party made himself a proseeuting attorney to bring to summary conviction the opposing candidate. He believed, as such attorneys usually believe, that in the interests of justice every fact and fancy which hore down on the personal character of the opposing candidate should he brought forward, and every fact which exeused, palliated or justified should he ighored. This is, and was, party warfare, but it was not justiee or good sense.

Politeal sentiments are usually involved in a whirlwind of feeling and prejudice. The growth of politieal ideas is in a soil riehly fertilized with bigotry. The party warfare in the early days of the Republic, as we have said, was bitter aad unrelenting. When Washington was nominated as a candidate for his second term of the presidency, his opponents said of him as severe and unjust things, as have ever been said of any candidate since. He was accused of peculation, of nepotism, of ignoranee and ineompetence. This was said hy not few, hut many. They insisted that his election would he a calamity to the country, and deelared that he was at the head of an oligarhy which would ultimately ruin the nation. At this time it would be a most interesting piece of politieal history to collect and publish the infamous things said of the first President of the Republic. Dr. Prime, of the *New York Observer*, said reeently that he had been an intimate friend of the late President Piereo, and that in relating the ineident of the death of the President's ehild, he remarked that the President took great consolation in prayer. An old Whig subscriber replied, "What! President Pieree pray? He can't pray. He is too wieked to pray."

As men eontrol their passions and subdue their prejudices there is a disposition to believe that every question may have two sides to it: that right is not always on one side only, and wrong on the other side wholly; and that, after all, men may reach widely different conelusions, and reach them honestly. It is strange how forcibly men will acknowledge their own fallihility, weakness and short-sightedness, as a general proposition, but how quickly, in all special cases, they fling aside all modesty of opinion, and claim an infallility which belongs to Omniscienee alone.

The early ages of political disension were reptilian. Political opponents regarded each other as noxious or dangerous animals, whose existence was to be tolerated, but whose death was always desirable. Hanging, shooting, poisoning, were the logical results of such political sentiment. When a man wishes to build a house, he looks nhout for and engages a carpenter with reputation for capacity and honesty. This same person, when called upon to vote for one who shall manage the affairs of the country, nt once throws aside all the good sense and temperate judgment he exereised in seleeting a builder for his house. The barometer of his mental and moral nature instantly falls. Stormy winds and gales sweep over him. Instead of staading like a rock, unmoved hy these swift currents of air, he bends and twists like a reed. In the political tempest his judgment is torn to shreds. While no amount of oratory or appeal will induee him to employ an ignorant earpenter, he is eager to put a hricklayer in charge of matters of State, and a fisherman to make comprehensivs laws.

Time, however, makes ehanges, though slowly. Year hy year there grows up in every community a set of men who *keep on even keel;* men who think for themselves, who have the sagacity and knowledge to judge for themselves, who look at things only as they are. These men see, everywhere, good and evil mixed together. They fail to find all the virtues in one party and all the viees in another. They detect, in the fluetuations of political life, a eonstant tendeney towards what is good, and underneath the actions of men and parties a heavy ground-swell moved hy the Infinite Master Hand, whieh sweeps men up towards a hetter condition of thiags.

When a man really knows that the field of knowledge is houndless, and his own eapacity to explore it is limited, he eeases to become a partisan; he makes great allowanee for opposing opinions, and offers nnd demands a liberal charity in judgment. Of late, the religious denominations have shown a disposition to hreak dowh the walls of exclusiveness which have stood so high and formidahle around them. The old preachers would be astounded, should they arise from their graves, and see the denominations shake each other hy the hand. Even the religious press is becoming liheral. Instead of excluding hostile thought it invites it. A late number of the *Independent* eontained an artiele in praise of the personal eharaeter of Col. "Boh" Ingersoll, and followed it hy aa artiele on another subjeet from the pen of a most orthodox divine.

Civilization and eduoation means equilihrium in thought and charity in speeeh. In a higher and more perfect state of social and political life, the ideal of every man will be to keep on an even keel.

W. N. A.

THE report, given in another eolumn, of Mr. Zadok Street, before the American Humane Assoeiation, upon the cruelties habitually attending the transportation of living animals for the markets, is a eurious eomment upon the civilization of the Nineteenth Century—a sufficient testimony to "Anglo Saxon Brutality." We expect harbarity from barbarians; it is not so much a matter of surprise that Pacific Islanders, who, fifty years ago huried their babies alive, should now ride sore backed horses, all day without watering. But is it not wonderful that it has taken nineteen Christian centuries to develop the highest civilization to the degree of even establishing soeieties for the prevention of cruelty to animals and to children, and that a dozen years after their establishment in America, such a report of open and wide-spread inhumanity can be made? Sickening as are the details, they should be kept steadily before the public until it is siekened or shamed into reform.

The Assoeiation justly calls upon the press, the pulpits and the schools to aid in this work of educating public sentiment. We gladly respond. The SOUTHERN WORKMAN has always, indeed, aimed to lay before its readers every month, something upon the subject of the proper treatment of dumb animals.

That there is great need of such education in this State, as well as others, there can be no doubt. Great quantities of livs stock are driven every year over the mountains of Virginia for transportation to the cities and the sea coast. Who

... and many citizens of Hampton ready to ... where it stuck. More experieaced hands

will report upon their condition? And it is not only in transportation that animals suffer. Ignorance and selfishness are everywhere the parents of cruelty. The graduate-teachers of Hampton can do no better work for their race, to help it faster forward in civilization than in wakening in the children an intelligent interest in, and sympathy for the helpless creatures around them, for horses and cattle, and dogs and birds—for everything to which God has given life. And in such work they may always count on Hampton's help and co-operation.

THE LATE ELECTIONS.

Looking at the late elections in the Northern States from a non-partisan stand-point, the most prominent object is the tombstone erected over the "Ohio Idea." This "Ohio Idea" was a neat generalization of all theories of repudiation, partial or total. The great American people have expressed their opinion that the obligations of a Nation are as sacred as those of an individual; and the minority who differed with them, are skulking back to old party lines, with no particular lustre added to their political history, nor much certainty of ever again commanding the respects and votes of their fellow-citizens.

The thorough, absolute rout which befell the repudiation party in the North is one of the healthiest signs of the moral tone of the people, that has occurred in many a day. Repudiate any part of the public debt on any pretext, and the same pretext will apply to State debts, and then to individual debts. It is an easy matter to argue against paying any debt, and it is surprising what long stories are told to get at the point, "We won't pay." All we have to do is to ask what right any man has to anything, and the question is settled. But so soon, however, as we claim to have rights in property ourselves, then we must concede the same to others. The State is but the aggregate of its citizens, our nation of its citizens. What is honest between citizen and citizen, is honest between citizen and state, or nation and citizen.

The history of all repudiation, partial or total, is the same—the effect is either financial death or paralysis. The honor (which is but another word for credit) of a State is as delicate as the honor of a woman—tarnish either, and years must elapse before the old-time brightness can be restored. About forty years ago Mississippi "readjusted" her debt, and ever since as a borrower she has suffered. The Northern elections, however, will serve a good turn—they will show the drift of public sentiment (quicker perhaps in the North than in the South,) and the leaders will see in time, that it is a dangerous thing to play roughly with so dangerous a thing as the financial honor of a great State.

Another lesson from the late elections is the evident loosening of party bonds; political hacks, who have never before kicked in harness, have dashed out of the party traces in the most surprising way. It is evident that either new parties must form, or the old ones trim themselves to the present times. Old war-cries rouse no more enthusiasm than the cooing of doves, and the next Presidential election will be fought on issues not now very prominent. The story of "bayonet rule" might as well be wrapt in the "Bloody Shirt" and both be put away in some dark corner of the political attic. The vexed question of State Sovereignty versus National Supremacy was settled at Appomatox, and certain defeat awaits any party which goes to the people with the cry, "We are not a nation." Certain political Bourbons who never learn and never forget anything, may try to force this issue on the country, and their efforts would be pleasing to their more astute opponents; but after all said and done, in this day of newspaper reading, the people force the leaders, not the leaders the people. In benighted regions, where communications with the rest of the world are few and far between, no doubt we can still find voters who wait for their leaders to think for them; but in the greater part of the United States, the people think, move and vote for themselves, and if their public men are not with them, these public men can stand aside and give place to others. The rush and whirl of the last half of the nineteenth century are very different from the comparative calm of the first half. A stage coach represented one; a quadruplex telegraph machine, the other. Intelligent people no longer vote so and so, because Smith, Jones or Robinson says so and so; but because they believe it to their interest to vote so and so. Never in the history of this country has the need of education been so great, for never has personality been so prominent in politics. To educate the masses, we must work on individuals, for the day is past when a country or a district will follow the dictates of a single man.

Probably in no way is the individuality of voting more plainly shown than in the way the negro vote is cast. To see freedmen and their old owners voting the same ticket seems an anomaly, but nevertheless it is a fact. All is supposed to be fair in love, war, and politics, and the Republican party has lost the negro vote to a great extent through the keener knowledge of negro character possessed by their opponents. The policy on one side was to appeal to the negroes *en masse*; the other side appealed to the negroes' individuality, *and won*. The result of the late election in this State was due to the way the colored vote was cast, and the canvass was not on the merits of the issue, but on appeals to the individuality of the colored citizens.

This individuality of thought has its strong points—no concentration of power in the hands of a few is possible, when the eyes and the votes of the many are upon them On the other hand, it has a tendency to create factions, and break up the usefulness of political organizations devoted to unity of action. In a monarchy this spirit would be intolerable—it would mean destruction; but in a democratic republic like ours, it is not only tolerable, but much to be desired. With every man watching every other man, all will be careful of their actions, for all well know how quickly pitiless criticism will assail their every act.

What is to be read, then, between the lines of the Northern elections this fall is, as follows: the people believe "Honesty is the best policy," and that every man as a citizen is part of the government; and not the tool (more or less dull) of the men who claim to be leaders. T. T. B.

BURNING OF ACADEMIC HALL.

The friends of Hampton and its work have already generally learned of the event which, on November 9th, added Academic Hall to the sad list of freedmen's school buildings which have been destroyed by fire in the last year.

The details of the disaster are, as follows: At a little after half past seven, P. M., when most of those connected with the school were assembled in the chapel of Virginia Hall for the usual Sunday evening service, as they were singing the first hymn, a student who had been sent on an errand returned, passed quickly through the room and whispered a word to the Principal. A lifted hand, a breathless pause, and then the announcement, thrilling every heart in the room,—"Let the girls remain quietly and the young men go promptly to their duty. Academic Hall is on fire."

In less time than the description takes, the chapel was emptied of men and boys, and those who were left rushed to the windows to see a great volume of flame and smoke pouring from the attic window and roof, at the north-west corner of the building's front. In five minutes from the time of the alarm the hand fire engine belonging to the school was sending a stream towards the roof, but failed to reach it, though it did good service in checking the downward progress of the flames somewhat, giving more time for the rescue of property. The principal efforts were directed, of course, to getting out the safe and business papers, the offices being fortunately on the ground floor and close to the front door. A squad rushed also to the Assembly room, and others to the library and museum, laboratory, and recitation rooms; while some of the boys who roomed in the building, dashed up to the third story to try to save some of their own effects, in most cases driven back by flames or fear. Guards were set to watch the other buildings, and some stayed outside to help the girls and lady teachers carry papers, books and furniture, as they were tossed or handed out, to a place of safety.

In the course of half an hour, the steam fire engine from the Soldiers' Home arrived on the spot, and many citizens of Hampton ready to lend help, and later the engine from Fortress Monroe, with Major Randolph and his company in charge, and several other officers from the Fort and citizens from Old Point. But nothing avail to save the building.

Indeed, there is no likelihood that anything could have saved it after the alarm was first given, for though the building had not been empty twenty minutes, the fire had then made the astonishing progress of the whole length of the attic, 110 feet from where it started. There had been much warm weather and no rain for two months, and everything was dry as tinder.

In twenty minutes, all efforts inside the building had to be abandoned. A light breeze blowing carried the sparks as far as the Wigwam, or Indian cottage, but a line of buckets was established, and the danger averted by keeping the roof well wet. There was work enough for everybody, and, when one could glance away from it, the fine spectacle of this burning building, wrapped in flames from cellar to attic, darting huge tongues of fire from every window, and raging with fiercer fury as the roof fell in and then the whole front wall. In the work and excitement and grandeur of the scene, there was no room for depression of spirits for the moment, and, before the fire had paled, plans were in progress for improvising new school-rooms and offices, and resuming the regular school work —all of which was accomplished, let us say in passing, with the loss of but a single day of school.

The fire exhausted most of its material and grew dim by eleven o'clock—though the ruins were smouldering through the next two or three days. The walls mostly fell in the fire or soon after it, except at the angles, which were buttressed and very strong. These being in a threatening condition had to be thrown down, but this could only be done by gun powder. Col. Loder, Instructor of Ordnance and Gunnery, at the School of Artillery, at Fortress Monroe, assisted by Major Randolph, kindly volunteered to conduct the work of demolition which was effected with 300 lbs. of cannon powder, the fuses fired by a dynamo-electric machine.

The origin of the fire is unknown. It was first discovered by a boy who was sick in one of the attic rooms. Smelling smoke, he got up, and going through the length of the attic, saw the further corner of it all in a blaze, ran back for his bucket, filled it twice at a tank which was kept full up there, and dashed it on the flames, but finding them under too much headway, ran down-stairs crying fire, leaving and losing everything he possessed. Meanwhile, it had been discovered by the student who gave the alarm. The first night watch of two men had just gone on duty. The location of the starting point and the remarkable celerity of its progress the first fifteen minutes suggest the possibility of incendiary work, though in the very dry state of everything, it is possible that a cigar, smoked on the sly, may have been enough to have started it. Some circumstantial evidence and general cause of suspicion have seemed to demand, in the gravity of the occasion, the arrest and preliminary examination of two of the students, resulting in the discharge of one, and the examination by Grand Jury of the other, although he has hitherto borne an excellent character. The only desire of course is to get at the facts of the case, and in this desire, the students as a body seem to earnestly concur, appreciating the fact that the reputation and interests of their race are at stake in the repetition of such disasters as this.

The behavior of the students was excellent. They did good and faithful work. This is equally true of the Indian students. They also worked hard and cheerfully. One of them, Ecoruptuna, especially distinguished himself, and gained a public commendation by volunteering his services and working steadily from morning till night, in the less exciting and more arduous labors of the day after the fire.

Several noteworthy instances of honesty occurred. Sums of money picked up were promptly returned to the Treasurer by a colored and an Indian student. The boys who lost their property in this building being requested to make out lists of their losses, several of these lists were subsequently reduced by the writers themselves who reported having found some of the articles supposed to be burned.

Two offices and thirteen recitation rooms had to be improvised and prepared. The former were established in out-buildings; the latter, in various places, four in the Principal's house, four in Virginia Hall (in the chapel, girls' parlor and reading room,) four in the Wigwam, and one over the engine house. Some black-boards and benches were saved, other boards have been ordered, and seats borrowed from the chapel. The school resumed regular work on Tuesday morning.

There is great cause for thankfulness in the safety of life and limb, and in the rescue of all the important contents of both the Principal's and Treasurer's offices—the desks, business books and papers, official records, bound volumes of the *Southern Workman*, etc. The Herring's safe was brought as far as the door where it stuck. More experienced hands might perhaps have got it out. It, however, was saved from the coal bins, and fell into the cellar in as safe a way as possible. It was subjected to intense heat, and could not be dug out till the walls were demolished. The set of Treasury books it contained were found legible, and will only have to be rebound. The small inner safe was unharmed, and what money it contained, also the bronze and gold medals awarded the school by the Centennial and Paris Expositions.

Besides this, there were saved, all the pictures in the Assembly room, including two very large and valuable photographs of the Coliseum and Forum, eight by four feet: about one-fourth of the library books as they happened to come; only a small part, we regret to say, of the curiosities from the Sandwich Islands (the model of a war canoe, shark-teeth spear, and a few coral bowls,) and a very small part of the philosophical apparatus; a very few new school books; a small part of the school furniture, tables, benches, maps and blackboards.

The losses to the school were of the chief part of the library, the small but choice museum of Turkish, Liberian, and Hawaiian curiosities, all the school desks, the iron dissecting maps, globes, physical charts, models and skeletons, most of the philosophical apparatus, fifty bedsteads and their beddings and stores of blankets, window shades, &c., &c.

A personal loss of about $1,200 falls upon the fifty boys who lodged in the building, most of them losing all their clothing; all of them, a part. One, in addition to clothing, lost $55 in money which he had carelessly kept in his trunk, instead of depositing it, as all students are advised to, in the Treasurer's office.

It is difficult, even yet, to comprehend this fact that Academic Hall is no more.

It was built in 1870, at a cost of $48,000, of which $32,000 were given by the Freedman's Bureau, and the remainder by friends in the North, chiefly in Boston. Like all the other school property, it has been kept well insured, and now stands insured for $35,000 in good companies. With our brickyard and steam saw-mill and facilities for dressing lumber, this sum will, we think, be sufficient to rebuild it on its present foundation which remains good, in simpler style, but on an equally good or more serviceable plan.

NEARS OF THE SCHOOL.

The actual loss in apparatus, furniture, &c., is estimated at $3,500. Three thousand dollars will replace this, and for the efficiency of the school should be expended at once in new apparatus. Will the friends of the school contribute this amount? For this we appeal to the friends who must judge of the value of investments—perhaps of their own former ones —in the Hampton work, by our care of them and the results of the work.

And we ask their consideration too in behalf of the fifty students whose fidelity to the school's interests has been, in part, the occasion of their very serious personal losses, averaging $25 apiece, which we shall try to make up to the extent of supplying necessary clothing. Money and serviceable garments for their relief will be most welcome.

THE Normal School acknowledges very gratefully the many expressions of sympathy received since the fire, and the donations of money and clothing for the relief of the students who suffered by it. These donations will be more fully acknowledged in our next number. They have amounted thus far to nearly half, perhaps, of the students' losses, and the supply of their first pressing needs. The losses of school apparatus and furniture can be made good for $3,000, about $1,000 of which have been received. The most necessary articles have been sent for, and for the interests of the school, all should be replaced as soon as possible. For this the school looks confidently to the friends of its work.

THE growth of public sentiment on the Indian question is apparent in the interest excited by the pathetic eluquence of the Ponca chief Standing Bear, who through his gentle interpreter, Bright Eyes, is pleading his people's cause before the nation.

Another indication is the recent request of a Northern magazine for the history of the Indian work at Hampton to lay before its readers. The sketch appears in the December number of "*Good Company*," and we call our reader's attention to it as the most complete story of the work which has been published. "*Good Company*" is the new name of the magazine, *Sunday Afternoon*, published in Springfield, Mass.

With its new name, the magazine appears in a new and attractive dress, but keeps up to its old standard and anticipates growing popularity.

HEALTH REPORT.

radiated all in one direction. The editor of the *Educational Journal* says:

"Every number of the SOUTHERN WORKMAN contains letters from Hampton School graduates, written simply, amiably, and piously; telling of their experiences in school-teaching generally. Most of these graduates this "lower nature" also is made by God, and made to be guided, not destroyed, by the higher, which thus may find in it its own rest and refreshment; like the Titans of Grecian fable, who re-invigorated their giant strength, by the touch of the earth whence they had sprung.

assembled to honor his memory. In the immense procession that filled the streets of the capital, and gathered in "Victory Circle," could be seen the President and his Cabinet, the Supreme Court, the City Authorities, Members of the Diplomatic Corps, the scarred veterans of three wars, members of the Army and Navy, military companies, some of

With its new name, the magazine appears in a new and attractive dress, but keeps up to its old standard and anticipates growing popularity.

HEALTH REPORT.

The following statement of facts is due to those who are watching the Indian work at Hampton as bearing upon the whole question of Indian civilization, and to the school which has undertaken it.

Of the five girls brought to Hampton, Nov. 11th, from Dakota Territory, by Major Crissey, three brought a certificate from the agency physician at Standing Rock Agency, that they were in sound health.

Of these three, two show marked signs of diseased lungs. Both say themselves that they have raised blood before they came here. One of these has also had a fit resembling epilepsy, since she arrived, and we are informed that she had two on the way here. The other one of the two is evidently scrofulous. The third is pronounced sound by the physician here.

The two from Cheyenne River Agency, also brought a medical certificate of sound health. One of them, fourteen years old has had a hemorrhage from the lungs within about two weeks from her arrival. It is hoped, however, that this may not indicate organic disease, and it seems to be the first she has had. The other one is apparently well, though a delicate looking child, undersized for her reported age (12 years) and too young for one to tell much about the possibility of latent disease.

The three sick ones have required the constant care of a teacher and nurse for several days and nights. All that our skill and care can do shall be done, and they are all apparently improving.

To send unsound material is however, obviously most unfair to the effort and to those who are supporting it, as well as cruel to the children and their parents.

The Government did all it could to guard the selection by ordering medical examinations and health certificates. While we would not willingly believe in the unfaithfulness—either from ignorance or carelessness—of its officials charged with carrying out these orders in the Territory, we feel obliged in self-protection, to state the simple facts; these should be clearly understood by all from the beginning.

It should be said that Maj. Crissey's only office was to bring on those who had been selected.

We append the official statement of the examining physician at Hampton.

HAMPTON, VA., *Dec.* 1, 1879.

GENERAL ARMSTRONG,

Dear Sir:—

Having examined the five Indian girls lately arrived, I find their condition as follows:

LOUISE BULLHEAD.—Has a cough and has raised a little blood lately. Both lungs show signs of incipient disease. I find swollen scrofulous glands in her neck.

SARAH MEDICINE ROCK WOMAN.—Has had a fit resembling epilepsy since her arrival, and is said to have had two similar attacks on her way here. Coughs and has raised blood two or three times since she has been here. Left lung diseased in upper half.

ROSA LAY OUT-OF-DOORS.—Has had a cough for about two weeks and had a severe hemorrhage on the evening of the 28th ult. Lungs good with the exception of a small portion of the left one, which shows signs of commencing disease. I think she will probably improve.

AGNES PLACE TOGETHER and MARY TRAVERSIE show no symptoms of any disease.

Your ob't servant,

J. T. BOUTELLE, M. D.

A very pleasant testimony to the results of the broadsides of letters from Hampton Graduates, which we have been for some time in the habit of publishing monthly in the WORKMAN, appears in the November number of the *Educational Journal* of Virginia. These simple reports, fresh from the field, have been scattered through the North, doing excellent service there in giving intelligent views of the work, and awakening substantial interest in the workers. And here is evidence that the influence has not radiated all in one direction. The editor of the *Educational Journal* says:

"Every number of the SOUTHERN WORKMAN contains letters from Hampton School graduates, written simply, amiably, and piously; telling of their experiences in school-teaching generally. Most of these graduates are employed in our Virginia schools. We ought not to let one of them go out of the State, and should contrive to give each of them two five-month terms.

"These letters show that these worthy young people have a hard life generally in their efforts to benefit their race; and with the most innocent motives the writers tell facts about some of our public school houses for colored people which ought to make the school officers ashamed and conscience-smitten. Fortunately for the credit of those concerned, names are not given."

So far as taxes are concerned, the most enviably situated county in the State if not in the United States, is the County of Norfolk in Virginia. There is no County debt. The State tax is 50c. on the hundred dollars and the County tax 20c., which latter is entirely for the support of the schools; the balance of the County expenses being met by the receipts of the ferry between Portsmouth and Norfolk, of which one-half belongs to the County.

THE Normal School Library acknowledges the receipt, from the Countess Agenor de Gasparin of a memoir of her illustrious husband. Count de Gasparin was one of the promptest and warmest friends of the American Republic in the civil war that assailed it. His remarkable book, "The Uprising of a Great Nation," admirably translated by Miss Mary L. Booth of New York, came like a breath of inspiration to the friends of the Union, at the moment when, in the first shock, its foundations seemed to be removed, and all friends failing. In that dark hour, he boldly prophesied a closer, lasting Union of North and South, East and West, to arise on the foundations of universal freedom. Count de Gasparin was a brilliant author, orator and statesman; a Christian nobleman with the nobility of nature as well as of title. The Countess, in closest sympathy with his pursuits and sentiments while he lived, has thus gracefully and tenderly commemorated them in this gift to a school which is one of the fulfillments of her husband's far-seeing prophecy.

IF anything can add to the relish of a Saddle Rock stew, it may be the pleasant consciousness that with every delicate bivalve we offer to our palates we are helping on the great principle of co-operative trade, and the progress of a new race.

The oysters of Hampton Roads have a world-wide reputation, and the Hampton Bar Oyster Company is already well-known to many of our readers as a favorite medium of supplying their tables with these delicacies. It may not be as well known that the Company was created some years ago by Mr. George Dixon, an English Friend, especially for the assistance and encouragement of the freedmen of this region, whose principal chance for making a living being oystering, had no means of getting their oysters to Northern markets. Not oysters only, but also crabs, and fowls and eggs are shipped in their season to the North by this company. The development of the industry and trade of the region is, of course, an advantage to it in every way. The unusual warmth of the season has interrupted the oyster shipping business, but it has opened again, and we bespeak for it the patronage it deserves.

A NEW PARLOR CAR.

That the people must have amusements of some sort, and that their amusements may be made a great power for good as well as of evil, are facts now seldom disputed, and much good thought and time are given to deciding what are the best sorts—not least harmful merely, but most helpful. While we used to regard a whole set of human faculties as created only for torment and temptation, to be despised and trampled out, we have come to a more reverent perception that this "lower nature" also is made by God, and made to be guided, not destroyed, by the higher, which thus may find in it its own rest and refreshment; like the Titans of Grecian fable, who re-invigorated their giant strength, by the touch of the earth whence they had sprung.

Recreation—in the very word is treasured up the original and true idea of the right sort of amusement. Whatever truly re-creates the wearied powers of the body and soul, is the true entertainment. This may differ with circumstances and temperament, and stages of individual or national growth, and one may not always be the best judge for himself, but the principle remains correct. As it has come to be generally conceded, more thoughtful and benevolent effort is made to provide helpful entertainment for the people. Holly Tree Inns, reading rooms supplied with games as well as papers, free courses of lectures, and free summer excursions are in the line of such effort. Much more might well be done, no doubt. It might not be a bad idea to revive some of the national athletic games of Greece with their laurel crowns for the victors.

A year ago, some of the young people of an Eastern town, agreed generously to give up their own set of socialies to establish one for the people outside. Once a week they met in public rooms, where all would be willing to come, and spent the evening in a social way, in games and talk and music, for the most part. In one room, a few classes were formed, for French and German or reading. The enterprise had a great success for a year, after which it was given up. It was, of course a strain upon young philanthropy, and such effort had better be turned over as soon as possible to the people themselves.

A very pleasant reading circle has been formed among the dozen or more resident graduates of Hampton this winter, under the name of the Parlor Car. Name and idea were borrowed from a circle in Philadelphia, whose brotherly love will not object, but will rejoice to hear that it has borrowed their success. The circle meets once a week, and the idea is to read up about some different city, each night, unless more time in one is desired. A conductor is chosen for every trip, who appoints two assistants, though contributions of reading or pictures are acceptable from any one. A reporter accompanies the train, and a porter sees to the pleasant preparation of the car. Lady passengers have a fashionable way of taking their fancy work. Thus far, the Parlor Car has visited Norfolk, Washington, Richmond, and Baltimore, spending several nights at some of these places. It is still rolling smoothly and merrily on. It is not patented that we know of, and we strongly recommend similar excursions to other circles.

The consideration of this subject of entertainments is timely at this season, so much given up to amusement, and it is well to remember the word which is the key to the right understanding of it: Recreation.

The principle is so simple in application, and the application is still so various, that there is neither much need nor use of entering here into details.

A NOBLE EXAMPLE.

The late meeting, in Washington, of the Society of the Army of the Cumberland, and the unveiling of the statue of its former commander, Gen. George H. Thomas, and its presentation to, and its acceptance by, the Government, was an occasion of rare interest; not only to those who were directly concerned in the erection of the grand work of art there given to the world, but also to the country, and to all mankind. To commemorate the deeds of the noble soldier, not only the sculptor's art, but oratory, poesy, friendship and valor lent their aid, and the occasion was one long to be remembered by all those present. In the brilliant and imposing throng that gathered about the statue, were to be seen, not only those who had stood by the hero in the dark hours of defeat, when his presence and will alone saved an army from destruction, or had followed him to victory, but the civic and benevolent societies, whose only missions are peaceful, and the citizen, who had never heard the boom of hostile cannon; and even those who had drawn the sword against him in war's troublous times, assembled to honor his memory. In the immense procession that filled the streets of the capital, and gathered in "Victory Circle," could be seen the President and his Cabinet, the Supreme Court, the City Authorities, Members of the Diplomatic Corps, the scarred veterans of three wars, members of the Army and Navy, military companies, some of whose members had once borne arms against him whose effigy they now came to crown with the laurel wreath of the conqueror, and thousands of undistinguished citizens of all ages and degrees.

Quietly and reverently they uncovered their heads, while the blessing of God was invoked upon our country, and He was asked that the lesson of a life full of purity, and of noble purpose, might not be lost, but bear good fruits; and when the striped and starry curtains that had hidden the work of the artist from view, dropped away, and it stood revealed in all its noble proportions, there was a momentary hush, and then from every throat there burst a cheer, and many eyes glistened with the unshed tears, while the cannon the hero had so often heard "on war's sanguinèd plain," thundered forth their salutes in his honor.

In the oration, by Hon. Stanley Matthews, his character was sketched by a masterly hand. Especially did the orator dwell upon his modesty, integrity of purpose, and devotion to duty, and, at the gathering of the members of the society of the Army of the Cumberland and others, in the mammoth tent located in rear of the Executive Mansion, in the evening of the same day, which gathering was briefly addressed by several persons who had known him during his whole career, the same qualities were largely dwelt upon, and it is to them that I would particularly call the attention of young men.

HIS CHARACTER WAS FORMED EARLY.

Entering the Military Academy at the age of twenty years, he at once showed there the same qualities that in later years, and in the most trying circumstances, endeared him to the heart of the nation, and his firmness for the right showed a fit foundation for the rock that towered above the waves of confusion and defeat at Chickamaugua, or refused to be driven to precipitate action at Nashville. Yet it never degenerated into obstinacy. He weighed all, decided, and simply adhered to his decision.

HIS MODESTY.

This characteristic was particularly dwelt upon by Gen. Sherman. He never pushed himself forward, nor "jumped" a grade. As a Second Lieutenant of Artillery, he performed all his duties with the same conscientiousness that characterized his later labors in more extended spheres, and never sought a higher grade till he had thoroughly mastered those of the one he then held. In 1862, offered the command of an army, he at once declined it, stating that the officer then in command, was, from his experience and knowledge, best prepared for the position, and he would prefer to serve, at that time, rather than command. There was never anything of bombast or self-laudation in his dispatches. Simply and briefly he made his reports, leaving his countrymen to draw their inferences, and bestow their praise where they saw fit.

HIS KINDNESS.

He was pre-eminently a *kind* man, as one of his comrades said during his remarks, "as kind, and considerate, and gentle, as a woman." Friend and foe alike bear testimony of this trait of his character, and those who knew him best, loved him most.

DEVOTION TO DUTY.

If possible, amid so many shining characteristics, this might "pale their ineffectual fires." However rough duty's path might be, once it was made plain, there was no holding back, or lukewarmness in his services. "Duty," was the watchword of his life. For that he could lay aside all else. Born on Virginia's soil, and importuned like many others to "go with the State," he calmly decided that his duty called him to the defense of the *nation* which he had sworn to defend, and whose existence was endangered; that decision made, nothing could change it. Calm and unmoved amid the carnage of the last fearful day of Chickamaugua, as duty bade, he stemmed the fearful current of defeat, and gained the southriquet, "The rock of Chickamaugua," and later, from beleaguered Chattanooga, his words thrilled and re-animated the drooping spirits of his friends, as they flashed over the wires, "*We'll hold it till we starve!*" His was the perfect soldier character, "without fear and without reproach." The influence of such cannot be lost, but, as not the soldier only, but the quiet citizen and even the schoolboy, look upon the majestic and beautiful statue which those who knew and reverenced him have erected, they will, it is hoped, draw from the record of his career, lessons that shall make them wiser and better men.

LETTERS FROM HAMPTON GRADUATES.

THE COLORED VOTE IN VIRGINIA. HER SCHOOL HOUSE IN THE WOODS. "LITTLE MOUNTAIN DEER." COLORED PEOPLE IN THE NORTH. AN ENTERPRISING MINISTER. AFTER MANY DAYS. A TEACHER OR A NURSE? WHITE SENTIMENT IN MARYLAND. AN INDUSTRIAL DEPARTMENT.

"LITTLE MOUNTAIN DEER."

A young teacher gives a pretty picture of her school house in the mountains of Virginia, in the following naive letter to a kind friend who sends it to us for publication.

——, VA., *Oct.* 24.

My kind friend:

Your letter was received just an hour ago. It cheered me a good deal. Rain very nearly every day, the roads Tuesday were in a fearful condition, when I placed one foot down I could scarcely get the other up, the soil is clay so you know just what it is during a storm. Although the weather has been so bad, I have had a regular attendance of forty-two pupils; these "little mountain deer" do not stand back for rain and cold. I call them deer because they are so active in climbing the steep hills. My schoolhouse is as good as any in this county (this county is noted for good school-houses,) nicely lathed, plastered and whitewashed, also a *new stove*, good benches and desks. The parents are getting their children books by degrees. I am sure they are anxious to have them improve, and all this does encourage me so much, for you know that I was deprived of it in ——. My room will accommodate one hundred, I think; large and square, three windows on each side, the windows are arranged so that the room can be ventilated. Can you not draw a mental picture of my school-house? A little whitewashed frame building at the foot of a very high hill, a little porch in front, and enough land cleared for a play ground, the road to —— is on the side, nothing else can be seen but a dense forest; the trees are lovely: Autumn has spared no pains to beautify them. I very often wish, when coming from school, that I could draw; the scenery is so very wild and picturesque.

Now I will tell you something about my little ones; they are very poorly clad; a good many have no shoes on; they try to look as clean as possible, their clothes are well worn but I must say they are clean. Many of them are between 12 and 13 years of age. I have four boys that are sixteen, and also as many large girls; I also have a good many little ones; after Christmas there will be a good many large ones in. They are busy working on the farms now, and will not be through until that time. I have a Monroe Chart, and a few primers which I find a great help indeed. I have two classes studying on it. A few are studying fractions and can read very well in the fifth reader. I also have a class in division, multiplication and addition. I am getting on nicely with them and am interested in my work. As yet, I have not opened Sunday School, but Sabbath after this I am going to make a start. I have the promise of a white gentleman's assistance in this place. When I get ready he will help me teach. I scarcely know how to make a beginning, for I have no song books nor Bibles. Most of the people are farmers, and just at this time they are busy sowing wheat. The one I am with has seven acres, and will sow wheat next week. His farm is three miles from where he lives. He expects a good crop next year. I wish I could give as good an account of my boarding place as I can of my school, but I cannot. Last night I thought I would freeze, the wind blew on me from every direction. I piled everything on my bed that I could find, and wrapped a piece of flannel around my head to keep from taking cold. I had the neuralgia fearfully in my face all this week; I think being in the rain so much has caused it. This school was taught by a Hampton student two terms, he was a classmate of mine, but did not finish; I think no doubt he will.

I will see Alice to-morrow, for I will go in town to mail this letter and to get a pair of shoes, then I will see the things you sent, and tell you about them when I write again. I am going to look for the crackers all next week. I will get them just as soon as they reach ——. I do thank you so much for them, and please accept my many thanks for the money and stamps. You are so good and kind to me.

Did you ever see or smell a pole-cat? For the first time last week I saw and smelt one. I had to keep the school-house closed all the time to keep out the scent. I have not got rid of it yet, it got in one of the boys rabbit traps, and they killed it in front of the schoolhouse. I also came in contact with a small yellow and black snake, he was very cold and could do no harm. This is a new life to me. They are having a lively time at Hampton. I hear from there sometimes: They miss Miss H. very much.

I must hid you good-night.

Ever your grateful friend,

M.

IN THE NORTH.

Naturally, the work of the graduates lies almost wholly in the Southern field. The few who are teaching in the North are good representatives of the school, and one of them thus gives his impression of the condition of the colored people there.

——, N. J., *Oct.* 18, '79.

My dear friend:

Your letter just at hand. I received tha books and wrote you a letter about them, which I hope you've received by this time. Now Mr. ——, I want to answer your questions as you asked them, as nearly as I can.

Well, the colored people are living here, seemingly with the idea that they were born to live and to die. There are exceptions; but as far as I've been able to find them, I can count them on the fingers of one hand. From my experience as a scholar in the schools of Southern Va., I claim that the same energy, in fact, *all* of the numerous qualifications that serve to make a good teacher there, are needed here. I guess I have the representatives here of twenty-five or thirty families; and I have had about that number of the parents to tell me that they could not write their own names; but they desire to have their children educated. Their reasons for their children not being any further advanced are, that the previous teachers have all been white, and they seemed to take such a little interest in the children that they only sent them to school when they had nothing else for them to do. And I think it true; for I have some scholars now who have been going to school for three or four years, and know nothing save spelling and reading tolerably well and writing a little.

The colored people are generally poor, very few owning a house to live in; and the most desirable positions are harboring and waiting in private families. The most of the old people work out on farms, for seven, eight and ten dollars per month. And out of that comes family support and house rent, with the aid of their wives, by taking in washing, etc. I don't make this as a positive statement of all; but I *do* of those with whom I have to deal. I think there are not six boys in my school that I've seen with an unpatched pair of pants on. The colored people generally here are not doing near as well as in Va., the reason for which, I think, is Irish competition. There are a great many of them here, and their labor for some hidden reason or no, seems to be more desirable. In the city of ——, there is one colored carpenter, and one colored shoemaker. Even blacksmiths are all white. There is one colored boarding-house kept here by a gentleman from Virginia. This is where I am stopping. I can tell you more, but don't want to worry your patience. I think you can strike an average from this.

ABOUT THE CHURCHES.

With the exception of two families, one of which is Baptist and the other Episcopalian, all of the colored people here are Methodists. But they are in three divisions; one calling themselves "A. M. E.," one "M. E." and the other "Union." The "A. M. E." is in the most prosperous condition. They have at present a pastor who is wide awake to the duties of his office. In short he is a man who will *not* let his members feel themselves contented in their present condition. Before he came here, about two years ago, the services were held in an old church, built about thirty-one years ago, out on the edge of the towns. But since that time, or rather since he has been here, he has succeeded in building a very nice church, (brick) which is well ventilated and furnished with settees, a pipe organ, etc. I don't know what it cost, but the way he built it was by drawing money from the Building Association which gives them ten years, I think to pay the amount with interest, by their paying so much each month. This minister I've called on several times; and he has visited my school several times; giving the children a little talk each time, telling them that they are the ones, who will have the question to answer—"What has the Negro American done." The question now is, What can he do?.

It is somewhat a mystery to white and colored here to know how he has succeeded in doing what none of his predecessors could; that is, getting money from such a poor congregation to build a church in so short a time. I was talking with a gentleman about that last night, and *his* reason for it is, that the people here are inclined to be superstitious. And he tells them that if they don't give money to the church, they cannot see God.

Hoping to hear from you soon, I am,

Ever oh'tly yours, J.

AFTER MANY DAYS.

It is not our custom to publish as personal an experience as is given in the following letter. This is published, not as being remarkable or rare, but rather, on the contrary, as happily illustrative of the normal influence of the school which follows the student beyond its walls and, sooner or later, turns the scale for usefulness of many hopeful lives.

Oct. 4th, 1879.

Dear Mr. ——:

Since I returned to —— I have felt a desire to hear from you, and now seize the opportunity to write.

I suppose you would like to hear of my work. After leaving the Institution, I opened school in —— Co. I was the only colored teacher within a radius of five miles. I was in a very ignorant, degraded and poor section. The best boarding place I could procure was a room in a log-house, and every time it rained, my bed was almost soaked with water, which leaked through the roof. Everything was solitary and desolate. I was eight miles from the nearest post-office, to which I had to walk twice a week for my mail, and three miles from a store. Being thus cast off alone, away from all pleasure, my mind naturally centred upon the place I had just left. And then only was the teaching of Hampton presented to me with all its vividness. Then and there I decided to be a Christian, to give my heart to God. And I succeeded. Thankfully did I receive the workings of the Almighty, in placing me in such a solitary place that I might receive the blessings of His gracious love. From this time my whole life was changed.

I taught my school during the five months' session, and after doing all the good I could, with the well wishes of my patrons, I returned to Hampton. And oh, what a change! Everybody was thankfully surprised at the change I had made. My classmates hardly could believe it. After staying a few days, I returned to take another school five miles from my first one. I was there ten days and being unable to make an average (which is fifteen) I closed and went to Hampton. I had only been there two days when I was requested by the General to come out here as a pioneer teacher, and after considerable deliberation I came. I opened here among many difficulties, May 31st. I passed the teacher's examination, which is very rigid here in ——, and consists of sets of very hard questions made out by the State Superintendent, ——, Commissioner of Education for the U. S. to the Paris Exposition. July 6th, I finished my summer quarter and the General was written to for more teachers for the fall. After the vacation, I returned and —— and —— were sent out by Gen. A. We commenced work Sept. 1st, and so far have succeeded admirably.

The section that we are in is very quiet. Most of the whites are Friends, and are not desirous of more show but want religious and moral educators. Our county superintendent is a thorough man, alive to the responsibilities upon him, and endeavors to show his teachers the grandness of the work they are engaged in. The colored people here (and they are many) are as ignorant and degraded as those of the South. I should call the Southerners their superiors in everything but the property question. Most of them were Southerners, and have brought with them all the vices, but seem to have left the virtues of the South. This is a good field for work.

They need enlightened leaders, for they are not a people who think for themselves, but are governed much by their ministry. Here is where the school and church come in contact. Both are forerunners of civilization. Nothing hardly can be accomplished for the people's good without the co-operation of their ministry. I am giving Friday evening lectures to bring out true ideas of life. They are doing good. The elder people are dead to persuasion and example; but it is encouraging to see that nothing can prevail upon the children to forsake the precepts of their teachers. It is true they have serious faults, but when we think of the influences that surround them at home, of the neglect that has been theirs, of almost every conceivable obstacle before them, is it not encouraging that we have done as much? Does it not show that we can do more? Cannot all the difficulties be overcome? Who knows? The whites here are awake to the condition of their colored citizens, and well they may be. What is more great, more grand, than this work—the redemption of a race? I, for one, shall cast in it my lot, and labor that Ethiopia shall yet be recognized as a civilized race.

I have written more than I intended, but hope you will not tire in reading this account of a subject so important to me.

Ever your devoted pupil,

——.

A SCHOOL NURSERY.

The babies need the best teachers, and these little ones have a very good one.

——, D. C., *Oct.* 11, 1879.

Dear friend:

I have been teaching ten weeks. I think it is time for me to let you hear from these children. I have seventy-five children. They are speaking about not letting a teacher have over sixty, but do not see just yet how they can do otherwise. They are quite restless yet a while, do not know how to study, but think that school was made for them to bring all sorts of amusements, so that they may have a grand time. The first week I could not do one thing but tell them, You must not do this, and do that, and, what are you doing? sit down; but now they begin to understand just what they must do. Most of the people seem to think that I am a nurse and bring their little children for me to nurse. Some can scarcely speak a word so you may understand them. I have been printing their lessons on the blackboard for them, but a picture I have not attempted to draw for them. I feel quite grand in my new school; the blackboards are so nice, from one side of the room to the other. I hope I shall hear from you very soon. I remain, Yours, respectfully, S.

THE COLORED VOTE IN VIRGINIA.

Requests having been sent to the graduates settled in Virginia to observe and report upon the colored vote and sentiments in the recent State election, a number of interesting replies have been received from different counties, from which we make the following extracts bearing upon the subject.

—— Co.

"Tuesday, the 4th, was election day for members of the State legislature, and in accordance with Gen. A.'s request, I undertook to note, as well as I could how the election was conducted; whether the colored people voted as a matter of vital interest to the State, or mere personal gain of a suit of clothes or a drink of rum. I must say I saw no drunkenness whatever, as they seemed to realize for once that they must assert their manhood from a point of honor, rather than transitory gain. The representative of this district, a democrat, has had that position four years, but at the election which took place Tuesday, he was defeated, he being for the settlement of the debt as it is to-day, which would necessarily take a term of four years, and injure our free schools, which are poor enough. The colored people in this county are republicans, and, as they have a majority, usually carry elections, if they only 'get rights' as they term it. They are bitterly against putting their shoulders to the wheel of pay, saying they did not contract the debt, and cannot see why they should help pay it. Not being able to get one to be the standard bearer of repudiation, they voted for the 'readjusters' and elected them."

—— Co.

"There has been great excitement here among the voters at this election. The majority of colored voters here are in favor of not paying the debt. A large proportion would be in favor of paying it if they were not led by parties who proclaim that the debt-paying party was going to rain upon their heads three dollars as capitation tax. As a general thing, heretofore, the colored voters never attended these State elections, but at this one there was as much noise made as at National elections. There were stump speeches made all over the county previous to the election, and the colored voters were excited to their highest ambition. The reason they give for their vote is that when this debt was made, they were held as property as security for it, and they had no hand in making it. Therefore, they hold that they should not be taxed to pay it, nor the money taken from their free schools and their children left destitute of education. This is the reason which the solid colored voters give for their vote, that is, those who will allow no party to buy them. There are others who can give no reason at all, but simply vote as the men with whom they live. There is a certain per cent. who can be bought by whiskey or something to eat, and probably for a little money. Not many though, for the colored voters are very solid and pull together. There are about seventy-five per cent. of regular voters; about fifteen per cent. of irregular, and ten per cent. that do not vote at all. Now the election is over, and from what I can understand, the debt paying party is elected from this county."

—— Co.

"The first day I got here, I went to see the Superintendent. Among the first questions he asked me was, 'are you a politician?' I told him that I believed in them but had not taken much stock in them as yet. This he was glad of, and said other teachers had spent one-half of their time in them. There was a readjuster meeting held in my school room, and, of course I went to it. When we were all together it was half past ten, as the people about here don't gather very soon for any kind of meeting. The meeting consisted of reading of abstracts and circulars, and when it closed the people didn't seem to know much more about the debt than they did before. The greatest influence in this part of the county was made upon the colored people by their own color, those seeking office, and who were nominees. There was a little compulsory power used round my neighborhood, such as threatening to discharge or injure in various ways. One man told me some days ago that Johnson, at the end of the war, told the whites of Virginia to pay the negro small wages, just enough to keep him alive, sell him no land, tax him highly and limit his schools, that by thus serving him it would be impossible for him to rise, and he said, 'they have done it all, and they shan't tax me by my vote.'"

—— Co.

"The papers state that nineteen-twentieths of the colored vote were cast for the readjusters' candidate. Many give their reasons. They say, as every one knows, that they were slaves when the debt was made, therefore they ought not to vote to help pay it."

INCIDENTS OF INDIAN LIFE AT HAMPTON.

END OF THE FIRST YEAR.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

END OF THE FIRST YEAR.

It hardly seems possible that it is one year ago this November since we first welcomed these Indians to our school. As we stand upon the threshold of a new year, it is pleasant to look back upon the old.

What a change from one year ago to-day, in their countenances, dress, habits, and manners! Intelligence has been gradually chiseling and softening the hard features of their faces, letting the inner light shine forth. The blankets, breeches, and long hair of the plains have yielded to the strong influence of example at Hampton, and are now things of the past. The indolent habits which characterize them as a people have not been encouraged, but they have not learned to love work. Still, work is required from all; it is taught to be honorable and to be the true road to success; the muscle is trained as much as the brain. The servile position of woman in their home finds no parallel here. The sexes meet in the class-room and at study-hour, and it is to be hoped that a more exalted idea of womanhood, and of woman's equality with man, may be one of the results of the Indian work at Hampton.

DISCIPLINE.

All through the year, we have had to deal with refractory pupils, and the question has always been, What must be the kind and degree of punishment? We have ignored, as far as possible, the fact that they are Indians, and made no great allowance for race propensities; the same rules which regulate the life of the colored students are applied to the Indians. Promptness and obedience have been required of all, but the Indian still wants his own way—promptness is not appreciated, and obedience is hard to obtain.

There has probably been no more trying period than the present since they came to Hampton. The work of the year has been very great; they have really made astonishing progress toward civilization, and as they leave behind them the old life, they have to wrestle, at every step of the way, with their old nature. It is something of a test of human endurance on our part as well as theirs; but the victory is so near and so certain to be ours that we lead them on, fully determined to conquer. "I don't want," and "I don't like," are the first excuses for any act of disobedience. They have not learned to shape their will by ours. This seems to be a crucial test of their real progress. We always try to punish in the line of the offence; extra work is excellent discipline, the amount being determined by the nature of the offence.

DEATHS.

The hand of death has torn five from us. Two were from Indian Territory, and had been East nearly four years; the others were from Dakota. At least all but two of those who have died were, unquestionably, marked with disease when they came to us. There are influences at home which are more dangerous to them than a change of climate.

GONE HOME.

Eight of the forty-nine were sent home—not because they were in any immediate danger, but with the desire to prolong their lives as much as possible. Their health was improved when they came to us, and it was hoped that a change back to their own climate would be beneficial to them. Two of them have died; the others are doing well and send letters that encourage us very much. They have gone back with the true spirit.

CORRESPONDENCE.

The following little note was received from Wahneechay, who has returned home; his father, Little No-Heart, Chief of the Minneconjoe band of Sioux, recently visited the school and expressed himself well pleased with everything, and wished to send his son back again.

"FORT BENNETT, *Oct.*, 79.

My Dear Brother (Mr. R)

This morning I am very well; I go home now to night. I like English. I pull grass for my father. Brother I want your picture: this is all I have to say my brother.

DANIEL T. NO-HEART."

The following letter from Jos. Cook (one of those who returned,) written at his dictation, naturally recalls the question, "Can any good come out of Nazareth?"

"YANKTON AGENCY, D. T., *Oct.* 28, 79.

My dear Mr. J. C. R.:—

At last I have the pleasure of writing you a letter and answering your questions. It's a great comfort to me to hear from you and especially to get good advice from you. I arrived home safely, and have been well in body since. All my people are well in some respects, though they are not as civilized as I wish they were. Their crops have done well this year. My friend I wish you would write to me all about Hampton when I was there I tried to do the right thing; I knew you wanted everything done well, and did all you could for the boys, so I wanted to help you all I could.

My friend, when I was at Hampton we got along well together; you never made me sad, and I never made you sad. Now I am at home I think of you with gladness. Then my friend I love to hear your words very much. I think of what you say every day for a long time. I love to think of you with my whole soul and above all my friend, my heart was drawn to you, and I loved you, and you had pity on me and that made me glad. I love to sing the song you used to have us sing "Nearer my God to Thee" and when I praise God and sing it I always think of you, and it makes me sad my friend to think of you and how far you are away when I sing it.

My friend I shake hands with you with all my heart. Your friend,

JOS. T. COOK."

Rev. Mr. Cook, Joseph's friend, writes:—

"Joseph came directly to me on his return, and I concluded to send him to St. Paul's School. I got him entered at St. Paul's and he staid there that night. He was excused the next day to visit his family. When he came back in the evening, he had changed his mind. His mother had told him that since he went away she had had a hard time. Joseph was touched; he thought, for the sake of his people, and his mother especially, he ought to go to work at once. It was so noble of him and such a holy thought, that I could not advise against it. I secured him a place in a carpenter shop. He lives a long way from his work, and I fear it will be very hard for him. Thus far he has always been at the Sunday morning service, and last Sunday was at the Holy Communion."

Will anyone now ask, What is the Indian worth? We have heard from all but one of those who have gone home, and have received the same good report—working for the family, and sorrow for the low state they are in.

GIRLS' WORK.

During the past year the Indian girls have been taught sewing in the general Industrial room, but, owing to the large force of colored students employed in this department, it has been hard to give the special training that the Indian girls required. A small room has now been given them, and they meet Monday, Tuesday and Wednesday afternoons to learn to cut and make garments. It is the desire of the teacher that each one should learn to cut and make her own clothes. A great many mittens are manufactured in the Knitting room of the School, and all of them have to be finished by hand; so any spare time that the Indian girls may have while in the Industrial room is devoted to crocheting and finishing these mittens.

Thursday afternoon the girls wash their own clothes, and on Friday afternoon they iron them; Saturday will be given to mending the clothes of the week.

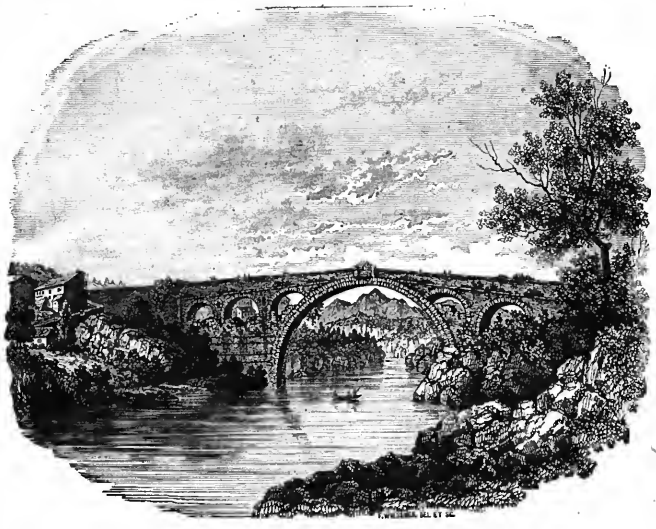
A cooking class has been organized. Cooking is one of the indispensable accomplishments of a woman. Human progress is determined as much by the cook as the teacher: the sight of a withered and blasted dyspeptic ought to make a poor cook blush.

The girls have, thus far, been assisting to get dinner; one girl is out of school one day to help in the kitchen. It is desirable that they excel in this branch of their education, as poorly prepared food is said to be one of the chief causes of the great mortality among the Indians. Even at Hampton it is a very difficult thing to keep them from digging up onions, carrots, turnips and potatoes and eating them raw.

The arrival of the five new girls has had a stimulating influence on the old ones. The desire to appear well is just as natural to the Indians as to any other people.

BOYS' WORK.

The boys have been divided between the farm, blacksmith shop, wheel-wright shop, engine room and Indian work-shop. The farm boys have been under the care of the Farm Manager; but, as with the girls in the Industrial room, we have found that the boys require special training. The services of an experienced farmer, living in the neighborhood of the school, have been secured; the boys go out every afternoon, except Saturday, to their work. We want them to get a taste for work; it is their only salvation as a people. The wheel-wright, blacksmith and engineer have done very well. It is a pretty sight to see the Indian engineer start the Corliss engine in the saw-mill. Tables, benches, bedsteads, dust-pans, tin cups, basins, pans, slop pails, shoes, and iron tanks, are some of the products of the work-shop.



THE BRIDGE AND ITS KEYSTONE. (*See page* 118.)

WAGES.

The time has come when it is proper and necessary to pay the Indians for their labor. One year ago, we could not trust them with money, as it was certain to be exchanged for jewelry or other useless finery. The allowance for wages, drawn from the Government appropriation, is too small to cover any extravagance. From it they are to provide everything for themselves, except two suits of clothes. The Indians need to learn the value of what they receive, as well as what they give. It would be poor policy to continue to hand out supplies—it would degrade instead of elevating them. They must feel that they earn everything they receive. They need to be pinched; close calculation is good for them; it makes them look ahead, and fixes the habit of economy. We know the temptations that money brings when in the hands of the ignorant, but the end to be reached is worth more than the risks, carefully watched as they are. Every day we realize more and more how much should be embodied in any plan for Indian education. The world is a hard school for them; its lessons have not been learned.

This whole effort is a preparation for the great world of temptations into which they must soon go. As pioneers, they must be well armed to fight successfully. Anything that will give them strength for the test must not be neglected now.

The girls are not allowed wages, as yet; we want to see how the experiment works with the boys. A short time ago, two of the little Indian girls were having a gossip in the Industrial room while at work. They conversed in English, and were heard to remark, "I think Mr. R. will go to heaven when he dies." Soon after this conversation the boys told the girls that Mr. R. was not going to give them any more clothes, that they would have to work and buy for themselves. The boys thought they ought to use the money for something else; and the girls thought so too, for they were heard to say: "I thought Mr. R. was a good man, but he makes Indians work and buy all their clothes." It is thought to be harder for Mr. R. to get into heaven now.

LITTLE NO-HEART'S VISIT.

Little No-Heart had come East "to see Washington on some business," and wished to visit the schools where the Indian boys and girls are. He went first to Carlisle, and, after a pleasant stay there, he came down to see us. Little No-Heart comes from Cheyenne River Agency, on the Missouri River, in Dakota; he is Chief of the Minneconjoe Sioux. The officer in command at this agency says: "Little No-Heart has proved himself deserving of all that can be done for him. He is a man of very high order of intelligence and is imbued with the most noble sentiments and aspirations. He is constantly laboring with his people, endeavoring to instill into their minds and hearts the noble ideas, thoughts and feelings of his own."

Every attention was shown our guest. In the morning, the class-rooms, dining-room and chapel were visited, and the dormitory inspected. In the afternoon, he visited the work-shop, and was shown around the school farm, where the Indian squad was at work in the sweet-potato field. That the school was not on dress-parade is evident, from the fact that, at the moment of the chief's arrival, his young braves were vigorously engaged, it is true, but in pelting each other with sweet-potatoes, and shouting the multiplication tables. Sternly striding across the field to the side of his little nephew, who was one of the party, Chief No-Heart began an emphatic address in Dakota, which had the effect of making the boy, while it lasted, the busiest worker in the field.

In the afternoon, the chief was invited to talk to the boys and girls; he gave them sound advice, which was communicated to us by his son-in-law, the interpreter, Charles Tackett. He told them they had everything they needed, and he would tell their friends all about the school; if they were punished for anything, he advised them not to write home about it, for their friends would understand that whatever was done would be for the good of the Indians, and their friends would know that the boys and girls were only mad; that we wanted them to be something. He gave each boy and girl a hearty shake of the hand, and then bade them good-bye.

His visit did us all good. He brought Dakota with him to Hampton, and will take Hampton back with him to Dakota; he made us see the past and present of our charge; through him they are made to realize the pleasantness of their surroundings and the important hearing this work has upon their future life. In a talk with the chief, he said: "The Indians see that the white man's way is the best way; they have thought about it and are ready to go in it; but when the white men try to do as they like with us, that keeps us back."

J. C. R.

LETTER TO BEAR'S HEART FROM MRS. LYDIA MARIA CHILD.

Our readers will be interested in the following kind letter to one of the Hampton Indian students from this long tried friend of the red man and the colored man.

WAYLAND, *September*, 1879.

Bear's Heart,

Dear Sir: I thank you heartily for the pretty little vase, hearing your name, which came to me some months ago. I shall always value it as a friendly token from your intelligent and much-wronged people, in whose welfare I have taken a lively interest all my life long.

I am rejoiced to know that some of you are trying to obtain a useful education. Knowledge is what renders the white race

more powerful than yours; and the acquisition of knowledge is the only way of placing yourselves on an equality with them. Especially important are those kinds of knowledge which are practically *useful* in the daily business of life; such as the Natural Sciences, considerable. But Let me advice you must take a little more pains in writing—form your writing all even—makes It look better—do not forget this. You write very good hand now. Try little at a time—and then before long you will be accomplished in writing

SPECULATION.

Men rush to extremes as naturally as young ducks waddle to water. From 1873 to the beginning of 1879, every man seemed to distrust every man and every thing; now, a confidence in man and things exists which would be at first successful, (and it is a proverb of Wall St., "A greenhorn for luck"); let him see $100 grow to $1,000, perhaps, between ten o'clock and three, with no particular effort of his own, and that man would laugh to scorn the theory of the folly of speculation,

more powerful than yours; and the acquisition of knowledge is the only way of placing yourselves on an equality with them. Especially important are those kinds of knowledge which are practically *useful* in the daily business of life; such as the Natural Sciences, and their judicious application to agriculture and the mechanical arts.

The remnant of you might, even now, become a great and prosperous people, if you would be wise enough to forget animosities between various tribes, and stand together, shoulder to shoulder, like brethren of one family, with no rivalry except to strive who shall do the most to make the red man respected by the nations of the earth.

Shun the vices of the white men; their intemperance, their dishonesty, and their falsehood; but copy them in their eager pursuit of knowledge, and their intelligent application of it to daily use.

I am one of many hundreds who have always sympathized with the wrongs of your unfortunate and much-abused people.

I am now 78 years old, but my heart is as warm as ever toward all the wronged and the oppressed. I have knit a scarf for you, which I send by Gen. Marshall, in token of my friendship.

May the great Spirit, who is the Father of us all, protect and guide you in the ways of wisdom.

Your old friend,
L. Maria Child.

OPINION OF A TWENTY-YEARS' MISSIONARY.

An officer of the Normal School has recently received the following testimony from a missionary, for twenty years among the Indians, to the value of a work like Hampton's:—

Bennonia, Bernie Co., Mich., October 25, 1879.

Dear Sir:—

I am very glad to see the new movement in regard to educating the Indian youth. For more than twenty years I was a missionary among the Ojibways of the North-west, and of course feel a great interest therein. We fully demonstrated to our satisfaction, that success in this direction, *in the Indian country*, was out of the question. A part of the time I was at the head of a Government school in connection with the American Board, and we found that when they came to graduate, *there was no place for them.* In general, they had not force of character sufficient to withstand the pagan influence among their own people, and there was no place for them in the States. No Christian philanthropist will fail to see the paramount importance of securing the Spirit's sanctifying influences in this, as well as every educational work. Otherwise, we but play into the hands of the Devil.

Yours, affectionately, for the oppressed,
David B. Spencer.

FROM AN INDIAN BROTHER.

We wish it were possible to show our readers the handsome chirography of the following letter to a Hampton Indian student from his brother. The writer and his wife were both educated in the Friends' school, at the Agency, and are prospering, as the letter shows.

Kiowa, Comanche and Wichita Agency, Ind. Terry. Sept. 28th, 1879.

Dear Brother.—I read your kind interesting letter with great pleasure indeed. I always happy to hear from you. I am glad that you are doing well, and are satisfied where you are *now.* That is right—stick to it long as you can, you will come out all right before long. I am in hopes that Capt. Pratt, will be down here in the Territory to get Girls and Boys from these three Agency here. He will get them without any trouble—great many Boys and Girls wants to go. They begin to know the benefit of Education and are anxious. The school here will commenced October 1st.

I tell you old Ansdarko are improving right along—when you ever come back home again you hardly will know old Ansdarko, Indian Territory. Business are flushing right along. Indian employes gets ten Dollars to fifteen per months, rations all furnish by Government, also Clothing to wear, House to live in etc. My wages was Raised to Twenty-five Dollars per month—and still so continue at present. All Indians on this reservation are doing very well, improving their farms—Building Houses for themselves. Also Indian Freighters begin to realize Freighting—some of them Received pay highest one hundred and Forty Dollars for three trips from Caddo to here. The *Cherokee Advocate* you wanted me to subscribe for you—I will heartily do so and have the Editor of the *Advocate* directed to you—Hampton Normal School, Va. You have improved in writing and spelling both—considerable. But Let me advice you must take a little more pains in writing—form your writing all over—makes It look better—do not forget this. You write very good hand now. Try little at a time—and then before long you will be accomplished in writing Also keep up your correspondence—that will help you a great deal—never let an opportunity pass by—always be on time—be prompt in Business or in School—or in conversation—no matter where you are—this is the best Policy I know—friends of mine use to tell me when I went to School these very words I am telling you now—and It done me great deal of good. Produce was not much this Spring—very little corn Raised—the weather was very dry—no Rain—also no Rain yet—the ground very dry—grass all burnt up—no water hardly in Washita River—hoping to hear from you soon, Kindest regards and good wishes to you.

Your Brother,
James H. Deen.

FROM A HAMPTON INDIAN STUDENT AT CARLISLE.

Etahdleuh Doanmoe, the young Kiowa whose "short talk" at Hampton's last Anniversary will be remembered, went to Indian Territory ahead of Captain Pratt, and, by his own speeches and influence among his people, collected at least twenty-five youth for Carlisle. He afterward, with most of the St. Augustine young men, went to Carlisle to assist Captain Pratt with his new students. They keep up a tender feeling for Hampton, as is pleasantly apparent in the following letters from Etahdleuh and Matches:—

Carlisle Barracks, Penn., *October* 29, '79.

My dear friend Miss L——:

You know that I have been away for a long time, since Sept., and just I got back at Carlisle last Monday night about six o'clock. And I was very glad to see my old friends again. We brought down about fifty-eight Indian children here. I got my little sister here. She is 11 years old. her name is Sandly. I thought could not take her away from home, but she would like to come East with me very much, so tooked her with me. Now please give my love to Miss H—— and all the other Hampton teachers who I know. And please remember me kindly. And also give my love to Zonekeah, and B. Heart. I hope all the Hampton boys doing well at Hampton. Now I hope you will write to me as soon as you can, and tell me all about Hampton and they thinking about the Carlisle School? Now I must close writing. And with the good wishes to you all. I hope you will write to me soon.

Your truly, E. Doanmoe.

The following letter was written to Rev. Mr. Gravatt, who is pastor of the Episcopal Church in Hampton in which Matches was baptized and confirmed:—

Carlisle Barracks, Carlisle, Penn. *Sept.* 14th.

Mr. J. J. Gravatt

My Good Friend;

Before leaving Hampton I promised to write to you but I have it much to say. This morning I went to Church and no Indians were there. I did miss all the Indians very much, *particularly you.*

My heart was sad, and I felt lonely, but I prayed to God Our Heavenly Father that He give me His Good Spirit in my heart to fight to keep the devil or bad spirit out of my heart and I must try hard to do this all the time now; I must love more Jesus too and try to keep my heart warm and in the good way Jesus will help me and show me what to do and I can make Him happy and then by and by I will be more happy in my heart.

Give my love to the Indian boys. Please write to me soon. I want you to pray that God will make me a better man and I may love Him more.

Your true friend,
Walter Matches.

BACK NUMBERS OF THE SOUTHERN WANTED.

By the fire in Academic Hall, our files of the paper for the past year were destroyed. If any of our friends have spare numbers, we shall esteem it a favor if they will mail them to this office. Ten cents each will be allowed for January, April and May numbers.

J. F. B. Marshall.

The largest cotton planter in Craven county N. C., is Isaac Forbes, a colored man. Last year he raised over a hundred bales of cotton. When set free in 1865, he did not have a hundred dollars.—*Ex.*

SPECULATION.

Men rush to extremes as naturally as young ducks waddle to water. From 1873 to the beginning of 1879, every man seemed to distrust every man and every thing; now, a confidence in men and things exists, which would be unexplainable, if we did not recognize how one extreme follows another. For six years only the boldest made any ventures at all, and even then touched the safest things timidly; now, there is hardly an enterprise so chimerical, but many men are willing to bet on its success. How or why this change occurred would be too long a story to tell in this paper, which will have to do with speculation in the abstract—its dangers and allurements.

Next to the instinct of self-preservation, which pervades all men, comes the desire to exchange, increasing in intensity as men rise in civilization's scale. The whole principle of exchange is embraced in the thought of two people having two things, and each preferring what the other has to his own. The efforts of each to get possession of the other's property by giving his own, is the whole story of business life. In any exchange, then, there must be, from the nature of things, two persons having two things, and these persons make each an effort to get what the other has.

No man can be everything to himself,—he cannot be at once his own "baker, shoemaker and candlestick-maker," nor follow all the myriad callings, the results of which are necessary for his comfort and happiness. To get them, he must give some of the thing or things which his own labor produces in excess of his needs. The whole principle, then, of what may be called natural exchanges, is the giving of one thing for another, both being the products of labor. Speculation differs from natural exchange in this, that only one thing passes between two people. A horse-race is a pure speculation—A bets B $100 that the brown horse beats the black, and B bets A that the black horse beats the brown; whichever way the race results, A or B is richer or poorer by $100. If A and B had each owned a horse and had traded the animals, it would have been a natural exchange, and at its end both parties would have had something to show as the result of the exchange. In the case of the bet on the horse-race, if A gets possession of B's money, he will not have it, by having given something for it, but because of the result of something quite foreign to the money. This is a bald illustration, but it marks the difference between natural exchange and speculation. There is no material difference between speculation in stocks, wheat, or cotton, and the betting on a horse-race. There are modifications and refinements in the former which are not in the latter, but both are entered into with the same object in view, the getting of some man's money by giving him an chance to get yours. I do not know if I can express the difference more clearly, than by saying, in natural exchanges, facts are given for facts; in speculations, risks are given for risks. Speculation produces nothing, while natural exchanges and the processes leading to them do. Suppose ten men, each with ten dollars, begin to speculate on cards, dice, horses, stocks, wheat, corn or cotton; at the end of the day one man has $100—the other nine, nothing; the $100 still exists, it has neither been increased nor diminished—it has only changed hands. In the changing of the money from hand to hand, the cotton, corn, wheat, stocks, horses, dice or cards have only been the pivots on which the risks turned.

The highest law of Heaven and earth is that men should labor: and the tendency of all speculation is to reduce labor to a minimum. I would not say that the men, who stand around a race-course or a card-table, or who watch the quotations rolled off an Exchange "ticker," do not labor—for labor is the putting forth of any exertion in order to obtain something in exchange for itself; but it is manifest that all the labor put forth by any of these parties is only enough to risk the result of previous labor on the happening of some special event within a certain time.

If a farmer plent 100 bushels of corn in the ground owned or leased by him, the crop will be the product of his own labor, the soil's fertility, and the chances of the season. Here labor is the largest factor, chance the smallest. If a man bet that corn will be higher than fifty cents in January, and another men bet that it will be lower, the greatest factor, is chance, the smallest, labor.

Perhaps enough has been said on this point, and it only remains to quote the old adage about there being "mischief still for idle hands to do." It is a peculiar fact that money won by speculation is generally spent in folly, or to put it in another way, "Quick come, quick gone."

It is all very well for those who have never speculated to declare they cannot see how men can be so foolish as to risk the money they have worked hard to obtain in speculations of any sort—this is all very pretty in sentiment; but nobody ever utters such a sentiment who has himself worshiped the fickle goddess. Let a man begin to speculate, and be at first successful, (and it is a proverb of Wall St., "A greenhorn for luck"); let him see $100 grow to $1,000, perhaps, between ten o'clock and three, with no particular effort of his own, and that man would laugh to scorn the theory of the folly of speculation, and tauntingly ask how long it would have taken him to have made that amount at the plow, the bench, or in his profession. The argument is of course as specious as can be—but the man who wins cannot see the folly of his winning. But let luck turn and the man's winnings melt away more rapidly than they piled up; on the top of this, let him lose what he invested, and, nine chances out of ten, he will plunge in deeper, hope for a change of luck, and flatter himself the best place to find his money is where he lost it. The majority of such people lose all their own money, and as much as they can borrow of their friends.

Take the history of Wall Street for twenty-five years, and there is hardly one speculator who has made more than a living; the "Street" is full of "lame ducks," as bankrupt speculators are called, and as one flock dies out, a new flock takes its place. It does to repeat, that if two men bet, one must lose; and the loser speaks as little as possible of his losses—of his gains he is more prone to talk; indeed, in general terms, it may do to say, what is "hit" is history and what is "missed" is mystery. We read of lotteries, where one man has invested one dollar and won fifteen thousand; but we do not hear of the twenty thousand men who invested a dollar each and lost.

As stated in the opening of this, a wild spirit of speculation is abroad; and there is hardly a hamlet in the land, in which there is not one man who has an "interest (big or little) in the market." The present craze is without a precedent; every man wants to buy—one crop of buyers take hold one day and sell out the next to a new crop, and these to a third, and so on. This makes the most dangerous sort of a market, for some day the new crop of buyers will not be found, and then will come the crash, and it will come, like all other panics, when least expected. Financial lightning out of a clear sky is no uncommon phenomenon, as any student of commercial history can testify.

To square the circle and make money without labor are two problems, which wise men abandon and fools try to solve. The wear and tear of body and mind which persons deeply engaged in speculation experience cannot be imagined or described,—a man must go through it, and then not realize at the time, the strain he has undergone.

Speculation may cultivate some virtues and check some vices, but it assuredly puffs up vanity and chills charity. A man who has made a series of lucky strokes puts himself, metaphorically, on the back and thinks what a brilliant, far-seeing man he is; while the man that loses at the game, is only too apt to dub as swindlers and scoundrels the men with whom he played—and lost. Of course, these remarks apply only to what may be called emotional speculators, people who have some other calling to follow, and indulge in speculation as an outside issue. One thing is certain, that no man can do his best in his legitimate calling, and speculate at the same time. One or the other must suffer, and generally it is his legitimate calling.

In the sea of speculation, like in the ocean of waters, the little fish afford food for the big ones; and the man who puts his hundred or thousand dollars against somebody else's half-million, will realize the truth, that to him who has shall be given, and from him that hath not, even the little that he hath shall be taken away. If a history could be compiled from the books of Wall Street brokers, this fact would be proved millions of times.

I believe that where one man makes and saves a fortune by speculation, one thousand lose all they have; is it not the quintessence of vanity to bet 999 to 1 on oneself? Especially true is this, if we apply it to people who know nothing of speculation and the laws of chance. A professional gambler can perform seeming miracles with a pack of cards, and just what the inexperienced onlooker would declare to be impossible occurs. In the wider speculations, the same thing occurs, and among dissappointed amateur speculators nothing is more common, than to hear quoted, "The market always goes as it ought not to do." Reason as we may, argue as we will, there are waves of speculation that pass over countries, as surely as there are areas of high and low barometer. Such a wave is now going over the United States, and its tingling influence is felt everywhere, but centres in the N. Y. Stock Exchange. To those who know nothing of speculation, and to those who know but little, I feel assured the following advice is good—Keep out. T. T. B.

Statistics in the United States estimate that with increased immigration, the population will be found in June, 1880, to be about 40,400,000.

GRASS AND STOCK.

That grass and stock growing are more profitable than raising grain is a proposition so well understood as would seem to render it unnecessary to use any further arguments in support of it. Indeed there is scarcely a well-conducted farm to be found on which live stock does not constitute one of its most prominent features. It is a self-evident fact that where farm products have to be transported long distances to market it is the part of wisdom to reduce them in weight and bulk as much as possible. And this, in the case of such bulky articles as grass and grain, can best be done by feeding them to stock, and thus conveying them to market in the shape of beef, pork mutton, wool, cheese, butter and milk, instead of in their original state. The homely phrase that "the best sack in which to carry corn to market is a beef's hide or a hog's skin" expresses the idea most forcibly, if not elegantly. Especially is this the more necessary when the market is at such a distance as to make the difference of even the fraction of a cent in the pound in the cost of transportation a considerable item in deciding the question of profit and loss.

It is one of the most obvious of business principles that capital, to be rendered most profitable, should be constantly employed. Say the security is equally good, it is far more profitable to loan money on long time at four per cent, than at short intervals at eight per cent., with the capital lying idle most of the time. The same is true of labor. It is far better for a laboring man to take steady work at fifty cents a day (if found) than to depend on uncertain jobs at double the price. And, as labor is part of the farmer's capital, it stands to reason that he can put it out to better advantage in growing stock than in raising grain, in which latter case both himself and teams are comparatively idle a third of the year, while the stock-grower can find employment during the entire time. Again, on many farms where the raising of grain is made a specialty there is much valuable food wasted for the want of stock to consume it, and which could thus be put to more profitable use than allowing it to rot for manure. So, too, there are many farms that are either too wet or too hilly or stony for profitable tillage, but which would give fair returns in grass, in which case even the nooks and corners, sides of streams, fence-rows, &c., can be utilized, while they are of no account in raising grain.

But the greatest advantage of all to the stock grower is the improvement of his land. As we have often said, all plants live by eating, just as do animals; and, like them, obtain their nourishment partly from the atmosphere and partly form the soil. To say nothing of the atmospheric elements of plant food, there are ten mineral elements obtained from the soil, all of which, save three are found in almost every soil in such sufficient quantity as to need no replenishing. The three exceptions are phosphorus, potash and lime; and although these are the most important of all the soil elements, yet they are found in most soils in such minute quantities as to soon become exhausted by excessive cropping. Now, if these three elements of plant food are allowed to be appropriated by grass, and the grass fed to stock, not only are these elements returned to the land in the shape of manure, but large accessions of atmospheric elements also, and thus the land is kept continually improving; whereas if these soil elements are diverted to the production of grain and the latter sold off the farm, the former will be lost to the land, and if not returned in some shape, deterioration follows as a matter of course. —*Baltimore Weekly Sun.*

ASPARAGUS.

There can be no better time than at present to make asparagus beds. Deep spading or ploughing, and working in a good body of well-rotted manure upon a piece of well-drained soil are the essential preparations for the crop. Good, strong plants, one or two years old, should be procured, and of a good variety. Conover's Colossal is the best, and we advise it in preference to any other now in the market. There is a great difference in practice about the distance apart the plants are set. For culture on a large scale by means of the horse-hoe or cultivator, three feet by two are not too great a distance, but in the garden, where it is necessary to economize space, the plants may be set closer; if the cultivator is to be used, the rows may be three feet apart and plants set one foot from each other in rows; if the hoe and fork only are to be employed, they may be set as closely as one foot each way. To set the plants a trench about eight inches wide and six inches deep should be dug along the line, and in this the plants carefully placed, so that the roots shall spread out freely in every direction; after this cover in the plants, being careful to work in the soil that is fine about the roots. This last caution is hardly necessary, for it is supposed that the preparation given the soil is so thorough that every spadeful is fine and mellow. After planting cover the ground with a dressing of old manure, but do not use fresh manure, as it nearly always contains more or less of weed seed ready to germinate in the spring.— *Vick's Magazine.*

AGRICULTURAL ITEMS.

The Berkshire swine seem to have taken a fresh start among Western farmers and raisers. At one time they were quite numerous in the Eastern and Middle States, but they wouldn't grow big enough for people here, and the Chester County Whites were substituted and preferred, and are no doubt more profitable to the general farmer. We regard the flesh of the Berkshire as preferable, and for home use we like small pork. There is nothing more objectionable than great, fat hams, weighing from fifteen to twenty pounds, with not more than one-half lean. The small size of the old Virginia ham, which we no longer see, weighing from six to nine pounds, the hogs which were fed principally upon acorns and nuts while running at large, were without comparison the best we ever ate—better, when properly boiled, than any other meat under the sun.—*Ger. Tel.*

Southern planters are encouraged by the fact that cotton sold in Augusta, Ga. during the week ended November 1, as compared with the corresponding week of 1878, gave the planter a gain of about $100,000, owing to the advanced prices. The amount of cotton sold in all the Southern States during October will net the planters from $8,000,000 to $10,000,000 more than the sales of the same month last year, the gain being found in the increased price of staple and not in its quantity. Cotton is now worth $10 a bale more than it was a year ago in the Augusta market.

Illinois is a tolerably well cultivated State, but, with 20,000,000 acres under tivation, it has 8,000,000 acres unimproved, an area as large as Massachusetts and Connecticut together.

NEWS OF THE MONTH.

FOREIGN.

BUENOS AYRES, Oct. 23.—The Argentine government has ordered two iron-clads to be purchased in Europe.

A dispatch from Cabul to the Standard says: "In all forty-nine Afghans have been hanged for complicity in the massacre of the British embassy. It is reported that trouble is apprehended in the Ghuzni country. One of the Khans and his brothers are inciting insurrection in Kohistan."

ROME, NOV. 19.—A fire occurred on Thuesday in a house belonging to Prince Charles Bonaparte, on the site of the villa which was burned at the storming of the Porta Pia. Three persons were killed at the fire.

LONDON, NOV. 18.—The former Confederate cruiser Shenandoah has sunk off the island of Socotra, in the Indian ocean. The date of the disaster is unknown. Most of the crew were drowned. The Shenandoah belonged to the Sultan of Zanzibar.

LONDON, NOV. 18.—A dispatch from Pesth to the Daily News says the distress in Montenegro is very great. One-sixth of the population is almost starving. The present supplies of food will only last until the end of January.

There has been severe fighting on the Turkish frontier, near Brescovitza. The latter place was completely plundered by a body of 500 Arnauts.

PARIS, NOV. 20.—The jury on the exhibition of arms has awarded a gold medal to Mr. Mackean, a citizen of Illinois, for his services in connection with the piercing of the St. Gothard tunnel.

LONDON, NOV. 21.—During the night between the 16th and 17th instants, an exceedingly violent storm burst over Odessa, causing enormous damage. Several ships were sunk in the harbor and the quays and naval establishments suffered heavily.

Lord Hatherton, umpire in the dispute about wages between the employers and workmen of the Staffordshire potteries, has made his award. It establishes a reduction of 8 per cent, in wages instead of 10, as claimed by the masters. Over 40,000 operatives are affected by the decision.

Park Hall, near Evesham, the seat of the Earl of Yarmouth, has been burned. Some estimates make the loss £160,000.

M. Forwood, ex-mayor of Liverpool, has received a letter threatening him with death if he speaks against the Irish at any public meeting.

LONDON, Nov. 21.—The British steamer Bornsela, Capt. Williams, sailed from Liverpool today for New Orleans, with 65 farmers and their families bound for Texas. They are mostly from Lancashire, Yorkshire and Durham, with a few from Scotland and Ireland.

POLITICAL.

NEW YORK, NOV. 14.—The Sun publishes to-day the official canvass for State officers as made by the supervisors of the counties. The table shows the following majorities: Cornell, rep. Governor 40,172 (plurality 3) Hoskins, rep. Lieut Governor, 1,130; Carr, rep., secretary of State, 4,411; Wadsworth, rep., comptroller, 7,059; Ward, rep., attorney-General, 7,909; Mendell, rep., treasurer, 4,631; Seymour, dem., engineer and surveyor, 9,969. Kelly's vote 77,471.

OMAHA, Nove. 6.—The returns of Tuesday's election show that the republicans elect Cobb, Supreme Court, by 15,000 majority over Wakely, dem. University regents, Carson and Gannett, rep., are elected by the usual party vote. The returns on district judges elect Pound in the first Weaver in the second, Savage in the third, Post in the fourth, Gaslin in the fifth and Barnes in the sixth—all republicans except Savage, whose majority over the republican nominee will be 1,200. Omaha and Douglas county elect a republican treasurer, clerk, surveyor, superintendent of public instruction and coroner. The democrats get the remaining county officers.

HARTFORD, CONN., Nov. 6.—In the election Tuesday for eleven State Senators and a full list of Assemblymen, the republicans elect 9 Senators, the democrats 2: and for Assemblymen the republicans elect 163, the democrats 79, with 3 ties, and the independents 1. The Senators holding over from 1878 are 3 democrats and 7 republicans, making a total for the next Senate of 5 democrats and 16 republicans. The republicans still have a majority in that body of 80, and of 91 on joint ballot.

In Mississippi the democrats' State ticket is elected.

LEAVENWORTH, Nov. 6.—Further returns from the State show that a very light greenback vote has been polled, though in one or two places greenback candidates are elected. Otherwise the republicans have generally increased their majorities. General apathy has caused only a light vote to be polled.

THE VIRGINIA LEGISLATURE.—The Richmond Dispatch says the Legislature of Virginia will consist of the following: House—Conservative debt-payers, 42; conservative readjusters, 44; republicans 17; Portsmouth tie between conservative debt-payer and conservative readjuster. 1—100. Senate—Conservative debt-payers, 14; conservative readjusters, 17; Independent debt-payer, 1; republican, 8—40. If this classification is correct the readjusters and debt-payers each have 57 members of both houses, with the tie in Portsmouth to be decided by ballot. This seems to place the balance of power in the hands of the 25 republicans.

BOSTON, Nov. 5.—Returns (semi-official) give Long, rep., for Governor, 121,716; Butler, 108,537; Adams, dem., 9,734, and Eddy, prob., 1,473.

Returns from every county in the State of Pennsylvania give the total vote for State treasurer as follows: Butler, rep., 280,134; Barr, dem., 221,715; Sutton, greenback, 27,397; Richardson, prohibition, 3,819.

ST. PAUL, MINN. Nov 8.—The republican State ticket is elected by increased majorities. Fairbault county elected ex-United States Senator Morton S. Wilkinson to the office of county attorney, and Ramsey county elected for a second term ex-United States Senator Henry M. Rice to the office of county treasurer."

Jere Haralson, colored, an ex-Congressman from Alabama, has been appointed night inspector in the Baltimore custom-house. Sr. H. J. Brown, colored, day inspector, was removed; N. C. M. Orooms, colored, a night inspector, promoted to the place of Brown, and Haralson appointed to the position vacated by Orooms. Haralson represented the Mobile district in the 44th Congress.

Gov. Croswell, of Michigan, has appointed Fernando C. Beaman United States Senator to fill the unexpired term of the late Senator Chandler.

Secretary Sherman will, in his annual report, recommend, it is understood, the discontinuance of the coinage of the standard silver dollars.

DOMESTIC.

The new French cable is finished: it stretches from Brest to St. Pierre Miquelon, and from thence to North Eastham, Mass., which is not far from Provincetown. The central wire of the cable is surrounded by ten copper wires, twisted. For insulating purposes three envelopes of gutta-percha, surround the wire, and outside of the gutta-percha is a wrapping of manilla hemp. Outside the hemp is an armor of steel wire the wires being made in a peculiar manner, side by side. Surrounding the armor is another covering of manilla hemp, saturated with an anti-corrosive compound. The Faraday will return to Brest, when another cable of similar character will be laid from Brest to Land's End, England. At the American end connection will be made with the lines of the American Union telegraph, which are already in place.

The comptroller of the currency issued a statement on November 1, which shows that on January 14, 1875, the amount of national bank notes in circulation was $351,861,450, and the amount of legal-tender United States treasury notes outstanding was $382,000,000, making a total of $733,861,450. On November 1, 1879, the amount of national bank circulation was $325,754,286, and the outstanding treasury notes $346,681,016, making a total of $672,435,314, thus showing a reduction of $51,426,136 in a little less than four years.

The amount of grain received at Chicago during October was larger than for the corresponding month of any previous year, and 8,718 cars more than in October, 1878. There were 33,405 cars of grain inspected and 1,030,250 bushels received by canal and lake without inspection. The amount of grain received at Chicago during the year ended October 31 was several million bushels more than that received during the previous year.

The colored people's industrial fair at Raleigh, N. C., was formally opened Tuesday Nov. 11th. Gov. Jarvis delivered the opening address. It rained all day, but a fair crowd was present. Eight military companies and a number of fire companies composed the procession which escorted the Governor to the grounds.

The heaviest fall of snow in Georgia for years occurred at Augusta, Wednesday, Nov. 19th, the snow falling for over three hours steadily. The storm seemed to be general in that section. A heavy rain, with some snow, fell in Charleston, S. C., Nov. 20th. There are reports of snow in the interior of South Carolina, and sudden changes of the weather.

There were received at Memphis, Tenn., Nov. 17th, 8,627 bales of cotton, the largest receipts for one day ever known within the history of the city.

PHILADELPHIA, Nov. 11.—A special dispatch from Carlisle, Pa., says: "The Indian school at this place has just received an addition of two more girls and six boys from Dakota and Wisconsin. The total number now here is 158 and the school is getting along finely. Indian Commissioner Hoyt was here a day or two ago, and he expressed great satisfaction with the pupils, with their cleanliness, good behavior and their general appearance. He is confident of the complete success of the undertaking. Mr. Hoyt authorized Capt. Pratt to arrange for a chapel and assembly room with capacity for 300 children."

TO BE SOLD FOR RENT.—The bark Azor belonging to the Liberian Exodus Association, in which 300 colored people went to Liberia from Charleston in May, 1878, will be sold there at auction by order of the court, on the 3d inst., to satisfy demands upon the association

U. S. Senator Zach. Chandler of Michigan is dead.

Major-Gen. Joe Hooker died at his home in Garden City, Long Island, last month.

Oysters! - Oysters!

The canning of steamed oysters has long been an important branch of industry in Baltimore; but the canning of the very best oysters in the Chesapeake, almost on the spot they are caught, is an enterprise just established. The undersigned feels confident that in opening a Packing House at this point, he is affording his fellow-citizens in all parts of the country, an opportunity, (which he hopes will be appreciated) of getting the best and freshest of oysters, prepared in the most healthful way, at the most moderate prices.

An Oyster may remain out of water many hours, nay days, before it be completely spoiled; but from the moment it is caught and exposed to the air a process of deterioration goes on. It needs no argument to show that the sooner an oyster is hermetically sealed after being caught the better it will be in taste, solidity saltiness, and healthfulness. Within a radius of fifteen miles of this point, are millions on millions of bushels of oysters, from the best of which will the stock used, be selected. The time consumed in transporting the bivalves from their beds to the Packing House is not worth considering, especially as the majority of the boats employed are the little "canoes" peculiar to these waters.

My packing is at present divided into three grades, according to the size of the oysters use: the same care, however, is taken in the preparation of all grades. A case of one pound cans contains 4 dozen: a case of two pound cans contains 2 dozen. Owing to the unsettled condition of the market, I can only quote to-day's prices, which are as follows:

Giants of Hampton Roads, No. 1—No. 2 $3.00 per doz,
Beauties of Hampt'n Roads, " 1 $1.30, " 2 $2.00 " "
Cove Oysters, " 1 $1.00, " 2 $1.75 " "

The above prices are net cash, and remittance may be made by draft on New York, Chicago, or Norfolk, or else by P. O. order. Authority to draw at sight with Bill of Lading attached will ensure the prompt forwarding of any goods ordered. If preferred, cases may be sent by Adams express, C. O. D., but unless specially directed, all shipments will be made via Norfolk, Va.

Direct all telegrams, via Fort Monroe. T. T. BRYCE, Box 10, Hampton, Va.

HAMPTON BAR OYSTER COMPANY.

(MUTUALLY CO-OPERATIVE.)

OPEN OYSTERS.

In boxes, containing one dozen quart cans and upward,

Select	(largest and finest), per quart can	35 cts.
Standard	(medium size), " " "	30 "
Medium	(large and small), " " "	25 "

In kegs, containing one gallon and upward.

Select	per gallon,	$1.25 "
Standard,	" "	.90 "
Medium,	" "	.75 "

The cans being hermetically sealed can be sent any distance and may be kept for weeks. The kegs are air-tight and will keep for a considerable length of time.

OYSTERS IN THE SHELL.

In boxes or bags containing one bushel and upward, or in barrels containing three bushels,

Select	per bushel,	.75 cts.
Standard,	" "	.50 "
Medium,	" "	.40 "

The freight is paid to Baltimore, Philadelphia, New York, Boston and Providence, and arrangements made to have them forwarded, thence to all parts of the Middle, Western, and Northern States.

Orders received by GEORGE DIXON, *Manager.*

HAMPTON, VA., P. O. BOX 13.

TERMS: Cash, or good references. Agents wanted.

N. B. This is an effort to assist the freedmen of these parts, and we trust their friends at a distance will give us their patronage. The oysters are packed with the greatest care, and handled only by persons of cleanly habits.

Hard Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad and Deviled Crabs—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all sea-food, far exceeding in fineness of flavor and of grain, lob-ter, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6 00 a case, net cash. Money may he remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $3.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

Hampton Normal and Agricultural Institute

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The Institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable &c., &c.

All Former Years Outdone.

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung up in every part of the Union for making an "Imitation Singer Machine."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken the FIRST Prize over ALL competitors more than TWO HUNDRED TIMES. *Why?*

After the Chicago Fire the Relief Committee undertook to furnish sewing machines to the needy women of that city. Applicants were permitted to choose from six different kinds of machines. 2,944 applicants were furnished with machines; 2,427 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines! These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The people bought Singer Machines as follows:

1870	127,833	Singer Machines
1871	181,260	" "
1872	219,558	" "
1873	232,144	" "
1874	211,679	" "
1875	249,832	" "
1876	262,316	" "
1877	282,812	" "
1878	356,432	" "

Many of the manufacturers of other machines refuse to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines. A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED*

SEND FOR CIRCULAR. THE SINGER MANUFACTURING COMPANY,

OUR JEWELS.

It seems to me that any woman who loves her children (and the women who do not love their children are fortunately so few that there is no need to consider them) must have a very strong and earnest desire to train and guide them aright, and to seek for them in all things a better way than she herself has known.

Whatever our position in life may be, whether we are rich or poor, of one race or another, I think that those of us who have little children can meet upon the common ground of our love and hope for them, and I am sure that as soon as we begin to think much about the matter, we find that the greatest obstacle in the way of our doing what we would for our children, is not our poverty, or our weakness, or even our selfishness, but, from first to last, our own ignorance. When our children come to us, helpless and utterly dependent, they bring with them a fullness of love which makes sacrifice easy and burdens light; but, alas for us! with all this love comes no increase of knowledge, no sudden growth in wisdom, which shall enable us to fulfil for them all that our love dreams of. On the contrary, we find, day by day, that to teach our children, we ourselves must first learn much, that their education means our education too, and that it is only by intelligent work and careful watchfulness that we can come to understand and obey the laws that govern their little lives. What an immense undertaking, what a great, almost awful responsibility this seems, and yet how little preparation most of us make for it; how insufficient is the knowledge with which we come to this which is for most of us our life work!

Can there, for example, be anything more important for a woman who has children to bring up, than that she should learn the best way of taking care of them physically? And yet how few of us give any time or thought to that which ought to lie at the foundation of all that we do for our children, that is, the study of their physical life. For, undoubtedly, a mother's first work, first, at least, in order of time, is to see to it that her children are born healthy and kept healthy so long as she has control of them, and it is in the hope of showing that this can be done by almost any earnest and conscientious woman, and that, furthermore, the only true wisdom lies in doing it, that this little tract is written.

In the first place, then, I beg you who are mothers to remember that the health and welfare of your children depend much on your conduct while they are still unborn. To have healthy children; to have good children, the first necessity is that you should be healthy and good yourselves; and this, it should never be forgotten, applies to fathers as well as mothers. The sins of the fathers are visited upon the children, in every sense, and parents who themselves avoid sin are not only lessening its temptations for their children, but are strengthening them to resist it. Now the best physical helps which men and women can have in leading pure and honest lives are, plenty of light, fresh air and water, a digestible and nutritious diet, all the out-of-door exercise possible, and plenty of work, for idleness, except when ill-health makes it a matter of necessity, is a more dangerous enemy than most people think. Over-indulgence in any direction brings suffering in its train, and to be temperate in all things is a lesson which we should learn as early in life as possible.

In the matter of dress, all women, but especially mothers, should remember that, in order to secure health, the clothing should be worn sufficiently warm for the season, but always light and loose enough to give play to every muscle. Before the birth of a child, the mother should be more than ever scrupulous in the care of her health, for at that time she is responsible for two lives instead of one; while during the period of confinement she should put herself in the hands of a good doctor or nurse and implicitly follow their directions: for in no way do women more frequently and seriously injure themselves than by yielding at such times to their own prejudices, or the prejudices of the ignorant people about them. As a single instance of this danger, I would draw attention to the foolish notion which many woman have, that the sooner they can get about after the birth of a child the better, whereas the fact is that trying to get up too early produces, not only sometimes sudden death, but often troublesome and chronic diseases. A fortnight in a recumbent position, after the birth of a child, is little enough; and no woman, even the poorest, need think that this is time wasted, for she will find if she will try it, that her convalescence will in the end be quicker and far surer. I cannot here go into details in regard to the care of new-born children and their mothers, but I repeat once more that the safest and usually the easiest rule to follow is the one already given: "Put yourself in the hands of a good doctor or nurse, and follow their directions."

Weak as little babies seem when first born into this world, there are, as a matter of fact, very few children who need die if properly taken care of; and that so large a number are lost during the first five years of life is terrible proof of the ignorance or carelessness of those into whose hands they are given. We mothers have much to say as to the thousand and one enemies which threaten the lives of our children, but in reality the worst enemy of all lies in our own ignorance, and in spite of the inevitable evils, which, heaven knows, are numerous enough, very few of our children need die, if we would only acknowledge that we have in our own hands the power to ward off many of the evils which we carelessly say are inevitable. To do this we must begin at the beginning, and after doing all that we can to ensure that our children shall be born healthy, we must then use our best endeavor to take care of them intelligently from the hour that our care commences, realizing at the outset that in this respect we, most of us, have a great deal to learn.

I have divided the details about which I am writing under several general heads, and the rules which are laid down under these heads are only those which have received the sanction of the best modern authorities.

WASHING.

From the day of its birth a baby should be thoroughly washed at least once in every twenty-four hours; and this should be done with water at about blood heat, a soft sponge or piece of flannel and good soap. For the first two months it should be sponged off in a warm room and quickly and carefully dried with a soft towel, using, between the joints, and in the folds of the flesh, rice or starch powder, as this completely dries the skin and prevents it from getting chafed or sore. Carelessness in washing and drying is the cause of many of the irritations of the skin from which little babies so frequently suffer, and for which their mothers and nurses are alone to blame. After the first two months, the baby can be put into a small tub or basin with sufficient water to cover its body, and if its head is kept carefully raised so that it does not get choked and frightened, it will enjoy this much more than the mere sponging. As it grows older the regular daily bath should be kept up, the temperature of the water being gradually lowered, until a child of five or six will have learned to delight in its bath of quite cold water, and if it has been properly taught, will be able, with a very little attention from the mother, to wash itself. A habit of this kind formed in childhood will very rarely be given up in later life, and that it should be so formed is of very great importance, for not only health but decency demands it.

CLOTHING.

Both babies and older children should be warmly, lightly and evenly clothed; that is, their clothes should be sufficient for the climate and the season, should not be so heavy, or made in such a way, as to drag upon any part of the body, or impede any natural movements of the muscles or limbs, and, especially, no one part of the body should be heavily clothed while some other part is permitted to go half bare. The chest, shoulders, arms and feet, should, in cold climates, be well covered, while with little children in particular, the neck and arms should never be left unprotected, at least one undergarment, as well as the outer dress, being made with high neck and long sleeves, which has also the advantage of bringing most of the weight of the skirts upon the child's shoulders. All the garments should be made loose and as light as is consistent with the necessary warmth, so that the child, like all other young creatures, can have fair play for the movement and growth of its limbs. The underclothes should be changed twice a week, or oftener if they get soiled, and any garment which from any cause has an unpleasant smell should be at once removed. As children grow older, they can be taught to think of these matters, and almost any child can be made to have some pride in its own cleanliness and neatness.

FOOD.

It is probably true that in this country more children are killed or made weakly for life by improper food, or over or under-feeding, than by any other cause, and this is the more unpardonable because the kinds of food which, for children, are the most wholesome and nourishing, are usually cheap and easily to be had and prepared. There are very few people in the United States so poor that they cannot get for their children, not only the right kind of food, but also plenty of it, so that here again we can only fall back upon the excuse, if we dare to call it such, of our own ignorance and thoughtlessness.

In almost every household, the children habitually get sweet cakes and pies, hot breads, preserves, pickles, etc., which cost twice as much, both in money and in the labor of preparation, as would the plain, digestible food which alone is suitable for growing children; and yet it seems almost impossible for mothers to realize that in giving these things to their children, they are not only wasting time and money, but are also directly injuring their helpless little ones. It is certainly a very fortunate thing that nature provides for a baby at its entrance into life, food which is all-sufficient for its needs, for otherwise it seems as if the ingenuity of ignorant parents would by this time have extinguished the human race. Even as it is, some mothers insist on giving babies all sorts of food, sometimes going so far as to believe, or say they believe, that a little of anything that they themselves can eat will not hurt the baby. A woman might as well say that the baby's little hands can do the work of her hands, as that its little stomach can do the work of her stomach; and the result of such treatment is that the baby pines, falls sick, is dragged with medicine, and in nine cases out of ten, dies, the victim of its mother's ignorance. Now there are very few moderately healthy women who cannot nurse their children if they choose, and in most cases it is not only easier for a woman to do so than to attempt hand-feeding, but it is also much better for her health, while on the baby's side of the question there is but one thing to be said. To bring up a child by hand even under the most favorable circumstances is difficult and dangerous; while under any other than favorable circumstances it is next to impossible. In no case is a hand-fed child likely to be so strong and healthy as one which has its own proper food, and if the difference does not show at once, it is very likely to in after years. A mother who can nurse her child has, therefore, at the outset, a very great advantage, and one which she is very foolish in any way to neglect, both for her own sake and the child's. She should be very careful about her own food, eating and drinking only that which is plain and wholesome, and the quieter and more undisturbed she can keep herself in every way, the better it will be for the child; for anger, fear, fretfulness, or indeed excitement of any kind, will affect the milk and sometimes make it almost a poison. Then she should try to nurse the child as far as possible at regular times, once in two or three hours being enough, for the first two or three months, during the daytime, while, after the first fortnight, it should not be nursed at all at night. If it is a healthy child, it will, if nursed at ten or eleven o'clock, sleep till three or four in the morning, thus giving the mother a good night's rest, which is a matter of great importance. If the mother has plenty of milk, the child should have no other food until it is time to wean it; but if from any cause she should not have enough, then a little milk and water with a very little sugar should be given from a feeding bottle, which must always be kept perfectly clean, by scalding it out with hot water two or three times a day. When a child has to be brought up by hand, asses', cow's or goat's milk and water, should be used at first, great care being taken that the milk is perfectly pure and fresh; if it can be had as soon as it is milked, so much the better. At first it should be diluted with an equal quantity of water; from the sixth week to the third month, gradually diminish the water to one-third; from the third month, gradually diminish the water till about the sixth month, when milk alone should be given until the first four teeth are through. The milk should be warmed by putting it into a little jug in a basin of hot water, and should be given at the same temperature at which it comes from a healthy mother's breast, viz., 95° of Fahrenheit's thermometer. The same regularity should be observed in feeding as in nursing, and the child, while being fed, should be kept as nearly as possible in the same position as in taking the breast. The appearance of the first four teeth show that the child can take and probably needs more solid food, therefore some kind of flour, cornstarch, rice, oatmeal or barley-

gruel, plain crackers or a little bread made very soft, should be mixed with the milk twice in the day. The state of the child's stomach and bowels should be care-

see how easy it is to get a baby, which is otherwise properly cared for, into good habits in respect to its sleep, and how much difference these habits will make in the health of the child and the comfort of the mother.

prising how much exposure can be borne without danger, by children who are used to a free, out-of-door life; while the strength of bone and muscle, digestion and nerve, which is built up by such a life, is such a strong

gruel, plain crackers or a little bread made very soft, should be mixed with the milk twice in the dey. The state of the child's stomech and bowels shoold be carefully wetched, and tha food varied accordingly, arrowroot, sago, rice or baked flour being given where there is tendency to diarrhœa, oatmeel end berley where there is constipation.

As to the time for weaning children, no axect rnle can be laid down for all cases, for much depends npon the health of mother end child, the climate, season of the year, etc., but as a genaral thiog, it is best to ween sometime between the ninth and twelfth month; and weaning can usoally be managed very easily, by giving the kinds of food described above, in gredually increasing quantities, at tha seme time, of course, diminishing the mother's milk. A child which is completely weaned at twelve months, sbould, from that time until it is eighteen months old, be fed four times a day upon milk, simple preperations of the different grains, boiled or baked potatoes mashed fine, beef tea, crackers and bread. From eighteeu months, when children are healthy, a greater variety of food may be given, but tbo same care should be taken in regard to the regularity of their meels (for a hebit of esting at odd times is harmful et any age,) and that they get nothing which is not plain and wholesome. Sweet cakes, pastry, hot breeds, greasy or highly seasooed food of eny kind should be strictly forhidden, while almost eny meat (except pork,) fish, rice, oetmeal, cornmeal, almost ell kinds of fruit, and ell easily digested vegetables, such es potetoes, tomatoes, spinach, etc., may be given, well cooked and in proper quantities, the heaviest meal being taken in tbe middle of the day, and tha condition of tbe bowels being always carefully watched.

Now any woman with common-sense and feirly good health can do all this without much trouble, end in the end will find thet it is the easiest way to bring up her children, for this sort of cara will keep them well and strong, saving all the expense end enxiety of the frequent illnesses which are usually the lot of children who are permitted to eat all sorts of thiogs at ell sorts of times. As, for exemplo, in teethiog, when babies which are properly fed and cared for suffer very little, while badly maneged children are elmost always in pain and frequently have fits, convulsions, and those choleraic attacks, which ere so common a causa of deeth, especially in cities. You cannot make good bread out of bad flour, you cannot grow a strong plant from an unripe seed, you cannot build a sea-worthy boat out of decayed timber,—bow then can you expect your children to be healthy unless you give them in their food the material from which to make healthy bone and muscle, nerve and flesh?

SLEEP.

A very young baby can make no better use of its time than to spend it in eating and sleeping, and, for the first few months of its life, a healthy baby will do this, provided it is allowed to be quiet, is fed regularly, and not dosed with any kind of sleeping mixture, this latter being a practice which every mother ought to understand is senseless, wicked and utterly inexcusable. Up to two years of age, children should sleep twelve hours at night and an hour or two in the middle of the day; after that age, from ten to twelve hours at night is uaually enough, though it is a good thing to keep up the habit of taking a nap in tha daytime, until they are four or five years old. No child should sleep in tho garments which it wears during the daytime, for they ere filled with the moisture given off from the skin, but should be put into nice, sweet, dry nightclothes, while the day clothes are hung somewhere to air. Except in extremely cold weather, it is best for even very young babies to sleep alone, end the less they are rocked and shaken about the better. A clean and comfortable bed and pillow for a child can easily be made by filling a couple of bags with dry moss, corn leaves, sea-grass, or horsehair, and the stuffing can be changed and the bags washed sufficiently often to keep them perfectly clean. The bedclothes should be warm but light, and mothers should be very careful not to let their children get into the hebit of sleeping with their heads covered up, for in this way they breathe over and over again the air which has been poisoned by their own little bodies. Plenty of puro air is absolutely necessary to health, and, in rooms where children sleep, the greateat care should be taken to have good ventilation. Draughts are, undoubtedly, bad things, but they are better than impure air; and children who are accustomed to plenty of fresh air and cold water are not likely to be hurt by an occasional draught.

Children should never be roused suddenly from sleep; and loud noises, or anything which may startle a sleeping child, should be avoided as much as possible, for though children do not always show it at once, it is certain that their brains and nervous systems are sometimes very much injured by sudden shocks or frights. It will surprise anyone who has not tried the experiment, to see how easy it is to get a baby, which is otherwise properly cared for, into good habits in respect to its sleep, and how much difference these habits will make in the health of the child and the comfort of the mother. Wakeful nights with a baby mean fretful days for both baby end mother, and, except in the case of really sickly children, there is seldom any need for a mother to lose much sleep, for sleep is such an absolute necessity for children that Nature forces them to take it, even under very unfavorable circumstances, and a little care on the mother's part in forming regular habits in a baby, will generally ensure quiet, comfortable nights, and two or three hours of freedom during the day, when baby is taking its nap.

Put children to bed at the same hour every night, having first given them e sufficient quantity of proper food, and changed all their dey clothes for loose, clean night-garments. Let the air of the room be cool and fresh, the bedclothes light but warm enough for the season,* have as little light and as little noise as possible, and you will find that "getting baby to sleep" is not, after all, so troublesome a thing to do. Where e mother is obliged to keep her baby in the same room with the rest of the family, she can often manage to screen off a corner, and avoid some of the light and noise, while the mere fact of undressing end putting e child into bed always at the same hour, will of itself often ensure a good night's sleep. The nap in the daytime should be regulated in the same way, and instead of interfering with the child's sleep at night, it usually makes it more quiet, as the effect of two or three hours' sleep in the day is to soothe and comfort the nervous system, thus increasing the chances for a good night's sleep. But, invaluable as sleep is to children, it should *never* be purchased with drugs or potions, or syrups of any kind; again and again should it be repeated to mothers and nurses that these things are all horrible poisons, and that the sleep that they bring is indeed the sister of death.

OUT-OF-DOORS.

In summer, a healthy baby should be taken out of doors when it is three or four weeks old; in winter it ought not to go out until it is five or six weeks old; and in both summer and winter care should be taken that it is properly dressed, not exposed too directly to the heat and light of the sun, or to dampness or strong winds. With a little precaution, a baby can be kept out of doors nearly all the time in fine, bright weather, and the more it is out the better for it in every way, for fresh air brings appetite and sleep, soothes the nerves and strengthens the digestion.

In many ways, children are like plants, and especially in their love for and need of out-of-door air and sunlight. Without these they will fade and droop, just as plants do, as anyone may see who looks at the poor little children who are crowded into dark, dirty tenement houses in large towns, where their white faces and wasted limbs show only too plainly that they are being stunted and starved for the want of fresh air, bright sunshine, and the beautiful, free life which even the poorest children in the country can get so easily.

With babies, of course, it is necessary to be careful in respect to many little points, of some of which I have already spoken; that is, a baby should never be carried upright until it is at least six months old; before that time it should be laid carefully over both arms of the person who carries it, and lie just as it does in bed. It should not be squeezed up too closely, for its bones are very soft; and it should not be let to lie too long on one side, but should be changed from one arm to the other, while its eyes should be shielded from the rays of the sun. After six months, it can be put into a little cart or carriage, and if properly supported with something soft, can be kept out in this way for hours at a time, for an occasional push to the cart will keep a baby quiet, just as well as constant motion. Indeed, I know of no such easy way of taking care of a baby in pleasant weather, as to put it in a safe and comfortable position (always taking care that its back is well supported) in a little cart with a top, or an ordinary baby-carriage, and letting it stand in some protected corner near the door or window, or on the porch, where the mother can once in a while step out, to speak to it and roll it back and forth for a few moments. Almost any child will take its nap in this way, and even very restless children will be quiet for a long time, to the great relief of mother or nurse, who will undoubtedly find plenty to do during these spare moments.

When children got old enough to walk, they soon learn that out of doors is the best place for them, and mothers who live in the country or in small towns find that the fresh air, which is so easily to be had, is food and drink and medicine for their children. It is surprising how much exposure can be borne without danger, by children who are used to a free, out-of-door life; while the strength of bone and muscle, digestion and nerve, which is built up by such a life, is such a strong argument in favor of the country for children, that it is a wonder that all men and women who have families to bring up do not, for their children's sake, look for employment and homes in the country, instead of clinging, as so many of them do, to the crowded, dirty, unwholesome city streets, where pure air is almost unknown and the best influences of out-of-door life are never felt.

But, in city or country, out-of-door air is pretty sure to be the best, and the more you can give of it to your children, even though it is only in a city square, the less trouble you will find them; while to those who live always in the city, too much cannot be said about the value of an occasional day in the country, in the woods or on the seashore, both to their children and themselves. I have heard it said, at the end of a long, hot summer, by mothers of little babies, who were cooped up through the stifling days and nights in one or two rooms of a tenement house, that they believed their children's lives had been saved by the one or two days' excursions into the country which, by the help of some charitable society or through their own economy, they had been able to take: and such is the wonderful power of fresh air and pure sunshine, that I believe they were right.

WALKING.

Do not hurry a baby about walking; for there is never any need to try to teach a child that which Nature will teach it in her own good time, in a much better and safer way than you can. The best thing you can do for your baby, as soon as it is old enough to move about, is to put it on the floor, on a big cushion, or blanket, or even a piece of old carpet, and let it roll and tumble and stretch to its little heart's content, just as any other young animal does when its freedom is left to it. Give it a ball, or a rag doll, or some other safe plaything to crawl about after, and you will find that its legs and arms will find plenty to do, until it is strong enough to pull itself up by a chair or table and take its first, tottering steps, after which the days of rest for its mother are gone by, and there is no safety except in constant watchfulness. If you want your boy or girl to be strong, you must be very patient with their little restless movements, for every one means the growth and development of some muscle, and ought not to be checked except when really necessary.

TALKING.

A healthy child will begin very early in life to make various sounds which are Nature's preparation for speech, and these sounds should not be repressed, for it is only by making such sounds that a child can learn to talk. Of course, all cries or noises which show that the child is in pain, or tired, or hungry, should be attended to at once; but a healthy child will never be a very quiet one, and a certain amount of noise-making seems to be essential to proper growth and development. So don't try to keep children always still; let them shout and prattle and chatter as much as they like, just as you let them struggle and reach and kick, with their little hands and feet. It is all a part of Nature's education, and the less it is interfered with the better.

MEDICINE.

The rule may be broadly laid down that none except the very simplest medicines should be given without the advice of a doctor, and that even the simple medicines should be given as seldom and in as small quantities as possible. Dosing children with this, that and the other, is by far too common a habit among all classes, but especially among the ignorant, for it is safe to say that those who know most about children give them the least medicine. "An ounce of prevention is worth a pound of cure," and although it is, of course, sometimes necessary to give drugs to little children, yet, in nine cases out of ten, intelligent care in the first place will prevent any such necessity. When you see that a child is really ailing, go to a doctor or some person competent to advise you, and don't meddle with medicines of which you know little or nothing, for you are pretty certain to do more harm than good.

CONCLUSION.

Within the limits of such pages as these, it is, of course, impossible to do anything more than give general ideas in regard to the care of little children; but nothing that can be said here or anywhere else will be of any use except in cases where the mother herself is ready and anxious to learn and practise. Fortunately, there are many such mothers in the world, and it is pleasant to think that, in these days, it is comparatively easy for them to learn how to take proper care of their children. In no way is the human race making greater progress than in respect to its treatment of little children, one evidence of which is that in civilized countries societies are being formed for the protection and care of such children as have no friends to care for them, or such as, worse still, are neglected or ill-treated by those who ought to care for them.

One of the great lessons that Christ left to the world, is, that the little children whom God has made so helpless and dependent, have a claim upon us, who are no longer children, which we can never rightfully set aside. And surely we who call ourselves Christians should hold our children as dear as did that heathen mother, who, when asked to show her jewels, had forward her two sons.

* A warm and light covering can be made by stitching several thicknesses of brown paper into a counterpane or coverlid of any kind. This will be found very comfortable, and of course is very cheap.

THE PRAYER IN THE DESERT.

The Mohammedan call to prayer is shouted at sunrise and noontime and sunset from "Syria's thousand minarets." Though he may be far ont of hearing, the devont Arab traveller, across the desert, lights from his camel and, kneeling on the sands with his face towards Mecca, pays his homage to Allah, as best he knows. Shall not we who call ourselves Christians pause on our journey across life's plain, as the New Year's sun is rising, and letting life's burdens and business halt awhile, turn our faces towards our Holy City, and worship the Father with thanksgiving for the care that has brought us safe on our way and given us springs in the desert, and with prayer for His guidance through the trackless future.

CORRESPONDENCE.

Albemarle Co., Va., *Nov. 18th*, 1879.

General Armstrong—

Dear Sir:

Our schools are largely attended and doing well. The term will be much shorter this session than ever before. The school board has been unable to secure the usual amount from the "Peabody Fund."

The election passed off quietly. The colored people of this (Albemarle) county voted almost solidly for the debt-payers. While our motive has been questioned by one of the leading papers of the State, I am firmly of the opinion that our people voted for the honest payment of Virginia's debt, because they believed it to be but an act of justice. There seems to be a disposition on the part of certain newspapers in this and other states, to place us in, certainly, no enviable position in the eyes of our Northern friends. No one will deny that during the canvass a hard fight was made by both sides for the Negro vote. The one side held up honesty. The other side portrayed in language which did not fail to have its untimely effect, that the negro had no right, morally or otherwise, to help pay a debt he had no part in contracting. We were also reminded that this debt was made while we were yet slaves—and were so much property.

These are some of the arguments adduced by the intelligent white readjusters of this state to secure the colored vote. Now, General, is it unnatural, with such sophisticated reasoning as this adopted by the readjusters, that they should have secured a large number of colored votes? Are not the leaders more to blame than their followers?

Again, the white vote against the debt-payers, is much larger than many care to admit. There were no papers edited by colored men preaching repudiation,—yet this class of citizens, who did the most harm to the State are blameless.

The colored man was, doubtless, as honest in his convictions when voting against the funders, as the white man; and the oft repeated assertion, "the Negro did it," shows an unkind spirit, if not an inclination to misplace the great portion of the blame.

I am, very respectfully,
THOMAS CAYTON.

C——, VA., *Nov. 22d*, 1879.

Dear Sir:

In an editorial not long since the *Charlottesville Chronicle-Democrat* spoke in defence of the colored voters of the state. The afternoon of the day on which I wrote you, I sent the editor my thanks, which he published. I also send you, enclosed, the editorial alluded to. I was sorry to hear of the burning of Academic Hall.

Most respectfully,
THOMAS CAYTON.

THE COLORED CITIZEN.

We beg leave to protest against the attempts to cast all the odium of the debt-payers' defeat on the colored voters. Those of them who voted with the readjusters, are no more responsible for the disastrous result than the white men with whom they co-operated, and not as much so, because the white voters ought to have known better. "The Negroes did it," is the ready explanation; "but for the 'ignorant Negroes' the success of the debt-payers would have been triumphant." Undoubtedly so; but what about the "ignorant white men"? But for them would not the defeat of the readjusters been overwhelming? Where then is the justice or the policy of laying special blame at the colored man's door? In all seriousness we say that the sooner that sort of talk ceases, the better. The fact is the colored vote, like the white vote, was divided. In many counties, as in Albemarle, they stood nobly in our ranks, voted with us and pleaded earnestly on the hustings for the preservation of Virginia's credit and honor.

The damage has been done, and it is profitless to speculate how it was done or who did it. A more practical inquiry is, how are we to undo it and who is to help us? If the repudiators' ranks are to be broken, what class of voters is more likely to come over to us? If the "Negroes did it," to them we may hopefully look for assistance in the effort to put things right. The white repudiators are there to stay. The colored voter cannot be a repudiator and remain a Republican.

We are thankful that there has been *some* division among the colored voters everywhere, and indulge the hope, that in future elections, there will be a still greater disposition among them to vote independently. So long as this question of fidelity to public obligations is a living issue, there is reason to hope that a greater number of colored citizens will be found co-operating with those who favor the payment of the public debt. The principles and policy of the Republican party, no less than their own interests, impel them in that direction, and we are confident that they will prove to be invaluable allies of the debt-paying white men of Virginia. They have every thing to gain by such an association. If they wish to rise in the social scale, the true way to do it is to vote independently. Let both of the great National parties find it to their interest to secure their votes, and as sure as human nature is ever the same, the colored people will make friends on both sides. The white people have learnt a valuable lesson from this election. Not only humanity and justice, but a sound policy requires that both parties should hereafter treat the negro as an equal of the white man at the polls. A few isolated communities, at the far South, have been guilty, in the past, of a very reprehensible spirit towards the colored voters in their midst, and these cases have been laid to the charge of this whole section by the fanatical North. Now we insist upon it that all our people should frown upon such proceedings and henceforth endeavor to remove the scandal from Southern politics. If there are bull-dozing communities that cannot be reformed, let them be driven out of both parties. This we say for the future, without admitting the truth of the grave charges brought against us by our enemies.—*Charlottesville Chronicle-Democrat.*

HOMES OF OUR COLORED PEOPLE.

THE copies of the SOUTHERN WORKMAN sent us were duly received, and, a few days afterward, I set out on a visit to a family who once rented a house from my husband, and carried a copy of the WORKMAN with me to see if I could get them to subscribe for it. I believe the WORKMAN is one of the best papers in Virginia, and gives information about the progress of the colored people which cannot be obtained elsewhere. Still, I fear it will be difficult to get many subscribers in Lynchburg for several reasons. Nearly all the colored people are members of some church, and their ministers always try to get those who can read to take their church papers; then some of them take papers edited by colored men, in Richmond or Washington, and then some who have looked at copies of the WORKMAN say it is very good, "but has not enough about politics in it"!

The family I wanted to visit lives in a suburb of Lynchburg known as "Camp Davis," and consists of an old man and his wife, with two or three good, steady boys, whom the old people adopted, as they had no children of their own. Besides these nephews, there is a very old woman, a sister of Uncle Winston, who was sold to the South many years ago, and came back very unexpectedly, when all her relations supposed she was dead. Her daughter, who is a widow also, lives with the family and helps with the work, of which the energetic mistress of the house seems to find a great deal to do. "Aunt Anne," as we all call this busy person, is quite a character in her way, and has a strong, clear mind. When she was renting a house to live in, she was always planning for a home of her own, and without her husband's knowledge managed to save from her own and the boys' labor, $75.00; and when she heard her spouse lamenting that some fine lots near them were selling very low, and wishing he had money to buy one, she produced her bank certificate, to the astonishment and delight of the old man, and he straightway invested in the land, whereon they have since built a snug house.

"Camp Davis," where they live, is quite a village in itself, has a pretty little white church, and is laid off in squares and streets. Only one or two white families live in that precinct, and most of the houses are small and belong to the colored people who occupy them. There are one or two large houses owned by negroes, who are considered rich by their neighbors.

I knew that Aunt Anne was very proud of her establishment, and could hardly help smiling when I came to a tiny little gray cottage, a story and a-half high, with a fanciful cornice on the roof and a latticed porch in front, about big enough for two people to stand in. The whole concern looks like a child's playhouse on a large scale; but it is greatly prized by its owners, who deserve much credit for their industry in accumulating this nice little property, for they were slaves until they were getting to be old people, and had to begin the world, when they were set free, with nothing but their clothes. A latticed fence enclosed the neat little grassy yard in front, which had flower borders all around it, the flowers being carefully covered to protect them from the winter, and back of the house was a large vegetable garden, with fruit-trees and borders of raspberries and strawberries. The family have lately bought a large lot adjoining them, and are planting trees and getting it in nice order; so if one of the boys should be married, they can put up a house and start the new family comfortably in the world.

While I was making these observations, Aunt Anne, the good, sensible mulatto woman who is the happy owner of this establishment, came to the door and ushered me into a very small parlor, shining clean, and so full of furniture, pictures and fanciful things that one might almost suppose it a variety shop. Colored people love bright colors, owing, I presume, to the fact that their race came from a tropical land, where nature paints in glorious tints and delights in gorgeous hues. A tall man might have touched the ceiling with his fingers, and a very long-armed man might almost have extended his hands from side to side of this cheerful, tidy little apartment which Aunt Anne's busy fingers love to adorn. There was a bright carpet on the floor, and crimson curtains with lace ones inside at the windows, and a very fine set of furniture carefully covered with linen, and in one corner a sweet-toned melodeon. A gloss basket, supposed to be a chandelier, hung down over the marble-topped centre-table, and this and the vases were filled with wax flowers and the beautiful, graceful plumes of the Pampas grass. And then the paper on the walls! That was covered with such big bouquets of bright flowers, that they looked as if they would crowd out the numbers of pictures of every kind, which vainly strove to cover *them*. There was a mirror on the mantelpiece so large, that one wonders where it got in, and a handsome picture of horses as big as the famous portraits of Dr. Primrose's daughters; and everywhere that they could find room for, pictures of everything and everybody, from the "Expulsion from Paradise," depicted by two fair, weeping figures with long hair, in figleaf costume, to a little black baby in a long white dress. And then the china and glass, useful and ornamental, that was placed everywhere, that I should have thought could not go anywhere, and not a speck of dust on any of it!

Of course this room was much too fine for ordinary mortals, on ordinary occasions; so, after giving me time to take in all the beauties about me, Aunt Anne remarked, that "it was too cold to stay in a room without fire," and took me into her chamber, which was quite as neat, if not so fine, as the parlor. There was a good fire in the bright little stove, and after asking me to be seated, the lady of the house resumed her place at the quilting-frame, on which was displayed a quilt of very gay pattern; making quilts for sale being one of the numerous trades by which Aunt Anne finds occupation for her busy hands and brings coin into the household treasury of which she is the careful guardian. Her husband and the boys were off at the factory, the eldest of the nephews being one of the best tobacco workers in the city, often making a hundred dollars a month in good seasons. The old sister and her daughter were washing in the kitchen, for Aunt Anne takes in laundry work too, and, with the aid of her hand-maidens, attends to two cows, selling milk and butter, and in the summer time selling fruit and vegetables from her garden. There was a charming air of peace, thrift and content about the little establishment, and I sometimes think that white people, who have never known the sorrows of slavery, what it was to be separated from their loved ones, unable to own property, no matter how much they worked, or to choose their own lot in life, could not possibly be as happy as colored people in such homes as this, saved by honest toil and shared by a united family. After Aunt Anne had exhibited numerous quilts which she had made for sale, and displayed "The Rising Sun," "The Wild-goose Chase," &c., for me to admire, and I had given her the WORKMAN, which she promised to show her boys when they came home, I took leave of the busy housewife.

Wending my way through Camp Davis, I passed many snug little cottages giving proof of careful industry on the part of their owners. Sometimes the beginning of this home-building is very humble indeed. Often a whole family can afford but one little room at first, and one wonders how they can live in such close quarters; but very often the brick chimney has an outside fireplace, showing that after awhile they hope to add another room, and perhaps, if the household prospers, in time a comfortable house is built in front of the small shelter where they first set up their household goods, and it becomes the kitchen or work-room for a far more pretentious house.

One of our colored families who began in a very small way had quite an adventure a year or two ago. They were very poor people, but had managed to buy a lot on a very steep hillside, selecting, on account of its cheapness, what otherwise seemed a bad location. Being in haste to begin housekeeping and very poor, the young couple built a tiny cottage, with the rear supported on long posts, trusting at some future day to build a strong brick room under the wooden structure. Soon after the family moved, a boy was born in the little house, which looked much like a bird-box perched on its tall stilts. When the boy was two weeks old, there was a terrible storm of snow and wind, and when a big snowdrift came along in the night, the poor little house, parents, baby and all, turned a somersault and rolled down the hill! At daylight, the luckless head of the family, who could not be called a *householder*, scrambled out, and with the aid of friends and neighbors took the mother and child out on the bed and carried them to the house of a relative, quite unhurt by their adventures. So much sympathy was excited for the unfortunate family by the downfall of their house, that the colored people all combined to set it up again on a solid brick foundation, and in a short time the family was re-established in a snug little home, with no danger of rolling down hill again in the first high wind.

Colored people are usually fond of animals, and nearly every family has its cat and dog, its pigs and poultry, and not seldom a cow or two, and sometimes are very happy in possession of a horse or mule, which assists greatly in the support of a family.

It sometimes occurs, in buying real estate, that the colored people make a purchase of property to which the title is defective, and the labor of years is lost by one mistake. It is a safe plan for every one who buys property, first to consult a reliable lawyer about the title. Five or ten dollars spent in this way may save hundreds, to say nothing of the care and anxiety involved. A case of this kind came to my knowledge lately. An old white man, who owned quite a large tract of land, died without a will, and his property was inherited by half a dozen children. The oldest son, without consulting the other heirs, sold two acres of land to a colored man for $30.90. The negro paid for the land and began cutting wood off it for sale. One of the heirs to the estate had the negro arrested for trespass, and he was carried before a magistrate. Here was a hard case! A man prosecuted for selling wood off his own land! The poor negro was too much bewildered to make any defense, but a kind-hearted gentleman who happened to hear the case at the trial advised him to employ a lawyer. He did so, and the lawyer asked for the cause to be deferred, and at the same began an action against the man who had sold the land, for obtaining money on false pretences. This alarmed him so much, that he induced his brother to drop the suit for trespass, and finally the consent of all the heirs was obtained to the sale of the two acres of land; but by the time all this was settled, the costs had amounted to as much as the land was worth, and the poor colored man might have saved all this trouble and expense by consulting a lawyer and paying a small fee at first.

ORRA LANGHORNE.

LYNCHBURG, *Nov.* 26, 1879.

STRENGTH OF CHARACTER.

Strength of character consists of two things, power of will and power of self-restraint. It requires two things, therefore, for its existence, strong feelings, and strong command over them. Now, it is here we make a grand mistake: we mistake strong feelings for strong character. A man who hears all before him, and before whose frown domestics tremble, and whose hurets of fury make the children of the household quake, because he has his will obeyed and has his own way in all things, we call him a strong man. It is his passions that are strong; he that is mastered by them is weak. You must measure a man by the strength of his feelings he subdues, not by the power of those which subdue him. And hence composure is very often the highest result of strength. Did we ever see a man receive a flagrant insult, and only grow a little pale, and then reply quietly? That is a man spiritually strong. Or, did we ever see a man in anguish stand as if carved out of solid rock, mastering himself? Or, one that, bearing a hopelese daily trial, remains silent, and never tells the world what cankers his home peace? That is strength. He who, with strong passions, remains chaste; he who, keenly sensitive, with many powers of indignation in him, can be provoked and yet restrain himself and forgive—those are the spiritual heroes. *Rev. F. W. Robertson.*

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.
To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.
For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

UPON the issue of paying interest on the State debt, according to terms accepted by Virginia's creditors (three per cent. for ten years, and four per cent, for the ensuing twenty-five years), or on terms fixed without their consent (three per cent for forty-five years), there has been an unprecedented excitement in this State. The colored vote has suddenly the balance of power and given victory to the readjusters: There is a split in Conservative ranks. Ex-Confederate leaders arn arrayed against each other. The heroes of the war are replacing one-legged soldiers who fought under them with colored men who might have fought against them. Storms of indignation have arisen.

There has been a pretty clean sweep of the State officers, and in the redistribution colored men have had some share. Negroes expect, hereafter, to be represented on juries and hope to change laws which practically restrict their voting.

So far as this result is at the expense of the State credit it is a calamity. We do not yet know its effect upon Virginia's honor or standing in the markets of the world.

The point we press is the need of enlightened voters who will know what they are about.

Public credit can stand on nothing else. A mass of ignorant voters who can be humhugged and misled, who get all their facts at second-hand, who neither read nor think, is a public danger.

Most of the Southern States have such a class—in the aggregate, an enormous mass, whites as well as blacks, whose action on questions of financial policy will be momentous.

Other ideas than the increasingly dim and distant one of gratitude for emancipation will occupy the colored mind. It will act for what it honestly believes to be its immediate interest. There is nowhere a class on the intellectual plane of the negro that is so well-disposed to right action. It will act up to its light, but its best light is dim and therefore unsafe.

More light for them, not more laws: a higher plane to which they shall be lifted, not by bayonets, or by demagogues, but by spelling-books.

Politicians to the background and schoolmasters to the front.

But where one ex-slave will faithfully attend a night-school, a hundred will gather about a stump speaker. The work of the teacher is upon the rising generation. The one now passing cannot be much leavened with right ideas, and the country must get on with them as best it can.

The mass of illiterate voters in the South is, because it must be, a destructive rather than constructive element.

Good intentions will not help it. The "Outs" in politics will combine with it to get in, and, when in, the others will seek the ninety-nine dissatisfied ones to get in again.

The well being of the South depends much on Northern capital and enterprise. That depends not a little on the soundness of its financial policy, and *that* depends on popular intelligence.

With an effort that is feeble in itself, but wonderful cunsidering the past, the South is maintaining free school systems. Again and ugain have one or two faithful men in Congress vainly urged the duty of aiding this effurt. We hope for better results this session.

Few realize the results of Northern benevolence in sending five millions of dollars, since 1862, to help the freedmen in e way they needed the most, and were helped the least. Thousands of intelligent colored schoolmasters are ahroad, and, with few exceptions, the worthy ones among them have won the respect and good-will of all their neighbors They have worked for their people and for peacs.

It takes a negro educator to appreciate the irony of saying "Let us have pence," and then neglecting the things that make for peace. The one is a sentiment easy as a breath; the other is a duty from which most men flinch.

BREAKING UP.

Those who have feared the power of the "solid South" hardly understood the silent but resistless working of obscure social nnd political forces. Those who understood these forces estimated the "solid South" at its true value—a fabric of imposing and pretentious front, but, nevertheless, based on a foundation of sand, and they predicted that it would quickly tumble in. It was utterly impossible, under laws which, to a remarkable extent, secured equality and freedom of action, for any permanent political forces to be organized. Stability in rank or party must come from specific laws, or from priestcraft, or from some overmastering common interest. Servitude, before the war, massed the whole community in its defense, just as the English uristocracy become one in a contest for their privileges. Break up these artificial barriers, and the tendency of society is like water to dispose itself in a common level.

In the South, the people cannot divide always on the color line. There is, indeed, one color which is very apt to deaden all other colors. It is the yellow of gold. White may dislike black, and black may dislike white, but both love the yellow in its metallic form. Few are the political sentinels who insist on the watchword of integrity. The many, the majority, are paralized before the yellow of gold. Like fierce dogs, won over by pellets of mnat, they reverse their guns when a dollar is tossed at them. The purchasahln quality of the legislatures of the Northern States is a matter of deep concern to thosn who have the interests of the State at heart; and in the treatment of the Indian, the Negro, and the Chinaman, the National Legislature shows that it has no hurden of lofty sentiments.

When the grent war ended, the whites of the South kept in solid line, to the music of old memories, and were knit together hy the inheritance of a vast and frightful disaster. They were held to each other by hooks of steel. They moved, side by side, in a vast caravan of wretched people, stripped of their property and humiliated hy martial dnfeat. Their sentiments were naturnl and noble. But they failed to see that, under disintegrating influennee, the hooks of steel would enap asunder, as they have broken before, among other people, in other lands, in like events. Knenly alive as the Anglo-Saxons are to the "mnin-chance," it could hardly he expected that they would nlways forego the emoluments of office, and the gratification of ambition, in order to indulge forever in love-feasts over the "lost cause," however dear to them. It is, therefore, no surprise to ns, that in the Legislature of the State of Virginia, two one-armed Confederate soldiers were turned ont of humble offices, by a majority which was overwhelmingly Confederate in its antecedents, and in their places two colored men were placed. It is e remarkehle turn in the wheel of fortune. It is the cap-sheaf of disintegration. It ie the proclamation of the rotteness of the platform styled the "solid South."

We ern not considering the motives or the morals of the act. We are simply illustrating the historical process—that process, which, in a community where hrnins ere active and laws and customs are not restricted, allows ideas to grow, ambition to do its work, end gives free play to all the social forces. Had anyone predicted ten years ago that, in a legislature where those of Confederate antecedents were in a large majority, a crippled soldier would he turned out by his old cumrades, and a negro he put in his place, he would have been scoffed at. Now it is done. The old memories are forgotten. The army of the "solid South" is broken up, and the cry of "*Sauve qui peut*" is shouted down the line. With the wisdom or justice of the act we have here nothing to do, as we heve said.

Just as this work of disintegration is accomplished, there comes from various quarters of the South the cry, "Grant for President." It seems as if there is ehout to be a new departure in politics. The negro has heretofore been pushed hack by the whites. Sagacious men have long predicted that the negro would in time be the willing tool of the wnites. The time has come for the trial. It remains to he seen what he will do as he enters on the political etage with his old master es his sponsor.

W. N. A.

THE DEPARTMENT OF AGRICULTURE.

There is no Government service of more value, at present, than thet of the Department of Agriculture in Washington. In a nation which must go to the soil for its life and prosperity there can be no more vital interest than that which seeks to develop wealth from the grouad. It is idle to repeat the old story that we must in the end fall back on our natural productions for material prosperity. The Commissioner of Agriculture is doing a epleadid work The real obstacle to his work is in the ignorance of people as tn its value. If the Commissioner could furnieh eeede of a plant which would produce Republican or Democratic voters, as the case might he, Congress would vote him half the public domain as a reward. Unfortuestely, he deale with subjects which do not take away or give offices.

It cannot be expected that he will nlways he successful in his experiments. Hie work is largely experimental. He is accumulating knowledge and experience for the benefit of the people. It is better that one man experiment thoroughly than that a hundred consume time and money in doing the eame thing, with possibility of loss. The Commissioner has been severely dealt with hecause of his efforts to iutroduce the tea plant. It is quite probable that tea cannot he economically produced in America, but it ie quite possible thet it may be grown in small garden patches, as currents are grown, and meny a poor woman may find relief and pleasnre in gathering the leaves for home consumption. If this can be demonstrated, the value of the ten plnnt will be beyond calculation. No less important are the experimeats in obtaining euger from sorghum and cornstalks. If the millions annually sent out of the country for sugar cnn hn retained at home, hy a domestic production. it will add enormously to the national wealth.

It is strange indeed that a nation of farmers are not alive to these matters. The people nre generous in a matter of experimenting in torpedoes. Yet a hundred thousand farmers arn moaning over the meagre returns to their toil, while their representatives in Washington are reluctant to epend money in devising ways and meens for their relief. The work of the Commissioner is to make two blades of grass grow where one grew before. He is doing it. One of these deys it will be known, and he will be honored accordingly.

W. N. A.

A NEW ARRIVAL.

Sixteen more Indian youths, nine girls and seven hoys, from Yankton Agency, Dekota, arrived at Hempton School on the morning of December 30th, under cherge of Mr. W. D. E. Andrus, U. S. Indian Agent for Yankton Sioux. These ere sent hy Government to fill the deficit in its last allowance of twenty girls, only fivs of whom were collected hy Major Crissy in Novemher, owing, as was explained in our last number, to detention by low water in the upper Missouri.

At that time, hy request of the Principel and permission of Government, Rev. Mr. Gravatt, of Hempton, wrote to Rev. Joseph Cook, in cherge of the mission church and school at Yankton, asking him to select fifteen girls and send them to Hampton. His party has now arrived, though, owing to further deleys, he was ahle so obtain but nine girls. This secession mekes the whols number of Indien girls at the school, twenty-one, and of boys, forty-seven. The new set are very intelligent and attractive in appearance, and several already speak English well; one of the girls, indeed, says thet she understands no other language.

Their nemes, with the egent's report upon each, ere as follows:

Mergeret Goulet and Mary E. Goulet are sisters. Their father is French. Both talk English well.

Anna Lymen.—Her father is en American. She is very hright and talks English well; very trustworthy and good.

Kete LeMonte.—Her father is half-breed —part French. He has a large family who are above the everage.

Emily West, niece of Chief White Swan.

Lizzie Selwyn, niece of Chief Medicine Cow.

Felix Benoist, helf French. He talks Englieh very well, ie e good interpreter and reliable.

Cherlee Picotte, half-breed French. His father is interpreter at the egency and heed councilman of the tribe.

Isaac Mandan end Daniel Manden are brothers. Full-hlood Sioux. Their father is one of the head men.

Jesse Prime.—His father ie one of the hest farmers at the agency. The boy has n good reputation.

George Stricker and Samuel Brown are hoth students of St. Paul's Mission School at Yankton, and are highly spoken of hy Mr. Cook. They understand some English.

Julia Upawiu, Lizzie Tasagyemaniwin and Mary Hinman are not epecially described.

The eupervision of the selection hy Mr. Cook is a sufficient guarantee thet it was well done. The difficulties in the way of it are shown hy the report of the agency physician, who, after all, can only say:

"I respectfully etate that I have made a physical examination of (the following named) Yankton Indian boys and girls, and that their average health ie as good ns it is possihle to obtain. I therefore recommend them for educational purposes."

A medical examination of all was made on the morning of their arrival at Hampton, hy Dr. J. T. Boutelle, with the following result: Of the eeven boys, three were put into clase A, as having both lungs in apparently sound condition. One more belongs to this class hut for some hronchial irritation—a cough resnlting from a cold caught on the journey, which will probably he hut temporary. Still another ie merked "A—with a few rales." Of the other two, the left lung is marked as in the second class—not perfectly sound.

Of the nine girls, three are marked A —good; two more, "pretty fair"; three more have right lung A—left 2. One of these has a scrofuloue eruption npon the neck. The ninth one is put into class 2 for hoth lungs, by auscultation, though percussion is normal. She had n cough for a year and says ehe has conghed np hlood, but does not cough now. She has been ordered malt and cod liver oil. Five of the whole nnmber report cases of consumption in their families, in one or both

parents, brothers or sisters.

This statement, as definite as we can make it, we regard as fino to those who are interested in this effort, and to the school which has undertaken it. It seems to confirm the observations of Secretary Schurz in his recent inspection of the northern agencies. Ho states that careful examination and inquiry convinco him that removal to the school has nothing to do with their consumptivo tendencies, which are continually weeding out the weaker ones at the agencies.

The most careful selection possible should be made of material, and with this tha school will do its best.

PUBLIC SCHOOLS IN VIRGINIA.

The Ninth Annual Report of the Superintendent of Public Instruction in Virginia gives a melancholy showing for the past year, but looks forward to a better state of things, which has indeed already begun. From '78 to '79, the public schools fell off very nearly one-half; in number of schools, from 4,545 to 2,491; in daily attendance, from 116,464 to 65,771. This sudden and excessive decline, resulting from the pecuniary embarrassments of the State and tha diversion of part of the school fund to meet them, was a little greater, Dr. Ruffner says, than it otherwise would have been, from "the want of what theologians call 'the assurance of faith' on the part of some of the Supervisors" who were frightened by the decrease of income from the State, and the activity of enemies, into diminishing the school levies just when they ought to hava increased them to tha full extent of the law. The State's insolvency is by no means removed, yet the closed public schools have reopened all over it, and while, last year, over a score of tha Hampton graduating class, anxious to teach, were obliged to go into service instead to support themselves—something which never happened before; this year, all of them can find schools, and there are more applications to Hampton for teachers than it can fill.

Dr. Ruffner attributes this encouraging and remarkable change entirely to a moral reaction, "a sudden and powerful determination on the part of parties and people to maintain the school system at all hazards," culminating in the desperate effort of each of the three parties in the November campaign "to prove that its views, of all those advanced, are the very views and the only views which will protect the school system from spoliation." "Whatever may be the result of the contest," adds Dr. Ruffner, "the people will not be defeated, although they may for a time be hindered, in carrying out their purpose to educate their children by means of public schools, and by means of the present school system."

The party which won in the contest is apparently fulfilling Dr. Ruffner's prophesy, and the pledges by which it gained success. And certainly one result of the curious break-up of old party lines, unlooked-for so soon, is the demonstration of the imperative necessity of educating the ignorant masses, into whose hands the balance of power may at any time fall. That the intelligent of all parties are recognizing this necessity is apparent from the digest Dr. Ruffner gives of the written reports of the county and city superintendents. They furnish an interesting history of a year's growth of public sentiment. The hundred and three reports, with less than half a dozen exceptions, notice a strongly favorable or decidedly improving disposition to the common schools. One remarks, "As an evidence of their high estimation by the people, no political candidate dares to raise his voice in opposition to them, or fails to advocate them." Tha deficiency of the school fund seems to have had very contrary effects in different counties, some superintendents reporting that "public sentiment has been much disturbed by the suspension of the schools," "the failure of the State to furnish adequate means to run the schools gava their enemies opportunity to croak. The State did her schools more injury than all their enemies could possibly do." Others declare more cheerfully, that "tha diversion of school funds by State officers has had a very decided effect in increasing sentiment in favor of the school." "The people began to appreciate their utility and importance in proportion as they were deprived of their benefits and advantages." Ona county reports: "All opposition to the free schools has ceased and public opinion has crystallized into a firm basis for their support." The superintendent of another says: "At first a large majority were opposed, but a few days ago one of the first men in the county said to ma that he had tried hard to believe it a Yankee innovation upon our good old Virginia plan, and as such it should be opposed by all true Virginians, but now he has become a decided advocate of it and believed the only hope of educating a larga majority of our citizens, indeed our very existence as a free and independent people, depended upon the preservation and extension of some good system of popular education."

STATISTICS OF EDUCATION IN VIRGINIA.

Virginia and some other of the Southern States have shown great enterprise in getting up very full educational statistics. From those furnished by Dr. Ruffner for the last year, ending July 31, '79, we have the following results:—

School population (between five and twenty-one years),		
White	289,849	
Colored	202,852	
		483,791
Schools opened— White	1,816	
Colored	675	
		2,491
Average no. of months taught.		5.36
Pupils in average daily attendance,		
White	44,549	
Colored	21,231	
		65,771
Percentage of school population in average daily attendance,		
White	15.9	
Colored	10.4	
		13.6
Average age of pupils		19.5
Whole cost of public education per month per pupil in average attendance		$1.45
Number of teachers,		
White	2,089	
Colored	415	
		2,504
Average monthly salary,		
Males	$39.95	
Females	24.73	
Cost of the system for year, including balance due,		
For pay of teachers	$391,393.37	
For all other expenses of administration	129,599.16	
	$511,992.53	

Dr. Ruffner says there is a common but mistaken notion that the school system of Virginia is a costly one, compared with other states, and that on this point —especially as to contingent expenses— there was most concern in the legislature last year. To refute this, he gives a statement showing the comparative cost of education in Virginia and nineteen other states, including three Middle, four Eastern, four Southern and eight Western States. The statement gives the comparetiva cost of public education per month, per pupil enrolled, including *all* expenses. Virginia is lowest, giving .88. New York is nearest her of all but the Southern States, giving $1.03. California is highest, $2.41. The statement ha finds in the Georgia Report and is taken, he believes, from that of tho United States Commissioner of Education for 1875, except the figures for Virginia which are his own.

EDUCATION IN SOUTH CAROLINA.

Col. Hugh M. Thompson, State Superintendent of Education in South Carolina, wrote last August to the Principal of tho Hampton Normal School to say:

"Dr. Sears, as you know, has allowed ma ten scholarships at Hampton for the next session. I thought it best to make selections from four different parts of the State, as I want tha influence of your institute to be felt all over South Carolina."

These students have entered Hampton and are justifying Colonel Thompson's selection, for which they are evidently grateful.

Of the general sentiment in tho State in regard to education, he says: "The condition of affairs is improving, but much remains to be done. Prejudice against public schools, indifference to education and waste of money are serious obstacles, but I am encouraged to hope that I am overcoming the two first, and I look confidently to the time when public opinion will remove the last."

Since thus writing, Colonel Thompson's Eleventh Annual Report, mada in November, gives still more favorable statements and full statistics in their support. He states that "tha public schools of the State are in better condition than at any previous time. The disorder and confusion which prevailed so long are disappearing; not that as yet results are fully commensurate with money expended, but it can justly he claimed that the public schools have taken a strong foothold in South Carolina and are gaining slowly, it may be, but surely. The school attendance is larger than at the last report by 6,224, the total attendance being 122,463, larger, he is confident, than ever before.

"The improvement in the schools for the colored has been especially marked."

Colonel Thompson makes "a brief statement to show what has been done toward the education of the negro." He says: "The amendment to the Constitution relative to the school tax was ratified January 26, 1878. This amendment provides that, for the support of public schools, 'the Board of County Commissioners shall levy an annual tax of not less than two mills on the dollar of all the taxable property in their respective counties.' The amount thus raised, together with the poll tax, constitutes the school fund. The amendment further directs that 'the school tax shall be distributed among the several school districts *in proportion to the respective number of pupils attending the public schools.*' This provision of the Constitution has been observed in the distribution of the school fund.

"It is true that the negroes continue to show a praiseworthy desire to avail themselves of the benefits of education; but it is equally true that they are receiving encouragement from the whites and their full share of the school fund. Not only are school officials discharging their duties impartially, but, from personal observation, I assert that in every part of the State, men of character and influence are cheerfully giving to the negroes aid and council in the management of their schools and in all matters tending to the general improvement of their race. The reports of my predecessor, which cover the period from 1869 to 1876, show an average attendance of colored pupils of 41,691, while my reports, from 1876 to the present time, show the average attendance of colored pupils to be 90,723, an increase of a little more than 45 per cent.

"The only institution in South Carolina for higher education which now receives State aid, is the Claflin University and College of Agriculture, which is devoted solely to tha education of the colored race. This institution receives annually from the State, $7,500. It is in successful operation with a large number of students. Rev. Dr. Cooke, the President, reports increasing success in its work the past year.

"During the past year, the public school system has attracted universal attention. At public meetings and in the columns of the newspapers of the State, the public school question has been discussed, generally with fairness and not unfrequently with marked ability. These discussions have taken a wide range.

"In spite of all that may be said to the contrary, the people generally have learned to regard tha control of education by the State with favor, and, more than that, to realize that it is the duty and the policy of the State to foster educational institutions. I am convinced that, to-day, if the question of establishing our public school system could be submitted to a popular vote, imperfect as that system is, it would be sustained by a large majority among all classes.

"I am authorized by tha General Agent of the Peabody fund to say that to a good normal school established by the Legislature ha will give at least $5,000. Aid from this source will doubtless be continued, should the school prove worthy of it.

"The entire population of the State of South Carolina, according to the U. S. censds of 1870, gives: Colored, 415,814; white, 289,667; Indians, 124; Chinese, 1; total 705,606. The school population was, in 1877: Colored, 144,315; white, 83,813; total, 228,128. The present expenditure in the year, per capita of average attendance is $3.26. This is compared with that in twenty-two other states, all higher; among which are California, $30.71; Massachusetts, $25.06; Connecticut, $22.02; New York, $19.61; Maine, $10.65; Delaware, $9.06; Virginia, $8.91, and Oregon, $7.96."

Colonel Thompson closes his interesting report with the just remarks: "South Carolina cannot afford to neglect the lessons which the experience of other states teaches so forcibly. If we develop the men of the State, material prosperity will follow. Of strong, well balanced, well-furnished minds, we cannot have too many. The needs of our people could not be more forcibly expressed than in tha words of a famous Indian chief, who, when asked by an officer of the United States Government what his people wanted, replied, 'Peace, plows, and schools.'"

To those interested in making good the recent losses of the Hampton Institute Library, apparatus and cabinet by fire, we would say that lists of any such articles as friends may be disposed to send would be gladly examined, and whatever would be needed would be reported.

Many have excellent and interesting books which they would be glad to place in our library. Books of history, travel and biography are especially desirable. Trashy reading is ruled out.

In case of duplicate copies, one can be given or sent to some worthy school teacher in a remote and desolate place, who would be only too gratified for fresh reading matter.

An interesting and important fact in this year's work at Hampton is the call for teachers for colored schools.

Never before has it been so difficult to supply the demand. Applications for over twenty are on file in the Principal's office and there are no more to send.

Salaries and school houses are ready. What work is there more needful and more helpful for the colored race and for the South than to produce teachers for the throngs of children that are growing up in ignorance.

The Hampton Institute is maintained chiefly by scholarship donations of seventy dollars each.

In the hope of enlisting new friends who will assume the expense of fitting a teacher to work for the negro race, we publish the following statement. It is printed on the scholership letters from students to their benefactors, now about to be sent according to custom, to those who have helped them.

Students letters are sent to those who contribute to the Hampton Institute one or more scholarships of seventy dollars each, as the tuition, or *pro rata* cost of education of a student for one year, as well as to many who have aided the school in other ways. Students cannot provide tuition, being barely able to meet their bills for board, washing, lights, mending, etc., which amount to ten dollars per month, payable half in cash and half in labor.

Tuition (teachers' salaries) amounted last session to $20,989.17, which was met chiefly by scholarship ($79.09) donations. Not including charges for board of Indians ($7,353.32) which were paid by Government and special contributions, the students' bills for board, washing, etc., were $22,113.17, of which $17,691.25 were paid by labor in the various industrial departments. The balance was paid in cash, $3,237.54 by students themselves, and $2,194.38 by their Northern friends. More earnings and less charity than ever before. Payment in labor by students is *bona fide*, but the value of most of it to the school is from 25 to 40 per cent. less than the amount paid for it. Instruction is primary to profitable production. The question is not what the student can do for the farm, but what can the farm do for the student.

Giving a scholarship is meeting a Negro student at the limit of his resources; is helping one who helps himself, and reaches him in the form of an *opportunity* which stimulates, and not as a cash credit which might tempt him to relax his efforts and tend to pauperize him. The Scholarship Fund is the main stay of this

institution. It maintains the teachers; on it depends, in a great degree, the existence of the school. Contributions for general pur-

less strong. It is only another evidence that a self-sacrificing devotion to any cause leaves the less room for a narrow

them to the dreadful alternative of suffering or doing such great wrongs. It is a shame for an enlightened nation to keep itself thus embroiled to the hindrance of its prosperity

in this direction. The result of his experience, thus far, is his decided conviction that 'there is no better way to elevate the Indian than in negro industrial schools.' An effort

institution. It maintains the teachers; on it depends, in e great degree, the existence of the school. Contributions for general purposes are, however, no less important. Efforts are being made to secure an Endowment Fund, the income of which shall provide, in part at least, for the support of teachers.

Less than one-half of those who enter this school take the full course of three years; the rest are called home either by personel or family troubles, or. are unequal to the advenced studies, or are dropped as "poor material." About one-tenth of the whole number admitted are of the latter class. The rest who do not graduate become teachers in primary schools, or laborers in various cellings.

Many students bring too poor to make the monthly cash payment of five dollars, besides providing for clothing and books, remain out a year or two to earn the means of returning to school.

This explains the frequent changes in letters from students: givers of scholarships, in some cases, receiving letters from different students each year for two or three successive years. If a student can by teaching, or working out for a year, provide for his board and other personal expenses, it is usually considered best to let him make the effort rather then appeal in his behalf to Northern charity. Our rule is, however, to help those who are worthy when they are at the point of discouragement or distress. A Benciary Fund of from two thousand to twenty-five hundred dollars is annually expended, reducing the total charge to students by about one-tenth. The proportion of charity has diminished yearly as opportuoities for work have increased.

SESSION OF 1879-80.

Number of officers and teachers, 28,—9 gentlemen, 10 ladies.

Number of colored students, 252: Young men, 151; Young women, 101. Average age, 18 years. Number of Indian students 60: young men, 48; young women, 21. Average age, 15 years. Total, 321.

Government pays $150.00 apiece, per year, for Indians, got quite covering cost of boerd and tuition, leeving no provisiun for clothing, the annuel expense of which, for boys is $00.00, for girls $50.00. For this tha school depends on voluntary contributions.

The eotire annual current expeose of the Hampton Institute, above all receipts from students, is in round numbers $35,000.00. Of this amount $10,000.00 sre yearly supplied by State approprietion as interest on the Agricultural College Land Fund devoted to this school. The balance is from interest on endowment fund (about $2,500), and by voluntary contribution from friends in the North.

Of the 310 grodustes of the Hampton Institute, twelve have died, and 00 per cent. of the remainder, with many of those who took only n partial course, have been engaged in the work of teaching their people. The demand for colored teachers is now greeter than ever.

S. C. ARMSTRONG, PRINCIPAL.

Hampton, Va., January, 1880.

OUT OF DEBT.

The December number of the *American Missionary* is entirely devoted to a report of the proceedings at the Annual Meeting of the Association, held in Chicngo, in October. In regnrd to the finnncial condition of the Associstion, the committee mnke the following gratifying report: (1st) The expenses of the yenr hnve been fully met. (2d) The debt of the Association is entirely extinguished. (3d) On the 1st of October the bnlance in the treasury amounted to $1,475.90.

This is a brilliant achievement of the Association, and won in the fnce of adverse circumstances and in n time of general finnncial depression, without nny sudden stroke of fortune, but by the hardest and steadiest work in educnting public sentiment and proving its worthiness of the funds entrusted to it, a proof which must affect its future prosperity as well as its present. It has n right to plead as it does:—"In view of the grand work which has been donc and the still grenter work to be nccomplished, the committee desire to urge upon the friends of the Associntion the necessity for n large increase of contributions the coming yenr, so thnt the missionnries and laborers in this good cause mny 'go forwnrd.'"

Rev. M. E. Strieby, D. D., Corresponding Secretary of the Associntion, mnde nn address, remnrknble not only for his usunl eloquence, but for its brond views and even-hnnded justice. Its tone is noticenbly free from the bitterness and hnrd feeling sometimes felt in the utterances of men whose interest in the work is much less strong. It is only another evidence that n self-sncrificing devotion to nny cnuse lenves the less room for n nnrrow nnd hnrd judgment of either side. Dr. Strieby's own close connection with the work among the colored people of the Southern Stntes has given him an inside view of the state of nffairs, and his unpartisan view of matters is worthy of serious consideration.

We quote the following passnge from his address:—

"I present three pictures:

"The *first* shows a gathering of colored penple peacefully assembled to prnmote their political welfare. But see that rush of armed men, the brief unequal struggle, and the flight of those who met only to exercise a constitutional right. In the background of the picture is a jail broken open and the venerable Judge Chisholm and his little son clinging to his knees, and his heroic daughter endeavoring to shield her father, all butchered in cold blood. In that background is another scene. That strong man, the leader of Ku Klux bands, whose hands are dyed with the blood of innocent colored men, and who could show the medal which the grateful South had given him, is himself murdered in open day, because he dered to announce himself not as a Republican, but as an independent candidate for office. The worst of all is that there is no legal remedy for these crimes. The National Goverrnment cannot reach them with punishment, and the Stata government will not. They can only be tried in Southern courts, and before Southern juries, and these have acquitted the murderer of the Chisholm father and children and refuse to try Barksdale for the Yazoo murder. Thus does the South make itself solid, and wipe out in blood the least traces of dissent from its supremacy. The North is moved by all this—indignant, determined, and well it may be; for what now avails the four years nf war and the fourteen years of nttempt at justice and conciliation?

"But I show you *another* picture. It carries us back a few years. The Legislature of South Carolina in in session. Its members are mostly black men. They have generally no property and pay no taxes, yet they heve taxed that already impoverished Stata to the verge of destruction, not for public improvement, but to lavish it upon themselves, in suppers, wines, personal perquisites, in jobs and in railroad schemes. No more scandalous or reckless plunderiug of a public treasury has ever been practised in America, and that is saying a great deal. Why is this little handful of mock legislators allowed to do this? Why do not the people rush in upon them and hurl them from the plsces they so dishonor? Why? Simply because there stands as a guard a file of United States soldiers—not themselves sufficient in numbers to be formidable, but representing the National Goverrnment, and to touch them is to touch it. Tha South is indignant, determined, and do you wonder? The troops are now gone, the black legislatnrs are dispersed and white tax-payers are in their places; and rising above all other considerations is the purpose of these tax-payers that, at whatever cost, and by whatever needed methods, be it by tissue ballots or by shotguns, those irresponsible plunderers shall never come back again into power. You blame them; but I fear you would do the same under like provocation. If the General Goverrnment, by means of a bloody war, should subdue the Western States, and then enfranchise in any one State enough Indians to outvote the whites, and those Indians should re-enact the plunderings of the Columbia Legislature, how long would the West bear it? I suspect that very quickly every Indian would be converted into a good Indian; but it would be in the Western sense—he would be a dend Indian. Brethren of the North, make the case your own. Put yourself in your Southern brother's place, and judge him by your own impulses. What, then, is the true remedy for this great evil? To answer this we must honestly consider what the real evil is. These South Carolina tax-payers do not crush these black voters because they are black. They would do the same to the 'poor whites' if they, having the numerical force, should enact the same wrongs. Nor is it because they are Republicans. It would be the same if they called themselves Democrats and did the same things. The trouble, therefore, is not with the man's color or party, but with the man himself—with his ignorsnce, his degradetion and his facility in being used as the tool of designing men. *The remedy, then, is not to change his color or his party, but his character.* All other remedies are delusive, and it a natural folly and crime to tamper longer with them. We have tried them; and to try them over again will be but to swing like a pendulum between the soldiers in front of the State house eud the bulldozers at the elections. It is e shame and n grievous wrong to leave matters are they are. It is a wrong to the blacks to compel them to suffer in the South or flee to Kansas. It is unfair to the South to put them to the dreadful alternative of suffering or doing such great wrongs. It is a shame for an enlightened nation to keep itself thus embroiled, to the hindrance of its prosperity and the jeopardy of its peace.

"Let me show you my *third* picture, which presents 'the more excellent way.' In the foreground is a school-house and near by is a church. Around and in the distance are pleasant little homes and well cultivated lands. Thesc are the instruments for working the needed change; they will make the Freedmen intelligent, virtuous and industrious; will give him property and responsible interest in the welfare of the State. But, you say, this is a long process. Admitted; but what if there is no other? A slave can be changed into a freeman in an hour, but to change him into an intelligent man will take years; to transform millions of ignoraat, cringing and penniless men into intelligent and responsible citizens and Christians will require generations. Tha acorn favorably planted will germinate into an oak in a few days, and though small, it is e reel oak; but it will be many years before its broad branching arms will give wide shelter, or its girth and strength of stem will yield heavy timber. A few such plants started in good soil and carefully tended will come forward rapidly, but the wide growth on arid plsins or in cold swamps will long remain dwarfs. The rapid progress of some of these colored people under adequate training shows what *can* he done; the backwardness of the mass shows what *must* be done. Here is the call to this Association to bear its part in this great work in Americe. It is no light task and no short work. The North is once more aroused to its magnitude as well as its necessity, and in that great effort the better portion of the South is ready to join us. God forbid that any delusive scheme or guilty indifference should hinder its steady progress.

"Converging lines nf providential purpose have met. A marked liec of American convergence began in 1830 with the first shedding of blood in the struggle with the slave power in Kansas. John Brown's raid came in 1859. The rebellion began in 1801; the slaves were proclsimed free in 1803, and their education began almost with the war. Other societies have their own coincidences in this great work, but this Association—loving the distinction of opening the first school among the Freedmen, it is a matter of special interest with us that about one month after Stanley reached the mouth of the Congo, we sent out our first company of *colored* missionaries to Africa, all of whom had been born in slavery, were educated since emancipation, and, moved by the love of Christ and of their fatherland, had gone thither to preach the Gospel. This is to us the beginning of the other part of the great work to which this Association is called, for Africa and America."

We make the following selections from the report of the Executive Committee:

Our *eight chartered institutions*, in the eight leading States of the South, Virginia, Kentucky, Tennessee, Georgia, Alabama, Mississippi, Louisiana and Texas, have continued to do thorough and faithful work. Ona has been added to the number of our normal schools, making twelve in ell. Twenty-four common schools have been ndded,—six more then the previous year. Tha total number of schools of all grades has been forty-four.

"We hava had, in all, 190 teachers; of these, 10 have also fulfilled the duties of matrons, 6 have been connected with the business department, and 11 have been pastore of churches, but all have been actively engaged in teaching.

"The total oumber of pupils has heen 7,207—almost exactly the number reported a year ago. These have been distributed as follows: Primary, 2,739; Intermediate, 1,405; Grammar, 033; Normal, 2,022; Collegiate Preparetory, 400; Collegiate, 63; Law, 28; Theological, 36. This shows en increase in the professionel schools, a decrease in the collegiate, and over 500 more in the normal departmeot than last year.

"A new element in work for the Indians has been tha *educational work at Hampton.* It has been demonstrated nt length that our Soothern schools may help to solve the Indian as well as the negro problem. Seventy-seven Indian hoys and nine Indian girls have spent the year at Hampton Institute, contented and studious, and responding to patient and skillful teaching with marked and steady progress. During the summer a number of them gained great credit to themselves by their good conduct on the farms and in the families of Massachusetts among which they were distributed. It is hoped that the number of girls allowed to enjoy these privileges may be greatly increased. Captain Pratt has obtained permissiun to do a similar work at Carlisle, Pa.

"It may he, in the providence of God, in this direction, that the Indian work of the Associntion is to be pursued and enlarged in the future. Tha committee recommend, for the present at least, co-operation with General Armstrong in the work he has so well begun in this direction. The result of his experience, thus far, is his decided conviction that 'there is no better way to elevete the Indian than in negro industriel schools.' An effort in this direction promises greater results, for the same expenditure of money, than the attempt to found new missions among the Indians."

THE undersigned gratefully acknowledges the following donntions of cash nnd material, to mnke up losses by the recent fire which destroyed Academic Hall:

LETTERS FROM HAMPTON GRADUATES.

THE COLORED VOTE IN VIRGINIA. AN OUTCRY FOR HELP. CHILDREN TURNED FROM SCHOOL FOR WANT OF BOOKS. A FATHER IN TEARS. JUST THREE DISADVANTAGES. FEW SCHOOL BOOKS. NOT A SINGLE BIBLE. NO NEWSPAPER. TEACHING IN THE NORTH. WHICH SECTION IS BEST FOR THE COLORED MAN?

THE COLORED VOTE IN VIRGINIA.

Many graduates have sent as requested, the result of their observations of the November elections in Virginia. There is strong similarity between them all, showing the arguments by which the great majority of the colored vote was secured by the readjusters. Most would have voted for entire repudiation if they had had the chance, while many, utterly confused by the split of the party, stayed away from the polls, for fear they should vote wrongly. Some extracts from these letters we gave last month, and we add a few more. They are clear and graphic, and nothing can more clearly show the need of educating the ignorant masses, in whose hands are sometimes the intercests of the State.

——, Co. VA.

Of this section, I have seen and talked with a great many of the colored voters: I find they all have the same opinion upon the debt question. Which is, it is nothing more than just and proper that it should be paid; but they have no right whatever, to share its payment; that would be wrong, they say, because it was incurred before they became citizens. During the day of election, near twenty-five colored voters weut to the polls to vote, but on examining the Readjusters ticket, they found the names of men on it whom they did not wish to vote for; therefore, returned without voting at all. The proportion that did not vote, has been estimated to be one-half. Those who did vote voted the Readjusters ticket. I inquired of soveral, why they did not vote, and all give the same reason—"The parties is so mixed up I don't understand um; so if I had voted, I most voted wrong, so I wouldn't vote at all."

I have no reason to believe that voters of this vicinity were influenced by any means, but, that they acted as conscience dictated. I was informed by a citizen of Petersburg, that quite a number there sold their votes; some for money, some for clothes, others for rum and cigars. These votes were bought by men who hold bonds."

——, Co., VA.

"I received your kind letter of the 3d inst. and was exceedingly glad to hear from you and Hampton. The election passed off here Tuesday, 4th, with more than its usual quietness. The leader of both parties worked most assiduously for their success. I left —— about seven o'clock, for my own precinct fifteen miles distsut, arriving there at ten. The vote polled here was small as compared with previous elections; it being thirty-nine votes, five of which were cast by colored voters. All but two for the Coaservatives. The Readjusters received only two votes, at this precinct. This polls numbers one hundred and fifty, so you see the people did not turn out for some reason I know not what, but I judge it was because some had not paid their taxes for 1878 and were thereby disfranchised, others because they knew not which party was right. I passed the ——; precinct on my return, and stopped until the polls were closed and the votes counted. Seventy-one votes were cast there, eighteen by colored men and sevouteen of them for the Readjusters. The Readjusters received a small majority et this precinct. All, or most of the colored men with whom I conversed expressed it as their opinion, that they had no right to take a part in paying a dobt incurred by the State of Va. when they were chattels and property, and of which they have received no benefit. There were many other objections advanced by the most ignorant, which I regard as being too frivolous to be mentioned here.

Hoping to hoer from you ngain soon. I am your pupil.

——, Co., VA.

"I was not an observer of the election, but learn that every one voted as he saw fit. Two-thirds of the colored and most of the whites voted for Repudiation. The formers' reason was that they did not make the debt and had nn right to pay it. The latter held that it was not a legal debt, and the State was not able to pay it. The leading colored men here were opposed to repudintion. Give my love to the Generals and teachers.

——, Co., VA.

"We have an association here, in which we have debates, essays, orations, and the reading of any good extract that may be useful to the members, and I introduced the subject: *Resolved*, "That the colored citizens of Virginia should help pay the State debt," just to get the ideas of the people here in regard to the matter. The majority claim they have no right whatever to pay it, that it was contracted before they had any voice in the government and now that the money is due, the white man that contracted, should pay it. They did not vote very freely on election day because they did not understand the question, and were afraid they would vote for the payment. Only about one-third of the voters in this vicinity cast their votes."

——, Co., VA.

"The election passed off quietly. About one-third of the white and colored voters of this County, and the Senatorial District did not vote at all because they were not in favor of paying the debt. There were no threats and riots, everybody seemed to be cool and sober. A colored Readjuster was elected to the Senate from this District, and a Funder to the House. The Conservatives were divided and the Republicans also. The larger portion of the colored vot d against the payment of the public debt. They were influenced by politicians to do so. They were told that this debt could not be paid and keep up the free schools too, unless by increasing the taxes. A great many whites voted in favor of the colored candidate for the Senate, because he was a Readjuster."

——, Co., VA.

"The colored people claim that they had nothing to do with making the public debt, and should have nothing to do with paying it, but are very willing to vote for those to pay it who contracted it. As a general thing the people never concern themselves about the election until just a day or two before it comes."

Quite a bright general aspect of the colored voting in his county is given by the following writer who was prevented by sickness from observing the last election.

——, Co., VA.

"I have been very sick and can only give you a little hint of our county concerning our elections generally. The voters of —— Co. are very solid. They go to the polls like men of war, and deposit their ballots like true citizens. They think voting is a great privilege of power. There is but little bribery among our voters. There is no drinking to cause any disturbance on election days. Everything goes along smoothly. I think there are only a few who do not vote. When there is to be an election, every man seems interested and goes to work for the regular nomiuee of the party."

CRYING FOR SCHOOL-BOOKS.

That the craving for learning which was so remarkable a characteristic of the freedmen in their entrance into freedom, has not altogether died out is very apparent from the following touching letter.

——, VA., *Dec. 1st*, 1879.

Miss L.:

I received a large package of papers, last week, for which I return many thanks to you or to whoever sent them. I suppose that it was you or Miss M. I gave them out to the children Sunday. They were very proud of them. I also received a small package of the New York Tribunes. I know not who sent them, but I was very glad of them, for it seems to me that I am shut up in a box, and I am glad to get any paper.

Please excuse a long letter this time, but tell me what you think can be done for the following:

I have a very large school and a very poor one, but the most anxious for education I ever had. I have seventy-three on roll and expect more. Out of this number not more than one-fourth have the necessary books, and to my knowing many of them are not able to get them. The superintendent has ordered me to turn them out if they do not get them. But it will be heart-rending to me to do it, when I see them so anxious to learn. They ask me for books. When I say anything about turning them off, they look at me as pitiful as beggars, as much as to say, O Teacher, can't you help us? The Sabhath School is also a poor and needy one. But I never saw a more earnest one.

Now, Miss L., please tell me if you think anything can be done to help them. Can you point me to any charitablo Institution or Society that you think will help me in getting them some books. I suppose you are all much in need yourselves and more so now since the fire. It grieves one to think of it. But knowing that this people deserve help and are greatly in need, I make the outcry for them. I wish that I could see you and tell you just how things are. If they were able to help themselves and would not, I would not make nny effort to help them. But when I see their inability and anxiety, I cannot refrain from help. Now, do tell me at once, what you thiuk can be done.

I will close for the present, in hopes of hearing from you soon.

Yours, in earnest, W.

P. S. A man came to me to-day at the C. H., and asked me if I could not get some boks for his children, and weit on him. When I told that I could not, he said that he did not want his children sent from ashool, and he did not know what to do. So he turned away in tears.

THE SOUTH FOR THE COLORED MAN.

The following letter from one of the few of our grnduates who have taught in the North, gives interestingly, the impressions of an observant and intelligent young colored man as to some of the differences between the North and South as a home for his people.

——, N. J., 11, 7, 1879.

Dear Miss L.;

How glad I was to receivs a letter from you; it seemed as if I had renewed an old friendship.

We are all so glad to receive news from Hampton that as soon as possible after the arrival of a letter, each is made a sharer of the pleasure. Thus it is that yours has been read and commonted upon by all.

Our positions as teachors are not as pleasant as they would be in Virginia. The young men will have no more communication with us than they can possibly help. They say that our ways are so much different from theirs that they do not care to associate with us. They are respectful enough (in this way), and do not seem to have any other cause for remaining distant. I attend regularly the Sabbath school, and generally teach, though they have elected officers and teachers. The young people do not attend very regularly, they say it is of no use.

I shall strive to induce them to visit it oftener, and have decided to give them a lecture for the benefit of the Sabbath School. My Friday lectures are delivered to my scholars upon topics of usefulness and morality generally. The "Morals and Manners," and the tracts of Hampton form a considerable portion of them. My lecture for to-day will be upon Water:—its composers—how supplied from the clouds—its changes upon the earth into vapor again, its uses, and the necessity of pure water. The young are deficient in morality to an extreme. If we can only interest them in some good cause, show them the startling effects of intemperance, and other vices, we may, I think, instill in them some feeling of self respect, some desire that the world will be better for containing them. As to which section has the better advantages for the colored people, I should emphatically assert for the South. That there is a general desire to better the condition of the colored; that prejudice is not as hostile as in the South is true of the North; but can the colored people successfully with the different branches of skilled labor, can they who have lately been brought to hear personally upon American affairs receive the front places in a section where men of influence are common? It is impossible.

The South only is where this labor can defy competition: there where their very existence is required to develop its valuable resources; there where their condition is truly known to them, they look for no help,—and there it is that they are destined to launch out upon the sea of usefulness and true glory.

The fall elections here are just over. Colored people are as ignorant of politics here as in Virginia. The ballot instead of being held as a birth-right inviolable, is but little esteemed, and in many instances I am told, exchanged for money.

I am at quite a loss for reading matter: may I have one of the reading-room journals?

Are the '80's very promising? I don't think they are quite as wild as the '78's were, of which one is Very truly yours, P.

ONLY THREE DISADVANTAGES.

Should one of the energetic philanthropists and model Sunday school workers among our Northern friends be set down in the woods with a race on his hands to elevate, in a community without school books, Bibles or newspapers, and no money to buy them, he might begin to think of Israelite brick-makers, and would know how to sympathize with the young colored teachers who, in true missionary spirit, go out to work for their people under the disadvantages set forth in the following letter. If out of their abundance, Northern homes and Sundny Schools will send us sometimes hooks or newspapers (religious or secular) which they have done with, we can send their light into many dark places.

——, VA., *Nov.* 18, 1879.

Dear Teacher:

I nm now very pleasantly engaged in teaching. I have a school of thirty five bright and enger pupils. You cannot imagine how much pleasure it affords me to start out each day with a pleasant day's work before me.

The people here are very far behind most of the colored people of this county; they do not seem to know the advantages of eduction and a great many of them are too poor to do what they desire to. They have not had a good school for four years, and they tell me, the school is in a better condition now than they ever thought it would be, but it is now very far from what I want it to be, and hope by constant hard work to bring it to. I want to get the children far enough advanced to show the older people the advantage of education; then, I think, they will take more interest in the work, and enable the teachers who follow me to do more good than they could if the people are left in their present condition.

I am teaching Col. Parker's system, and find it a very interesting and instructive way. All my little pupils enjoy it and learn very rapidly. I also use Monroe's reading chart for my lower classes, but have one great disadvantage, that is I cannot get euough Chart Primers; it is quite a drawback. There are several others in our way. I say our, because they pull mo back as well as the pupils.

The first is that about half of my pupils are without books or slates, and do not at present seem as though they will ever be able to get them. I have spoken to some of the parents about getting books; they said, "I will get them as soon as I can get hold of some money." The most of these men are farmers, and get paid for their work in trade or produce, and have large families to support, so you see it is quite hard for them, and totally out of their power to do a great deal.

The second is in the Sunday-school in which they have given me quite an active part. They have not been having Sunday-school here in the winter, but I think they ought to, and am going to try to keep it up if I possibly can. We have only about one-third enough books to go around in the different classes, and not a single Bible or complete hymn book. I am trying to teach them some of the Moody and Sankey hymns. They like them, but learn very slowly, as they do not know anything about music, and I do not know any good way to teach it them, but I do my best, and they try hard, and I trust we may accomplish something before I leave them. I wish you could have seen them the first Sunday I was here, I had a few Sunday-school papers that I got from a friend a short while before I came out here, and I gave them round to all those who could read. They were perfectly delighted. It was a great treat, it having been a long time since they had had anything of the kind.

The third and last disadvantage is about reading matter. This is an out-of-the-way little village, without a single book store, or any place where a person can get a book or a newspaper. I have read but one newspaper since I have been out here, and that has been nearly a month. You cannot imagine how lonely a person is, shut out as it were, from the outside world, for I never know what is going on outside of our little village here.

So far I like teaching very much and I think I can do some good here, at least I intend to do my very best for the little time I have, and with the disadvantages I have to encounter. You know this is my first school, and a happy one it is to me. I do not know of any task I have ever undertaken that I felt more interest or pleasure in than I do in teaching, and only hope that it may continue always the same.

Please remember me very kindly to Gen. Armstrong and the teachers.

Please let me hear from you soon.

I am your obedient pupil A.

A FINANCIAL PLAN.

Our graduate teachers, as a rule, meet their difficulties with cheerfulness instead of whining, and show considerable ingenuity in overcoming them. The following letter is from a very worthy young man of the last class.

——, VA., *Dec.* 18, 1879.

Dear Miss L.:

I am now in my third month, and having had anch a smooth time with my teaching, am beginning to thiuk myself n teacher; am sure I kuow more about it than I did three months ago. However, I am working hard to make it a success. My people seem generally well-pleased, and the superintendent also. My school is now fairly started. House finished and stove up and every thing is in a comfortable condition, and I work daily uninterrupted-ly. The reason I say without being interrupted; ever since I have been teaching, ever one or two weeks I have had to stop for a few days that the carpenters could work, as the building, in which I teach, is a church and had not been finished. I taught here without windows or doors until the last of November. The people are poor and cannot build a school house, therefore they, to have a school, admit me to the church. At first, some made objections. But after I told them how important the school was, they readily consented. I devised a plan by which they could get their windows and doors and at the head of the subscription list subscribed for one dollar, in thirty or sixty days. My time has come to pay. Shall pay next Saturday. After I introduced this plnn about twenty-five subscribed for $1, and some for fifty cents.

I too, earnestly wish that I could be in your reading circle, and advancing. I should like your paper, and shall send you my nddress with money soon. I never get my papers here. I will write you a fullar account of the people soon. Remember me to all.

Merry Xmas and a Happy New Year to all.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

confidence and ambition to go forward. There is a marked difference in the aptness of the nations into which they had to be graded

agencies are similarly provided for. This division is not absolute. Many know something of more than one trade. The carpea-

Mr. Starkweather, the good effect of throwing upon them some responsibility.

THE MEASLES.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

OUR LITTLE GIRLS AND THEIR SAYINGS.

Tha three little girls represented in the pie-ture, Sarah, Annie and Carrie, are among thosa who came first. We have two other littln ones now. Mary Traversie, and Rosa Lay-ont-of-doors. Mary is smaller than either of them, though not quite as young as Annia. The three who have been with us n year hnve made great progress in talking Englisb and in other ways. They are quick and observing and often amuse and interest us hy their bright sayings and dawning thoughts. Miss Amelia Perry, a graduate of the Hampton School, who taught them through the summer and now has much of the care of them out of school, teaching them to sew nnd cook, furnishes the following incidents of her experience witb them:

"One evening I happened to go into one of the Indian girls' rooms; quite a number of them were sitting around, and one of them, (Carric), said, 'You don't do now, what you promised." I said "Wlint do you mean Curria ? What is it ?' She said 'Hush ! don't tell,—look now, see what I do.' Sho then put her hands to her head, and made other signs which made me remember that I had promised to come and henr her say her prayers in English every evening. I said, 'Come, with me to your room and we will now.' She said: 'Hush ! don't tell the girls what it is.' After she had said her prayers, I snid, 'Come, let us talk a little.' I said, 'Carrie, you were a little naughty yesterday; now I want you to be a good little girl, and then God will love you.' She said 'Can God see me all the time ?' I said, 'Yes, Carrie, all the time.'

'Has He, (God) got very many eyes ?'

I did not know just what to say then, but I said, 'No, Carrie, from the picture wo see of Jesus, God's Son, if we can judge God anything like him, we think He only has two eyes.'

'Well, how can He see behind and everywhera with two eyes ?'

I said, 'Carrie, God is such a being that He knows and sees even what we think. Our thoughts, if they are bad, He knows them, and if they are good He knows them.'

'I think something now; you can't see; does God see and know ?

I said 'Yes, Carrie, God knows everything.'

'If somebody want to kill somebody, and don't do it, does God know it ?'

'Yes.'

Another time, she was helping me to cook. I told her what I was going to have for dinner, mentioning maccaroni. She said, 'What that ?' I said, 'Come into the pantry and I'll show you. I opened the box and showed her the maccaroni. She said, 'Oh ! you going to eat that ? At my home Indian *smoke* that.'

I took some and broke it, and she seemed astonished to think that I was going to cook it. I told her to break it, and after it was cooked she would see that it looked different from Indian pipe stems.

Another time Sarah was helping me cook, and I began to brown the flour to make gravy. She said, 'What for you do that ?' I said, 'To make the gravy look nice and brown.'

'At my home, we don't do that way."

I said, 'how do you do ?'

'Oh ! we put milk in it, and white grease, just like that in that bucket,' pointing to a bncket of lard on the table.

I said 'Do you buy that at your home ?'

She said, 'Yes, how much you pay for it here ?'

I said, 'About twenty-five or fifty cents, I suppose.'

'I think that man at my home no good,' she said.

I asked why.

'Because hn make my father pay a dollar for ono not that big. When I go hnme, I will tell my fäther he no good; not to pay ao mnch money.'

I had on a red shawl ono day. Josephine said, 'Oh, very pretty ! How much money you pay ?' I said 'About four or five dollars.' She said, 'At my home, ten dollars. I think everything so little money here. At my homo very much we pay. I think man no good; makn Indian pay so much money for just littla.'"

PROORESS IN STUDY.

Naturally, we who are with them from day to day do not notice the Indians' progress as outsiders do, one of whom recently expressed himself as "paralyzed with astonishment," on learning that the class ha saw engaged in "sentence building," had, many of them, no knowledge of English a year ago. The arrival of new-comers affords us a chance to estimate the progress tho "old" scholars have made. Tha difference is especially manifest in the girls, the new ones sitting in the class as the old ones used to, with drooping, listless figures and shawls drawn up over their heads, too shy to speak even in their own languaga except in whispers, while the others answer up promptly and clearly. They avidently feel the difference themselves and it gives them confidence and ambition to go forward. There is a marked difference in the aptness of the sections into which they had to be graded soon after their arrival, but all have advanced. Any ona who has watched the unfolding of a little child's mind, has noticed the remiting growth, how after weeks or months almost stationary, the child takes a sudden start, using new words learned no one knows where or how, and astonishing everyone for a while with its rapid development. It is curious to notice the same peculiarity in the Indians' progress. Just now they are in such a flood-tide, interested, eager, and learning rapidly.

NO BABY TALK.

The universal tendency to talk baby talk to those who don't understand English, is carefully resisted in our teaching and talking to the Indians. Baby talk is not so pretty in an Indian chief as a three year old, and it is exactly as easy for him to say I want to go, as Me want go.

Tha significance of the particles and idioms can he learned only by use, and their use acquired only by constant practice. To this end, the conversation class is put through a daily drill in the verbs without knowing what a verb is; the simple tenses and most common forms only are employed as yet. After toiling rather rebelliously through the present, past and future of the verb to be, they suddenly woke to intensa interest on the discovery that they had mastered the key to all the verbs. Now the teacher's entrance is the signal for the general cry, "A new word—a new word. Please give us a new word this morning." Pest, Present and Future are represented to them in a more practical from, by Now, Then, and By-and-by, or perhnps, Yesterday, To-day, and Tomorrow, or some other expression for variety. Any verb has only to be put upon the blackboard in skeleton form, like this;

NOW,	THEN,	BY-AND-BY.
I making,	I made,	I

for any one in the first and second sections to fill up the vacancies—

NOW,	THEN,	BY-AND-BY.
I am making,	I made,	I shall make,

and carry each tense through all its persons, affirmntively and interrogatively. Then they take great pleasure in building them up into sentences,

I am making a dress for myself.

Karunnch made a pair of shoes, for you last week.

They will make a very nice house for their mother when they go home.

To complete the lesson in their estimation, though that has to wait sometimes till the next day, they must turn all the sentences into questions, which they do quite readily, changing the pronouns all the way through if necessary, and insisting upon the question mark.

Are you making a dress for yourself ?

Did Karunnch make a pair of shoes for me last week ?

Will they make a house for their mother ?

This practice is chiefly oral, of course, in the conversation class, but they see the sentences on the board and sometimes write them, while they have similar ones to copy in their writing class.

DIVISION OF TRADES.

In teaching the trades, tha first effort was to find out what was best adapted to the powers and natural bent of each. As far as consistent with this, the next aim is to send back to each agency as many different skilled mechanics as practicable, besides the farmers. Thus for Fort Berthold, which is best represented here, having sent us eight boys, wa are preparing two farmers and six mechanics, a carpenter, wheelwright, tinsmith, shoemaker, tailor and mechanical engineer. Tha other agencies are similarly provided for. This division is not absolute. Many know something of more than one trade. The carpenters are all equally painters and gluziers, and three-fourths of the boys are ablo to mend their own shoes, while with farming goes the care of stock.

WAGES AND ECONOMY.

To teach them the value and use of money and its relation to work, a proportion of the Government's appropriation is paid into their own hands as wages. With it, they are expected to buy all the articles of their clothing but their uniform suits, saving on them if they can, suffering the want of them (unless it would endanger health) till the next pay day, if they squander, or the suspension of the right if it is abused. This of course implies considerable care; it would he greatly easier to keep the money in our own hands, and buy everything for them; it is true also that their work is only apprentice work for the great part, and while it is worth something, does not by any means pay the expense of the instruction in it; but we consider this a very important part of their training, and it is already showing some effects. Mr. Starkweather, in charge of the workshop, reports that since the wages have been started, they work with more earnestness, and appreciation of the value of time, and are learning economy. Any one has the privilege of coming into the shop and mending his own shoes, or others, paying for the materials. Many take advantage of this to save their money. Others pick up scraps of iron and fit them as caps on their boot heels to save the wenr.

THE REPORT FROM THE WORKSHOP.

Mr. Starkweather's report of them is, in general, good. The effect of settling each in a chosen trade has been excellent. They seem to realize that their life-work is before them, and are taking hold with zest and manliness. Karunach, the head shoemaker, has six working under him, takes charge of the box of tools, and keeps all going. He feels the dignity and reponsibility of his position and fills it well. A pair of shoes came in for repair the other day, badly worn out at the heel. He gave them to one of his workmen, a little fellow who thought them a rather tough job and brought them to Mr. Starkweather with the remonstrance, "Oscar Brown, too much, he jumps !" The latest articles of manufacture in the shop are rat-traps, for which there was some need there, and they are watched with interest. One of them is a Dakota invention, consisting of two blocks of wood, gouged out and tied together, forming an imitatious rat hole. A sapling is nailed on the closed end, and bent over the trap, with a loop fastened to the tip forming a snare which enters the hole from an aperture in the upper block, and is held there till the bait is stirred, when it springs up to the discomfiture of the adventurous rat.

The boys are always asking the price of things, and Mr. Starkweather notices that in speaking of money, even among themselves, they always express the amount in English, as two dollars and twenty cents, though they call specie *Maza* (iron) to distinguish it from paper money.

THE FARM REPORT.

Mr. Cock, who is in charge of the Indian farm squad, reports improvement since ha first took them, two months ago. They generally mind well, though they cannot be relied on to always work without watching. The desultory and less interesting character of tha work at this season, may partly accounl for this. They work slowly and are fond of talking, and as their talking is frequently carried on in signs, when one begins ho drops his implements, and all the rest must stop work to watch his hands. Mr. Cock notices, like Mr. Starkweather, the good effect of throwing upon them some responsibility.

THE MEASLES.

A very mild form of this disease is slowly going through Hampton and the School. Several of the Indians have taken it lightly, and it is probably to their advantage to have it here instead of at home. Even here they are rather unmanageable patients, and experience has shown the necessity of locking them into their rooms, lest in spite of all warnings they walk out into a hard rain. This is only another suggestion of some of the causes of mortality among the tribes. The new girls, whose feeble condition was reported last month, are improving, and all are out again. H. W. L.

OUR LITTLE INDIAN GIRLS.

LETTER from Fort Berthold Agency:

FORT BERTHOLD AGENCY, D. T.
November 28th, 1879.

Dear Sir:

It is with pleasure that I respond to your invitation to give you some accouat of the work going on among the Fort Berthold Indians.

In the end of August last, U. S. Special Indian Agent, Colonel Robert S. Gardner, assumed charge of the Agency; and under his vigorous and practical administration, a rapid and favorable change in affairs has taken plnce, and great progress has been mnde, especially in the education of the Indians. Previous to Col. Gardner's arrival here, the average school attendance was almost *nil*. There are now about thirty (30) scholars regularly attending school, and on several occasions the number ran up to nearly sixty (60). This gratifying improvement must be ascribed to Col. Gardner's determination in carrying out the orders of the Indian Department, and in complying with the wishes of the Indians in teaching their children English.

Formerly, owing to a mistaken idea entertained here, that it was absolutely necessary to acquire a knowledge of the Indian languages spoken at this Agency, the Indians were led to think that the teachers did not desire to teach them English, and believe that their own language was superior to the white man's. Time after time, the chiefs and head-men of the Indians complained that their children were not learning English, but no attention was paid to their complaints, until finally the school dwindled away to almost nothing. For a short time previous to the resignation of the late teacher, it was not unusual to find only one or two children attending school out of a population of 1300 Indians.

Col. Gardner has changed all this, and is ably seconded by the present teacher who faithfully carries out his orders, and never uses a word of the Indian languages in school or permits the scholars to use any language but English in all their communication to her. The consequence is that the Indian children are fast acquiring a knowledge of English, and it is pleasant to hear the bright-eyed little ones calling out, "Please Miss ——, may I go out ?" "Please Miss ——, look at my lesson ;" "Please, Miss ——, coma here," &c. The Indians are feeling greatly pleased at the progress their children are making, and the present teacher has tha confidence and esteem of both parents and children, and is greatly liked by both.

A foolish system had formerly been introduced, but is now wholly discontinued, of bribing the Indian children to attend school. A more sensible course would be to give slight rewards to the pupils distinguished for regularity in attendance, and attention to study.

There is no more occasion for the instructors of Indian children at Fort Berthold learning to speak Indian, than there is at Hampton.

At thia Agency there is a promising field for an earnest, practical missionary; the Indians are intelligent and anxious,—as they express it,—to become "White men ;" and quite a large number of adults, and even men in middle life, will sit down patiantly for hours, and try to spell, write, and understand the meaning of English words.

In agricultural pursuits, I am glad to say that the Indians are making progress, and are anxious to abandon the use of their antiquated and inefficient farming tools, and take up the white man's improved implements. They are learning to use plows, reapers, and mowing machines; and during the past season, they cultivated a much more extensiva acreage than in former years, and also for the *first* time they raised about 800 bushels of oats for themselves. They also planted and harvested a good deal more corn and potatoes, and put up a mueh larger quantity of hay than usual.

The annuity goods were issued this year by Col. Gardner, in a more sensible manner than hitherto. Formerly the issue was made *pro rata* to "heads of families," so-called. And when the "family" consisted of only *one* person as was frequantly the case, the issue nec-

cessarily consisted of small fractions of calico | to the Interior Department, for the establish- | civilized tribes, it being found that the Indi-

essarily consisted of small fractions of celico, ginghams, &c., which were practicnlly of no benefit to the Indiens, being entirely too emall for dresses; and thns the goods were wasted and the benevolent intentions of the Government frustreted. Col. Gardner, on the other hand, bed the Indians put themselves in bends of ten (10), end issued the annuites *pro rata*, thereby avoidieg the issue of small fractions of aey of the goods, and iesuring enough of sech article of calico, ginghems, denims, &c., to make dresses for the women and children. The issue of annuities this year was decidedly the best and most satisfactory ever mede here, and the Indians feel well-pleased in consequence.

Wers practical husiness men in charge of all Iudian Agencies, discontent among the Indians would cease; they would epply themselves to industrial pursuits, and civiliza-tion would make rapid strides.

Sincerely yours,
WILLIAM COURTENAY,
Late Acting Agent.

CARLISLE BARRACKS, PA., *Dec. 15th*, 1879.

Editor of Workman:

Sincs the deto of last letter a grest improvement hes been effected in the personal appearance of the boys end girls; cleanliness and order are beginning to roign. Long hair, blankets, leggings and moccasins are no longer seen, much to the disappointmsnt of many of our visitors. "We would liks to see a real Indian," is the complesinieg remerk of many, who appear to think that, at lesst, a few children ought to be paraded in all the treditional glory of paint end feathers.

Habits of punctuelity end cleaeliness ars acquired only by slow degrees by our littlo peopls. All their life they heve taken no eccount of time, eating, drieking and sleeping when the spirit moved; but they ars anxious to learn, willing to do whet is required, are happy and healthy, end work expended in their behalf meets with satisfectory results.

Beth-rooms, laundry, kitchen end schoolrooms are in good working order; the hoys are drilled twice a day during the week, end e delegation of hoys and girls attend the different Sunday schools on the Sabbeth in Carlisle, where much interest is displayed in their welfere. It is hoped with God's grecs and help they will imhibs the gospel truths and thet the seed, sown broadcast in this Christian community, will spring op in the hearts of our little wards, and bring forth good fruit in dne season.

The remarkable chenge that has taken piece in the personal eppearance and deportment of ths children is in great measure due to the persevering efforts and assiduous care of the teachers. The school is indehted to the kindness of Bishop Huntington for the servicee of a skilled nurse in the person of Sister Julia, whose gentle and kindly manners have already won the confidence end esteem of the children. The hearts of ths children, teachers and other workers at the Barracks were cheered and encouraged by the Quaker smiles and kindly interest shown by Miss Susan Longstreth and Mary A. Brown of Philedelphia, who recently visited the school.

On Thenksgiving-day the hoys were supplied with lanterns end candles and taken over to Blaine's Mill (built in the yesr 1772, by Senetor Bleine's grsndfather). Just ehove the Mill, is a large cave in the rocks, and, heving lighted lanterns end candles, the hoys rushed into the cavern six or seven hundred feet, with many shouts of leughter. Having explored the cave and the Mill, the hoys scattered through the woods, gathering nuts end havieg a good time generally. At helf-past twelve the hoye assembled on the crest of the hill, and with protruding pockets, smilieg facee and heppy hearts, they trudged back to the Barrecks, where they meted out due justice to the ample dinner awaiting them. The enjoyment of the day was made complete by a megic lantern display in the evening.

Good results and *kindly appreciation by good people* have been eccorded to the work thns far, and we place onr ehoulders to the wheel with strong and hopeful hearts.

G. B.

SECRETARY SCHURZ ON THE INDIAN QUESTION.

THE President in his Message and the Secretary of the Interior in his Report, agnin call nttentioo to the importance and signifiennce of the work for Indinns at Hampton Institute, its immediate results in establishment of other like efforts, and its benring upon the whole Indian problem.

The President remarks thnt,—

"The experiment of sending a nnmber of Indian children of both saxes to the Hampton Normal and Agricultural Institute in Virginia, to receive an elementary Eeglish education and practical inetrnction in farmieg and other nseful ieduetries, has led to results so promising that it was thought expedient to turn over the cavalry bar.acke at Carlisle, in Pennsylvania, to the Intarior Department, for the establishment of an Indian school on a larger scale. This school has now 158 pupils, selected from various tribes, and is in full operation. Arranganents are also made for the education of a nnmber of Indian boys and girls belonging to tribes on the Pacific slope, in asimilar manner, at Forest Grove, in Oregon. Thess institutioes will commend themselves to the liberality of Congress and to the philanthropic muuificence of the American people."

Secretary Schurz expresses his grateful acknowledgement of the willingness with which the Secretary of War turned over to the Interior Department the military barracks at Carlisle, for the use of Captain Pratt's school, and for the harmonious and effestivc co-operntion of the War Department and the military authorities on all occasions when their assistaece was requested. He says also that,—

"Several chiefs whose children are at Hampton and Carlisle have expressed a desire to visit those schools next spring, and to bring their wives with them for that purpose—a sort of Indinn visiting committee. It is thought that such a visit will be calculated to do much good, and it will, therefore, be encouraged within proper limits." He says the education of Indian youths has been e subject of special solicitude, and he is happy to report that very substantial progress has been made in that direction, although much yet remains to be done. The number of childrea of the uncivilized tribes now attending school is 7,193; last year it was 6,220.

The Report of the Secretary, who has recently visited the agencies, is mainly occupied with the Indian question, and is full of interesting statements and suggestione. He says:

"It is believed by many that the normal condition of tha Indians is turbulance and hostility to the whites; that the principal object of an Indian policy must be to keep the Indians quiet, and that they can be kept quiet only by the constant presence and pressure of force. This is an error. Of the seventy-one Indian agencies there are only eleven which have military posts in their immediate vicinity, and fourteen with a military force within one to three days' march. Of the 253, 090 Indians in the United States there have been, since the pacification of the Sioux, at no time more than a few hundred in hostile conflict with the whites.

"While I am by no means disposed to belittle the deplorable nature of Indian disturbances or the great value of a military force in suppressing them, it is but just to the Indians to point out the important fact that disturbance end hostility are the exception end peaceable conduct the rule; that a very large majority of Indian reservations are in a condition of uninterrupted quiet, without the presence of a coercing force, and the equally significant experience that the more civilized an Indian tribe becomes, the more certainly can its peeccable and orderly conduct be depended upon. The progress of civilization and the maintenence of peace among the Indians have alweye gone hand in heed."

He declares that his Department has an Indian policy, which is:

"First. To set the Indians to work as agriculturists or herders, thus to break up their habits of eavage life, and to make them self-supporting. Second. To educate their youth of both sexes, so as to introduce to the growing generation civilized ideas, wants and aspirations. Third. To allot parcels of land to Indians in severelty, and to give them individual titles to their farms in fee, inalienable for a certain period, thus to foster the pride of individual ownership of property, instead of their former dependence upon the tribe with its territory held in common. Fourth. When settlement in severalty, with individual title, is accomplished, to dispose, with their consent, of those lands on their reservations which are not settled or used by them, the proceeds to form a fund for their benefit, which will gradually relieve the Government of the expenses at present provided for by annuel appropriatione. Fifth. When this is accomplished, to treet the Indians like other inhabitants of the United States, under the lawe of the land."

He regards herding and agriculture combined as the best primary means of civilizing the Indians—as herding alone would not keep all busy, even if the herds could be provided. The number engaged in farming and the results of their labor are larger than is commonly understood.

"The Indians on reservations have now under cultivation 157,056 acres (about 24,000 of which were broken by them this year), and this yeer's produce emounts to 1,361,577 bushels of grain, wheet, corn, oats and barley, 390,098 bushels of vegetables, and 48,353 tons of hay. This exhibit does not include the civilized tribes of Indian Territory. At the sems time, the raising of stock has been encouraged as much as possible. Provision has been mede for an additional distribution of 11,300 head of stock cettle among the uncivilized tribes, it being found that the Indians are beginning to take excellent care of their domestic animals and to be proud of the increase of their stock. The cultivation of garden vegetables is also rapidly spreading. Preparations have been made to very largely increase the area of cultivated ground next year. Considerable quantities of agricultural tools have been distributed and the demand is consteetly increasing."

One statement of the Secretary's, one would think, might eet at rest all question of the possibility of making men of the Indians. He says:

"In my last aenuel report I mentioned that lete in the autumn of 1878 the conveyance of supplies from the Missouri river to the Sioux agencies, recently established in southern Dakota, was entrusted to the Indians themselves. The Department furnished wagons and harness; and the Indiens, their poeies as draft animals. A shout of derision all along the Upper Missouri greeted the experiment. A disastrous failure was confidently predicted by those interested in the freighting business and many others. But not only did the Sioux succeed in keeping their agencies supplied during an uncommonly herd winter, taking their wagons over desolate plains, without roads, a distance of 90 and 193 miles respectively from the river, but they have proved the most efficient, honest and reliable freighters the Indian service ever had. Not a pound of freight was lost. Although the Indian freighters, occasionally delayed by accidents or extraordieery difficulties on their weary wey, were sometimes without provisions, not a cracker box nor a pork barrel was broken open."

The Secretary adds:

"The employment of Indians in the mills and workshops on the agencies has been tried with equal success. In some of our grist and saw-mills Indiaes act as engineers. In the blacksmith shops, saddler shops and carpenter shops at the agencies, 185 youeg Iedians are instructed as apprentices, and their number is being constaelly increased. Some of the shops are successfully controlled by Indians as firemen, and the employment of Indiens as laborers in a variety of other ways has been generally introduced. Oe Indian reservatioes, where suitable clay is at hand, the establishment of brick yards to be worked by Indiens is contemplated, and will be begun next spring. On the Sioux reservation in southern Dakota the Iedians ere engaged in putting up telegraph lines.

"The building of houses for Indians by white contructors has been abandoned eed Indians are now constructing their houses themselves, windows sash, shingles and planks, the latter sawed in the mills on the reservations, being furnished to them. The old Indien prejudice that it is improper for men to do anything else than hunt and fight and that squaws only should work, is being rapidly end very generally overcome."

Of the Red Cloud and Spotted Tail bands of Sioux he says:

"A general outbreak was predicted a yeer ego. When I visited them this summer, I found their freighted wagons by hundreds on the road, with their young werriors on the box; their chiefs with their people meking hey, aed cultivating fields on the bottom lands, meny of theu building houses for their families, anxious to have their children educated; many requesting that their boys and girls be taken to our schools in the East, and the universal wish to be permanently scttled, and led on 'in tho white man's way." Only oee slight disorder interrupted their general good conduct. Similar things may be said of many other tribes. The rapid diseppearsance of geme, which is to them a blessing in disguise, will greatly facilitate the introduction of civilized pursuits among several tribes, who at present still prefer huntieg to regular work. There is good reason to hope that if Congress will aid the carrying out of the policy above indicated by the enactment of legislation eecential to its success, and if citizene of the West will meke up their minds to it that the Indians must have at leat some land worth cultivating, we shall, in enother yeer, meke eeother long step toward the solution of the Indian problem which consists in so scttling the Indiane that they may become self-supportieg, and that their presence amoeg us will ecase to be a disturbing element in American society."

The best Indinn fighters on the plains agree with the Secretary in his views of the Indian's case. Such men as Crook and Harney and Mackenzie feel thnt they are fighting a wronged people—they risk their lives to punish snvage outrages provoked by civilized injustice and humanity. The best hope for them and for the Indians is in tho fact that the whole American people seem to be rousing at last to a sense of this reproach upon American civilization.

DIED.—At Hampton Institute, Dec. 26th, of consumption, Francis Rencontre, Sioux Indian, from Lower Brule Agency, aged eighteen years. Francis has been failing for several months, and was put upon the "Saulsbury Treatment" of oil baths and a special diet, with some temporary benefit, but all that could be done was unavailing. He was a bright, sweet-tempered boy, and one of those who were confirmed in St. John's church, last winter.

IN the place of a Hampton Tract, we give our readers, this month, as many extracts as we have room for from the very interesting little volume "How to Get Strong, and How to Keep So," by William Blnikie, a recent publication of the Harpers. The book itself has had already a very large sale, and if we can do anything to increase it, we shall be doing a service to humenity. Its statements are startling; it will surprise many to learn for the first time of the possibilities of the human body, to learn what others have done, and what they can do themselves to improve, and develop—almost to create—physical powers which shall make their lives longer and happier and more useful to the world.

We have not given up the issue of Hampton Tracts, ten of which are now on sale, according to the list on the first page but their publication is subject to unavoidable delays, their generous authors being overworked already in the service of humanity. We have the promise of at least two more from physicians of the highest reputation and authority. These will complete the originally planned series of twelve, and we hope we may be able, from time to time, to add to the number. Meanwhile we purpose to devote this space in every paper to the interest of health and humanitp, in reprints from the best English and American authors.

THE PRESIDENTIAL CANVASS.

Every leap year the great American people are told, that if one or the other of two Presidential candidates be elected, the country will go to the dogs; but somehow or other the country has so far escaped going to the bow-wows, and it is fair to conjecture that in some way it will again escape perdition, never mind who is elected in November next. Nevertheless our ears are already filled with the lamentations and dire prophecies of professional politicians; prophets who are without honor in their own or eny other country. The funniest part of these prophecies is, that the prophets of either side predict thet exactly the same thiegs will heppen, if the candidate opposed to them be elected. They seem like two men travelling round the world in opposite directioes, the farther they get spert in one way, the nearer they are in another.

To non-pertizan observers these fellows are amusing enough, and it would be mortifying to the prophets, if they eppreciated how little the everage Americen heeds their prstings. To etrain a metsphor, the United States is not a good political hunting field, and the people do not submit tamely to the perty whip eracking of any would be political master of hounds.

While we all know thet a Presidentiai canvass will occur this summer and fell, it is not certain on whet issues the contest will be fought. The emount of the story is, thet neither Democrats nor Repuhlicens, taken as perties, are wholly or even partly in eccord. On almost every issue, we find prominent members of both parties arrayed against their frieeds. To be sure "the cohesive force of public plunder," may cause side issuee to be forgotten; but there are vast numbers of men, who have generelly voted one way or the other, who owe their parties nothing and are not amenable to party discipline. This cless is a very large one, as any student of present affeirs must edmit, and it forms a great factor of uncertainty in the coming election. The present position of the membere of Congress is sufficient proof of this—a majority of both parties dodge questioee and stave off votes, uncertain how to act until they can feel the pulse of their constituents. Some men on both sides, hold and true, do not hesitete to declare their convictions; each men heve elreedy a followieg; but the trimmers, end utterere of uncertain sounds have none and deserve noee. On metters of public finence, the best men of both parties agree in a wonderful way, while in an equally remerkable menner, the Republican rag-tag and Democratic hohtail coelesce. The exact epot where both stend ie hard to define, but they seem harmoniously determined to try to do somethieg not quite on the finaeciel squire. It may be that the hulk of the financial question will be eliminated from the contest by a

decision of the Supreme Court, as to the legality of meking paper a Legal Tender in terms of peace.

The silver pert of the financiel problem would still remain; but the question is comperatively unimportant, end Sec. Sherman may perpetrate a grim joke by asking Con-

to his business. The beginning of the year is the nppropriate time for ascertnining it. Frequently an account of business is kept for n month or two, and then neglected. If it is only to eecourage habits of regularity and perseverance, it will be time well

drive the cattle to them and see that they drink. When all are supplied, empty the troughs, and either cover them or turn them over. Have no flowing water in the the yards to waste and freeze, or become ice-cold for drinking. A cold drink will reduce the milk from the cows 10 per cent

Four thousand three hundred and fifty tons of tea was the cargo of a vessel which reached the port of New York last month from China. This was the largest cargo ever brought here from China.

At Bismarck, Dakota Territory, a large portion of the business part of the town was destroyed by fire on Christmas day, but for the presence of the snow upon the roofs of the houses and the absence of any wind it is thought that the whole place would have been destroyed

decision of the Supreme Court, as to the legality of making paper a Legal Tender in terms of peace.

The silver part of the financial problem would still remain; but the question is comparatively unimportant, and Sec. Sherman may perpetrate a grim joke by asking Congress for an appropriation to build warehouses to hold the "dollars of our daddies," which by order of Congress he keeps coming, and which persistly refuse to stay out of the Treasury vaults. What a remarkable obstacy the people show to take 88c. for a dollar, even when they have the august permission of Congress to do so.

There is another issue on which the Presidential contest may be fought, and that is "Whether or not we are a Nation"? It does not require to be the seventh son of a seventh daughter to foresee—the certain defeat, that awaits any party, which in its platform by statement or insinuation, insults the American People, by saying "you are not a nation." The question of National or State supremacy has been decided—the costs of reaching the decision were three thousand millions of dollars, and four years of dreadful war with all this fresh in memory, the American people at large are in no mood to have this expensive litigation renewed.

Again the commercial condition of the country may have much to do with the way the popular vote is cast. Just now everything is "booming," and the flood-tide of prosperity is setting strongly in. For two years the food crop of Europe has been a failure. On the other hand our food crop has been unprecedentedly large, and most remarkable prices are being paid for wheat and corn. This is also true of cotton, to the extent of our receiving very full prices for a very large crop. In exchange for all this Europe will send us $100,000,000 or thereabout in coin. The balance in our favor must be heavy, and by the working of our Tariff, coin and bullion are about the only two commodities we can exchange our surplus breadstuff and cotton against. There is no doubt that present prices will stimulate the planting of vast areas of cotton and breadstuffs in this country, and it is almost equally certain that Europe will not have three bad years in succession. Putting this and that together, it looks very like as if we must have a sharp break in the prices of food and cotton between now and September. If we do, the change from flood to ebb will be felt politically. For when prices fall from a great height, somebody must be hurt, and men who have been hurt financially, are very apt to blame that intangible thing, "The Government," for having done, or having left undone something that it ought to have done. If we raise an immense surplus of food products, we raise an immense surplus of food products, Europe has a good crop of her own, it and Europe is as sure as night succeeds the day, that the big surplus will go at little figures, and the bigger it is, the less the figures will be.

Of the chances of any individual receiving the nomination of either party it is not my purpose to discourse: But so far as the past reveals the future, candidates who are very prominent six months before the nominating conventions meet, are comparatively in the background when the nominations are made. It looks as if history would again repeat itself, for as before stated, both parties are so loosely bound together, or rather, both contain so many discordant elements, that the leaders of one faction of either party, if pressed to a nomination, would have only the lukewarm support of the other faction, and by both parties, it is likely a compromise candidate may be selected. It is entirely within the range of possibility that a third party may spring up, and put its candidate into the field. If this should happen to prove true, the election would fall into the hands of the House of Representatives, and the politicel prophets would have another chance to prophesy.

To sum ths whole matter up, we are to have a Presidential election this year; somebody will be elected, and the affairs of the country will move along much as usual. But meantima there will be plenty of excitement and any quantity of political meetings. In a majority of cases, people who go to a political meeting as democrats come away more democratic than when they went, and so too of the other party. Talking politics is about as poor business as a man can follow, and listening to others talk is not much better. Any man with a field, a forge, or a profession, any man who really works for a living, will have more of this world's wealth with which to salute the new President, if he sticks to his work through the summer and autumn, than he will if he devote one-eighth, one-quarter, or one-half of his time to discussing, or listening to the discussion of the Presidential canvass by professional partizans.

T. T. B.

HINTS FOR WORK.

From American Agriculturist.

How do You Stand?—One can not lay out his work to advantage, without knowing precisely how he stands with regard to his business. The beginning of the year is the appropriate time for ascertaining it. Frequently an account of business is kept for a month or two, and then neglected. If it is only to encourage habits of regularity and perseverance, it will be time well spent to keep an account, not only of money affairs, but a record of events for every day. This tends to beget promptness and system in every detail of farm work, and in business affairs, that foresight and economy which are everywhere the prime essentials to success.

Keep a Record of the events of each day's work, and farm-life. One of the boys or girls should do this. A book will be needed, ruled with plain lines, on which to make the entries; put down the condition of the weather, the work done, and by whom; purchases and sales made, indeed, anything that may be needed for future reference, or that should be entered in the account book, which will thus become a valuable and interesting record of the farm.

Make an Inventory:—Put down every thing you possess, from the farm itself, to the small tools and utensils, and value each item fairly. Enter the money on hand, and also every debt owed. This is the first work in beginning an account. The property owned, and money on hand, will be on one side of the account, and the debts on the other. The balance will show just how the farmer stands. This account will be the *Account of Stock*.

Purchases and Sale, are entered in the daily record, and from that into a purchase and sale book; except the cash transactions, which go into the cash book.

The Cash Book.—Every payment and receipt of money for purchases, sales, or for wages, should be entered in the cash book; this should be done every evening, and before it is forgotten; all these entries are transferred to a ledger to the proper accounts. The work is very simple and easy, and there are farmer's girls who keep all their father's accounts in the most accurate manner.

Hiring Men.—A farmer should try to make work for a hired man, or several if possible. It he can find profitable work for them, he is making money for himself. A few months' wages spent in procuring or making manure, draining, clearing off stone, getting out stumps, or otherwise making the farm more productive, will be well invested.

Keep the Stables Clean; clear out the manure every morning, and scrape or card off all filth from the animals. The stable should be made so warm, that manure will not freeze at night; a lower temperature will either demand a larger amount of food, or the animals will fall off in condition.

Pile the Manure in squars and compact heaps; and if it is not frozen when thrown out, it will heat and ferment in the pile; but if once frozen, it will be likely to remain so during all the cold weather.

In the Southern States, the work of making compost heaps, should go on rapidly this month. Time is needed in making composts; raw mixtures are not fit for fertilizers, until the materials are decomposed. A bushel of lime added to each load, will hasten the decay of the materials of the compost heap, and cotton seed, well soaked with water, will soon beat, and warm up a large pile of compost.

Economy in Feeding, is a very important consideration. In some cases half the feed used is wasted. Cutting the fodder has proved a saving of one-third to one-half. Where but 10 head of stock are fed, if the feed of one-third or one-half can be saved, it is simply a large increase of the resources of the farm, and is sufficient to pay the cost of a good cutter and the time expended in cutting.

Watering Stock.—The supply of water in winter is a source of trouble. Ice gathere about the troughs and other drinking places; pipes freeze and burst, or become ebonked, and many other inconveniencee occur. These may be avoided by methodical management. Have regular watering periods, twice a day. Fill the troughs from the pumps or cisterns, and drive the cattle to them and see that they drink. When all are supplied, empty the troughs, and either cover them or turn them over. Have no flowing water in the the yards to waste and freeze, or become ice-cold for drinking. A cold drink will reduce the milk from the cows 10 per cent or more.

Horses.—When not at work the horses need but little grain, if sufficient good hay is given. But as hay is generally dusty, and long hay is wasted in the eating, we find it economical to cut and wet the fodder, and give 3 quarts daily of bran or ground feed. The hay saved will pay for the meal, and the increased value of the manure will pay for the labor. The moist feed prevents injury to the horses from breathing the dust from dry hay.

Work Oxen.—Oxen that work on frozen roads, although there is no ice, should be shod. The rough, hard surface wears down the hoofs very fast, and causes inflammation of the interior; the trouble may not become apparent until later, when the mischief is difficult to repair. If the feet are tender and hot, and slight lameness is perceived, examine the hoofs between the claws, cleanse the feet, and apply remedies if needed.

Cows.—Milking cows will be benefited by mixing their feed with warm water, if this can be done without too much trouble. A family cow may be treated to a warm mess in the mornings without difficulty, and it will increase the milk perceptibly. Cut the hay and pour a pailful of hot water over it; mix the mess so that the hay is all wetted, and add the meal; mix again, and feed while warm In a dairy of 20 cows, the extra milk will pay for the labor needed. If the food can be made more digestible, by giving it warm, the waste of animal heat will be avoided, and the same effect will result as from an increase of food. Thus the study of the principles of feeding may be made a source of profit by the economy which may be practised through it. The card and brush should be in frequent use during the winter, and if necessary a coarse cloth and warm water may be used to preserve cleanliness. If filth is permitted to gather on the skin it is difficult to remove at this season.

NEWS OF THE MONTH.

FOREIGN.

THE French Ministry have resigned.

THE evicted tenant who brutally assailed Lord Fermoy in the porch of the Limerick County (Ireland) Clubhouse, has been sentenced to five years' penal servitude.

A CALCUTTA dispatch says executions continue in the Palace at Mandalay. Five Princesses were recently murdered. The Burmese Embassy is still at Thyetmyo

THE Chillians continue to have success in the war with Peru, South America.

THERE has been more fighting in South Africa. Secocoeni's town was captured by the British forces on the 26th of November. Two of Secocoeni's captains were killed, and two lieutenants wounded. Secocoeni's loss was heavy. The total loss of the British was twenty-five men.

A TELEGRAM from Madrid, Spain, says: "The first five sections of the law for the abolition of slavery have been passed in the Spanish Senate. The first section says: 'Slavery is hereby abolished in the island of Cuba in accordance with the enactments of this law.' It is said the whole law will pass by a large majority."

KING KALAKAUA is using his best endeavor to induce Portugese immigration to the Sandwich Islands. This is said to be the outcome of a positive belief on the part of Kalakaua that his government is gradually passing into the hands of the Chinese.

THE officers of the new French cable company deny that there is any defect in the cable, and declare that the line will be open for traffic shortly.

DOMESTIC.

The public reception of General Grant at Philadelphia, Pa., last week, amounted to an ovation. It was shared in by the civil and military authorities as well as by all classes of the people with an enthusiasm that could not have been more heartily manifested. General Grant arrived at Germantown Junction, on a special train from Harrisburg, at 10 o'clock Tuesday morning Dec. 23d, and was at once escorted by Mayor Stokely to his place in the procession with the First City Troop as a guard of honor. The procession was several miles long; United States, Pennsylvania, Jersey and Delaware soldiers falling into line. These were followed by large bodies of men representing various industries; the whole affair presenting a very imposing appearance, and being reviewed by the distinguished guest of the day with evident interest and gratification.

NEW ORLEANS Dec. 29.—Fifteen sea-going vessels cleared from here to-day, including eight steamships, laden with cotton, grain, &c. The amount of cotton shipped is 46,890 bales, being the largest quantity on record from this port in one day, and embracing 22,000 bales for Liverpool, 8,809 for Havre, 2,200 for Bremen, 1,100 for Spain, and $1,200 for New York. There were also quantities of bulk grain, sugar, molasses, &c. The total value of the shipments is $3,000,000.

Four thousand three hundred and fifty tons of tea was the cargo of a vessel which reached the port of New York last month from China. This was the largest cargo ever brought here from China.

At Bismarck, Dakota Territory, a large portion of the business part of the town was destroyed by fire on Christmas day. But for the presence of the snow upon the roofs of the houses and the absence of any wind it is thought that the whole place would have been destroyed.

The New York Journal of Commerce puts the balance of trade for 1879 in favor of this country to the amount of about $150,000,000.

It is estimated that the real estate now owned by the colored people of North Carolina aggregates, between $2,000,000 and $3,000,000 in value.

An examination of the educational statistics of South Carolina, recently put forth by the superintendent of public education, shows that the total school attendance for the year 1878-79 was 122,463, of which 58,368 were white pupils and 64,095 colored, an excess of 5,727 colored pupils. During the period of reconstruction between the years 1868 and 1876, the average of colored attendance in the State was 41,091. The average colored attendance during the three years of democratic rule has been 64,78, and increase of 45 per cent. Every school district in the State contains separate schools for white and for colored children. These run for an equal period of time, and are alike paid from the treasury.

A bill introduced in the Virginia Senate, Thursday, by Mr. Fulkerson, to incorporate the Richmond and Southwestern Railway Company. The road is to extend from some point on the southeastern boundary line of Kentucky to and through the city of Richmond to Tidewater, in the State of Virginia. It is claimed that the incorporators propose to expend $50,000,000 in Virginia in the construction of the road and the development of the mineral and other resources of the southern part of the State. This enterprise is alleged to be under the auspices of Boston capitalists exclusively.

THE CHINESE IN CALIFORNIA have begun to go. The steamer that sailed from San Francisco for Hong Kong on the 15th took 901 of them to their land. The port statistics of San Francisco show that the arrivals of Chinese during the year ended November 1 were 6,128, and departures 8,746—of whom 6,229 went to China and 2,517 to Honolulu—the excess of departures over arrivals being 2,518. It is estimated that there are 94,000 Chinese on the Pacific coast, which shows that this population is decreasing instead of increasing, for when the anti-Chinese agitation was begun, a few years ago, the estimate was 130,000. The total number of Chinese arrivals for the twenty years ended December, 1878, was 230,457, and the departures and deaths 137,491. At this rate the Chinese will soon cease to trouble California workingmen.

During the four months ending Friday, Dec. 19, the total amount of gold brought to the part of New York from Europe was $71,672,930, or an average of $518,826 for every day of the one hundred and twenty-one. These figures are very significant.

The corn crop of the United States and Territories is larger this year than any previous by over 150,000,000 bushels. The country west of the Mississippi returned over 100,000,000 bushels more than in 1878.

The Memphis (Tenn.) Water Company's works were sold yesterday to the Cincinnati bondholders for $155,000, the sale being subject to the approval of the United States Court.

The public schools in Petersburg, Va., were closed on Dec. 12 for one month, owing to the failure of the State to contribute its full quota of funds to carry them on.

General William Mahone, who is regarded as the leader of the readjusting party in Virginia, has been elected by the Legislature to succeed Senator Withers, whose term expire March 1, 1881, in the U. S. Senate, by a decisive majority of all the votes.

Politics in Maine are miserably mixed. Thirty-seven republicans who claim to be fairly and honestly elected to the State Legislature have been counted out by Gov. Garcelon and the Council.

Oysters! - Oysters!

The canning of steamed oysters has long been an important branch of industry in Baltimore; but the canning of the very best oysters in the Chesapeake, almost on the spot they are caught, is an enterprise just established. The undersigned feels confident he in opening a Packing House at this point, he is affording his fellow-citizens in all parts of the country, an opportunity, (which he hopes will be appreciated) of getting the best and freshests of oysters, prepared in the most healthful way, at the most moderate prices.

An oyster may remain out of water many hours, nay days, before it be completely spoiled; but from the moment it is caught and exposed to the air a process of deterioration goes on. It needs no argument to show that the sooner an oyster is hermetically sealed after being caught the better it will be in taste, solidity saltiness, and healthfulness Within a radius of fifteen miles of this point, are millions on millions of bushels of oysters, from the best of which will the stock used, be selected. The time consumed in transporting the hivalves from their beds to the Packing House is not worth considering, especially as the majority of the boats employed are the little "canoes" peculiar to these waters.

My packing is at present divided into three grades, according to the size of the oysters used; the same care, however, is taken in the preparation of all grades. A case of one pound cans contains 4 dozen: a case of two-pound cans contains 2 dozen. Owing to the unsettled condition of the market, I can only quote to-day's prices, which are as follows:

Olants of Hampton Roads, No. 1.— No. 2 $3.00 per doz,
Beauties of Hampi'n Roads, " 1 $1.30, " 2 $2.00 " "
Cove Oysters, " 1 $1.00, " 2 $1.75 " "

The above prices are net cash, and remittance may be made by drafts on New York, Chicago, or Norfolk, or else by P. O. order. Authority to draw at sight with Bill of Lading attached will ensure the prompt forwarding of any goods ordered. If preferred, cases may be sent by Adams express, C. O. D.; but, unless specially directed, all shipments will be made via Norfolk, Va.

Bayd Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the most of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad, and Deviled Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all sea-food, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $4 00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $2.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

Hampton Normal and Agricultural Institute

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probably. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable &c., &c.

356,432 GENUINE SINGER SEWING MACHINES SOLD IN 1878,

BEING

73,620 *More than in any Previous Year.*

SOME VERY HARD NUTS TO CRACK:

Companies have sprung up in every part of the Union for making an "Imitation Singer Machine."

Why are not similar companies formed for making Imitations of other Sewing Machines?

The public will draw its own inference.

Gold is continually counterfeited; brass and tin never!

The Singer has taken the FIRST PRIZE over ALL competitors more than TWO HUNDRED TIMES. *Why?*

After the Chicago Fire the Relief Committee undertook to furnish sewing machines to the needy women of that city. Applicants were permitted to choose from six different kinds of machines. 2,944 applicants were furnished with machines; 2,427 chose the Singer Machines, and 517 distributed their choice among the five other kinds of machines! These girls were to EARN THEIR LIVING on these machines. *Why did they take Singer?*

THE PEOPLE'S AWARD TO THE "SINGER."

The people bought Singer Machines as follows:

1870	127,933	Singer Machines
1871	181,260	" "
1872	219,758	" "
1873	232,444	" "
1874	211,079	" "
1875	248,852	" "
1876	262,816	" "
1877	282,812	" "
1878	356,432	" "

Many of the manufacturers of other machines refuge to state their sales! WHY?

Sales of 1878 over Sales of 1870, 228,599 Machines. A Three-fold Increase.

WASTE NO MONEY ON COUNTERFEITS. *PRICES OF GENUINE GREATLY REDUCED.*

HOW TO GET STRONG.

more than the chest—or, rather, than the front chest—and the legs having but passive sort of work at best. Poddlers and boiler-makers, plumbers and carpenters, engravers and smiths, shipwrights, carriage-makers, tinthings: one, that the knees are never bent; the other that, after the first week, the hands are gradually brought lower down, until they touch the toes. Some persons, familiar with this exercise, can, with the knees

HOW TO GET STRONG.

Extracts from

"How to Get Strong, and How to Stay So,"

by Wm. Blaikie, Esq., New York City.

In a country like ours, where the masses are so intelligent, where so much care is taken to secure what is called a good education, the ignorance as to what can be done to the body by a little systematic physical education is simply marvellous. Few persons seem to be aware that any limb, or any part of it, can be developed from a state of weakness and deficiency to one of fulness, strength, and beauty, and that equal attention to all the limbs, and to the body as well, will work a like result throughout. A man spends three or four weeks at the hay and grain harvest, and is surprised at the increased grip of his hands, and the new power of arm and back. He tramps through forests, and paddles up streams and lakes after game, and returns wondering how three or four miles on a level sidewalk could ever have tired him.

An acquaintance of ours, an active and skilled journalist, says that he once set out to saw twenty cords of wood. He was a slight, weak youth. He found he had not enough strength or wind to get through one cut of a log—that he had to constantly sit down and rest. People laughed at him, and at his thinking he could get through that mighty pile. But they did not know what was in him; for, sticking gamely to his self-imposed task, he says that in a few days he found his stay improving rapidly, that he did not tire half so easily, and, more than that, that there began to come a feeling over him—a most welcome one—of new strength in his arms and across his chest; and that what had at first looked almost an impossibility had now become very possible, and was before long accomplished. Now, what he, by his manliness, found was fast doing so much for his arms and chest, was but a sample of what equally steady, systematic work might have done for his whole body. Indeed, a later experience of this same gentleman will be in place here; for at Dr. Sargent's gymnasium in New York, in the winter of 1878–'79, he, though a middle-aged man, increased the girth of his chest *two inches and five-eighths in six weeks!* and this working but one hour a day; and he found that he could not only do more work daily afterwards at his profession, but better work as well.

A very great majority of Americans are the sons either of farmers or merchants, mechanics or laborers. The work of each class soon develops peculiar characteristics. No one of the four classes has ordinarily had any training at all aimed to make him equally strong all over. Broad as is the variety of the farmer's work, far the greater, and certainly the heavier, part of it tends to make him stoop forward and become inerect. No man stands up straight and mows. When he shovels, he heads more yet; and every ounce of spade or load pulls him over, till, after much of this sort of work, it requires an effort to stand upright.

Scarcely any work on a farm makes one quick of foot. All the long day, while some of the muscles do the work, which tends to develop them, the rest are untaxed, and remain actually weak. A farmer is seldom a good walker, usually hitching up if he has an errand to go, though it be scarce a mile away; and he is rarely a good runner. He is a hearty, well-fed man, not only because food is plenty, but because his appetite is sharp, and he eats with relish and zest. Naturally a man thinks that, when he eats and sleeps well, he is pretty healthy, and so he usually is; but when he is contented with this condition of things, he overlooks the fact that he is developing some parts of his body, and leaving others weak; that the warp he is encouraging in that body, by twice as much work for the muscles of his back as for those of the front of his chest, while it enlarges the former, often so as to render it muscle-bound, actually contracts the latter, and hence gives less room for heart, lungs, stomach, and all the vital organs, than a well-built man would have.

The merchant, is, physically, however, in a worse position. Getting to his work in boyhood, sticking to it as long as the busiest man in the establishment, his body often utterly unfit and unready for even half the strain it bears, he struggles on through the boy's duties, the clerk's, the salesman's, till he becomes a partner; or perhaps he starts as entry-clerk, rises to be book-keeper, and then stays there. In many kinds of work he has been obliged to stand nearly all day, till his sides and waist could scarcely bear it longer, and he often breaks down under the ceaseless pressure. To be sure, he does not need the strength of a stalwart young farmer; but, could he have retained it, he would have been surprised, if he taken sufficient daily exercise to regulate himself, how valuable it would have been in toning him up for the severer work and trial of the day. If, instead of the taxed and worn-out nerves, he could have had the feeling of the man of sturdy physique, who keeps himself in condition, who does not know what it is to be nervous, what a priceless boon it would have been for him!

Nor do most classes of mechanics fare much better. Take the heavier kinds of skilled labor. The blacksmith rarely uses one of his hands as much as the other, especially in heavy work, and often has poor legs. Indeed, if he has good legs, he does not get them from his calling. The stone-mason is equally one-handed—one hand merely guiding a light tool, the other swinging a heavy mallet. Nine-tenths of all machinists are right-handed. And so on, through the long list of the various trades where severe muscular exertion is requisite, there is a similar uneven distribution of the work to the various parts of the body, the right arm generally getting the lion's share, the left but little, the back more than the chest—or, rather, than the front chest—and the legs having but passive sort of work at best. Puddlers and boiler-makers, plumbers and carpenters, coopers and smiths, shipwrights, carriage-makers, tinners, and all who follow trades calling for vigorous muscular action, not only constantly work one side more than the other, but many of their tools are made, purposely, right-handed, so that they could hardly use them with the left hand if they wanted to. In short, take the mechanic where you will, in the vast majority of instances his right arm and side are larger and stronger than his left, and quite as often his vocation does little or nothing to strengthen and develop his legs.

The result of overworking one part of the body at the expense of the other especially in heavier mechanical labors, and of two little vigorous action in the lighter, tends to make the average workman more prone to disease. Were there uniform development, and that daily vigorous exercise which would stimulate the dormant parts of the man's body, it would add to his life and usefulness.

But how is it with the laborer? He can hardly be liable to the same defects. His work certainly must call into play every muscle of his body.

Well, watch him awhile and see. His surely is heavy, hard work, and must make him exert himself all over. But does it? While it keeps his knees steadily bent, his back is all the while over his work. The tons of coal he lifts daily with his shovel gradually, but with positive certainty, insures his back remaining somewhat bent when his work for the time is done. When a year is spent at such labor, the back must take a lasting curve. While his back broadens, growing thick and powerful, his chest does not get so much to do; hence he is soon a round shouldered man. As he does not hold his chest out, nor his neck and head erect, he contracts his lung-room, as well, indeed, as his general vital-room. Scarce any man grows earlier muscle-bound, for few backs do so much hard work. Now, standing erect, let him try to slap the backs of his hands together behind his shoulders, keeping his arms horizontal and straight at the elbow. Now he will understand what is meant by being muscle-bound. It will be odd if he can get his hands within a foot of each other.

The navvy is no better. The gardener's helper has to do much stooping. So do track-hands, stone-breakers, truckmen, porters, longshoremen, and all the rest. Especially are ordinary day-laborers, whose tools are spade, pick, and bar, who are careless about their skin, who are exposed to dust and dirt, who are coarsely shod, most prone to have bad feet. They, too, have the hearty appetite and the sound sleep. Seldom do they give their bodily improvement a thought, and so often, like their own teeth, they decay before their time, and materially shorten their usefulness and their days.

With us Americans fond of results, many of whose chests, by-the-way, do not increase a hair's-breadth in twenty years, better proof could not be sought than these figures offer of the value of a system of exercise which would work such rapid and decided changes. Hear Dr. Morgan, in his English "University Oars," on this point: "An addition of three inches to the circumference of the chest implies that the lungs, instead of containing 250 cubic inches of air, as they did before their functional activity was exalted, are now capable of receiving 300 cubic inches within their cells: the value of this augmented lung accommodation will readily be admitted. Suppose, for example, that a man is attacked by inflamation of the lungs, by pleurisy, or some one of the various forms of consumption, it may readily be conceived that, in such an emergency, the possession of enough lung tissue to admit forty or fifty additional cubic inches of air will amply suffice to turn the scale on the side of recovery. It assists a patient successfully to tide over the critical stage of his disease."

It may be well to group in one place a few movements which will enable any one to know at once about what amount and sort of work is to be taken daily. Special endeavor will be made to single out such movements as will call for no expensive apparatus. Indeed, most of these want no apparatus at all, and hence will be within the reach of all. As the school is the most suitable place to accustom children to the kind and amount of work they particularly need, a few exercises will first be suggested which any teacher can learn almost at once, but which yet, if faithfully taught to pupils, will soon be found to take so little time that, instead of interfering with other lessons, they will prove a positive aid. Though perhaps imperceptible at the outset, in a few years, with advancing development, the gain will be found not only to be decided, but of the most gratifying character.

DAILY WORK FOR CHILDREN.

Suppose the teacher has a class of fifty. If the aisles of the school-room are, as they should be, at least two feet wide, let the children sit about the middle of the morning, and again of the afternoon session, stand in these aisles in rows, so that each of the children shall be about six feet apart. Let the first order be, that all heads and necks be held erect. Once these are placed in their right position, all other parts of their bodies at once fall into place. The simplest way to insure this is to direct that every head and neck be drawn horizontally back, with the chin held about an inch above the level, until they are an inch or two back of the vertical. Now raise the hands, directly over the head, and as high as possible, until the thumbs touch, the palms of the hands facing to the front, and the elbows being kept straight. Now, without bending the elbows, bring the hands downward in front toward the feet as far as can comfortably be done, generally at first about as low as the knee, taking care to keep the knees themselves absolutely straight; indeed, if possible, bowed even back. Now return the hands high over the head, and then repeat, say six times. This number twice a day for the first week will prove enough; and it may be increased to twelve the second week, and maintained at that number thereafter, care being taken to assure two things: one, that the knees are never bent; the other that, after the first week, the hands are gradually brought lower down, until they touch the toes. Some persons, familiar with this exercise, can, with the knees perfectly firm and straight, lay the whole flat of the hands on the floor in front of their feet. But after the first week, reaching the floor with the finger-tips is enough for the end sought, which is, namely, to make the pupil stand straight on his feet, and to remove all tendency towards holding the knees slightly bent, and so causing that weak, shaky, and spraggy look about the knees, so very common among persons of all ages, to give way to a proper and graceful position.

Let the pupils now stand erect, this time with backs not bent forward, but with the body absolutely vertical. Raise the hands above the head as before, elbows straight, till the thumbs touch. Now, never bending body or knees a hair's breadth, and keeping the elbows unbent, bring the hands slowly down, not in front this time, but at the sides just above the knees, the little finger and the inner edge of the hand alone touching the leg, and palms facing straight in front. Now notice how difficult it is to warp the shoulder forward even an inch. The chest is out, the head and neck are erect, the shoulders are held low, and back vertical and hollowed in a little, and the knees straight. Carry the hands slowly back through the same line till again high over the head. Then bring them down to the sides again, and do six of these movements twice each day the first week, and twelve afterward.

To vary the work a little, and to bring special development to particular muscles, now let the pupil stand with arms either hanging easily at the side, or else held akimbo, the head and neck always erect, with the heels about four inches apart, and the toes turned outward. Raise the heels slowly off the floor, the soles and toes remaining firm on the floor, sustaining the entire weight. When the heels are as high as possible, hold them there a moment; then lower slowly till the whole foot is on the floor again; then rise as before, and so repeat twelve times twice a day the first week, and then twenty-five for the following week, continuing this. If this is not vigorous enough when fifty, after the first month, are tried, it will be found that now this work is telling directly on the size, shape, and effectiveness of the feet and calves, and on the grace and springiness of the step itself. If any boy or girl wants to become a good jumper, or to get decided aid in learning to dance long and easily, he or she will find this a great help. If they even practice it half an hour a day, they will be none the worse for it.

All the work thus far recommended here can readily be done in two minutes. Standing erect, with the arms still akimbo, and the feet as before, now bend the knees so as to stoop six or eight inches, then rise to the perpendicular, stoop again, and continue this six times, the feet never leaving the floor. This strengthens the knees, while the front of the thighs get the heaviest part of the work, though the leg below the knee is doing a good share. By the third week the number may be made twenty-five. If among the scholars there are some who are decidedly weak, twenty-five of these exercises is about the limit. For strong, hearty boys, twice as many will prove nearer the mark. After two or three months of twenty-five movements as described for every day, fifty might be tried once by all the pupils, to see whether it is too severe, and if not, then maintained daily at the maximum.

Thus far the feet have not left their particular position on the floor. Now let the pupil stand with the right foot advanced about twelve or fifteen inches, suddenly rising on the toes, give a slight spring, and throw the left foot to the front, and right back; then spring back as before, and do this six times twice a day the first week, to twelve the second, and twice as many by the end of the month. This calls the same muscles into play as the last exercise, and brings the same development, but in a little more severe and vigorous.

If still harder thigh-work is wanted, startling again, with the feet not over four inches apart, this time do not raise the heels at all, but stoop down slowly, as low as possible, bending the knees greatly, of course, the back, however, being held straight all the while. Then rise to an erect position, then go down again. Practising this three times each morning and afternoon at first, may be followed up with six a week later; and twelve by the end of the month. Better work than this for quickly giving size and strength to the thighs could hardly be devised; while, as has been already noted, scarcely any muscles on the whole body are more needed or used for ordinary walking.

Still standing erect, with arms akimbo, raise the right foot in front about as high as the left knee, keeping the right knee unbent. Hold the right foot there ten seconds; then drop it; then raise it again, fully six times. Then, standing, do the same thing with the left foot. This calls at once on the muscles across the abdomen, aiding the stomach and other vital organs there directly in their work.

This time raise the foot equally high behind; then return it to the floor, and so continue, giving each foot equal work to do. The under thigh, hip, and loin are now in action; and when, later on, they become strong, their owner will find how much easier it is to run than it used to be, and also that it is more natural to stand erect. The rate of increase of these last two exercises may be about the same as the others.

There is not much left now of the ten minutes. Still, if the work has been pushed promptly forward, there may still be a little time. However, all three of the kinds of work suggested for the front thigh need not be practised at the one recess, any one sufficing at first.

With head and neck again erect, and knees firm, hold the hands out at the sides and at arm's-length, and clasp the hands firmly together, as though trying to squeeze a rubber ball or other elastic substance. Beginning with twenty of these movements, fifty may be accomplished by the end of a fortnight; and by their continu-

ance both the grip and the shape of the hand will be found steadily improving.

Clasp the hands together over the head. Now turn

reach the highest point behind, to hold them still there a moment. Now the under side of his arms, and about the whole of the upper back, have had their work.

work the first week. At breakfast, and whenever sitting down throughout the day, determine to do two things—to sit far back on your chair, and to sit at all

ance both the grip and the shape of the hand will be found steadily improved.

Clasp the hands together over the head. Now turn them over until the palms are upward, or turned towards the ceiling, and straighten the elbows until the hands are as high over the head as you can reach. While holding them in this position, be careful that they are not allowed to drop at all. Let the scholar march three or four times around the room in this position. It will soon be found that no apparatus whatever is necessary to get quite a large amount of exercise for the corners of the shoulders. In this way, while there is an unwonted stretching apart of the ribs, and opening up of the chest, the drawing in of the stomach and abdomen will be found to correct incipient chest weakness, half-breathing, and any tendency towards indigestion.

Following up the method, now let the class form around the side of the room, standing three feet apart, and about two feet from the wall. Place the hands against the wall, just at a level with and opposite to the shoulders. Now, keeping the heels all the time on the floor, let the body settle gradually forward until the chest touches the wall, keeping the elbows pretty near to the sides, the knees never bending a particle, and the face held upturned, the eyes looking at the ceiling directly overhead. Now push sharply off from the wall until the elbows are again straight, and the body back at vertical. Then repeat this, and continue six times for each half of the day for the first week. Keep on until you reach fifteen by the third week, and twenty-five by the second month. For expanding and deepening the chest, helping to poise the head and neck so that they will remain exactly where they belong—in an erect position—and for giving the main part of the upper back-arm quite a difficult piece of work to do, this will prove a capital exercise. Whoever will make a specialty of this one form of exercise until they daily take two or even three hundred such pushes, will find that any tendency he or she may have to flatness or hollowness of chest will soon begin to decrease, and will very likely disappear altogether.

In this last exercise most of the weight was on the feet, the hands and arms sustaining the rest. If the aisles are not over two feet and a-half wide, let each pupil stand between two opposite desks and place one hand on each. Now, walking back three or four feet, his hands still resting on the two desks, let him, keeping his body rigid and his knees unbent, bend his elbows and lower his chest very gradually until it is nearly or quite level with the desk tops, then slowly straighten up his arms, and so raise his body again to the original position. Three such dips the first week, five or six the second, and by the end of the month ten or twelve, and that number then maintained steadily, will open and enlarge the chest materially before the year is out, while at the same time doing much to increase and strengthen the upper back-arm. This is harder work than pushing against the wall, because the hands and arms now have to sustain a much greater portion of the weight of the body, but it is correspondingly better for the chest.

Besides these exercises, the teacher, insisting on the value of an erect position in school hours, whether the pupil be standing or sitting, and by inculcating the value of this, would soon find that these efforts were being rewarded by making a crooked girl or boy straight, and so lessening their chance of having either delicate throats or weak lungs. Care should be taken that the school chairs have broad and comfortable seats, and that the pupil never sits on a half of the seat or on the edge of it, but far back, and on the whole of it. This apparently small matter will assist wonderfully in forming the habit of an erect position while sitting. Some twenty years ago a Mrs. Carman, of Boston, devised a chair-back which should just fit the hollow of the back when the back was held erect, as it should be. This simple contrivance greatly encouraged a good position in sitting, and could well be made a part of the standard chair in our schools. A pad of the right shape, hung on the back of the chair, would effect the same object.

The teacher's opportunity to work marked and permanent physical benefit to every pupil under her charge, by daily and steadily following up most or either of the above exercises, or of some substantially equivalent, can scarcely be over-estimated. The exercises strengthen the postures, whether sitting or standing. When a teacher insists on having her children erect for six hours out of the twenty-four, and makes plain to each one the value of being straight, and the self-respect it tends directly to encourage, there need be no great fear that the remaining waking hours will make any child crooked. It is in school generally that the mischief of warping and crooking is done; and hence there, of all places, would be the most appropriate place for the undoing of it.

A little foot-work, for a minute or two remaining, would make a good conclusion. With the hands closed and elbows bent, the body and arms held almost rigid, the neck well back, and the head up, let the column now start off around the room at an easy trot, each stepping as noiselessly as possible; and no heel touching the floor. A minute of this at a lively pace will be abundant at first; and as the legs gradually get strong, and the breathing improves, the run can be either made faster or longer, or both.

DAILY EXERCISE FOR YOUNG MEN.

On rising, let him stand erect, brace his chest firmly out, and, breathing deeply, curl dumb-bells (each about one-fifteenth of his own weight) fifty times without stopping. This is biceps work enough for the early morning. Then, placing the bells on the floor at his feet, and bending his knees a little, and his arms not at all, rise to an upright position with them fifty times. The loins and back have had their turn now. After another minute's rest, standing erect, let him lift the bells fifty times as far up and out behind him as he can, keeping elbows straight, and taking care, when the bells reach the highest point behind, to hold them still there a moment. Now the order aids of his arms, and about the whole of the upper back, have had their work. Next, starting with the bells at the shoulders, push them up high over the head, and lower fifty times continuously. Now the outer part of the upper arms, the corners of the shoulders, and the waist have all had active duty.

Finally, after another minute's rest, start with the bells high over the head, and lower slowly until the arms are in about the position they would be on a cross, the elbows being always kept unbent. Raise the bells to height again, then lower, and so continue until you have done ten, care being taken to hold the head six or more inches back of the perpendicular, and to steadily face the ceiling directly overhead, while the chest is swelled out to its uttermost. Rest half a minute after doing ten, then do ten more, and so on till you have accomplished fifty. This last exercise is one of the best-known chest-expanders. Now that these five sorts of work are over, few muscles above the waist have not had vigorous and ample work, the lungs themselves have had a splendid stretch, and you have not spent fifteen minutes on the whole operation. If you want to add a little hand and fore-arm work, catch a broomstick or stout cane at or near the middle, and, holding it at arm's-length, twist it rapidly from side to side a hundred times with one hand, and then with the other.

In the late afternoon a five-mile walk on the road, at a four-mile pace, with the step inclined to be short, the knees bent but little, and the foot pushing harder than usual as it leaves the ground—this will be found to bring the legs and loins no inconsiderable exercise; all, in fact, that they will probably need. If, shortly before bedtime each evening, the youth, after he has been working as above, say for a month, will, in light clothes and any old and easy shoes, run a mile in about seven minutes and a-half, and, a little later, under the seven minutes, or, three nights a week, make the distance two miles a night, there will soon be a life and vigor in his legs which used to be unknown; and if six months of this work brings a whole inch more on thigh and calf, it is only what might have been expected.

DAILY EXERCISE FOR WOMEN.

And what should the girls and women do each day? With two-pound wooden dumb-bells at first, let them, before breakfast, go through twenty-five movements of each of the five sorts just described for young men. After six weeks or two months they can increase the number to fifty, and, if this does not bring the desired increase in size, and strength of arm and chest and back, then they can try dumb-bells weighing four or five pounds each.

Out-of-doors, either in the latter part of the morning or afternoon, if they will, in broad, easy shoes, walk for one hour, not at any listless two-mile pace, but at first as fast as they comfortably can, and then gradually increasing until in a fortnight or more they can make sure of three miles and a-half at least, if not of four miles within the hour, and will observe the way of stepping just suggested to the men, they will get about walking enough. And if once in a while, every Saturday, for instance, they make the walk all of five or six miles, getting, if city ladies, quite out into the suburbs and back, they will be surprised and gratified at the greater ease with which they can walk now than formerly, and at their freshness at the end.

Girls should also learn to run. Few of them are either easy or graceful runners; but it is an accomplishment quickly learned; and begun at a short distance and slow jog, and continued until the girl thinks nothing of running a mile in seven minutes, and that without once touching a heel to the ground, it will do more than almost any other known exercise to make her graceful and easy on her feet, and also to enlarge and strengthen her lungs. A roomy school-yard, a bit of lawn, or a gymnasium-track, either of these is all the place needed in which to learn this now almost obsolete accomplishment. The gymnasium is perhaps the best place, as there they can wear costumes which do not impede freedom of movement.

If besides these things the girl or woman will determine that, as much as possible of the time each day in which she is sitting down, she will sit with head and neck up, trunk erect, and with shoulders low, and that whenever she stands or walks she will at all times be upright, she will shortly find that she is getting to be far straighter than she was, and, if has a larger and finer chest than formerly, it will be nothing strange, for she has simply been using one of the means to get it.

DAILY EXERCISE FOR CONSUMPTIVES.

And what should these people do? If there is one good lung left, or a goodly portion of two, there is much which they can do. Before breakfast they need to be more careful than others because of their poorer circulation. Still, in a warm and comfortable room they can work to advantage even then. In most instances consumptive have not large enough chests. Stripped to the waist, there is found to be a flatness of the upper chest, a lack of depth straight through from breastbone to spine; and the girth about the chest itself, and especially at the lower part of it, is often two or more inches less than it is in a well-built person of the same height. Now, to weed out these defects, to swell up and enlarge the chest, and bring it proper depth, and fulness, this will go far toward insuring healthy and vigorous lungs. And how is this done?

Standing under the handles in an appliance like that represented in Fig. 8*, holding the body rigidly erect, the chest out, the knees and elbows unbent, bear the two handles downward on either side of you until the hands are as if extended on a cross, using only very light weights at first. Lower the weights again, then bear down again, and so do ten. Just as you bear down each time, inflate the lungs to their utmost, and hold the air in them until you have lowered the weights again. Rest about a minute, then ten more, and a little later ten more. This will be enough before breakfast work the first week. At breakfast, and whenever sitting down throughout the day, determine to do two things—to sit far back on your chair, and to sit at all times upright. No matter how many times you forget or fail, even if a thousand, keep trying until the erect posture becomes habitual. This point once reached, you have accomplished a great thing—one which may add not a little to save your life.

Next, about an hour after breakfast, start out for an easy walk. Going quietly at first, the head held, if anything, back of the vertical, and the step short and springy, quicken later into a lively pace, and, holding that as long as you comfortably can, return to your room. If your skin is moist, do not hesitate a minute, but strip at once, and with coarse towels rub your skin till it is thoroughly red all over, and then put on dry underclothing. If you then feel like taking a nap, take it. When well rested, do thirty more strokes at the pulley-weights. In the afternoon try more walking, or some horse-back work if you can get a steed with any dash in him. After you are through, then more weight work. Finally, just before retiring, take another turn at the weights.

After the first week run the weight work up to fifty at a time, and increase the out-door distance covered both morning and afternoon, being sure to go in all weathers, and to eat and sleep all you comfortably can. Vary the in-door work also somewhat. In addition to the exercise on Fig. 8, practice now an equal number of strokes daily on the appliance described as Fig. 9†. After the first fortnight try hanging by the two hands on the horizontal bar and swinging lightly back and forth. Before breakfast, before dinner, and just before retiring, take a turn at this swinging. Of it, and the work on the two sorts of pulley-weights, a weak-lunged person can scarcely do enough. These open the ribs apart, broaden and deepen the chest, and inflate the lungs—the very things the consumptive needs. The out-door work secures him or her ample good air, vigorous exercise, and frequent change of scene. On the value of this good air, or rather the danger of bad air, hear Langenbeck, the great German anatomist: "I am sure now of what I suspected long ago, viz., that pulmonary diseases have very little to do with intemperance, * * * and much less with cold weather, but are nearly exclusively (if we except tuberculous tendencies inherited from *both* parents, I say *quite* exclusively) produced by the breathing of foul air." This out-door work should be steadily increased until the half-hour's listless walk at first becomes six or eight miles before dinner, and as much before supper. From breakfast to supper one can hardly be exercising too much; and steadily calling on the heart and lungs in these very favorable ways, increased vigor and power are only what might have reasonably been looked for.

As the months roll on, and this steady work, directed right to the weak spots, has strengthened and toughened you, now put larger weights on the Fig. 8 appliance, and also increase the number of strokes until you do a thousand or even two thousand daily—head and body being always held erect, and full breathing a constant accompaniment. This making a specialty of these chest-expanding exercises, none of which are severe or violent, but which are vigorous enough, and the abundance of healthy and active out-door life, are sure to bring good fruits in this battle where the stake is no less than one's own life. They are rational and vigorous means, aimed directly at the weak part, and, with good air, good food, cheerful friends, and ample sleep, will often work marvels, where the filling the stomach with a whole apothecary shop of nauseous oils and other medicines has wholly failed to bring the relief sought.

* Dr. Sargent's ingenuity has provided a simple and excellent chest expander. He rigs two ordinary pulleys over blocks some feet above the head, and from five to six feet apart, and attaching weights at the floor ends of the ropes, puts ordinary handles on the other ends, and has the ropes just long enough so that when the weights are on the floor the handles are about a foot above the head. Now stand between and directly under them, erect, with the chest as full as you can make it, and keeping the elbows straight, and grasping the handles draw your hands slowly downward out at arm's-length, say about two feet. Next, let the weights drop gradually back, repeat, and so go on. This is excellent for enlarging the whole chest, but especially for widening it. A better present to a consumptive person than one of these appliances could hardly be devised.

† Again, to deepen the chest from front to back, he hangs two bars, B and C, and attaches the weight at the other end, A, of the rope, the bar B, when at rest, being about a foot above the height of the head. Standing, not under B, but about a foot to one side of it, and facing it, grasp its ends with both hands, and keeping the arms and legs straight and stiff, and breathing the chest brimful, draw downward until the bar is about level with the waist. Let the weight run slowly back, repeat, and go on.

WARD'S STATUE OF GENERAL THOMAS.

STATUE OF GENERAL THOMAS | Brown of Philadelphia, and it is proposed to | greatly to my pleasure, and also through me | Love only love is the right thread to spin,

WARD'S STATUE OF GENERAL THOMAS.

The kindness of Messrs. Harper Bros. enables us to show our readers a fine engroving from the equestrian statue of General Thomas erected by our foremost American sculptor, Mr. J. Q. A. Ward. The engraving was made from the plaster cast in the artist's studio. The statue, cast in bronze, was made for the Society of the Army of the Cumberland, and was erected in Washington last November with interesting ceremonies which we have before described. This noble statue is about fifteen feet in height from the horse's feet to the rider's head. The figures are about twice the size of life. The figures are full of spirit. The General has just reined in his charger on the top of a rising ground to take a sweeping view of the field.

CORRESPONDENCE.

Training School for Indian Youth,
CARLISLE BARRACKS, PA., *Jan.* 8, 1880.
Editor of Workman:—

Eleven of the boys, selected from the eleven different tribes represented at the school, were taken to Harrisburg, Pa., on the 15th of last month to witness General Grant's reception by the citizens of that place. They enjoyed the trip immensely, were orderly and easily managed. The gaily-uniformed soldiers, fine companies and brass bands afforded them an inexhaustible fund of amusement. Returning to Carlisle on the evening train, the writer was agreeably surprised to meet Inspector Pollock of the Interior Department. This courteous and kind hearted official was on his way to the Barracks to visit and distribute presents among the pupils; many of whom had been his charges while he was Indian Agent and Superintendent of Indian Affairs in Dakota. During his short visit, the Major had several talks with the pupils, giving them sound, common-sense advice. The pupils from the Indian Territory had their pictures taken just before Major Pollock left, and he was commissioned by them to deliver their pictures to their parents, whose agencies he was about to visit.

The boys have been measured for their uniforms, which are to be of army blue with scarlet trimmings. They are delighted with the prospect of having, at an early date, their pretty uniforms, and it is hoped by the authorities that they will have been so thoroughly taught the necessity of cleanliness and care in wearing the white man's dress, that they will present a creditable appearance when the President and Secretary of the Interior pay the School their contemplated visit.

Things of every-day utility will, as far as practicable, be made a part of their every-day life, that they may be developed into useful men and women, capable and willing to earn their bread by the sweat of their brow. The carefully trained child develops into an useful man or woman, and neglected childhood is naturally followed by a vagabond manhood. Human nature is the same in the red man as in the white; is controlled by the same impulses and is susceptible to the same good and bad influences.

The Carlisle School proposes to give the child of the red man just the same educational advantages which are so liberally extended to the children of the white men all over the country, and it is confidently expected that the same general results *will obtain* in the case of the Indian as *have* in the case of the Caucasian.

The general intelligence of her people is one of America's proudest boasts, and the time has come when it is due to her honor and good name that she extends to ALL her children, "*without regard to color, race or previous condition,*" the grand educational advantages now so freely extended to the white and black.

During the past month, the work of the school has been pushed forward by continued and earnest effort. The chapel has been completed, a gymnasium and reading rooms prepared for the boys; regular drills take place, weather permitting, on the grounds, and during inclement weather the boys are exercised on the porches of their barracks or in the gymnasium. At the regular Sunday morning inspection, the boys appear with their clothing neatly brushed and their shoes blacked.

After inspection, the delegations start for the different Sunday-schools and churches in Carlisle. A strong feeling of interest in their welfare is displaying itself in the good people in the city, who have taken charge of the classes of Indian children who attend their churches.

All these good people, and many others who have shown a marked interest in our work, assembled, with the teachers, authorities and pupils of the school, at the new chapel, which had been duly trimmed, decorated and furnished with two large Christmas trees well laden with presents, the gifts to the pupils of friends, far and near, who have become interested in the little school just springing up from the ashes of the old recruiting rendezvous at Carlisle Barracks, Pa.

Among the presents to the school was a small printing press, the gift of Miss Mary H. Brown of Philadelphia, and it is proposed to instruct several of the young braves in the art of printing, and some day they may become brave enough to publish a paper. The exercises of the evening were opened by the pupils singing a Christmas carol, after which Rev. J. A. McCauley, President of Dickenson College, addressed a few remarks to the pupils, explaining the reason why Christian people commemorate the 25th day of December. The good doctor then led in prayer, at the close of which Santa Claus stepped forward, pupils a little speech and proceeded to the distribution of presents. His furred and extensive proportions at first astounded the little braves, but they soon saw the comical side of the affair and fully enjoyed it.

The presents having all been all delivered to their proper owners, Santa Claus disappeared and Dr. McCauley, having been called forward, again addressed the pupils and closed the exercises of the evening by asking the benediction. Observance of Christian customs is to be made a marked feature of their school life, and it is hoped that the pupils, with the pleasure enjoyed, will imbibe an impression of the true meaning of the festivities and learn to realize the full blessedness of God's love.

The pupils attending the different Sunday-schools in Carlisle were very much gratified to find themselves remembered by their kind teachers on Christmas, and from their expressions of pleasure and satisfaction we are led to believe that they found their first Christmas at Carlisle a very enjoyable occasion.

The need of departments for agricultural and mechanical instruction, which must play an important part in the civilizing work of the school, is very keenly felt, and every effort will be made to have such departments in good working shape at as early a date as possible.

The great importance, to the ultimate success of the work, of filling up the pupils with sound, practical knowledge that will increase their sense of man- and womanhood and render them self-supporting, cannot be over-estimated. It is desired to develop them in every way which will tend to increase their respect and confidence in themselves and the respect of their people for them.

These things must be taught them practically, and to do so effectually requires the establishing of separate departments devoted especially to agricultural and mechanical instruction. Unfortunately, the school has only about twelve acres of arable land. Two hundred acres would not be a superabundance. This discrepancy between the supply and demand must be met, if possible, before spring. There are two large brick buildings, belonging to the school, which will afford ample accommodations for the different trades, such as shoe-making, harness-making, turners, blacksmithing, and wagon-making, etc.; but the obtaining of the authority for the purchase of tools, machinery, materials, and to employ tradesmen, is, at present, the desideratum.

The Honorable Secretary of the Interior and Commissioner of Indian Affairs, to whom is due the establishing of the school, have been very liberal towards it and anxious to further the work by all the aid they could, under the law, give; but they must be governed by the action of Congress in regard to the expenditure of public funds.

Through the benavolent help of the many friends who have become interested in the enterprise, the school authorities have been greatly encouraged and materially aided in their work. Miss Mary H. Brown, of Philadelphia, the lady mentioned before as having given the school a printing press, has signified to the authorities her desire to furnish them with three sets of shoemaker's tools for the use of the pupils, and it is hoped soon to have that industry in full operation.

Like other mortals, we find our pupils prone to backslide and that it requires constant watchfulness and care to prevent them from flying the track; but the progress thus far made is decidedly encouraging, and, striving to obtain the best results, we enter upon the new year with strong hearts and willing hands.

G. B.

REPORTS FROM OUTSIDE.

A friend who devotes much time to aiding, by personal correspondence and counsel, as well as in material ways, the young colored teachers from Hampton and other Normal schools in the South, sends us the following very interesting letters from two who are not Hampton graduates. We are always glad to receive such reports from outside our own ranks, and should like to have more of them.

LOUISVILLE, *Nov.* 17, 1779.

Miss L——,

Esteemed friend:—

I own you many thanks for favors in the way of books, papers, etc., which I have received from you this year. They added greatly to my pleasure, and also through me give delight to many. I have become greatly attached to the SOUTHERN WORKMAN. I shall send you a dollar for its continuance next year. I look forward to no part of my mail with more pleasurable anticipations. Its spicy and practical editorials and the letters from teachers (many of which depict so truly my own surroundings and drawbacks, that I could almost imagine I wrote them) I read with the keenest enjoyment. I am sorry I could not continue the *Christian Weekly* which you so kindly sent me. But as I am going to have the WORKMAN, you will not, I am sure, be angry with me because I cannot afford both. I intend to treat myself, on Christmas, to a daily paper. I find it necessary in order to maintain my position as a well informed teacher and as a man of general intelligence and information, to keep up with the current events of the day and to be conversant with the leading opinions on the same. A "daily," therefore, I must have.

My school is closed. I had no special exercises, as most of my scholars on whom I depend for such demonstrations were taken away a month earlier than usual. I shall commence early in the ensuing year. I have some promises of assistance in completing the school-house.

Many thanks for "Easy Lessons in Natural Philosophy." I shall make good use of them in my school-room.

Respectfully, GEO. E. JOHNSON.

SPARTANBURG, S. C., *Sept.* 25, 1879.

Very Dear Friend:—

All of this week I have been very busy preparing to begin on the 29th inst. There being so much to be done in the way of arranging the room, etc., I have been kept unusually busy. The prospects are that I shall have a successful term of teaching this year. Patrons and pupils seem very anxious, our vacation being longer than we expected.

My school is supported partly by private subscriptions, by a small tuition fee from patrons, by the Government, and by the Peabody Fund. Perhaps you are aware of the fact that, in order to secure the Peabody aid, there are certain conditions which it is very difficult for a poor, uneducated community to comply with. For the past two years our school has been kept going from nine to ten months a session. To do this, though, has caused much self-denial and courage, on the part of the teachers especially, who have had the whole matter to look after and keep going. I have been asked to take charge of schools in other parts of this State, and no doubt I would fare better, financially, should I make a change; but as the attachment to my work is great, and the appreciation of those for whom I work is very manifest, I still prefer to live with these in their sunny circumstances. I cannot but believe that there is a better day ahead for us here, and by patient toil and waiting it will be reached.

Schools are not largely attended here, at this season, owing to the large farms of cotton to be gathered. This is an employment which even small children can follow, hence the small attendance of children in schools. I send one of my pupils to the Hampton Normal School on Saturday. He goes as an applicant for the Peabody Scholarship, established in that institution for the education of teachers from South Carolina. He is not our best representative, but I am sure he will give general satisfaction. With prayers for great success, I send him to those who will and can do great things for him.

I regret that I did not send you an account of my tour across the mountains, which was published in one of our papers. The subject of geology has received much of my attention this vacation. I am especially fond of that science.

I trust I may be able to hear from you when convenient for you to write.

Weather is beginning to be autumnal.

Hoping you much pleasure and rich success in your plans, and above all, the sweet consolation that you are each day following your Heavenly Master.

I am, most respectfully,
WALTER I. LEWIS.

At Home.

BABY CLOTHES.

What shall we wrap the baby in?
Silks are too coarse and velvets too rough,
Snowiest linens not half white enough,
Web of right fineness, no fairy can spin:
What shall we wrap the baby in?

Softest of colors may cover his bed,
Delicate hues of the sky and the rose,
Tints of all buds that in May morns unclose,
When on the bosom of sleep drops his head;
He must have something more heavenly instead.

What shall we wrap the baby in?
Nothing that fingers have woven will do;
Looms of the heart weave love ever anew,
Love only love is the right thread to spin,
Love we must wrap the baby in.

—LUCY LARCOM.

FROM MOTHER'S RECEIPT BOOK.

OX-TAIL SOUP.

Ox-tails make an especially good soup on account of the gelatinous matter they contain.

Ingredients: Two ox-tails, a soup bunch (a carrot, a turnip, an onion and a potatoe, a stalk of celery, a little parsley) and a small cut of pork.

Cut the ox-tails at the joints, slice the vegetables, and mince the pork. Put the pork into a stewpan. When hot, add the onions; when they begin to color, add the ox-tails.

Let them fry a very short time. Now cut them to the bone that the juice may run out in boiling. Put both the ox-tails and fried onions into a soup kettle, with four quarts of cold water. Let them simmer for about four hours; then add the other vegetables, with three cloves stuck into a piece of onion, and pepper and salt. As soon as the vegetables are well cooked, the soup is done. Strain it. Select some of the joints (one for each plate,) trim them, and serve them with the soup; or, if preferred, they may be left out.

MOTHER'S MUFFINS.

One pint of milk; one egg; one tablespoonful of lard; one half cup of yeast. Flour for stiff batter. One teaspoonful of salt. Set to rise over night.

FACTS ABOUT ALCOHOL.

1. Alcohol is a poison. When pure, it will produce death as certainly and almost as quickly as prussic acid.

2. Alcohol is a product of fermentation or decay. No plant produces it. No bubbling spring affords it.

3. Alcohol is an irritant. It will blister the skin, and produce inflamation of the stomach.

4. Alcohol is a narcotic. It paralyzes the nerves, and benumbs the sensibilities.

5. Alcohol destroys the blood. It dissolves the blood corpuscles, and thus impoverishes the vital fluid.

6. Alcohol causes heart disease, by changing the heart tissue for fat.

7. Alcohol causes apoplexy. It weakens the blood-vessels, and causes congestion of the brain. Alcohol weakens the muscles. It has been proven by experiment that a man can lift less after taking a glass of whisky than before.

8. Alcohol wastes vital force.

9. Alcohol causes consumption.

10. Alcohol lessens bodily heat. Travelers in the Arctic regions are obliged to be teetotalers.

11. Alcohol causes paralysis of the brain. A man who is dead drunk is temporarily paralyzed.

12. Alcohol hardens the brain.

13. Alcohol produces congestion of every organ of the body.

14. Alcohol hardens the liver and renders it useless.

15. Alcohol produces its worst effects when taken in small doses.

16. Alcohol produces all kinds of nervous disorders.

17. Alcohol occasions cancer, ulcer, dyspepsia, and other diseases of the stomach.

18. Alcohol is the cause of more than two-thirds of the cases of disease found in the hospitals in large cities.

19. Alcohol is one of the greatest causes of pauperism.

20. Alcohol is one of the most active causes of crime. In Scotland it increased the frequency of crime 400 per cent.

21. Alcohol is a great cause of insanity.

22. Alcohol shortens life 50 per cent., according to the statistics of life insurance companies.

23. Alcohol annually kills one hundred thousand American citizens.

24. Alcohol costs more than bread.

25. Alcohol serves no useful purpose in the human system, and does inestimable harm.

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

A FEW months ago Mr. Wm. Coppinger, Secretary of the Colonization Society was informed that the Hampton Institute would educate three African youth, without charge, on condition that they should work out a reasonable share of their expenses.

Prof. Blyden, the well-known African scholar, author and diplomat, on being notified of this, replied as follows.

"MONROVIA, AFRICA, *Nov.* 20, 1879.

"I am much obliged to Gen. Armstrong for his kind offer to educate at Hampton three first-class African boys. Such are the very boys, that we cannot get for such a purpose, and it would be a great pity if we could. I cannot too much insist upon the idea that Africans to be useful at home among their people, must be educated among the circumstances where they are expected to live. As a rule, without a single exception, those who go abroad for education return on stilts—altogether out of sympathy with their people. They may be giants when they return, but they walk on their heads. The infants on foot who have stayed at home, are stronger than they for the purposes of the country."

Dr. Blyden is a full-blooded Negro and is a leading man in Liberia. We should say that his head is "level" on the subject about which he writes. We believe, however, that the Hampton drill would avert the danger of "walking on their heads," because of its ground-work of elementary and industrial training, which tends to keep its students right end up.

Men fitted for the conditione of a simple civilization will succeed in it. Those who are schooled up to the needs and duties of a higher or later plane, do not always land on their feet when forced by circumstancee upon one thet ie lower or earlier.

Education is a meane to an end. The end should determine the meane. The neglect of this is the rock on which thousands are wrecked. Sending Africans to the United States, or colored youth from the South to Northern colleges, or Indians to Carlisle Barracks or to Hampton is, as a rule, of douhtful wisdom, and justifiable only on special grounds. The mere chenge is not the point; the difficulty ie in the position of the transferred student who, in a current of new influences and customs and in a social atmosphere which he enjoye, and forever after craves, revolts at a return to his former life as he would at putting on discarded garments after being clothed in elegant attire.

The lofty miesionary epirit that leads one in ten thonsand white Christians to give up all that he likes and to live for the eake of his fellow man, can hardly be expected in a larger ratio from lees favored races.

The contented, plain man who has been taught at home, Dr. Blyden's "infant on foot," is better for his country than the Americanized African who "walks on his head."

Trans-Mississippi missioneries whose devoted labors for the past forty years heve laid the fouudatíon for the elevation of the Dakota tribes, fear lest the Indians sent to Hampton shall be "spoiled."

Can better work he done for the average Indian or African out of his country than in it?

The Hampton School is attempting an answer to this question. It finds itself a school for civilization. It aims to make, not polished scholars, but men. Manhood is everywhere the same. Decent family life is the most important condition of it. The family is the unit of civilization, and the conditions of a pure family living are the first things to be created in educated men end women. Hence, the co-education of the sexes is indispensable, and in the leading colored schools of the South ie an unquestioned success. We claim as much for well-managed Indian boarding schools.

The pupil is to live not more by brain than hy muscle. Head and hend must be educated together.

At Hempton Negro youth work two days a week and study four.

Indiens, more averse to labor, work one-half of the time, studying the other half, and are encouraged by the offer of wages to work the entire time, gaining what language they need from the shop manager, and from evening instruction or amusements.

These youth acquire new tastes and desires, hut they also get the ability to gratify them. The week point of education away from home is that it creates fresh eppetites, hut does not give the power to satisfy them.

Give new hut moderete cravings, and the means of supply and there is great gain to the student. He is content with his old home when he returns to it; he has e relative ascendency among his people; not so great as to make for him an isoleted end lonely place, hut enough to stimulate him, and lead others to emulate and follow him.

Indian Agents and others have urged a temporary sojourn of their picked youth in civilized regions, hut not too long, lest the educated brave should be elienated from his people, yet unfit for the severe competition of civilizetion — a men without a country.

Hampton is working in full view of this danger. The crucial test is to come when its pupils shall return to their nations.

We believe that they will be men end will stand on their feet and win hread with their hands.

We believe thet some of Dr. Blyden's African hoys would gain hy a course at Hampton, and that they would go back to Africa right side up, end do good work for that country.

IGNORANT VOTERS.

"AUGUSTA, GA., Dec. 3, 1879.—The municipal election that took place here to-day was the most exciting contest that has occurred in many years. There were no nominations. R. H. May and Chas Estes, the opposing candidates for Mayor, were both democrats. The vote was the largest ever registered, and as the negroes were nearly equal in strength to the whites, there was a fierce struggle in every ward to obtain their votes. Early this morning, barbecued breakfasts were provided for them at various places, and when they had finished eating they were decorated with badges and marched in procession to the polls, preceded by bands of music. In the Fourth ward, where the largest vote was polled, and where the most turbulent spirits reside, there were a great many difficulties between white men and negroes, the supporters of different candidates, and about 12 o'clock a riot, which at one time threatened to assume formidable proportions."

The above, from the *New York Herald*, illustrates a recent phase of the illiterate vots of the South. There was a similar occurrence in Atlanta. Georgia, not long since. This thing is on the increase. It is more demoralizing and injurious to the freedmen than anything in their history.

But so long as buying votes is not a sectional sin, no eloquence will be expended over this debasement of the Negro or damage to the country. The political champions of the freedmen are silent in the presence of this form of "outrage." What heve they said about it?

They rend their garments over a corporal injury; they look the other way when the *man* is degraded. They have in all these years of professed guardianship cared not so much that the Negro should have his vote, hut that *they* should get it.

Since the help given, yeers ago, hy the Freedman's Bureau, and a little benefit through the Agricultural College land fund, not a sign of interest in, or care for, the condition ol ex-slaves hy Congress.

The troops were marched down South, and then marched back egain.

Laws have been flung at the waves of humen passion, hnt the waves rolled high as ever for the shrieking politicians who lined the shore, and toesed at them their Speeches and Acts.

The factors in Southern progress, and it has been great, heve been:—

First. The issue of the war, end the terrible logic of it, enforced hy the penalty of starvation.

Second. The Constitutionel Amendments, and some necessary legislation in consequence.

Third. The working of societ and economic law. The South needs and asks for capital and migration. It can get it only hy persunsion and hy edapting itself to those it seeks, as settlers and investors.

Fourth. Public sentiment at the North whieh determines the use of its resources, material, social, and political. Now that the country is homogeneous through the nbolition of slavery this factor is powerful.

Fifth. The moral and educational movement for the improvement of the people, first imposed hy legislation, then edopted by the people and pushed with remarkeble energy, considering the circumstences. This hes been aided by Northern benevolence which has given over five millions of dollers for Negro education alone, and hy the Peabody Fund. The Freedman's Bureau gave three and n-half millione for Southern schools.

Sixth. Last hut not least, the efforts of the people to help themselves. The splendid grit shown hy both races in a quiet way; attracting the attention only of those who are looking for such things, resulting in immense harvests through the thrift of a portion of the poor whites, the energy of e part of the ruined aristocracy, end the steady hehits and improvement of a class of the ex-slaves.

Emancipation created e revolution in which every man struck out for himself, es in a race, almost from tho same point of poverty, and the chances were nearly equal to all. The questiou was one of individual stuff and pluck, end the greatest of nll needs was ligbt for every man. Equal rights were firet in the order of time hut (after emancipation) not of first importance. Ideas were and ere the pressing want, nnd the eupply of them is but just hegun.

ABOUT EMIGRATION.

In discussing the schemes of colored emigration, the real issue is quite neglected. The complaint of the colored men in Louisiana, in North Carolina and Missiesippi, ie, that they are not protected in their political rights, are charged high and excessive rentals for land, or are compelled to pay exorhitant prices for it, when purchased, and that, in ehort, their condition is very intolerahle. There is truth in this etatement of grievances, but there are other facts quite as true which should modify an opinion hased solely on these *ex parte* etatements. Land in the South is cheap enough, and the colored man's money will buy it as quickly as the white man'e. We have yet to hear of a case where, under ordinary circumetances, his money has been refused. And in view of the utterly exhausting way all rented land is tilled hy the tenant, the rental money ie not high. Many white men at the South are at the eame disadventage as the Negro in the matter of paying high rents, and in the inability to purchasn land. It is the misfortune of poverty, end there is no exception on race account.

Poverty, however, is not en absolute harrier to prosperity. Every men who reads or knows about men is ewere of that. The colored man in the South cennot say that he is harred out from the result of honest, intelligent labor. There are instances in nearly every county in the Southern Stetes which show what the Negro can do when he resorts to the usual methods adopted hy all thrifty men to become successful. Thougitfulness, economy end industry will make men rich, though there is not e dollar of capital in the beginning. It has always been so, and will always be so. There is a Negro near New Berne, North Carolina, who has bought and paid for 1,000 acres of land hy raising cotton. No white man in that section of country has been as successful. Indeed, it was said by everyone there thet "cotton did not pay." The truth is, this man worked early and late, end used his hrains to the very hest edvantage. His opportunities were no better than thoss of his neighbors, hut he had the rare faculty for organizing work. This wes the open secret of his success.

A colored man near the town of Hempton is the owner of five acres of lend, upon which he hes huilt n house. He was asked why he had not, during the eight years he had occupied it, planted apple trees on one acre of it. The cost of the trees end the expense of planting would have been about twenty dollars. Tho man replied, "I never had the time. I have to work for my living. I never get a moment to spere." The inquirer asked, "Did you attend camp meeting this year?" "Yes," he replied. "How long were you there?" "Two weeks," he said. The inquirer seid, "If you had taken only two dnye out of those two weeks and planted fifty epple trees, you would have en orcherd in e few years which would yield an ennual income of from one to three hundred dollars. If you had done this e few years ago, you would now be quite independent. This men hed been talking about emigration.

Just now some of the colored people of Florida are talking ebout leeving the State. They declare the usuel grievances, and emong other things complain of the high price of land.

The official returns show that there ere now some fifteen million ecres of unoccupied Government land in Floride, which may be taken up. in lots of 160 ecres ench on payment of fourteen and a-half dollars. Meny of the Northern white people in Florida say it is impossible for them to get reliahls colored lebor, and they have resorted to Virginia for help.

If the colored men of the South who are devoting themselves to the improvement of their own condition, who spend little time in talking politics, who heve become forehanded, will come forward and say that they will sacrifice their accumulations because they cannot vote, we shall be disposed to believe that the colored people are really willing to become political martyrs.

An ably edited paper, the *Land and Water*, saye the law makers of the Southern Statee should pull down all legal enactments which allow men to run in debt for their crops, and then permit the creditor to take them at a sacrifice, because the repeal of euch lawe will prevent people from running in debt. But euch repeal will never remove the trouble. If there is no law for enforcement of debt, the rate of interest will be higher, becanse the risk of lending will be greater. The real difficulty ie in the character of men, who will be improvident and shiftless, and run into debt. No law can keep such men out of trouble. Nor will emigration help them. Hundrede of lezy men in the North emigreted to Florida because they believed that prosperity could be had there without work. They have been sadly mistaken. The prizes in life are few enough, and thriftless men may draw them, but the mase of men must rely on intelligent work for any degree of success. There is a clase of men in the Western territory known as "prospectors." They are alwaye on the lookout for something better than their present surroundings, in-

stead of attempting to make better those surroundings. They never have a grip

of things, are not constructive, and fail to make themselves the power they would be were they united in wise and

nrse, and in his most impressive manner said that as an ex-slave he extended the right hand of fellowship to an ex-slaveholder on the common ground of their aspirations for the

Miss Lucy M. Washburn, San Jose, Cal. 10 00

stead of attempting to make better those surroundings. They never have a grip on anything, and so they move on from yeer to year, and in the end die poor.

If no colored man ever succeeded in the South, it would be safe to say that the South is no place for him. But there are already n very large number of the colcr-ed men who have succeeded, are content-ed and have no complaint to make. These men settle the question of emigration. When the rest of the colored men follow in their footsteps and fail, it will be time to discuss the question of a new country. The colored man, like the white, is given to indulging in foolish dreams of sudden wealth, and life is made barren of results by so doing. Things must be taken as they are. The problem of life any of the densely populated European countries is difficult enough. Beside it the problem here is nothing. When land is valued at $200 per acre instead of $10, the colored man, as well as the white man, may speak of hardship.

Real wealth lies in each man's head and hand. If in these there is neither power or cunning, it is hopeless to expect that any surroundings will supply the deficiecy. W. N. A.

THE calls for teachers for colored schools in this State come in steadily, and "nobody to send," is now the invariable answer. The following is an average specimen.

It is from a "rebel," we presume, and illustrates a pleasant and not uncommon relation of Southerners to the work of negro education. What better work than to supply such demands?

BRANDON CHOKEN, VA., *Jan. 20th*, 1880.

Gen'l. S. C. Armstrong:

Dear Sir:—Our Superintendent of Schools Mr. W. H. Harrison, referred me to you to obtain a couple of teachers for our (colored) schools in Brandon Magisterial District, Prince George's Co., Virginia. We prefer female teachers. They can get good places to board at, and we pay $25.00 per month of twenty days. If you can send them, tell them to come on the Steamer "Ariel" up the James River to Fort Powhatan and then they will be in three miles of the place. Please let me know the day they will arrive, as I wish to get our Superintendent to be on hand to examine them as the law requires.

Very respectfully,

J. R. T., (Trustee.)

To our Travelled Friends:

The Normal School has recently improved an opportunity to purchase at reduced cost a Megalethoscope—a very fine instrument for viewing photographs (not stereoscopic views.) We consider it a valuable addition to the educational apratus of the school. It is especially appreciated in the "Parlor Car,"—the pleasant reading-circle established for the resident graduates as we have before described—in its weekly trips to different cities and counties.

If any of our travelled friends can spare from the abundant stores of photographs which travellers are apt to bring home, a few for Hampton, they will be assisting it in an important way. Our Megalethoscope will show pictures of any size from 12x16 inches to card size—landscape shape being preferable.

The Christian Recorder, of Philadelphia, edited by Rev. B. T. Tanner, D. D., and managed by Rev. H. M. Turner, D. D., is by far the ablest newspaper in the land owned and controlled by colored men.

Like the negro himself, it does not lack ability. It is vigorous and pungent, sometimes brilliant in its thrusts, but not always prudent. We do not wonder that the educated colored man of this country in view of all his bearings, finds it hard, sometimes to keep cool

The colored newspapers in the United States, according to a published list in our possession, number thirty-four.

They are an interesting study.

Generally, they do not make the best of things, are not constructive, and fail to make themselves the power they would be were they united in wise and solid measures, and less sensitive and responsive to what are really side issues.

We believe that they are a growing power, and destined to have increasing influence.

A BRITISH WORKMAN has been writing interesting letters to the New York *Evening Post*. Of the effect of a recent speech of John Bright, he states:

"That effect may be briefly described as a general determination to seek homes in this country at the earliest possible moment, and it is worth while to note that this is the determination not of idlers but of the stoutest hearted, most industrious class of England's workmen, the men whose toil has created British wealth, and whose coming to this country would be the greatest gain to us as well as to themselves. Immigration has not always been an unmixed good to us. It has brought to our shores great numbers of the thriftless and the idle and the ignorant, together with men of a better sort. When it promises to give us also men of this correspondent's kind, men who think while they work and who think to some purpose too, it promises to atone fully for whatever ill it has wrought us."

Virginia should be on the lookout for such reinforcements.

THE SOUTHERN WORKMAN proposes to print advertisements of good lands for sale in this and neighboring states, and to send, in addition to its limited regular circulation in England, one or two hundred copies each month to be seen at and distributed from a well-known office in London, where, for five shillings (we believe), one is allowed to examine maps and accounts from all the states; not to be coaxed into any particular section. The management, having no "axes to grind," maintains itself by collecting all possible facts and charging for the use of them.

HOWARD UNIVERSITY.

The "*Evening Post*" of New York of January, contains a long and interesting letter upon Howard University. Like "Fisk," "Hampton," and other Institutions for the Negro, it has a peculiar history. Its tap root was the Freedman's Bureau, but it had rather too much of it, largruished awhile, but now is coming to the front as a school of wide-spread influence for good. Its Medical and Theological schools are at the head of that kind of work for the Negro. Rev. Dr. Patton, from Chicago its President has given it an energy that promises even greater results.

The leading Institutions for Negro in the South are in the hands of Northern men of Republican sympathies, and their pupils are likewise, but they are unselfish and true to the interests committed to their care. They are at least abreast of Howard University in commanding the respect and cordial co-operation of good and true men at the South of all classes. We extract from the letter.

"The University is gradually drawing to itself the sympathy and support of the old respectable conservative slaveholding element at the South. It is considered important that this element should be brought into fellowship and co-operation with the University, and efforts are making to accomplish this result. Thus, General Thomas J. Kirkpatrick, of Lynchburg, Va., was recently added to the Board of Trustees as a representative man of this type. General Kirkpatrick is a man of high social standing in Virginia, a Christian man, a leader in the Presbyterian Church, a well-known lawyer and successful politician. He was an officer in the Confederate army during the Rebellion, and a man withal who showed his sympathy with the chattel class by serving fifteen years as superintendent of a colored Sunday-school. At a recent meeting of the Board of Trustees, this gentleman was requested by President Patton to give the Board his impressions of the University and his ideas on what should be its policy in the future, and this he did with such friendly and sagacious words, that, at the conclusion of his remarks, Frederick Douglas, another of the Trustees who was present at the meeting, arose, and in his most impressive manner said that as an ex-slave he exteaded the right hand of fellowship to an ex-slaveholder on the common ground of their aspirations for the elevation of the colored race. The University has also been visited by two delegates of the Synod of Virginia, appointed for the purpose, who made a thorough study of the aims and facilities of the University and since then have spoken of it in the highest terms. One of them said to a friend, after his visit, "I not only tell you that I am highly delighted, but I gave me for the first time a thoroughly substantial hope for the colored race."

HARPER'S Monthly for February is rich in good things, especially of illustrated articles. That on the Percheron and Norman horse is of practical value to farmers interested in the improvement of his working stock, and suggests "a new field encouraging to all who are prepared to embark in a moderate way in the breeding of large, superior farm and city cart and truck horses." "Washington as a "Burgher," 'Foreign Tips," "A Visit to the Republic of San Marinio," and "Grubstakes and Millions,"—a description of the mining city of Leadville, and other mushroom growths of the rich treasure regions of the Rocky Mountains, are among the most interesting articles.

THE enterprising firm of McMenamin & Co., Hampton, fruit and oyster packers, are putting upon the market a very delicious article of food in the way of Pickled Oysters. It is claimed that nothing but the purest spices and the best vinegar is used in their preparation, and no doubt their superior quality and neat appearance will give them a quick and ready sale with increased demand.

As the January edition was exhausted before the paper had been sent to all the donors of cash and material for our Relief Fund, to make up losses by the burning of Academic Hall, the list is reprinted with such corrections as we have been able to make.

NO LAW FOR THE INDIANS.

At the late meetiag of the American Missionary Association in Chicago, Gen. J. B. Leake read a very full historical paper on the "Necessity of the Protection of Law for the Indian." We can only make a short extract:

"We have given him no redress for civil wrongs. Against a wrong committed by a fellow Indian he has no redress whatever, and we have never pretended to give him any. White men are stealing, openly, from all reservations cattle and horses, or whatever they care to take, without interference or remedy.

There is no law to punish crime of any kind committed by one Indian against another. We have provided that the criminal laws of the United States shall be extended over the Indian country in cases where crime is committed by na Indian against a white man, or by a white man against an Indian. As the the trial must be in the nearest Federal Court, with a jury of white men, the practical application of the law has been that an Indian is always convicted, and the white man always acquitted. Section 34, of the law of 1834, reads: "So much of the law of the United States as provides for the punishment of crimes shall be in force in the Indian country. Provided, the same shall not extend to crimes committed by one Indian against the person or property of another Indian." That condition of affairs is not an accident or an oversight. The law is still in force. The attention of Congress has been called to the fearful condition of the Indian in this regard in nearly every report of agent, superintendent, commissioner and Secretary of the Interior for many years. In 1868 the Commissioner asked "that there be given to proper courts jurisdiction over cases where crimes are committed by Indians against one another." In every one since, in some form, the appeal is renewed, but the high carnival of crime goes on."

A SET OF SCHOLARSHIP LETTERS.

Perhaps most of our friends know that a "Hampton schoolarship" is a contribution of $70 for a year—$210 for the course—which meets the cost of a student's schooling. His board and lodging he pays for himself, $10 per month, paid, on the average, half in cash and half in labor. He is thus not pauperized, but helped where he most needs help, after making all the honest exertion he can. He can feel that he is working his way up, and his head and hands are trained at the same time. Without these contributions of scholarships, or something equivalent, the school could not continue. In return for them, each student is required once every year to write a letter to the giver of a scholarship, doing his best. The first year he is expected to give an account of his life; after that, of his vacation experience, purposes, or thoughts.

These letters form as good an illustration of the student's progress as can be had. As such, we give a set of them to our readers this month, one from each class. The letters published are selected for their intrinsic interest, while they are from average representatives of the classes, in attendance and ability. They are given here, as they are sent to the contributors—without correction.

FROM AN INDIAN STUDENT.

This young man is nineteen years old, a Yanctonnai Sioux from Yankton Agency, Dakota. He entered the school a year ago, and understood some English and could read in Dakota when he came. He is in the preparatory class.

Dear friend

I want to tell you how I was. I am getting along very well, and like to go to school. I came here Nov 6, 1878 and I try to be white mans way when I was at Dakota Territory I do not know anything. But I came here in Hampton school and I know something white mans do. And when I was 15 years old I go to school at St. Paul's School and I know something, but I was there one year so I could not understand my lesson and not learn talk English but I want to know speak English so I came here this Normal School again. But I do not understand some of the words

because too hard for me but I will trying to talk English and try to be good man, I know some of the white mans way, and I want to know some more so when I get my home I will try to teach my people thats way I want to do. My people they are great deal speak English and they have cut hair and just like white man some are minister and are Deacon and some are teachers my brother he is minister. Last summer he was at Philadelphia and speak English very well. But he is now Dakota Territory on Missouri river the town names Yankton Agesey D. T. thats place I was born and my Father dead about 8 years ago. My mother life. tho Indian people some are good those remember the Church but some are bad those did not remember the Church and did not like to go to school and did not like to be try good man and not work. But they are painting his face and all the time dance and do not know what are doing they are learning just only dance and did not understand anything. I know all my people but some good and some are bad, some like work and some are do not like the work. I like to work and go to school and I will like to obey my teacher and I want to be a good mas. My people some are who good those cut hair and put on American cloth and work. some are black smith and some are carpenter shop and so on. and some Indian have great cows and horses and sheep and wagon and those who are good all time work and like to work but some are did not like work

Dear friend I can not long write so I must stop writing

one of yours truly friend

W——.

FROM THE PREPARATORY CLASS.

For a man of thirty, a minister, to enter the lowest class of beginners in a large school, takes some moral courage, and shows a touching desire to fit himself for his position. We have had several such students at Hampton. Two are now in the preparatory class, one of whom, not long entered, writes as follows:

HAMPTON, VA.

My dear friend:—

I was requested by General Armstrong to write you a scholarship letter, dear friend touching my condition. I am about 30 years of age and was born and raze in the Town call, Washington, North Carolina. I was a slava until the late war frao me. I profess religion about Twelve years ago and sence that time, I have lived a conesant christian Man. My hole desire is to Educate myself for the Lord Vinard. I dont want any higher position in life than to be an amble Christian minister. my object is not for any other purposus. my occupation in life was farming. it is not my object in life to quit farming. But to improve my Brancs for a more higher purpose and to due so I have work and got some money to put me in school about Two years, and inquiring of a school that I could enter, I was told that the Hampton Normal Agricultural institute was the place for me and I came to the school as soon as I could make it convesant and I arrived at the school on the 9th day of January 1879, and was well pleased with the school, and if the Lord will help me and gave me health and straggth, and will be with me, I will not stop school until I finish my scause of study, and so far as my charneter it good and has been so untill now, and I hope it will prove so at the school.

I huvo now father Living, my mother are yet Living I had Two Brothers who died in the United States Armey, my oldest brother he long to first North Carolina Reagment and the next one he long to the United Navay department he join at Neworleans. My oldest brother died at Fortost Monroe, and scence the younger join the Navay at Neworleass, we hava not heard anything from him scence.

So far as myself I am a poor Colored Mas, and if our white Christian friend North will help me and all our Colored People we will be abla to help our selea. I myself give the prayer to the white Christian Missionary people in the Northern States for the improvment of Negro Race in the Southern States.

Know more at present from your friend in Christ.

B——.

FROM A JUNIOR.

Dear Friend,

I am regnested to writh a letter of my past scholarship. I was born in Smithvilla Charlotte cousty Virginia, in the year 1858. My parenta lived with a man by the name of Mr. S., whom he owned as slaves until the end of June. Mr. S. is a farmer and my emancipation. Mr. S. is a farmer and my father is still living with him now acting as head manager on the farm, he is about fifty years of age. My Mother also lives with the same man, and she is about fifty years of age, and she has five living children, three boys and two girls, all of which can read and write some. I have a brother which was graduated at the Hampton Normal School in 1879 and is now teaching school in Charlotte Co. Va. Mr. S. is a very good man to the colored people in Charlotte. After the emancipation, he was the first man who had a schoolhouse built on his farm, in 1868, for the benefit of edueating the colored children. In 1869, the quakers sent a colored teacher from Philadelphia by the name of J. W. Cromwell, who taught one session, he was the first teacher I ever went in my life. I could read a little and count a hundred before I went to school to Mr. Cromwell. My father could read and write very well, though he had never been to school one day in his life; and when I was indeed. I use to be sorry when night came; he use to call me over night, you Richard, you boy, can you count that husdred? no sir. ha would then call me and crack my head, and commence to make me count for him, and kept on in that way until he learnt me how to count a hundred. I use to get very mad with him for it but I came to be glad afterwards, he use to sit down every night and talk with me; boy you better learn how to count, people will cheat you to death, boy. you better learn how to read and write, there is a time coming that you will feel the need of it, and will come to be sorry for it if you don't learn, and kept on after me until he got me interested into it, and then I use to get or take an active part in getting my books every night, and would try to learn how to read and write, at last I got so that I could read and write very well. After I graw to be a good size boy, my old mistress took me in the house to wait on her, and she used to learn me how to read. And when school opened in 1869, I knaw enough to read very well in National first reader and could add numbers very well. My second teacher also was from Philadelphia by the name of Henry Boyer, and he was a good teacher. My third teacher was a self made man by the name of W. J. Johnson of my own town. And my fourth teacher was a graduate of Hampton Normal School, who was a very good teacher, and my last teacher was from South America by the name of Lambert McKenzia a very good teacher indeed. After I went to school to Mr. McKenzie five months during the year 1878, I thought then that I was advanced enough to go to some Institute. I had a great desire to go to the Hampton Institute, as I had heard so much talk about it, and that it was one of the most cheapest school in the United States. Father told me that he was not able to send both of us to a high school, and tried to persuade me out of the notion of going to any high school, and that my health was too delicate to go to Hampton. I said Father I know that my health is very bad, but I will depend on the providence to preserve my health, and of course his loving kindness will watch over me just as much as it will at home. So I took courage depending on the Lord for my success, and remembering the little post when it says, where there is a will there is a way. So I went to work trying to live as economacal or as saving as I could, though wages were very low, but nevertheless, out of a little I made out to save a little. So I went and volunteered without Father's consent, and bought me a trunk, and some clothes, and of course I had some money left, which after Father found out that I was determined to go to Hampton, he told me that he would lend me what money I lacked of paying my school bills this year. I have made up my mind to get an education if it is any way possible, and then I intend to go out into the world, to instruct those who are in the dark, and to do all the good I can towards building up my race, for I find a great need and lack of education even here among some who profess to have some education and how much more it is needed among those who dont know a from b nor a five dollar note from one. Should I be successful in trying to acquire an education, I shall endeavor to try and approve of it and put it to a good use in trying to do all the good I can, in every place I can, everywhere I can, at all the times I can, and to everybody I can.

Most respectfully submitted,

Yours very truly, M.

FROM THE MIDDLE CLASS.

Dear Friend

This is the third time I have had the pleasure of writing a letter of thanks to you. I have been here three terms, I am now in the middle class. I entered the Preparatory class when I came and have been successful so far in being promoted. Perhaps it would interest you to know how I spent my vacation at Hampton. School closed on the thirteenth of June. After making arrangements with Miss M. to stay all summer, I went home and spent a week, they were all very glad to see me. I came back on the twenty-fourth of June, and began my work which was in the laundry.

There were six other girls besides myself, we had quite a pleasant time. We had about one hundred and ten boys, including the Indians, to wash and iron for, which was not an easy job in summer. Every Monday morning early, I washed my own clothes and got through in time for breakfast at six oclock. After breakfast we would wash till the bell rang for dinner; after dinner the bell rang again announcing the time for work; we worked then till supper time. We finished washing Tuesday, and began ironing on Wednesday, and finished that Thursday. On Friday we darned the boys socks, and fixed up their clothes in a closet in the laundry, ready for them on Saturday.

On Sundays we were allowed to visit the churches in the vicinity; but had to be back in time for Sunday school at eleven oclock. At twelve fifteen we had dinner, after which we could go to church if we wanted to, as there was service at all the churches.

But it was so hot and dusty hardly any one cared to go. Every evening after supper, we went directly from the dining room to the chapel for prayers. On Sunday evening after prayers, we remained for a bible lesson given by Mr. R., which was very interesting and instructive. Mr. R. would read the lessos, then we gave our ideas on it, after we were all through, then he explained. During the week we spent the evenings in sewing, reading, and studying. Early in summer Miss G., our matron, promised if we were real good, and things went on nicely, she would give us a picnic out at Shellbanks, and we should have a long drive. Shellbanks was given to the Institute, by some Northern friend for the Indians. It is a very pretty place, fronting on Back River. It is seven miles drive, and about fifteen by water from here.

We started about half after eight o'clock and reached there at ten; the day was intensely hot and on account of the heavy load, we had to drive very slowly. The first thing attracted my attention was the tents. These were used by the Indian boys that were camping out there for a month. Some of them had blankets around them others sheets. I imagined they looked as they did in Indian Territory. They were amusing themselves in every way and seemed to be very happy. Some were fishing, others rowing, and still others playing a game which I think you would like to know something about. They had a large piece of canvas spread on the grass, with about ten boys sitting in a circle. Five of them had long sticks in their hands, and one had eight short sticks. They had three moccasins in the centre of the circle, and while the others sat still and looked on, one would put a bead under one of these slippers, he did it in such a way, that neither of the five boys could tell which one of the slippers it was under.

They then would begin to sing some funny song, which I did not understand. The five boys who had the long sticks, would strike hard on the ground, and then they would begin and turn over the slippers. Each boy turned a slipper in order, till they turned the one that had the bead under it, then he would win some of the short sticks. Then they would begin all over again. In this way they amused themselves for hours; it was quite a curiosity for us. We were called to dinner about two oclock. Some of us sat on the ground, others on low benches. We ate heartily of everything especially watermelons. After dinner we had a sail near Chesapeake Bay. It was the best sail I ever witnessed, every one thought it was delightful. It was all the days of vacation this was the happiest to us. We continued our work till the first of October and then our time was up.

I am trying with all my might to be a senior next term, though I feel very doubtful about it now. Please dont think this uninteresting letter will pay you for your kindness to me, I dont feel like anything I could do would pay you; but by asking God's blessing on you, believing he will pay you, is all I can do.

Respectfully yours

G.

FROM A SENIOR.

Dear Friend

The time has again come when we are to write scholarship letters, which I cannot regret when I think of this fact, that almost none of us would be here, but for the philanthropy of our friends up North, who give the Seventy dollar scholarships. You will pardon me for being a little personal in this. This is my second year at Hampton; when I came I succeeded in entering the Middle Class, which was not I think discreditable considering that I had only gone to school a year and a half before. So you can imagine I had to study right much to be promoted. Now I cannot help thinking of the last day of school, when every one was grave and solemn; a breathless silence prevailed as we assembled to hear the classes for the next session. Only half of my class was promoted, so you can see that our anxieties were not unfounded. Near the beginning of last term I obtained employment in the knitting room agreeing to stay during the summer which I did. About a hundred and fifty remained during the vacation; Our time was spent pleasantly, evening prayers were kept up also Sabbath School on Sundays. After dinner we could go to church in Hampton. Sometimes the minister from H. would come over and preach for us. In July we had a picnic out to the Shell farm five or six miles from here, all had a good time sailing, rowing, playing different games, and lastly but not least the splendid dinner. About the last of the vacation I was borne my health being bad, returning however after a few weeks to resume my studies. I am not sure that it would not be interesting to you to know some of the things, I think, my race need most. It may have been said that the Negro is lazy, this I deny; but acknowledge some faults as had. The colored man will work but he does not know how to take care of what he has earned. Yet he does the most natural thing for him under the circumstances. Spends his money for whiskey and tobacco in imitation of his superiors the Whites. Another thing is this credit system which prevails in the South; a man goes to a grocery gets what he wants and has it charged to him; keeps no account is often charged very high interest or if his creditor is not honest he, the Negro, is cheated out of a great part of his hard earnings. Against immorality and intemperance I have steadily set my face and will remain so, but none the less against ignorance.

What our people need are good men and women for teachers, who have the interes of the race at heart. Those who will work for more than their salaries and do not scorn to work with their hands, thus giving them both precept and example. Such are the most of the graduates out from Hampton. Doubtless you have heard all about the burning of the Academic building but permit me to add this; in the midst of the work and excitement I looked up and saw what was an hour before my room falling in the flames; then I felt a little curious.

I hope that you will not expect too much of me yet I feel that your desire would not be accomplished if I graduated and did nothing for the advancement of others. For thus only half your object would be carried out. My purpose is to do all I can for my people. If the colored people had education and wealth, I believe their political and social rights would be acknowledged.

With many thanks for your generosity toward me, I am

Respectfully yours

W.

LETTERS FROM HAMPTON GRADUATES.

AFRAID OF SANTA CLAUS THE FIRST

ar who gave them to him. I must say I never saw happier children. I only wish you could see them in one of their class. I know you

tle children are looking very different now since I have clothed them in the things that you sent some time ago. They are now read-

come, for it seems like they care for their children's future which they should do, and I really believe they do.

LETTERS FROM HAMPTON GRADUATES.

AFRAID OF SANTA CLAUS. THE FIRST TASTE OF A CRACKER. TOO FULL OF JOY TO TELL HIS MOTHER. UNSELFISH GRATITUDE. HUNTING SMALL GAME. A POLITICIAN IN SPITE OF HIMSELF. NIGHT MEETINGS IN THE MOUNTAINS. QUINCY MUD-PIE MAPS. A PLEASED AND PLEASANT SUPERINTENDENT. SENT HOME IN RAGS. SUCCESS IN A CITY SCHOOL.

A very generous and thoughtful friend of Hampton graduates, who has been plying Santa Claus, on a liberal scale, in some of their little school-rooms, kindly allows us to share a reflection of the pleasure he must have taken in their grateful acknowledgments and simply-drawn pictures of the little ones' delight.

——, VA., *Dec.* 25*th*, 1879.

Dear friend:

Your letter and card are both at hand. The barrel is come also. The Christmas Tree is over at last. The children were pleased and happy. Each child got candy and a present; the little boys who got the caps are as proud as they can be. The people never saw, nor ever had anything like this around here, and as it was new, each tried to get a peep at it. There were about two hundred and fifty people in the house, and I don't know how many outside. Many white people were there and enjoyed it very much. The children did very well. The pieces were spoken excellently, and the singing was very good.

At the end the children were very much surprised to see Santa Claus come in, and many crawled under benches and staid until he was gone.

I don't suppose that they are over their fright yet. I had a few fireworks, which gave them very much pleasure. On the whole we had a delightful Christmas eve.

Hoping that you had a Merry Christmas and Happy New Year, I am, as ever,

Yours gratefully, P.

——, VA., *Nos.* 12*th*, 1879.

Kind Friend:

I wrote you a card, Saturday, Nov. 8th, stating to you the arrival of your most noble gifts. I went to ——, Saturday, Nov. 8th, and received a barrel of books. Monday, Nov. 10th, I divided the crackers among the children, I never saw children more delighted in all my life. It was such a surprise to them as well as a treat. A great number of them had never seen a cracker. You could hear their little voices from all parts of the room crying out, "Thank you." The last I saw of the children on Monday evening, their baskets, hands and mouths were filled with crackers, from the feast. I found my school increased as much as eight or nine pupils Tuesday. The children at —— have never had advantages in the way of help as children elsewhere. Country children, I find, appreciate what is given them a great deal more than town children. Tuesday Nov. 11th the box of clothing was brought to me. Wednesday, Nov. 12th a great distribution among the children. I never saw such merry children in my life. The school numbered twenty-five pupils the day I gave the things out. I had enough to give all around and then had a great many waists left. I shall give them to the children until they are all gone. My school will be much larger in a few days. The children have been kept back on account of not being clad. I wish you could see and know how much the children appreciate what you send to them. The people about here are quite industrious but have never been helped like others. My pupils are very apt. Those drawing cards that you sent, some of the children are learning to draw beautifully from. I will send you a copy of their drawing before Christmas. They are so anxious for you to see some of their work, since I have told them about you. I have a splendid school; no right to grumble. My books are splendid, and oh! my writing map, I do think it is beautiful! I would not take anything for it. I think my shawl is beautiful. I always wanted one like it.

I have a good boarding place. I have the pleasure, this winter, of boarding with the mother of one of the Hampton graduates. N—— is in New York studying for a doctor. He is working his way through. He expects to enter Buffalo College next Fall. His mother feels very proud of him. I also have the pleasure of teaching within five miles of another Hampton Graduate. It affords me so much pleasure to be so near a Hampton student. I find it quite a pleasure to have some one to converse with about Hampton. I have a great number of small children. A few large girls.

I gave the larger girls some of those aprons. I never saw little girl's dresses fit any prettier in my life. They were just the right size for the little girls. The suits for the little boys fitted splendidly, and they were so very nice. The parents were as glad as the children. One little boy carried his suit home, and he was so overjoyed that he was not able to tell his mother when gave them to him. I must say I never saw happier children. I only wish you could see them in one of their glees. I know you would enjoy it. I have not written you half of the children's capers, because I cannot. You can see from what little I have said that your gifts are very highly appreciated and much needed.

We have what you might call poor people and children at this place. It is one of the offcast places. A place that has not been much cared for. I think I can do more good here than any place I know of.

Your very grateful friend, M.

UNSELFISH GRATITUDE.

The pleasurs of giving is sometimes marred by a lack or npparent lack of appreciation and gratitude. Though the parer the benevolence the less anxiety there is perhnps for a response. The loss from such a lack is greatest to the receiver. There can scarcely be a sweeter example of unselfish gratitude than was shown by these poor little ones who finding there were more children than gifts, helped cheerfully to find the needy ones, and shouted their thanks as loudly as those who got most.

——— Co., Mn., *Dec.* 12*th*, 1879.

Kind Sir:

I have received your letter (dated 28th Nov.,) the clothing and the new supply of books etc., for which I am very thankful. I distributed the clothing last Friday; had nearly fifty scholars present. I notified them on Thursday that I would have something pretty to show them on Friday, and be sure to come out on that day. I did not tell them what it was I had to show. So Friday morning they came out with hearts big with anxiety, to know what I had to show them. After the noon recess I told them that Mr. —— had sent them some clothing, and I was now going to distribute them. At that moment they commenced to shout and clap their hands. and before I could quiot them I had to threaten them with punishment. Before commencing to distribute, I told them, as I had not enough to go round, I would give to those most in need. As I took up piece by piece they seemed to take pleasure in helping me find the needy ones, and those who received but little shouted thanks just as loudly as those who received more than themselves. Sir, there is no end to the thanks the children and people send you for the clothing. And in reason many of them have a great right, for their children were almost naked, and they were not able to buy clothing for them.

I feel truly grateful for the new supply of books, etc., the maps were very much needed. I neglected to say aoything about the crackers in my last letter. I failed not to do with them as you instructed me,—"To eat freely and give freely."

I am glad to receive your papers every week.

I am yours, B.

A SCARED STUMP SPEAKER.

——, VA., *Dec.* 24*th*, '79.

Dear Friend:

I passed a satisfactory examination and opened school in a house large enough to accommodate fifty, with seven long benches and one long desk. During the first week I had twelve little scholars that had never been within the walls of a school house before. I went about the neighborhood hunting up more children. While going along the road up a steep mountain, I met five little boys and girls who were chestnut hunting. I got quite close to them before they saw me. On hearing my foot strike a large stone which lay in the road, they lifted their heads, gazed at me, then darted through the wood like so many wild turkeys. I called to them but in vain. They kept on running. I continued my walk until I reached an old log hut which seemed to have been built in '01. "Who lives here?" said I with a loud voice, though it seemed impossible for any body to live in such a place. I heard a weak voice say, "Come in." I did so, and saw an old women whose head had become white, and figure half bent with age sitting on an old bed made of split wood with a few ragged quilts spread thereon. I asked if there were any children about there that were large enough to enter school. With a feeble voice she said, "There's a good many but none dat seemed so dear to me was sold before de war." "Is your husband living?" I asked:

"Yes, and he's done gone to de mill to get some meal for dinner and him like me, am getting mighty weak. We aint long for dis world." I had fifty cents and I gave it to her. She thanked me and said "God will bless you for dis." I bade her good bye and told her I would come again soon. I reached the top of the mountain and entered another cabin which had two rooms in which two families were living. The lower room had only three plank representing the floor and they were placed near the fire-place. The remaining part was clay. They were glad to hear me say the school bad begun. "We have got seven that'a big enough to go to school and will send them next week." They came and as they had never been to school before, they spent their time in looking about the room. Dear friend, those little children are looking very different now since I have clothed them in the things that you sent some time ago. They are now reading in the First Reader. I, with them, thank you for what you have done for us.

Before the election the gentlemen used to come very often to my school and make some very interesting remarks to the scholars and me, and said they were going to furnish us with everything that was needful after the election. They asked me my opinion of the State debt. I told them I believed firmly all honest debts should be paid. "That is right and you are of the same opinion that we are." They left, laughing quietly among themselves and as they passed the broken window, I heard one say, "We have him all right." After a few days there was a political meetiog held at this Station, and Mr. ——— asked me to attend. I did so, and heard the debt question argued both ways. After the white speakers had finished he called on me to say a few words in behalf of the payment of the debt. I told him I was not a politician and I was rather too young to be in that business. They clustered around me and said, "you must say something to influence the rest of the colored people." I being from home and far from the protection of law or friends, was forced to take my place on the stump. While trembling with fear, a white man brought me a letter from Hon. Fred. Douglas who was in favor of the debt being paid. I read the letter to the colored men and then I said, "my colored friends: I, like Fred. Douglas, believe the debt should be paid, but what race should pay it is a question that should be decided amid yourselves." So I leave you to think and vote for yourselves. My speech was short. There have been a great many colored families thrown out of doors, because they did not vote to suit their employers. Every man, woman and child (colored) who is hired out, is hired by the year. Let the time come as it may they are obliged to stand it, or else lose their year's labor. An able-bodied man gets from $100.00 to $110 00 per year. A number one woman gets $40.00 to $48.00 per year, which they receive in two and three dollar orders. The most of them do not see a cent in cash. A widow, mother of five children, and a first-class seamstress gets $1.50 per week for running a machine. Four of her children come to my school and are learning very fast.

A NIGHT MEETING IN THE MOUNTAIN.

This meeting is held every Wednesday and Sunday night. They meet about half-past eight, after which one of them starts a "little shouting praise," as they call it, which lasts until 12. The most of the women come in and stand with men's hats on. They laugh and whisper during services. I saw, the other night, several of them who had blacked their mouths with charcoal pull some mud from the cracks of the house of which it was the chinking, and strike a man who had bowed in solemn prayer to God. You see there is a great need of teachers and preachers in this section of the Blue Ridge Mountains.

I am now the only one from the Hampton Institute teaching in this County with any such school furniture as was given to me by a Boston friend.

Hoping to hear from you when at your leisure, I am Sir, Your obt. servant, R.

A PLEASED SUPERINTENDENT.

——, VA. *Dec.* 25*th*, '79.

Kind Friend:

The box has been received and contents distributed; it came Tuesday. I came here Tuesday afternoon, with a horse and wagon, and took it to Miss ———'s boarding place, opened it and divided it as directed. I then went on with my half of the articles Wednesday afternoon. After I closed for Christmas, I gave the various articles to the children, their hearts were filled with gladness and thankfulness for the nice presents. I saw some of them this morning dressed in their nice little shawls. I gave the little suit of black clothes to a little boy whose father is dead. He did not know his letters when he first came to me, but he is doing very well now. The boys were very glad of the under shirts. Miss——— had a Christmas tree at her school house to-day; the presents from you, and some from Miss———, made it look very pretty, and her scholars enjoyed the presents very much. I closed my school yesterday, and shall open again next Monday. Miss ——— will do the same. My school has increased to seventy five pupils. I had a pleasant visit from the Superintendent, Col. ———, a few days ago; he was very much pleased with my school and said everything had the appearance of pregress.

Very truly yours, S.

MUD-PIE MAPS.

——, VA., *Dec.* 8*th*, 1879.

My dear Friend:

I am just from my school-room, where I have been all day with twenty-five bright little faces, and sparkling eyes, that I delight to meet every morning. I wish it were possible for you to be present some day, at recitation, so you might see how much interest each child shows; I think you would be pleased and even astonished to see so much interest from children so young.

My school still increases. The narents are showing more interest than they have ever done before, they come in to visit us quite frequently; that seems to encourage the children more and I am sure I feel encouraged to have them come, for it seems like they care for their children's future which they should do, and I really believe they do.

Our Teacher's Inst. is now over; it was not very interesting this year. I read a letter from Gen. Armstrong, to our Supt., expressing his regret at not being able to attend the Institute, on account of the fire.

I can use Monroe's Chart and Primers, Goodrich's Child History, Warren's Geography and the copy-books that you sent me. They use McGuffey's Readers here. I could not use the others as text-books, but I can teach from them on the black-board, which I do from Green's Introduction, and Hagar's Arithmetic.

I have not had a map since I have been teaching Geography; it is inconvenient to be without them too, so I have had to use sand for a map, having the children make the different divisions of land of it, having the table on which it rests answer for the water; they like to work in the sand, when I want my map (sand) arranged.

Hoping to hear from you again, I am,

Yours truly, L.

THE BRIGHT SIDE.

The young man who sends the following letter is carrying thought into his observation and work. Such workers are valuable.

MD., *January* 19, 1880.

Dear General:—

I would have written you an account of my work before now, but being busily engaged with a very large school have not found time to do so. Many things might be spoken of in connection with this field of labor. By reading the letters in the SOUTHERN WORKMAN I find some other student has told you exactly my experience. I shall endeavor to show the bright side of the picture, and by "reading between the lines" you will observe the dork side.

In '77, when first I came to Moryland, my work was begun in an old log church in the back woods, near a place called Poplor Springs. There I taught seven months. In September, '78, I opened a school at Elkridge Landing, ueor Relay Station. Spent nine months there. Now 1880 finds me at ———, teaching n large and flourishing school. Step by step have I advanced.

The last school was opened on November 24th in the colored church. On January 2d we moved into a large, new schoolhouse, which is filled every day with bright and happy children. This new building is situated in the suburbs of the city. It is about 50 by 28 feet, and is the best public schoolhouse in the county; is provided with an elegant blackboard running the whole length of the room, and upright desks with ink-wells and movable seats which will conveniently seat two, while three little ones can sit on them with ease. It contains also a large self-feeding stove. Land and school-house cost upwards of $500. This is for colored children in the democratic State of Maryland, in whose legislature the vote was unanimous against the ratification of the 13th, 14th and 15th Amendments. In the face of this, the whites have no school-house of their own, but rent an old Quaker church in which colored children were formerly taught. When I look at such changes as these and examine their meaning, they astonish me.

When I came here, it did seem as though the "harvest" was too "great" for me. Out in the country I had succeeded, but could I here in the city? What made it worse, white teachers had been teaching the school, and some of the colored people thought it best to have a colored teacher. Whether I could succeed, was more a question of experiment than anything else. To prove the matter, after considering it a while, I went to work, and have now been engaged more than six weeks. My work in the log church at Poplar Springs only trained me for the responsible position which I now hold. "He that humbleth himself shall be exalted" has been exemplified in my case. The schoolhouse is crowded to its utmost capecity. Some I have been compelled to turn away. Wherever I go I try by preeept and exsmple to do my duty. How to teach to the best advantage, I make a study, and by so doing my work has been blessed beyond measure. Exhort the graduates, in your Sunday night "talks," to be diligent and *study* their work after leaving Hampton, as they do hook-keeping or algebra; for they will find teaching our race more difficult than either of those studies. "Wise as serpents and harmless as doves" is wholesome doctrine for every student to inculcate. Sometimes one gets discouraged when he works so hard and is not properly rewarded. This is natural. I trust I shall realize something by this year's work.

Now nothing would please me so much as to have yon visit my school. Your presence here would not only benefit me, but increase your knowledge of the great and good work Hampton students are doing in Maryland.

I could say more, but think I have said enough.

I am, very truly yours, D.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

Our record of incidents is supplied by various hands this month, and should therefore have a varied interest. The first contribution is from the Rev. Mr. Gravatt, rector of St. John's Church, Hampton, who has special care of the Indians from the Episcopal Mission stations.

AN EXAMPLE TO THE FLOCK.

"No incidents or facts in Indian life are of greater interest than those which meet the eye of the religious teacher. Their eagerness to learn about the 'good way,' the brightness of their faces when truth is grasped, the power of truth revealed in its freshness to them, and their affection for those who minister to them in holy things, are truly refreshing, and suffice for any amount of labor. Their reverence for things sacred is most exemplary, even in this Christian land where, from life-long familiarity, *we* fail to appreciate privileges, and learn to be unmindful of them. It will no doubt surprise persons unacquainted with the Indians here to know of some of their civilized doings. If absent from Sunday-school or church, they write a note explaining their absence,—such as the following:

'NORMAL SCHOOL, HAMPTON, VA., *Dec.* 28, 1879.

Rev. J. J. Gravatt:—

I couldent to church this morning. I guard to-day. Your truly friend,

GEORGE BUSHOTTEN.'

Where is the white Sunday-school or congregation that does this?

CHRISTMAS.

"I will mention one incident more of an interesting character. Christmas, from the 'glad tidings' it brings, is always a bright and happy festival, but the last was specially so at Hampton. Notice had been given of a Christmas tree for the Sunday-school, which many of the Indians attend. A large and overflowing congregation crowded the sacred courts of the ancient church—possibly 220 years old. A sweet and bright service of Christmas carols began. As was beautifully appropriate, the Indians sang a carol and the 'Gloria Patri' in Dakota, while one of their number played the organ. The whole congregation rose and stood while they caroled joyfully in their native tongue 'for the coming of Christianity,' and prayed 'a gladsome Christmas for all good Christian men.' Surely no one present can soon forget the impression made. When the gifts were distributed, the Indians came forward as their names were called to receive them, having been instructed that these gifts were made because God had given us 'His unspeakable gift,' and that 'God sent not His Son into the world to condemn the world but that the world through Him might be saved." J. J. G.

REPORT FROM THE WORKSHOP.

Mr. Starkweather, in charge of the Indians' mechanical training in the various trades, gives the following report from the workshop:

"There is still a marked improvement in the industrial features of the Indians' training, due apparently to the system of compensation recently adopted. Hardly any of their money seems to be spent for trifles. All who contracted debts with me paid promptly. The first Saturday after pay-day many of them were to be seen in town, purchasing articles of clothing. They went from store to store and compared prices and goods most systematically. One asked to be excused early from the shop to attend to matters of his own for which he was to receive money. Permission was given, but he was informed that many repetitions of the favor would affect his month's pay. Upon learning this he could not be induced to go. The matter was fully discussed among the boys, and, since then, I am almost constantly importuned with 'want work.'

"One who was put in charge of several others some weeks ago, with a promise of extra pay if he did well, sent me a note yesterday—written for him by one of the more advanced in English—inquiring how much he could count upon, and when he would receive it. It took the interpreter to explain the nature of the promise fully. He was left to name the amount he thought due him for his extra services, and was assured that it would forthwith be paid. He walked slowly away, with an abashed smile, not venturing to claim a cent.

"The feeling of manhood which animates them as they carefully count over the change, is most noticeable. When any one of them is over ostentatious in rattling his coins, he is sure to be greeted on some side with

"'*Leelah mahza shah!*'—(too much copper metal).

"On the whole, I can think of nothing better calculated to develop them than this practical way of teaching some of life's most indispensable lessons. G. B. S."

THE GIRLS.

Miss Amelia Perry, a Hampton graduate, who for the last seven months has been a valuable assistant in the practical instruction and care of the Indian girls, is about leaving us to teach in the public school in Norfolk. Another graduate of the same class will take her place. She takes with her the very friendly esteem of all connected with the school. The Indian girls had become much attached to her and greatly regret her going. Little Sarah wrote this sentiment in her album, quite unaided:—

"Dear teacher Miss Perry

"I will remember you always. I want you to take care of us all the time. I dont want any body but you. I will cry when you go to teacher some body elee please come to see us again

"Sarah Walker. Fort Berthold Dakota."

Miss Perry says: "If I could give my thoughts to it now, I could remember many interesting little incidents. I have been teaching the new girls to wash and iron their clothes. Some of them did not like to do it at all. I have learned a good many of their words and expressions, and signs, and I know pretty well what they are saying often. And what I don't understand, those who can talk English interpret to me. Some of them did not want to learn. They said it was no good, too much work; at their home they didn't do so, they wore their clothes a long time and then threw them away. I told them we wash our clothes often and mend the holes in them and that makes them last much longer, and they feel much nicer when they are clean. I please tell me again about when you were a little girl and chewed *tobacco*.'"

TEMPERANCE VOLUNTEERS.

Mr. Robbins, who usually compiles these "Incidents," has but just returned from a vacation trip. He contributes the following:—

"The first evening I had the Indian boys together after my return, I talked to them of the wrong and evil results of intemperance. I tried to make it as plain as possible to them, and I had in mind especially one or two of them who had been tempted to drink, and had spent some of their money in liquor. I was greatly surprised the next morning to receive the following little note signed by five of the boys, none of whom I had suspected of ever having taken a drop of liquor, and some of whom are among the very best and most reliable as well as most influential among the Indian students. I was very much pleased by this evidence of their tenderness of conscience and thoughtfulness. They are boys of strong character, and I believe their voluntary pledge will be faithfully kept:

"'*Jan.* 19, 1880.

"'Mr. Robbins,

"'*Dear Sir*:—

"'We are ashame to coma before thee, to acknowledge our great sin against Heaven and the rules of the achool. which wa are now indeed very sorry, and *wish* wa hadn't done so. But we all *agree* that hereafter, we shall never touch or taste the intoxicating liquor as long as we live. So we humbly *beg* thee *forgiveness*, and we shall *remember* and KEEP this *agreement* as long we shall live, for we know now that the "way of sin is sorrow forever."

"'Yours Very Respectfully

"'——— ———.'"

THE PROCESSION OF ALL NATIONS.

On Christmas night, the students were entertained with a grand procession of all nations—the principal countries and tribes of Europe, Asia, Africa, Polynesia, and North and South America, represented by nearly a hundred from the school itself, which, as its visitors know, can supply all shades and types of complexion and features. All the costumes were accurate, though most of them home-made, and the spectacle was very beautiful and instructive. The Indians, as might be expected, were a valuable addition to the forces. Some of them had brought handsome articles of Indian dress with them, beaded moccasins and dresses, leggins embroidered with porcupine quills, bows and arrows, etc. The others had no difficulty in making up for the occasion, with the help of blankets, sheets, and red flannel; while the "Koranic" decorative department was freely drawn on for war paint. The effects were startling, and when the grand march of the nations closed with an Indian war dance, some tears were expressed as to the danger of giving the wild nature a taste of its old wildness. Those who had most to do with the Indians had least fear, however, and the result justified their confidence. The dance was intensely enjoyed, and the whole spectacle heartily entered into, but it was evidently quite understood as a spectacle only. Witticisms were not wanting, and grave declarations,—"I big chief now—no more white man's dress. I come to school to-morrow this way;" but the next day found them clothed and in their right mind as usual. One of their teachers, struck with the change in their appearance, held out her hand with a smile and said, "I'm glad to see you back again, boys." A quick, responsive laugh showed their full appreciation both of the humor of the thing and its graver significance. This quick sense of humor, so often a saving element in character, is a marked characteristic of the Indians. With it they show a corresponding sense of the fitness of things, and power of discrimination, with mental quickness and shrewdness in other directions. H. W. L.

ZULU CHURCH AND SCHOOL-HOUSE.

THE ZULUS.

A year or two ago we could read about the Zulus only in books and missionary magazines, but now we may read about them in almost every daily paper. The war between this tribe of Africans and the English has called attention from all parts of the world, and many are asking who these people are who can resist the British forces so successfully.

There are three native races inhabiting South Africa: the Bushmen, the Hottentots, and the Kaffirs. The Zulus belong to the Kaffir tribe, and they are sometimes called Kaffir-Zulus. They occupy a region in the south-east part of Africa, including the province of Natal and the territory north of it. Natal is now an English colony, having been made such in 1843, and many English people have gone there to trade and to live. But before these colonists went to Natal, missionaries from America had begun to preach the gospel to the degraded natives. This was in 1835. The Zulus, as they were found, were degraded indeed. The men to be sure, had good forms and features; they were tall and quick in their motions. The earliest missionaries described them as wearing a few feathers upon the head, beads upon the neck and arms, a small piece of the skin of some animal about the loins, and otherwise without clothing. They are a strong, vigorous race, and very brave.

HOW THE HEATHEN ZULUS LIVE.

The ordinary native dwelling is called a "kraal." It looks like a large beehive, and is made of withes covered with thatch. Kraals are usually some eight or ten feet in diameter, and in the center are only four or five feet high, so that no man can stand erect in them. They have but one opening, about two feet high, which serves for door as well as for windows and chimney. If a Zulu has many wives, several of these kraals are built together in a circle, thus making a pen for the cattle. Women are always bought for wives in exchange for cattle, fathers selling their own daughters to the man who will give the most cows for them. The Zulus were never cannibals, but they are very little for human life. It is said that when a king dies his body is not allowed to touch the ground, and before he is buried several of his principal men are killed and their bodies are placed in the grave so that the king may rest upon them. Cetawayo, the present king of the wild Zulus, when the English protested against his slaying so many of his own people, sent back this message: "I do kill, but do not consider that I have done anything in the way of killing. I have not yet begun. I have yet to kill. It is the custom of our na-

EDUCATION IN THE SOUTH.—The great correct original rather than on their own faulty and bungling copies. The weariness becomes "one-ship"—or the having of a right which others are bound to respect.

have yet to kill. It is the custom of our nation," and I shall not depart from it."

WHAT THE GOSPEL HAS DONE FOR THE ZULUS.

Some one told Mr. Grout, one of the first missionaries who went to Africa, that he was going on a wild goose chase. After thirty years of work there he could say: "If I did, I caught my goose. To be sure it was ten years after the missionaries reached Natal before the first convert was received, but since then fifteen churches have been formed, and large numbers of Zulus have become Christians. They are changed in every respect,—new creatures all through,—with new hearts first, and then with new clothes, and new houses, and new habits.

The picture shows the chapel and a corner of the school house built by the Christian Zulus of Amanzimtote and is said to be a fair representation of the people as they may be seen at any ordinary gathering during the week.

A ZULU CHIEF AND PASTOR.

Our missionaries have sent home a photograph of the Rev. James Dube. The story of this man is remarkable. He was born in the interior, in a common kraal, where he lived as all Zulu children did, naked and untaught. He was the son of a chief, but when he was quite a boy, his mother fled with him towards the coast because a war had broken out between the tribes in the region where he lived. They came to one of the missionary stations, built a kraal, and there James cared for his mother. He soon became a Christian, and when he had gained an education he was made a teacher. After a while the people of his tribe came to get him away from the mission, offering him the place of chief, to which by birth he was entitled. He had only a small salary as teacher, and the chieftainship would have given him everything which an ordinary Zulu thinks worth having: cattle, wives, and authority. But he answered them: "I want you to take Christ for your chief, and then I will gladly be your servant and teach you about him." He seems to have acted on the command Jesus gave his disciples when he said. "He that is great among you, let him be as the younger; and he that is chief as he that doth serve." In 1870 Mr. Dube was ordained as pastor over the native church at Inanda, and one of our missionaries, writing about him at that time, says: "While he has renounced every rag and tatter of heathenism, he is still greatly respected by his people. They know him to be a true man, a wise man, inside man, inside a nobleman," He was a little over six feet high, of splendid form and feature, and though black as any negro, it was rare for a stranger to meet him without asking: "Who is that fine-looking man?" His preaching was said to be remarkably serious, earnest, and eloquent, so that he always deeply moved his hearers. But before he had time to show all that a Zulu could be or could do, God called him away from earth. He did in 1877. Well did one write about him at his death under the title "Ripened Fruit." There is more of such fruit to be gathered in Zululand. The English are sending thousands of men to South Africa to fight the Zulus. Can we not send a few more missionaries to save them?

Teacher's Table.

GEOGRAPHY SONG.

(This lively little song goes nicely to the air of "The King of the Cannibal Islands." Perhaps some others as suitable will suggest themselves to teachers.)

Oh, have you heard Geography sung?
For if you've not, its on my tongue,
About the Earth in the air that's hung,
All covered with green little islands.
Oceans, gulfs, and bays, and seas;
Channels and straits, sounds, if you please,
Great Archipelagoes, too, and all these
Are covered with green little islands.

All o'er the earth are water and land,
Beneath the ships or where we stand;
And far beyond the ocean strand
Are thousands of green little islands.
Continents and capes there are,
Isthmus and then peninsula,
Mountain and valley, and shore stretching far,
And thousands of green little islands.

All o'er the globe some circles are found;
From east to west they stretch around,
Some go from north to southern bound
Right over the green little islands.
Great equator, tropics two,
Latitude lines, longitude, too,
Cold polar circles, and all these go thro'
The thousands of green little islands.

Oh! don't you think 'tis pleasant to know
About the sea and the land just so,
And how the lines, the circles, go,
Right over the green little islands?
Now you hear how we can sing;
This is, to day, all we can bring.
Come again soon, and then you shall hear
The names of the green little islands.

MRS. M. H. SLADE.

EDUCATION IN THE SOUTH.—The great need of teachers and schools in the South is apparent from the following statistics from the last State reports:

Virginia, school population 280,840 white and 202,852 colored, only 208,000 being enrolled in the schools; North Carolina, school population 278,787 white and 148,613 colored, total enrollment 226 000; South Carolina, school population 85,078 white and 152,203 colored, school attendance 54,118 whits and 62,121 colored; Georgia, school population 137,817 white and 72,055 colored, number of persons over 18 years of age unable to read, 20,830 white and 158,494 colored; Florida, school population 72,083, of which about half are colored, average daily attendance 23,033; Alabama, school population 214,730 white and 155,525 colored, of which 100,713 are enrolled; Mississippi, children of school age 338,153, and but 302,310 attend school; Louisiana, school population 274,406, with an average daily attendance of 83,407; Texas, school population 104,453, enrollment 140,530; Arkansas, school population 187,407, and only 33,747 in the public schools; Tennessee, school population 343,917, 201,152 enrolled; West Virginia, of 201,237 children only 130,204 attended schools. The total appriations the past year for the Peabody fund were $74,850, and $33,000 was on hand for the ensuing year.

THE PRESIDENT'S OPINION of the duty of the Government to promote popular education was clearly given in his last Message. He says:

"It is gratifying to learn from the Bureau of Education the extent to which educational privileges throughout the United States have been advanced during the year. No more fundamental responsibility rests upon Congress than that of devising appropriate measures of financial aid to encourage and supplement local action in the States and Territories, and in the District of Columbia. The wise forethought of the founders of our Government has not only furnished the basis for the support of the common-school system of the newer States, but laid the foundation for the maintenance of their universities and colleges of agriculture and the mechanic arts. Measures in accordance with this traditional policy for the further benefit of all these interests and the extension of the same advantages to every portion of the country, it is hoped, will receive your favorable consideration. To preserve and perpetuate national literature should be among the foremost cares of the National Legislature."

COPYING.—One of the most valuable exercises for a class of almost any grade, as soon as it has learned to write, is copying from any interesting book or paper. It teaches writing, spelling, punctuation, words and construction of sentences, all at the same time, besides cultivating accuracy and quickness of observation, and a taste for reading. Do not continue the exercise to weariness, and do not try to keep the writers together. Let each write as much as he can write carefully in the time. Select short stories, anecdotes, bits of interesting information, and sometimes short and good poems. There is no need that all should write the same thing. Pick up the selections wherever you can find them. By exchanging with each other, one good set will last a class a long time. Insist on accuracy. Poetry should be written in its proper form—paragraphs, verses, capitals, etc., observed.

There are various ways of correcting the exercises. One is to go over each carefully, and draw a line under each mistake—each word mis-spelled, or wrong word used, indicating each omission of word or punctuation-mark by a caret. Then return the papers and let the pupil look up the mistakes, and correct, either by re-writing the whole, or writing the words or lines correctly on a separate paper. The latter plan is the best, because beginners, who would most need to re-write, would be likely to make other mistakes in the second copy, and to go over it too often would create disgust.

For further advanced, or more practised pupils, it is a good plan to simply indicate at the bottom of the exercise the number of mistakes of various sorts—as; 4 words mis-spelled, 1 line omitted, 3 wrong punctuation-marks, 8 punctuation marks omitted, &c. The pupil has then to compare his copy carefully with the original, and find out the mistakes himself.

Another plan is not to return the papers to the pupil for correction at all, but to simply keep a record of his mistakes and inform him of their number. This may be made an inducement to greater carefulness, especially as he finds his mistakes decrease with practice, as they will if he is not culpably negligent. This is perhaps the best way—certainly for beginners, for several reasons. Their eyes are better trained to good spelling and proper form of sentences by always dwelling on the correct original rather than on their own faulty and bungling copies. The weariness and disgust are avoided which would be fatal to one of the principal objects of the exercise, the development of a liking for good reading. The corrections of their mistakes is equally insured by copying new selections, for the same words are constantly recurring and those which are most important recur oftenest.

The most advanced class, after they get to be pretty good copyists themselves, may find excellent exercise in correcting the papers of the lowest class. Call it proof reading, if you like, and let them learn to do it as the printers do; you can find the signs used in proof reading at the end of the Unabridged Dictionaries—Webster's or Walker's—or in any printing office. They are easily learned.

In the end, with proper care, you will have taught your pupils two good trades, copying and proof reading, besides improving them in all the ways we have indicated. We have tried the plan and knowthat it is good.

FINANCIAL ISSUES AND THE NEGRO VOTE.

In at least seven of the States forming the American Union, the negro vote is an important, if not a controlling factor. During the next few years, financial issues will be the main ones before the country, and on these the people will have to vote. These are a couple of bald facts, and the relation of one to the other presents a serious question. From necessity, the great majority of the negroes are ignorant and vote ignorantly! and some people, resting their belief on the doctrine of chances, claim that the negro is as likely to vote the right way as the wrong way, on questions concerning which he knows nothing. The facts of history are rather against this doctrine of chances, for whenever the colored people have had a controlling voice in financial matters of State, folly or worse has marked their action. As a single instance, take the financial legislation of South Carolina when under negro control. It would be a grave injustice to white knaves to lay all the blame on the negroes; but if white rogues concocted the villainies there practised, the negro majority went hand and heels with them and not against them. The remarkable way in which the colored vote was cast in this State at the last election is another case in point. So far as can be understood, the following thin bit of sophistry won the colored vote: "The bulk of Virginia's debt was contracted when you colored people were slaves; why should you as citizens help pay it?" This gauzy talk was effective, and when coupled with the promise of office and increased school facilities, caused a surprising political revolution. It seems almost a waste of paper to show the hollowness of this sham; but by the same line of reasoning, the colored people should decline to pay any taxes to the United States, which would be used to pay any obligations of the United States contracted before the 13th Amendment went into effect. Sauce for the goose is supposed to be sauce for the gander, and it is always well to bear in mind that emancipation was an incident, not the object of the late war. If we should follow this line of argument a little further, it is manifest, that all children born after 1865, should decline, when they reach maturity, to pay taxes to discharge obligations incurred before they were born. Enough perhaps has been said of this diaphanous plea—it was absurd, but yet it was successful; it had not even the merit of newness, yet it was accepted as unanswerable.

On matters of public finance the white portion of the American people are none too well informed, as the actions of their representatives in Congress abundantly prove. Nevertheless, the higher average education of the Anglo Saxon enables him to discern more quickly wherein he is wrong, especially when the Schoolmaster Experience devotes himself to the sensitive nerve that runs through the breeches' pocket. Both the educated and the uneducated know the difference between what are called "good times" and "bad times," but the former seek to know why "times" are better or worse, while the latter accept them as they happen to be, and are jubilant or depressed accordingly. The most profound thinker America has produced says, "Cause and effect are but the two sides of one fact;" the educated man seeks to see both sides of the fact, while his less investigating neighbor is satisfied to look on only one.

The strong individuality of the negro is probably his most dangerous characteristic: if an appeal be made that reaches him as an individual, it will probably be effective; but if it be made so as only to reach him as one of a class, as a citizen of a citizen government, it will as likely fail as succeed. For two hundred and fifty years the negro in this country lived under a system, the dominant feature of which was *property*. When we translate this Latinism "property," it become ownership, and if we go one step further, "ownership" becomes "one-ship"—or the having of a right which others are bound to respect. Herein we find "the why" of the strong individuality of the colored voters.

To see an inch ahead of one's nose is not an universal attribute, and those who endorse a financial policy, that looks all to the present and none to the future, are but blind leaders of the blind, with a bottomless pit not far ahead of them. In this age of ours we must either go ahead or be left behind; to try to stand still, or to be only what our great-great-grand-fathers were, is to be what they are,—dead—and as rusty as the nails in their coffins. Hardly any section of the United States has so many natural resources, and so little capital to develop these resources, as our Southern States. Why waste time in proving that every act tending to drive out capital is an act of political suicide? Nothing is so timid as capital, and it is more afraid of financial folly on the part of legislatures, than of ruffians' revolvers or the torches of incendiaries. European emigration is assuming vast proportions, yet how much lands Southward? Capital aroused from a six years' nap is hungry for remunerative employment; but how much is pressing the Potomac and the Ohio? In the last twelve months Kansas and her neighboring states have started and are rapidly completing a railroad system second to none in the Union: steel clad and triumphant, these roads are carrying population and prosperity with them. How did these states do this? By linking Capitol and Labor, and giving the most possible encouragement to both of them. Capital without Labor is as useless as Labor without Capital, and every policy that would invite one to a state, and forbid the other, is about as sensible as to request a deaf mute to entertain an audience of blind persons. What every voter should do is to ask himself whether the policy of his state, (I care not what the state may be,) is favorable to inviting capital and labor to it. If it be not, then the citizen must blame himself in part; for he is part of the State. A state only exists through its citizens; if it commit a folly or a crime, it is only reflecting the folly or crime of a majority of its citizens. Party lines are impassable barriers only to professional partizans: a good citizen should no more be willing to be cooped up under a party platform, than an eagle should sigh for a wire cage.

Financial fallacies will reach the negro voters more readily than other voters, because the exponents of the fallacies (orators and writers) will address the negroes' individuality and dwell solely on the present. Those presenting the truth, will of necessity address all, and speak as much for the future as the present. Economic truth knows no color line, nor class distinctions,—all economic fallacies do. There is no denying the old proverb "Truth is mighty and will prevail," but it is well to remember that the second verb is in the future tense, and no matter *what will* prevail, error *does* prevail, and that too very largely. Closing our eyes to difficulties never surmounts them, and there is no use in winking at the difficulty of preventing the colored citizens being led to their own satisfaction on financial fallacies, and voting in that direction.

T. T. D.

A HUNDRED DOLLARS WORTH OF DISCIPLINE.

It is not often that thanks for merited discipline are so speedily and frankly returned as by the writer of the following letter, a Hampton student suspended for a year to teach or work. Such an experience is however frequently of great value to a student with good stuff in him, the natural discipline of life bringing sooner or later maturity of character, and appreciation of the advantages he has had.

——, TEXAS, *Jan. 13th*, 1880.

General:

Sir—I would have been much more satisfied if I could have written to you before now. But feeling condemned about the way I behaved when I was in school I could not raise the courage to write, until I could do something to encourage my feelings. I was angry when I left, but I found out since that I was a fool. I am now in Texas; and am teaching free school. The people here are ignorant and I find no education of semi use. I expect to open Sunday School this Sunday; but we haven't any books; neither Bibles, nor testaments; nor papers.

I will close by saying I am under many obligations to you for sending me away for a term, and hope you will really excuse me for doing so badly. I hope I have seen the worth of an education.

I will be happy to hear from the school, and also from you. My best regards to Miss M—— and Miss E——, also Capt. Romeyn.

I remain, your student, B.

P. S. General you did me ($100) one hundred dollars worth of good.

PLEASE WRITE TO SANTA CLAUS.

——, D. C., *Dec. 19th.*

Dear friend:

Your letter was received; thank you for sending me C——'s letter; I enjoyed reading it ever so much. I imagine I could see those poor people sleeping up on those little bundle of rags in the corner. Right here some are no better.

To-day I had to send one of my large boys home because he was so dirty, and his clothes were so poor they hardly covered him. All the children are quite small: from five to six except three boys and two girls. The girls are as tall as I am and the boys a little taller. My school gets along nicely otherwise. Sometimes, when it is very cold, a great many have to stay home on account of not having any clothing and shoes, but just as soon as it gets a little warm the school is just as full as ever with happy faces and laughing eyes. To-day, about one dozen children came up to my desk at noon and asked me if I would please write to Santa Claus to send them something. I smiled and said, "I fear he won't answer me." They are so kind to me. Every few minutes some one of them wants to know if I do not want a fresh pitcher of water, or some coal on the fire, or some thing of the sort. I hardly need any Histories for my school as yet, my children are not far advanced enough. If you find only been here to-day and heard some of my children read in those little Primers you sent, you would not regret that you sent them. I know. They do read nicely; not one knew their letters when I took them; and now every one can read a little, but some are still spelling words and pronouncing as queer as ever. To-day I gave the word *as*, to one child, and the child spelled the word *so*, and pronounced it *as*.' The whole school roared. I could hardly keep from it myself. I do not think the maps would be out of place, because I tell them a great many things, and that would help me to tell and show them the places. I thank you ever so much for the present you sent in the letter. I will try to make good use of it.

My little niece is very anxious to write you a letter, but she is sick now; had to stay home from school. With many thanks for your kindness.

I am yours, S.

HOW THE INDIANS MADE THEIR ARROW-HEADS.

A young man in the Smithsonian Institute, writes the Washington correspondent of the Cleveland *Leader*, has just made public the discovery of the method employed in making the stone and volcanic glass arrow-heads, daggers, knives, axes and razors of the prehistoric races. Up to this time this has been a great problem to all antiquarian students, but no theory has ever been advanced showing so practical results as Cushing's. He started to solve the difficulty by putting himself in the identical position of the Aztecs or Mound Builders—without anything to work with except sticks, various shaped stones such as he could find on the banks of my stream, and his hands. After making some rude implements by chipping one flint with another he discovered that no amount of chipping would produce surfaces like the best of those which he was trying to imitate. He therefore came to the conclusion that there was another way of doing it, and, by chance, tried pressure with the point of a stick, instead of chipping by blows of a stone; when, presto! he found that he could break stone, flint and obsidian in any shape he chose. Soon he had made spear-heads and daggers that would cut like a razor, as good as any he had before him, which had been picked up from all over the world. By a little more observation, he found that the "flaking," which he calls his process, on the old arrow-heads left grooves that all turned one way. He produced a like result by turning his stick the easiest way from right to left. He therefore concludes that that the prehistorics were right-handed people like ourselves. This conclusion is reinforced by the fact that occasionally an arrow-head is found that has flakes running from left to right, showing a left-handed person. The importance of the discovery is that it shows that the early races were able to do this work without the use of iron or bronze, a thing long doubted.

WHAT WILL YOU HAVE?

"What will you have?" says the bartender. "What will you have?" Methinks that I can answer that question. First, to the shoemaker who is asking for for gin. "What will *you* have?" You will have an empty pocket. There comes my neighbor the book-binder. His hand shakes as he raises the glass. Ah! you will have the palsy. Sorry am I to see in this den the cooper Mr. Scantling; both his sons are beginning to drink. He looks about suspiciously. Now he has plucked up courage. He takes whiskey. Ah! friend, you will have a pair of drunken sons. And now the crowd increases, for it is Sabbath night. Two voices call: "What will you have? Misguided souls, I greatly fear you will have a deathbed without hope.

Agricultural.

A NEW CEREAL FOR THE WEST.

In the regions of western Kansas, where there is liable to be a lack of rainfall in any season, and where corn especially must have plenty of moisture to produce a crop in paying quantities, a grain that will not merely be a succedaneum, but will absolutely take the place of corn, has been experimented with during the past three seasons, and it is believed to be demonstrated beyond a doubt that it will add very much to the value of western lands.

This grain is called here Egyptian, or rice corn, and, so far as known, has not been cultivated in any other part of the United States. The seed was obtained from the display made by the Egyptian government at the Centennial Exposition. The name is derived from the resemblance of the grain to rice, and, so far as it has been experimented with, has proved a success, both in wet and dry seasons. While growing this crop can barely be distinguished from sorghum; the seed forms at the top of the stalk in large bunches, and, as it ripens and gets heavier bends over and hangs down, not unlike a cluster of grapes. It belongs to the sugar-cane family and is cultivated in the same manner and as easy as sorghum or broom corn. One bushel of the seed is sufficient for five acres, and it has been put in here with a wheat drill. In harvesting the heads only are gathered, and a good threshing machine will clean ready for market two thousand bushels a day. The specimens raised this year weigh sixty pounds to the bushel. The yield per acre in 1878 was from sixty to seventy-five bushels. This season, which, as said above, has been a very dry one, the yield was forty to forty-five bushels per acre. No scientific analysis has been made of this new grain as yet; indeed, it is scarcely known, except in some two or three counties in western Kansas, where it has been grown by several farmers who desire to find some grain that would serve in the place of corn as a food for stock. The trial by these men has satisfied them that for horses, cattle, sheep, or swine it is superior to maize, and farm animals to which it is fed give it the preference to corn when both are laid before them. When ground into meal the rice corn is about equal to a mixture one-third wheat flour and two-thirds corn.

The value of this new grain to the people of western Kansas can hardly be estimated when considered as a sure yield in any season, and it will enable the stock raiser to fatten his herds at home instead of shipping them east, as has heretofore been mostly the custom for fattening. The vast plains in the portion of this state, so celebrated as grazing grounds by reason of the buffalo grass with which they are covered, and its excellent climate, will be doubly valuable if further experiment confirms the value of this hitherto unknown grain.—(*Letter to Chicago Times*)

FARM IMPLEMENTS.

There is nothing on the farm in which there is such a reckless expenditure of money as there is in farming implements. It is not only necessary that every implement on the farm should be of the best kind, but that it should be properly taken care of and kept in the best possible order until wanted for use, for it is just as impossible for a farmer to raise and secure good crops with bad or worn out implements as for a mechanic to do good work with an indifferent tool; and for a farmer to delay putting his implements in order until wanted for use, manifests a degree of negligence totally incompatible with good farming. It is in this particular that so many farmers are culpably negligent, nothing being more common in every neighborhood than to see tools and implements scattered over the farm in all directions, the plow here, the harrow there, log-chains, hoes single and double-trees the dear knows where, and more time lost, perhaps, in hunting them up, if found at all, than it would take to do the intended job for which they are wanted. Now is the time if not attended to before, when every implement on the farm should be personally examined by the farmer, and every necessary repair made at once, so that they may be ready for use on the opening of spring. There is nothing like foresight in this matter, for it is always attended with a saving of time and labor, and nothing shows greater negligence on the part of a farmer than to have such work to do in the midst probably of other and more important business. Let every farmer then, not rest easy until he has given this matter his personal attention, for he may depend upon it it will be the means of stopping many a "hog-hole" in his expenses, if not in his fences.

The Garden.—Although little can be done in the garden at this season of the year, everything should be put in readiness for the work. All seed to be bought should be ordered now, and those raised upon the place be cleaned and put away in small bags, ready for use, and any old or doubtful seeds—especially of the parsnip, carrot, onion, and such other as it is not safe to rely upon after the first year—discarded and fresh seed procured. Have, too, every bag or parcel of seed labeled with the date of the year when gathered, never trusting if you would be sure they are fresh. New sorts come into notice every year, and generally under the claim that they are superior to the old standard varieties, but upon the first trial nine out of every ten are never heard of again. Of these it is well enough to make trial on a small scale, but they should never be depended upon for a crop.—*Baltimore Weekly Sun.*

The agricultural department has published a comparative table on the crops produced this year and last, together with the prices obtained by the producers, as follows.

	1878.	1879.
Wheat, bushels	437,142,493	448,774,000
Corn, bushels	1,388,218,742	1,547,876,000
Oats, bushels	414,578,560	264,555,000
Rye, bushels	23,842,791	21,611,000
Barley, bushels	42,145,841	43,181,2 0
Buckwheat, bushels	12,710,889	13,141,6??
Cotton, bales	5,216,931	5,?03,?87
Potatoes, pounds	39,?46,?99	384,0?5,659
Hay, tons	39,?98,?96	35,618,000
Potatoes, bushels	124,198,?50	181,?50,000

	Price.	
Wheat	$126,316,121	$499,104,000
Corn	411,113,425	580,?5?,0 0
Oats	101,?41,?80	120,?5?,000
Rye	13,?82,?89	13,?05,000
Barley	24,483,315	23,?15,?00
Buckwheat	6,441,130	7,?0,?83
Cotton	191,?54,?11	231,0?0,000
Tobacco	22,137,425	21,4?4,?91
Hay	286,?45,?32	2?9,?83,?00
Potatoes	74,?19,?13	78,?71,000
Total	$1,?85,?0,?56	$1,?04,?80,?59

This increase of some $415,000,000 in a single year is a most encouraging result. But there has also been a gain in other values besides those of the crops noted above. The statistician of the department, who is reported to be gathering material upon which to base a careful estimate of the total increase in certain other values during the year just closed, to include the increased price of real estate and mining property; expresses the opinion, based upon material already gathered, that it will not fall below $1,000,000,000.

NEWS OF THE MONTH.

FOREIGN.

Three successive shocks of earthquake gave Havana, Cuba, a violent shaking up on the night of Jan. 24th. Great consternation prevailed and nearly every house in the city was deserted.

The United States Consul-General at Rio de Janeiro South America, says: "The imports from Great Britain during the last year amounted to about $17,000,0 0; from France, $3,0 0,0 0; and from the United States about $1,?0,000. Of the 414,?33 barrels of flour imported, 3?4,9 barrels were from the United States. The chief export to the United States was coffee, valued at $11,0?,0?1. Of the 1,4?? foreign vessels entering the harbor of Rio only 171 were American."

Twenty-five serious railroad disasters occurred in Great Britain during the month of December last.

A despatch from Berlin says: "The new German protective tariff has already had a marked effect, especially in the price of breadstuffs. Wheat is now 35?6 per cent higher than at the time when the tariff bill was passed. Rye is 55 per cent higher, barley 25 per cent, and oats 17 per cent. The German shipping trade has appreciably declined in consequence of the tariff."

President Prado of Peru, who has been supplanted by General Pierola, now Dictator is in New York.

An official dispatch received at the Chilian Legation at Paris announces that General Baza, President of the Republic of Bolivia, has been deposed and has fled.

A dispatch from St. Thomas states that news has just reached there of terrible floods on the island of St. Kitts, by which two hundred lives have been lost, property to the extent of $250,000 destroyed and the whole island devastated. The island is twenty-three miles long, fifteen miles broad and covers an area of sixty-seven square miles. It is one of the Leeward group of the British West Indies, and was settled in 1625 by English and French colonists and divided into upper and lower parts. The whole population of the island does not exceed 25,000, and of these 200 perished and many of the rest are homeless.

DOMESTIC.

The termination has at length been reached of the trial of Rev. Herbert H. Hayden, on the charge of murdering Mary Stannard at Rockland, Conn., in September last. The trial commenced on the 7th of October and closed on Monday, January 19—the jury failing to come to an agreement.

Frank Leslie, the publisher, died on Saturday afternoon Jan. 18th, at his residence in New York city, from the effects of a cancer. Leslie's publications were actively sold. His *Illustrated Newspaper*, the best known of his papers, was launched Dec 14, 1855, and is therefore a quarter of a century old.

A serious accident occurred on the New York elevated railroad on Saturday, Jan. 24, caused by a train leaping from the track to the street below. Several persons were badly injured, and property destroyed to the amount of $25,000.

Messrs. Parnell and Dillon of Ireland, who are traveling over the United States soliciting funds for the relief of famine—stricken Ireland are meeting with only indifferent success

POLITICAL.

General Garfield elected to the U. S. Senate from Ohio, will take his seat the 4th of March, 1881, when he will have completed his eighth term of continuous service in the House. He entered the House in December, 1863. He was born in 1831, and was graduated at Williams College, Mass., in 1856. General Garfield was at one time one of the trustees of the Hampton Institute.

The President sent to the Senate the following nominations for Ministers to the respective countries named:

James Russell Lowell of Massachusetts, Minister to England.

John W. Foster of Indiana, Minister to Russia.

Lucius Fairchild of Wisconsin, Minister to Spain.

Philip H. Morgan of Louisiana, Minister to Mexico.

The State of Maine has become so nearly that both Parties, the Republican and Fusion, feel the necessity and importance of their superior leadership; consequently each has set up a Government of its own and each is sailing in its own ship in the race for supreme control, with the Republicans many boat-lengths ahead.

ITEMS.

BUSINESS IN CHICAGO.—During 1879, Chicago received 13,824,?23 bushels of breadstuffs, and shipped 129,8??,?51 bushels, as against 134,?86,?56 received and 118,?75,?69 shipped in 1878. The total farm products received in 1879 had a weight of 5,?75,000 tons, against a weight of 5,?10,0?? tons in 1878. The value was $?32,000,000, against $?18,000,0?0, an increase of 16 per cent. The wholesale transactions, independent of breadstuffs reach $?1,000,000, and the sales of goods manufactured in Chicago aggregated $?30,500,000. Making a close estimate of these transactions and excluding duplicate sales, when such were included under both heads, the joint sales during the year at wholesale of manufactures and other specialties, aggregate $?12,000,000. The grand total value of breadstuffs, merchandise, and manufactured goods reached the handsome sum of $?61,0?0,000, an increase over 1878 of 17?? per cent.

EXTENSIVE INDIAN RESERVATIONS.—Investigation shows that since the organization of the National Government 329 treaties have been made with 227 tribes or bands of Indians. The total number of Indians on reservations, according to latest census returns, is about 240,000, and the extent of their reservations is 238,359 square miles or 151,?97,?88 acres. This would give every Indian, young and old, nearly one square mile of ground. These figures include the Indian Territory, the population of which is placed at 75,0 0 and is an area of 44,000,000 acres. In Dakota, 27,901 Indians have nearly 35,000,000 acres, or over two square miles for each Indian. The 22,000 Indians in Montana have over 31,000 acres, while the 3,0 0 in Colorado have nearly 12,000,000 acres, or about six square miles for every Indian.

GOLD AND SILVER PRODUCTION.—For the past year, as compared with the predecessor, California shows a decrease in gold of $140,312, and in silver of $?09,145. Nevada shows a total falling off of $13,184,?55, the yield from the Comstock being only 48,830,552 as against $1,?53,?83 for 1878. Colorado shows an increase of over $?,000,000 chiefly from the Leadville district. Dakota shows an increased production of $?33,182.

Oysters! - Oysters!

The canning of steamed oysters has long been an important branch of industry in Baltimore; but the canning of the very best oysters in the Chesapeake, almost on the spot they are caught, is an entire prize just established. The undersigned feels confident that in opening a Packing House at this point, he is affording his fellow-citizens in all parts of the country, an opportunity, which he hopes will be appreciated of getting the best and freshest of oysters, prepared in the most healthful way, at the most moderate prices.

An Oyster may remain out of water many hours, nay days, before it be completely spoiled; but from the moment it is caught and exposed to the air a process of deterioration goes on. It needs no argument to show that the sooner an oyster is hermetically sealed after being caught the better it will be in taste, solidity saltiness, and healthfulness. Within a radius of fifteen miles of this point, are millions on millions of bushels of oysters, from the best of which will the stock used, be selected. The time consumed in transporting the bivalves from their beds to the packing House is not worth considering, especially as the majority of the boats employed are the little "canoes" peculiar to these waters.

My packing is at present divided into three grades, according to the size of the oysters use: the same care, however, is taken in the preparation of all grades. A case of one pound cans contains 4 dozen; a case of two pound cans contains 2 dozen. Owing to the unsettled condition of the market, I can only quote to day's prices, which are as follows:

Giants of Hampton Roads, No. 1 — No. 2 $3 00 per doz,
Beauties of Hump's Roads, " 1 $1 ?5 " " 2 $2 00 " "
Cove Oysters, " 1 $1 50, " 2 $1 75 " "

The above prices are net cash, and remittance may be made by draft on New York, Chicago or Norfolk, or else by P. O. order. Authority to draw at sight with bill of Lading attached will ensure the prompt forwarding of any goods ordered. If preferred, cases can be sent by Adams express, C. O. D. but unless specially directed, all shipments will be made via Norfolk Va.

Hard Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the publicin general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On receipt of can will be found full directions how to prepare Crab Salad, and Deviliced Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surpassing delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all sea-food, for excelling in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on while the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. No only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lanches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6 00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to slight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C O D, at the rate of $2.50 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

THE BEST PAPER! TRY IT!!

BEAUTIFULLY ILLUSTRATED.

35TH YEAR.

The Scientific American.

THE SCIENTIFIC AMERICAN is a large First-Class Weekly Newspaper of Sixteen Pages, printed in the most beautiful style, *profusely illustrated with splendid engravings*, representing the newest inventions and the most recent Advances in the Arts and Sciences; including New and Interesting Facts in Agriculture, Horticulture, the Home, Health, Medical Progress, Social Science, Natural History, Geology, Astronomy. The most valuable practical papers, by eminent writers in all departments of Science, will be found in the Scientific American.

Terms, $3 20 per year. $1 60 half year, which includes postage. Discount to Agents. Single copies, ten cents. Sold by all Newsdealers. Remit by postal order to MUNN & CO., Publishers, 37 Park Row, New York.

PATENTS. In connection with the **Scientific American,** Messrs. MUNN & CO. are Solicitors of American and Foreign patents, have had 35 years experience, and now have the largest establishment in the world. Patents are obtained on the best terms. A special notice is made in the **Scientific American** of all inventions patented through this Agency, with the name and residence of the Patentee. By the immense circulation thus given, public attention is directed to the merits of the patent, and sales or introduction often easily effected.

Any person who has made a new discovery or invention, can ascertain, *free of charge*, whether a patent can probably be obtained, by writing to MUNN & CO. We also send *free* our Hand Book about the Patent Laws, Patents, Caveats, Trade-Marks, their costs, and how procured, with hints for procuring advances on inventions. Address for the Paper, or concerning Patents,

MUNN & CO., 37 Park Row, New York.

Branch Office, cor. F & 7th Sts., Washington, D. C.

$5 to $20 per day at home. Samples worth $5 free. Address STINSON & Co., Portland, Maine.

BOOTS AND SHOES!

N. McNEILL invites attention of the public generally to his large and carefully selected stock of Boots and Shoes of the

Best City-made Work,

which I will sell at cost below cost. All other goods in my store will be sold lower than ever, in consideration of the times. Please give me a call and see for yourselves. Ladies' and gentlemen's work made to order, and repairing neatly done.

SOWING THE SEED.

Reprinted by permission of (London) Ladies Sanitary Ass'n.

It has often made me feel sorry to observe how much suffering there is among children; how often, instead of being happy, they are discontented, fretful, and complaining; how often the air is filled with their cries. We may be very sure this crying is often caused by bodily illness, since we know how large a number of the children that are born die before they are five years old. Those who have studied the matter tell us that out of every hundred children that are born, thirty-never live to see their fifth birthday come round. Before all these deaths there must have been a time, longer or shorter, of weariness, sickness, and pain, that makes one's heart ache to think of.

Many are trying to teach our people how to change this sad state of things by better management. Pure air and water, warmth, and cleanliness, will do much in giving health and longer life to the poor little ones. I am going to add a few words about another thing, the importance of which, I think, we too often forget both in the case of the old and young: I mean a cheerful and contented mind. As I believe that illness is very often the real cause of fretting and crying which people are apt to punish as crossness and bad temper, so I think it is also true that fretting and crying in their turn make children ill. Is it not so with us older people? Do we not all know that when any great sorrow comes upon us and our eyes grow dim with weeping, we suffer in health? The appetite goes, the head aches, the face grows pale, and the limbs lose their strength. Be sure, then, that a constant state of dulness, discontent, worry, and fretfulness, though it may not have such a strong effect on the body as that, yet lowers the strength. Be sure that if you want to rear healthy children you must make them happy children. "Healthy and happy"—"happy and healthy"—the two words seem to go together naturally.

Do not fall into the mistake of thinking that the woes of children are fanciful; that children do not feel sorrow, but cry for nothing at all. It is very true that if they have got into a habit of crying they will scream and make a great noise about very little; but then, what has given them this bad habit? Is it not often given by a neglect of their real wants, by mistaken indulgence or severity, by injustice, or, in short, by bad management of some kind? Be sure that children feel deeply. Their little sorrows are great to them. Look back to your own childhood, and to what you felt then, and you will know I only say what is true. In looking back to my own I remember days of grief almost as great as any I have had since. I can remember being unjustly shut up, and left at home, on a day when I had been promised that I should go to see a lady I loved very much. It was a trifling fault for which I was punished, and I was innocent of it. All the years that have passed since have not made me forget the anguish of heart I suffered that day, nor the tears and sobs that almost choked me. I can remember, too, being lost, as I thought, in some public garden in Paris. It was only done for fun by the girl who had the charge of me; but my terror when I looked round and saw no one near, was so great that, though I was then only five, I seem at this day to see the grass, and lilac-bushes, and gravel walk, that I looked upon in my misery. No sailor shipwrecked on a lonely rock, no traveler benighted in a desert, ever felt more castaway.

Remember, too, that these sorrows of children, and the habits and feelings they leave behind, do not end with childhood. They "sow the seed" of many faults that will grow up afterwards. Children who are kept fretting and crying are not only unlikely to be strong and healthy, as children, but are very likely to grow up weak in body, fretful in temper, and little able to take their share bravely in the duties and trials of life. I have said that all this is too often forgotten. If I give you some instances of what I mean, you will perhaps think they are very trifling things. Do not think so. These things that seem little to you are great to little children, and great in their future consequences for good or evil.

Infants have no way of telling their wants but to cry. They cannot say, "I am hungry," "I am thirsty," "I am too hot," "I am cold," "A pin is hurting me:" all they can do is to cry. But as soon as a child can speak, the mother will try to teach it to ask and not to cry. "Ask for what you want," she will say. "Say, if you please, and you shall have it." The mother then must not forget that she has said, "You shall have it." If her child only asks for what is really good for it, she ought to give what it has asked for, and without delay. If she delays, she cannot wonder if her child gets impatient and begins to cry, because though the thing asked for seems a very trifling one to her, and one that as she is busy, may be waited for, it is perhaps a very great thing to the child, who has, besides, no idea how long he may have to wait, nor whether, as he dines not get it at once, he may ever get it at all; so he cries, and then he gets attention, and so very soon learns a very bad lesson. This happens much in the following way:—

A little boy wants to go out to play, but his cap is on the shelf beyond his reach. "Mother, I want my cap," he says. "Please, mother, give me my cap." But mother is washing. She hardly hears him at first, and when she does, she is too busy to mind him. So he goes on saying, "Please, mother, my cap;" and she goes on washing, and thinking that he may very well wait till she has finished off the things under her hand. Meanwhile time is going on. The other boys are out in the lane, laughing and shouting. The game will be over. The poor little fellow quite loses his patience, and begins to cry. Now the mother's attention is roused. "What's the matter, Tommy?" she calls out, as she runs to him. "My cap!" he sobs. "There; then—bless his little heart!—Don't cry: here's his cap," and she puts it on for him, and Tommy toddles off to his friends in the lane, wiping his eyes with his sleeve, while his mother goes back to her wash-tub, never thinking how she has been undoing all her teaching. She will find it in vain to say "Ask for what you want," or, "Say please and you shall have it." Tommy knows better. The way to get a thing is to cry for it. It would have been a little trouble to put down the things that were in her hand and go for the cap at once; but it will be much more trouble to hear fretting and crying all day long.

And some mothers are not so kind and good-natured as Tommy's; and then matters are worse. A gentleman in Edinburgh was obliged to give up his lodgings because of the wearisome noise that began outside his door every morning at eight o'clock. No sooner did eight o'clock strike than little Jemmy, the landlady's son, stationed himself there at the top of the stairs, and began, "Jeanie, bring up the porridge." Porridge is the common breakfast for all Scotch children, and a very good and nourishing breakfast it is.

"Jeanie, bring up the porridge," cries poor Jemmy. "Jeanie, bring up the po—o—o—ridge."

Then comes a long wailing and crying.

"Eh, Jeanie, bring up the porridge; bring up the porridge!" then a long cry, and then, "Jeanie, bring up the porridge," again; and so it goes on. At last a clattering of bowls and spoons is heard coming up the stairs, and then Jemmy stops, follows his porridge into the room and seats himself at the table to begin. But his tears drop into his spoon, and his face is full of peevishness. His breakfast will not do him half so much good as if he had got it without all that fretting, or as if he had been taught to play about, or trundle his hoop, or do something active and healthful, till it came, and he began eating with rosy cheeks and a cheerful heart. Jemmy's mother might have prevented all his grief by some little trouble; but this is not possible for some mothers. The sorrows and toils they have to bear will fall in some degree on their poor children.

Two young ladies are walking beside a hedge row in the country, when a sad sound makes them stop and listen. It is the low moaning of a child. The moaning comes nearer, and they hear footsteps on the path that runs along the other side of the hedge. More and more plaintive seems the child's cry, and then comes a loud threatening voice, and the cry stops for a moment only to begin again. "Mother, mother, take me up!" sobs the pitiful voice.

"How cruel that woman must be," says one of the young ladies, "not to take up her poor child." The other does not speak, but climbs over a stile that separates the field in which they were walking from the pathway, and soon overtakes the mother and child. She sees that the child is a pretty little girl, who goes stumbling along the stony path, lame with a long journey, pale with fatigue, and hardly able to keep up with its mother, while it goes on with its pitiful cry of "Mother, mother, take me up."

But the mother is over-loaded, dusty, and weary. She carries a baby on one arm and a heavy basket on the other. She cannot bear more; and now she sets down her basket, and lifts her hand; but the young lady who is close behind, catches it and holds it firmly.

"Do not strike your child," she says in a gentle voice. "She is very tired."

The poor mother burst into tears. "I am worn out with her fretting," she says. "I cannot carry her and the baby too, and my basket is load enough without either, and we've been a long way. We are but half a mile from home now, and Sally ought to be quiet and come on. No, no, my lady, that will never do: you must not think of carrying her yourself."

But Sally is safe in her new friend's arms, who will not hear of putting her down, but begs the mother to go on and they will follow. Poor little Sally cannot check her tears at first. She has been too much frightened, and her feet ache too much; but before very long she is smiling, and pleased with the posies they have gathered by the path; and baby peeps over his mother's shoulder, and holds out his hands for some and gets some; and so they reach the cottage that Sally says is "home." Four brothers and sisters come to the door to meet them.

They are all neat and clean, and so is everything in the cottage; and the poor woman whose daily toil keeps it so sets down her basket, and thanks her visitor with a grateful smile. She was a good mother, though in her toil-worn weariness she had been cruel to her child.

"It is easy for me. 'Oh, very easy, and nothing but a pleasure to me,' thought the young lady as she walked away, "to carry little Sally. I am young and strong, and have had nothing to tire me. It was very different with her. But she will be glad, when she thinks of it, that she did not beat her poor tired child."

Yes, many a mother would be glad afterwards, when the passion is over, that she had not been severe to the children who were trying her temper beyond bearing, when she was worn out with hardness and sorrows. It is very difficult to be patient at such times; but it is not impossible. It needs a strong effort to do right, and strong love and earnest prayer for help; and if it can be done, the effort will bring its own reward. Severity at such times will do nothing but harm, and add to every difficulty, when kindness and patience will bring the quiet she longs for so much.

What a pleasure it is to see a set of healthy, happy children, merry at play out of doors and good and quiet at home. I have often wondered how their mothers could keep them so clean, and well, and well-behaved, with so much to do and and so many difficulties. It makes one see the difference only the more when they are unruly and fretful. Of course I do not mean to say it is all management, or that it is equally easy to manage all children. Far from it. There is a great difference in children. Some have much better and easier tempers than others; and some can bear little troubles and pains much better than others; but then, it is all the more necessary to learn how to smooth the way for the less fortunate ones, and teach them how to face the trials that will come upon us all as years go on. Some children, too, have much weaker bodies than others, and are more easily hurt by any outward evils or by unwholesome food; and therefore, though they may not be seriously ill, yet they are in sufficient discomfort to be made fretful.

These kind of weakly children are often made to suffer a great deal by being too hot. I have seen a child on a warm spring day with a fur around its throat, and a hot woollen shawl wrapped round it, wailing and crying in a crowded omnibus, and annoying all the passengers, while its nurse tried in vain to hush it by pressing it in her arms and rocking it backwards and forwards. The poor little thing was fevered with the heat, and the simple plan of seating it upright where the air could get to it, taking off the fur, and loosening the shawl, at once changed its cries into smiles and baby talk.

Cold is also a frequent cause of fretting. Young children feel it much more painfully than grown-up people. Who cannot call to mind the sight of some little boy, with bare red legs, and the tears looking as if they would freeze on his blue, swollen cheeks, holding by his mother's gown as she loiters along marketing, or chatting with a neighbor in a bitter frost in winter? She does not know how his poor toes and fingers are aching and smarting, or she would not be angry with him for the noise he is making.

Discomfort of body sufficient to cause fretfulness, is also often produced by the habit of eating what children call sweet-stuff. Any one who would take the trouble to spend half-an-hour in one of the shops where they sell this sweet-stuff, would be surprised at the numbers of children that come in with a halfpenny or penny to buy. What they buy is always unwholesome, and it is very well known that poisonous things are put in the sugary comfits to give them their bright colors; so that children eating them day after day, make themselves sick and uneasy and cross. It would be far better to save up the halfpence till they make a little sum to be spent on something useful or pleasant for the children. A picture book, a ball, or a hoop would give much more enjoyment, and save a great deal of fretfulness.

The habit of feeding children constantly when on a journey, or when going out for a short excursion, as a means of keeping them quiet, is another frequent cause of fretfulness. The moment a child is the least troublesome, a bun or cake is taken out of a basket and given to it, till at last it becomes so ill and uncomfortable, that no power can keep it quiet.

It is sadly common to try to stop the habit of crying, which has been brought on in one way or another, by false promises or false threats. A mother will say, "Stop crying, and I'll give you a cake," "Be a good boy, and you shall have a halfpenny," without ever thinking of really giving either; and the child soon learns that he cannot trust her at all, and therefore her words have no effect upon him. It is just the same with threats. The very common threat of "the stick," is no more minded than if sticks were made of wool instead of wood, because though it may be really used once in twenty times it is never expected. And generally children soon find out that all manner of other threats are only falsehoods. "Here's the policeman coming!" "Bogie shall have you!" "There's the big bear!" All these sayings are soon found out to mean nothing by the children. But what a lesson do they learn at the same time! The lesson that truth is quite disregarded by their mothers, and therefore need not be regarded by them.

It may however happen that children are filled with dread and terror by threats, and as this happens in the case of timid, nervous constitutions, it is of course one of the worst things that can be done both for mind and body. Children have been frightened into fits by horrible stories of what would happen to them. I myself saw a little girl turn pale and tremble when the woman who was hauling it in a steamer said, when it put its hand on a lady's muff, "I will fling you overboard if you touch that." The noise and rushing of the water must likely made it seem like a real danger to this poor little creature. It is by stories of "bogie," and "big bear," and such like, that children are made timid in the dark, and cry if they are left to go to sleep in bed alone, a habit that causes great trouble to mothers. I know a little boy who suffered terrors every morning, because he had been taught to believe that a man who passed, calling, "Any umbrellas to mend?" called "Any naughty boys to be killed?" There was a melancholy story in the newspaper some years ago, of a little girl being frightened to death. She was in a shop, and she happened to look out at the window at the moment when a boy with a hideous mask on his face looked in. She fell into fits and could never be recovered; but died in a few hours.

Without, however, causing such dreadful things as this, it is certain that the habit of threatening timid children makes them cowardly, selfish, fearful of the least pain, and therefore very fretful.

A little boy was pulling a wooden carriage, in which his two sisters were seated. He set off running down hill with it and upset it. All three children began screaming and crying. The girls were hurt and cried with pain, but the boy who was not hurt at all cried the loudest. "Poor fellow!" said a lady who was by. "How sorry he is to have hurt his sisters." But she soon found out her mistake. As soon as he could speak through his screams and sobs, the words that came were, "Shall I be sent to prison?" He was in no grief for his sisters. He never heeded them as they lay on the path rubbing their knees and complaining of their heads. All his thoughts were about himself. Of course he had been threatened with a prison, and was full of dread and terror about it.

People who know how to manage children, and to keep them good and contented, know how important it is to avoid giving them useless orders. "Sit still," "Stand up," "Put it down," "Hold your tongue," "Let that alone." This sort of ordering is sure to make children naughty, for they generally pay no attention to it, and are seldom expected to obey; but now and then they are, and then a sort of struggle begins, in which the children are often the conquerors.

Sometimes, too, people will refuse a thing to a child, grief was reasonable or not. It is much better to leave stops for granny. Poor granny, who ought to be the

Sometimes, too, people will refuse a thing to a child, not because there is any harm in it, but because they are themselves cross or tired, or ill-tempered. "You shen't have it!" they will say when there is really no reason to refuse, and "I will not." Young girls who are employed as nurse-maids are very apt to do this.

Two such young girls were walking out with several children under their charge. One of them, a little boy, was screaming violently. What he wanted was to walk between the two, holding each by the hand. It could have have done them no harm. He would soon have been tired of it and glad to run on, but they would not let him. "You shan't take hold. Walk on in front, sir!" These were the orders. It was easy to order, but impossible to make him obey. The plan he took was to stand still and let them walk on till they were nearly out of sight, filling the air with his screams all the time. They did not dare to leave him. He might have been lost. Besides, everybody was beginning to notice the noise, so they were obliged to take him between them after all. He therefore gained the battle; but to punish him they held his hands roughly, and knocked his feet against the stones. It is sad to think what "seed is sown" by such treatment as this.

A girl in a railway carriage had charge of two little boys. One of them sat still on the seat as she had placed him, half asleep, looking as if he had eaten too much dinner; but the other little fellow was full of life and fun. He began looking about him, and as it was a large and nearly empty carriage, he thought to himself that he would get down and merch about among the seats. There was no reason why he should not. He was quite safe on the floor. There was no danger of the door being opened between station and station, and there was nobody he could annoy. But no! the girl would not let him. No sooner had his feet touched the floor than he was snatched up again and seated as before. "Sit still, directly!" was the order. He sat still for about three minutes, and being a good-tempered child, did not cry; but the large floor of the carriage and those empty seats were too tempting, and down he got again. "Naughty boy! Look at your brother, how good he is!" was the cry as he was seated roughly again. He was an uncommonly good child, for he tried to amuse himself by looking out at the side windows, but before the journey came to an end he had been down again, and been shaken for it, and made to cry and become rebellious, all because this girl was in a bad humor.

Among all the causes of fretfulness, there are few more common than the constant tumbles that children get when they first begin to run alone. They are forever hurting themselves. A child's knees are generally all over bruises, black, blue, and green. Perhaps if I try to describe the different ways in which I have observed different mothers treat their children under these little misfortunes, you will understand better what I mean when I say that good management on these occasions may prevent a habit of fretting, and may also sow the seed of a brave and independent character.

I was walking in a country lane with a little fellow of three, and his mother. We walked on, and he came after us, picking up pretty stones, peeping under the hedges at the weeds and wild flowers, and talking to himself. Suddenly a little noise made his mother half turn her head. He had tumbled into a deep rut. She took no notice, but walked slowly on, and his head appeared in a moment above the edge of the rut. He looked about, and said gravely, "Oh!" It was not an Oh! of pain, but as if he would have said, "Oh, here I am! I must see about getting out again." And first having put on his cap, which had fallen off, and rubbed the dry mud off his hands, he scrambled out, and ran after us. No one took any notice of the disaster, nor did he cry or complain, though he must have scratched his hands and knocked his head.

It is so common to treat a tumble in exactly the opposite way, that I can remember in a moment twenty instances that I have seen of it. A child falls on the floor, and knocks its head against a chair. Up starts the mother, and takes her little pet in her arms. "Has she hurt her head, then? Don't cry? Naughty chair to hit her. We'll beat it well, that we will," and so on; and, of course there is a fit of crying that lasts a long time.

Another very common way is to scold a child if it falls down, and to pick it up roughly; but this is done more often by girls who are taking care of children than by their mothers. "Naughty boy!" they will say, shaking him by the arm, as if his tumble had not been bad enough; "why don't you look where you're going. See how you've dirtied your frock. I won't bring you out again if you don't mind." This is sure to bring on fits of crying, both of pain and rage. So many young girls go out to service as nursery-maids, besides those who are trusted to take care of their little brothers and sisters, that it is very much to be wished they could be taught how to manage children better.

Another way still there is, and a very good one, I think. It is to show kindness and feeling for the child, but carefully to avoid over-pity; rather giving encouragement to be brave. "Jump up again, my boy. Never mind a tumble. Come to mother, and let her rub it, and make it well." This way will generally succeed in making children brave in bearing pain, and preventing crying and fretting over every little ache; and will teach them to be kind to others who get into trouble.

If we are agreed on this point, that fretfulness is very bad for the health, as well as very troublesome, it will become a matter of earnest desire with good mothers to prevent the habit from growing, and if it has already grown to cure it. For this purpose it is of no use to try to stop fits of crying at the time. The only way is to prevent them by good management, or if they cannot be prevented, to take as little notice as possible of the child while it cries. To shake a child while it is sobbing, and its tears are flowing; to call out to it, "Will you be good? will you stop?" never succeeds, nor can it be expected to do so. Ask yourself if it would stop you if you were in a fit of grief, no matter whether your grief was reasonable or not. It is much better to leave the fit to take its course, showing in your manner that you are sorry to see your child so wretched, and are ready to receive it back to your notice when it is quiet. It is trying and difficult to do this. It is difficult to bear the deafening noise and the painful sight, and to do nothing; but it will not happen often. If a child finds that it will gain nothing by crying, it will soon learn to leave it off. If you never refuse anything that is reasonable, and never give a thing because it is cried for that you have refused when it is asked for, the child will soon leave off its useless and troublesome habit of crying.

And it is not only when children are naughty that it will be found best to let them alone. It is a great mistake to meddle much with them when they are good and happy at play. Children will play together for hours if they are let alone. They may quarrel a little now and then, but things will soon get right again in most cases. It is but seldom they will require correction. Even a lonely child will amuse itself for a long time without giving trouble to any one if it is let alone; but its game will very likely be spoiled if it is noticed. See how fond a little girl will be of a wooden doll with a battered face and no legs or arms; how pleased a little boy will be to drag a wooden cart with only one wheel left. They can fancy these poor broken things are very fine, and be just as much pleased with them as if they were new if nobody tells them the things are battered and broken. I have seen a little girl amuse herself a whole morning with a few little wooden sheep, most of them broken, some of them without a head, a dog with two legs, and a shepherd and shepherdess as much knocked about as their sheep. She would arrange them along the bars of the panes of glass in the cottage window. Those that could not stand were asleep, and the dog, who could not stand either, lay watching them. The shepherd and shepherdess went and came, doing all manner of things. He fed the dog, brought stones for turnips for the sheep; she churned butter in a square piece of wood, cleaned the window-sill, which was the cottage, and so on. Outside the window was a grass-plot and a large tree. Most likely the grass-plot seemed to the little girl to be the field where the sheep fed, and the tree to shade them from the sun. All this went on, and she was happy, and gave no trouble to any one. But suppose some one had meddled with her. Suppose some one had said, "Take care you do not break the window!" how everything would have been spoiled! She had forgotten there was a window, but fancied she was in a grass field with her sheep, and there was really no danger of the window. Or suppose some one had said, "Pretty dear! how nicely she plays with her sheep!" or, "Just look at that child, how she goes on playing hour after hour with those broken old sheep!" In either of these cases, all would have been spoiled. Either the child would have felt vein that she was playing nicely, and would have gone on to be admired, or would have felt shy and ashamed that she should care for such shabby things. Her pleasure would all have been gone, and very soon she would have been troubling her mother to find some fresh play for her, or have become cross and fretful.

If people could but recollect when they are men and women how they felt when they were little children, they would understand all this better. But they seem to forget that children have ears, and that they very soon notice and feel the meaning of what is said in their hearing. It is a great thing in management to be able to enter into the feelings of children.

It is endless work if you teach a child to think that you must find amusement for it. Now and then it is good to do so. When a holiday comes and you plan some pleasure for it, what you do will be felt all the more because you only do it now and then.

A kind old grandmother is sitting by the fire in her arm-chair, and her grandson Dicky is crawling under the large table by the wall, roaring like a lion. They have agreed that he is to be a traveler fallen among wild beasts, and she is to be another traveler who is to come and help him. After he has roared for a little while he stops.

"But, granny," he cries, "you don't say anything."

"Oh dear me!" says granny, "there is that poor, good man, fallen among lions."

The roaring begins again, and goes on for several minutes, but then it stops again.

"Say something more about the poor, good man, granny."

"Oh dear me!" she answers, "there is that poor, good man going to be eaten up."

This sets Dicky off again, and he roars for five minutes this time, and then clings to the leg of the table and shakes it well, making the tea-tray that is on it slide down with a clang.

"Ah," cries granny, starting, "there is that clever men climbing up the tree away from the lions."

Dicky now begins to growl and roar by turns, but granny is longer in saying anything than he likes. The truth is, she is getting very sleepy, for she has been amusing him for an hour, and is quite tired.

"Say something, granny: it's your turn now," he calls out.

"Oh dear me!" she answers, "here comes another traveler."

Dicky begins to cry, and quite stops playing. "It's not another traveler," he sobs. "You ought to have said about the bear."

"Oh dear me! Yes, to sure," says granny. "There is that poor, good bear——"

Dicky sits down on the floor, and cries and screams. Granny is quite sorry to have vexed him, and wakes up a little. "What's the matter, lovey?" she says. "Don't cry. Bless his heart! what ails him, then?"

"It *isn't* poor, good bear," he calls out very loud in his passion: "it's wicked bear."

"So it is, ducky. Oh dear me! There's that wicked bear climbing up the tree after the poor, good man."

Dicky wipes his eyes, and makes a great growling for a good while, and then says Bang! bang!" but then he stops for granny. Poor granny, who ought to be the other traveler that has shot the bear, has fallen fast asleep; so, after calling and calling in vain to her, Dicky crawls out, and seeing how it is, begins to cry again and to thump her knees. She starts up in a fright, and calls him a "naughty boy." On this he begins to roar and cry so loud that his mother hears him, runs in, and carries him off screaming to bed. If only he had been used to play alone, instead of wanting some one to be always helping him, he would have roared for this in one, and have been the poor, good man, and the other traveler, and climbed the tree, and growled for the bear, and shot him all for himself; for he had plenty of fun in him, and could fancy all manner of things; but he had been spoiled by too much notice, and so made troublesome and fretful.

The worst of all ways of trying to cure fretfulness is beating children. I believe every kind of pain inflicted on the body, in order to cure faults is a mistake, and to put in two evils for every one it may even seem to cure. Yet some people seem to think beating is the best cure for everything. I was once sitting under a low part of the cliff near the sea, when a party, several of whom were children, walked along by the edge over my head, so that I could hear what they said, though they were out of sight. A voice that I supposed to the mother of the family, said, addressing, no doubt, a little boy who had done something or other naughty, "Here is another act of disobedience! You will not be right until you have had another severe whipping. You know you have not had one since your illness." She spoke in a harsh, grating voice, and I could not help taking a great dislike to her, and fancying how she regularly gave "severe whippings" to her poor child, and seemed sorry to have been interrupted by his "illness;" succeeding, too, very badly, after all, for "here was another act of disobedience."

But whatever may be the truth as to beating for faults in general, I feel no doubt that, as a cure for fretfulness, it is the very worst that can be tried. A little thought will be enough, to show that it must fail. You wish that your child should not cry at every want, or trouble, or pain, he may have to suffer. That is, you want him to be patient and brave. To make him so you punish him in a way that gives him a terror of bodily pain. You actually teach him to be afraid of pain; for if he is not afraid of it, beating is of no use at all as a punishment. You do all you can to make him a selfish little coward, only trying to be good because he is afraid of his poor little body being hurt; and then you expect that when he is hungry or thirsty, too hot or too cold, a little sick and ill, tired and weary, in want of amusement, or aching with bruises from head to foot, he will despise pain, and behave like a man, as you tell him to do. It will never succeed.

I will end by going once more over the subject, and putting together the different ways that may be tried to sow the seeds of a brave and cheerful temper, as if I were trying to write a recipe to avoid fretfulness.

1. Never refuse a thing if it is harmless, but give it, if you are able, without delay.

2. Never give anything because it is cried for that you have refused when asked for.

3. Be careful to observe real illness, and avoid causing bodily uneasiness from over-clothing, or cold, or unwholesome food, such as sweet-stuffs, sour fruit, or giving buns or cakes to quiet the child.

4. Avoid false promises. They are sure to be found out to be false.

5. Avoid threats of all kinds. If believed, they make children timid, and injure both mind and body: if not believed, they are useless. Such threats as bogie, policeman, and bear coming, are sure to be found out to be false if the child lives.

6. Never say anything untrue to a child.

7. Do not wreak your own bad temper, or visit your own feelings of fatigue and trouble on children, by being severe with them, or by saying "You shan't have it;" or, "I won't give it you," when there is no reason for refusal except that you are yourself tired, or in trouble, or out of sort.

8. Avoid giving orders, such as "Stand still," "Go on," "Hold your tongue," "Put it down," etc., unless you really mean them to be obeyed; and the fewer orders you give the better.

9. Neither give too much pity, nor yet be severe and unkind, when a child tumbles down or hurts itself.

10. Do not worry a child. Let it alone, and let it play in peace.

11. Teach it early to play alone, and amuse itself without your help. Let it alone, is a golden rule in nine cases out of ten.

To sum up all in a few words. Try to feel like a child; to enter into its griefs and joys, its trials and triumphs. Then look forward to the time when it shall have numbered as many years as you have seen, and pray for help and strength to do your duty by it. You may fail, as we all may; but if you sow the seed with humility and faith, you will have done all that is permitted to us imperfect creatures; and if you have reared up a cheerful, loving, truthful, and brave spirit, in a healthy body, you have been working with Him who told us it was "not the will of our Father that one of these little ones should perish."

EVENING SCHOOL IN CHINA-TOWN.

EVENING SCHOOL IN CHINA-TOWN.

BY H. W. L.

Any traveler across the tha continent discovers for himself that, from the first encounter with the Chinese waiters at the railroad restaurant of Evanston, Utah, the yellow, shaven heads increase in numbers, until in the streets of San Francisco they are as thick as the black ones in Baltimore or Norfolk. He is quite prepared by that time to credit the statement that the number of Chinese in this country is estimated at 100,000, the vast majority of whom are to be found on the Pacific Slope of the Rockies. He is equally prepared, probably, whatever his own conclusions may be, to admit that the Chinese question in America is a great question, viewed from any stand-point you please.

Without entering at all into the consideration of this question from any stand-point, it may be interesting to take a glance at an effort which one earnest set of workers is making to meet it from their own.

With this idea, on a recent visit to the City of the Golden Gate, I very gladly accepted an invitation for myself and my traveling companions, from the Rev. Mr. Pond, the American Missionary Association's representative in San Francisco, to visit his evening school in China-town, listening on the way to statements, more or less familiar already, in regard to the work.

The problem of mission work among these thronging thousands of heathen contains, as is well known, this peculiar factor—that they do not come to stay. We have not, as far as at present appears, to prepare future citizens and voters for America; but future missionaries and civilizers for China, citizens of God's Kingdom on earth and in Heaven. It is with this idea at any rate, that the missionaries of all denominations are carrying on their work among the Chinese in California, with what money and force they have—pitifully small, indeed, as in all missions, in proportion to the greatness of the work.

The American Missionary Association's branch of it maintains thirteen schools, about half of which are open throughout the year, without interruption. Fifteen hundred and thirty-six Chinese are enrolled as members of these schools, with an average attendance of three hundred and forty. Up to the time of our visit, about one hundred and twenty hopeful conversions had been reported; and of these converts something more than a dozen have returned to China and are there actively engaged, as far as heard from, in spreading the knowledge of Christianity among their countrymen, having an access to them and to the interior of the country far beyond what is possible to a foreigner.

The fact that the Chinese speak a difficult and almost unattainable language is both an obstacle and an advantage to mission work among them. The necessity of teaching them English, while making the progress, perhaps, slower, furnishes a powerful attraction to the schools to these emigrant laborers, whose first desire is to acquire the language in which they must earn their living and make their small fortunes.

"The English language is the bait," said Mr. Pond, "with which we draw them in, to feed them with the truths of the Gospel. They know that we teach the Bible; but they do not come at first because they care for that, but because they are so eager to learn English. Then they see we are kind to them and interested in them, and they are willing to listen to what we say, especially through the influence of our Chinese helpers, who are earnest Christian workers."

While we have been talking, we have been walking through busy, brightly-lighted city streets, quite distinguishable from the streets of New York or Boston by a certain wide-awake, Western air; and hills, up whose heavy grades we are drawn in mysterious rail-cars, without visible horse-power of flesh or steam.

We stop at the corner of Brennan Place, and mount high steps to the first story of a modest looking house, whose ground floor is appropriated to the office of the Mission. A loud hum issuing from this building rises, as we mount the steps with two or three late-arriving scholars, and bursts into a deafening din, a distracting roar, a perfect Babel of noise as the door opens and we enter the room. All our Eastern ideas of a studious school-room retreat in dismay, and leave us in confused astonishment to stare about us, as one does on first introduction to a cotton-mill, to see what all the racket is about.

The small room seems overflowing with Chinese anise and Chinese boys. It is hard at first to credit the assertion that the average attendance is only eighty. There are perhaps a few more than that to-night. I don't know that the average amount of noise has ever been estimated. All the furniture is of the simplest, most indispensable kind; rows of plain benches with backs, ranged like pews, with one row along one side of the room. At the further end a table, and beyond that a platform. The rows of benches are filled to crowding with boys and young men. A stranger would mistake some of these beardless, girl-featured youth, with their long braids neatly twisted around their heads, and their flowing robes, for young women; but the curse of Chinese emigration is the almost total absence of respectable women among its swarming thousands, and the mission of reclamation among the few women who do come is a work by itself.

The din continues, and, as we grow somewhat used to it, we see that every one of these yellow-faced pupils holds tightly in his grasp an open book, of one sort or another, which he studies with closest attention, painfully following each word with his finger, and, when he has mastered it, shouting it out, in his high-pitched voice, with the utmost force of his lungs.

"Is it possible that they can ever learn anything in such a din?"

"They couldn't learn in any other way," said Mr. Pond, smiling. "In the first place, that is the way they learned Chinese in China. Then, you see, they couldn't learn to pronounce English unless they spoke the words out aloud; and, when so many are studying together, one has to raise his voice to hear himself."

With this satisfactory explanation, Mr. Pond gives us seats on the wall-bench, to look about, and excuses himself to go to his class. I have no sooner taken my seat than the bright-looking young fellow next me pulls my sleeve, and, holding out his book—an old-fashioned collection of "Moral Tales" for children—says, shrilly:

"F-r o-u-d, proud. What mean?"

How shall I tell him! The almond eyes are looking confidently into mine, and I make a desperate attempt, putting into use a recently-acquired knowledge of one marked Chinese trait:

"Maybe Chinaman have one little baby. He run, show everybody. Maybe you have new coat. You say: 'See! Look at my new coat!' All same you proud. All right. Maybe

"Maybe Chinaman have one little baby. He run, show everybody. Maybe you have new coat. You say: 'See! Look at my new coat!' All same you proud. All right. Maybe you tell poor Chinamen, 'You go'wey; you not get new coat. I, new coat on, not speak to you? Bad proud!"

My first attempt at pigeon English was entirely successful. My Celestial pupil drank in every word, laughed with pleasure, and gave me at once a new illustration to show that he understood:

"All right. Me talkee velly good English. All same me proud. Good proud! Now hear my lesson."

I held the book with him, and, lowering his voice, he read, in a musical, sing-song tone, several paragraphs, making very few mistakes.

Then he wrote his name in my note-book in Chinese and English hand, Hom Lee, and showed me his Chinese and English dictionary, published in Pekin. But I was not permitted to waste much time in curiosity.

"Now you hear his lesson," said Hom Lee, changing places with the boy next him. I meekly complied; and when I had heard it, looking round for my companions, discovered that each of them had found employment, and was as deeply engaged as if this were what we had come for. And so, no doubt, it was, though we certainly had not known it before.

The teachers present were few, but earnest, and moved about from seat to seat, eagerly welcomed, and giving kind assistance.

I made a tour through the room myself, stopped frequently by irresistible appeals. Scarcely two seemed to have the same reading book. That, of course, did not matter and made rather pleasant variety for the teacher. Hom Lee's unwieldy dictionary was the only one I saw. At the further end of the room I found Mr. Pond and his advanced class, sitting round their table, studying the Bible, which some of them could read quite intelligently, and with evident love for it.

Here I was introduced to "Mr. Fung Afoo," an intelligent-looking young man, upon whose efficient help and Christian devotion Mr. Pond depended much. He was dressed in American style—the only Chinaman so dressed in the room—and had made that last sacrifice a Celestial ever makes to progressive ideas, the sacrifice of his cue and tonsure. Very few, even of the converts, become so entirely reconstructed; and, seeing the air of comfort and general suitableness and picturesqueness of their own loose blouse and trowsers, one can hardly care much to hurry them into conformity with Occidental fashion-plates.

"It is time to close school," shouted Mr. Pond, from the platform, above the din. A bell was struck, books were laid reluctantly aside and

"Silence, like a poultice, came
To heal the blows of sound."

Cards of printed hymns were distributed, and soon the familiar strains of "There is a Happy Land" were filling the room again with echoes, not altogether harmonious. Chinese ideas of music are hopelessly unique. My nearest neighbor, who did not know as "velly good English" as Hom Lee, appealed to me to help him keep his place. His long, sallow finger followed mine along the lines, while he kept contentedly, about a beat and a half behind the rest.

After the singing, Mr. Pond made a short and very touching address upon the text "We love Him because He first loved us." These were some of his words, as nearly as I can reproduce them:

"You Chinamen all love your father. China boy not love his father? Oh! you say, he not fit to live. Why China boy love his father? Why, because first his father love him, take care of him when little baby. You not love your teachers? You not love us? We come here because we love you—love you very much, want to make you good.

"Oh! you not love our Lord Jesus Christ? He first love you. He takes care of you. He sends us to teach you. He wants you to love him. We love him because he first loved us. Won't you love him too?"

They listened with rapt attention to the little sermon which Fung Afoo then translated into Chinese, for the benefit of those who could not follow the English, and with the benediction the evening school closed, and the pupils scattered, to run the gauntlet of the hoodlums, on their way to their homes or harrows in China-town.—*New York Independent.*

Correspondence.

AN ASCENSION THAT DID NOT TAKE PLACE.

If there is anything particularly discouraging about our colored people, it is their singular fashion of getting up revivals, with all the accompanying processes of what they call "purfessing, coming through, getting happy," &c. Any exciting subject or event in temporal affairs will give rise to a revival in the churches, and then follows a general confusion in domestic service and all regular work. A revivel generally comes on violently about the time of a presidential election, and in less proportion in any political agitation.

The last affair of the kind we had here was occasioned by the allusions in the newspapers, early in the autumn, to the meteoric display foretold by the astronomers as likely to occur in November. The colored preachers at once instituted a revival, announcing that the world was about to come to an end, the Judgment Day was at hand, &c. Crowds attended the services every night, all day Sunday, and, towards the close of the revival, every afternoon. There were numbers of converts, and some of our colored neighbors who professed to have "come through," would do no work for several days, walked round all the time, praying, going from house to house shaking hands with all the colored people they met, and showing in every way great excitement. One of these converts plunged into a mud-puddle one dark night, but refused to come out on the sidewalk, declaring, "Jesus would guide him through." Some of the colored people are very sick after these revivals, many are threwn out of work, and the general effect is demoralizing. The scene presented would often be very ludicrous, if it were not very sad.

Negroes are by no means the only class subject to such attacks of religious excitement, "Second Adventism" being a common delusion among Christians, but as the Africans are a highly emotional people they are especially injured by the working of such ideas.

It seems to me very wrong and very rash for any mortal to attempt to fix a time for the end of the world, as the Bible expressly tells us, that "of that day and that hour knoweth no man, not even the angels in Heaven;" and I send you an account of an affair of this kind that came under my knowledge some years ago in the valley of Virginia, hoping it may prove a warning to all who may attempt to fix a date for the coming of the Lord.

I must first, however, explain that a large portion of the Shenandoah valley is occupied by Germans or "Dutch," as they are called by their neighbors, to whom they give the name of "English," whatever their nationality.

These German people are among our very best citizens, nearly always sober, industrious, and thrifty in their habits. They are so universally prosperous in worldly matters that a really poor person is almost unknown in their communities, which are to a great extent separated from other classes of society, and as the elders disapprove much of "the world" and its ways, there is a great disposition among them to keep aloof from what they deem evil influences.

These Germans are usually considered illiterate, though I do not think any people can justly be called ignorant who usually speak two languages, are often able to read one or both, have considerable knowledge of music, and have almost reached perfection in the art of acquiring and keeping property. They are well versed in agriculture in all its branches, and practice many ingenious household arts, such as weaving, dyeing, wood-carving, etc., of which they have little buying "store goods," a great merit in their eyes. They are not a very progressive people, though much change is noticed among them of late years in this respect. In politics, they were during the war, nearly all Unionists, being generally opposed to slavery. In religion, they mostly belong to the Tunker, Dunkard, or Menonite church, as it is variously called. There are, however, quite as many shades of belief among them as among other religious bodies, and new sects frequently arise, composed of members who differ with the majority on "feet-washing," or some equally important point.

Some years ago, one of these Tunker preachers named Shuruen, who was strongly suspected by outsiders of being demented, produced a great commotion among his people by predicting the second coming of our Lord, upon a date fixed by himself. I had often seen this man, whom we "gentiles" deemed a harmless lunatic, lingering about our village book-store, examining all the religious books and occasionally purchasing one. He wore the Tunker costume, which consists of the simplest style of homespun garments, with a broad felt hat, and was really a very worthy men, of quiet manners, only excitable on religious subjects and always ready for a controversy on such points. I remember being much amused once at seeing him purchase a copy of the Koran, the old bookseller giving me a roguish smile, as he tied up the parcel, because I had said that he would never sell the book in that region.

What effect the writings of Mahomet had upon the German mind I cannot tell, but, soon after this, we heard much jesting among our townsfolk about the "Second Advent" for which the Sankers were preparing.

These German people, when obliged by business to go into the town, always carry something to sell, and, in the absence of a regular market, it was very convenient to the villagers to have the good old farmers, or their wives who always look healthy and contented, come to our doors with fruits (fresh or dried), vegetables, butter, eggs, fowls, etc. We were always sure of good measure from the honest souls, who often come long distances to find us lazy townfolks lingering over the breakfast table.

Many were the jokes we made to the amiable little Dutchwoman who furnished our butter, about her approaching ascension. As the time drew near, things began to assume a very serious aspect. The Tunker women set to work making garments for the momentous event. The thrifty housewives and their hard-working husbands grew indifferent to the care of their property, though they continued to feed their stock, merely "to keep the dumb beasts from suffering," as some of them explained to a seeker who asked some irreverent question on the subject. From mere force of habit, I presume, our market woman brought the butter as usual, the day of the promised "Advent;" and when I asked with some curiosity if she would take the money, she said "it would not matter, but she owed that much to another woman, and she wanted to settle all her debts." She was then on her way to a neighboring hamlet, where the Tunkers were assembling in large numbers in a barn close to the dwelling-house of one of their members, whence they expected to rise triumphantly that night at 12 o'clock, "to meet the Lord in the air."

We young folks were disposed to make merry over the upward flight of our butter-woman, but the good little soul was so very solemn, and so earnest y entreated us to prepare for the great change which awaited us, too, that we were fain to become serious, and at least leave off joking in her hearing.

Very solemnly taking leave of us, she got into her little wagon and drove off towards the place of meeting, in the opposite direction from her comfortable farmhouse, the rest of her family having promised to meet her at the barn.

We were all so fond of our little butter-woman that we inquired anxiously next morning, of some young scamps from the village who had made up a party the night before to "see the Dutch ascend," as to what had been the result of the contemplated ascension.

The young sinners had been sobered into quietness by the spectacle they had witnessed, and gave a very impressive account of the affair.

The Tunkers had really assembled in the barn the night before, Shuruen, however, not being present, having departed some days before to carry his message of warning to some other community. Those who had collected had united in prayers and singing of hymns, accompanied by fervent exhortations from some of the brethren,—and all had waited with intense excitement until after midnight for the appearance in the heavens, and the blowing of trumpets, foretold by their modern prophet. Many persons were collected in white robes; families sat together, clinging to earthly ties, while looking forward to endless bliss. Many wept with excitement, and, just at midnight, a very stout old German woman, the owner of the house close by, who had declined to join the other saints (perhaps from some carnal yearning towards the things of earth), threw up the window, and leaning far out, loudly proclaimed that the hour had come and the Lord would at once appear; indeed, she vowed that she already perceived, in the brightening east, the signs of His coming. At this critical moment, the good women leaned too far out, lost her balance, fell to the ground, and a few minutes later was taken up dead. So far as she was concerned, the world had literally come to an end. This melancholy event had the effect of diverting the minds of the assembly from the signs in the sky, and by the time the family had gathered around her, restoratives had been applied in vain, and the natural grief of her relatives had begun to show itself, the night had advanced towards to "wee, sma' hours." The Ascensionists were getting cold and hungry, and one by one they began quietly to look up their wagons and horses, and take the roads leading to their forsaken homes, which they had expected to exchange for heavenly mansions.

While we were talking over this singular delusion of our steady-going neighbors, our little butter-woman drove up, looking weary and sad, as one who had expected to find her Lord, and, having failed, was loath "to take up the burden of life again."

We had no heart to tease her now, after hearing of the tragic fate of her fat friend; but it was difficult to repress a smile when she asked for her basket, forgotten in her excitement about the ascension the day before, and put it into the wagon, as if she felt that she might have some use for earthly things after all.

ORRA LANGHORNE.

Lynchburg, *Jan.* 26, 1880.

The cotton mills at Augusta, Ga., turned out $4,000,000 worth of manufactured products last year, paid 10 to 12 per cent. dividends, and carried a handsome surplus to the sinking fund accounts.

THE ROLL OF HONOR

Of the Hampton Normal School contains the names of those graduates or students who, levying the school in debt to it, have paid their debts in full from their earnings as teachers or otherwise. Students whose resources are exhausted, and whose school debts are getting so large as to discourage them, are usually sent away to earn the means, not only to pay their debts, but to meet a part, at least, of the expense of continuing their course. This method develops character, makes them self-reliant, and maintains their self-respect which would be lessened by a dependence on charity. The following letter illustrates the spirit which such a rule engenders. The writer, a member of the Junior class, left school in 1878, owing a debt of nearly fifty dollars, which, as will be seen, she has paid in full from her hard earnings, besides supporting a dependent mother. She will, doubtless, soon return and finish her course, all the stronger for the efforts she has made in her own behalf.

J. F. B. M.

WEST VA., *Jan.*, 29, 1880.

Dear General:—

Enclosed you will find $48.00, which I think will settle my school-bill. When I was there at school and had to leave because I get behind in my payments, I told you then I would get all you money and I have tried to keep my word.

This money has been very dearly earned. I taught school last winter, and am teaching at the same place this winter. I have a nice school. I walk three miles each way to my school every day, making six miles daily. I have done this because I could not afford to pay board; for besides having to save money to pay you, I have had my mother to take care of.

My school is nearly out now; the people like my teaching very much. I get $32.50 per month, but have to spend most of it on household matters.

Yours truly, F. N. S.

FOOD-CURE FOR ALCOHOLISM.

Lelbig's theory that liquor-drinking is compatible with animal, but not with farinaceous, diet, seems to have been corroborated by an English scientific man, who has been trying the experiment on twenty-seven liquor-drinking persons. A striking instance of reform was shown in the case of a man of sixty, who had been intemperate for thirty five years, and was in the habit of taking o spres about once a week. His constitution was so shattered that he had great difficulty in obtaining insurance on his life. After an attack of delirium tremens, which nearly proved fatal, he was induced to live upon farinaceous food, which in seven months entirely removed his desire for liquor, and he became perfectly sober. He lost flesh at the beginning of the experiment, but regained it in a few months. Among the articles of food mentioned as especially antagonistic to alcohol are lentils, dried beans, haricot beans, and macaroni, all of which should be well boiled and seasoned with plenty of butter or olive oil. Ordinary garden vegetables are said to be provocative of temperance, but much less so than farinaceous diet.

ONE part of rectified oil of turpentine, seven parts of benzine, and five drops of oil of valerian to each ounce of the mixture, is said to make a superior disinfectant for hospital and general use. Each of the ingredients possess the power of absorbing the oxygen of the atmosphere, and of converting it into peroxide of hydrogen, a substance similar in its effects to ozone. Books, letters, newspapers, clothing, well-peper may be treated with this sort of disinfectant without injury. Its action is very persistent.—*Late Paper.*

THE WHEAT PRODUCT IN BRAZIL.

On the 3d of January, 1880, there existed in Rio de Janeiro a stock of 85,470 barrels of flour—say 1557 barrels Trieste, 27,000 barrels of Richmond, 16,000 barrels Baltimore, 1,000 barrels domestic, and *thirty-nine thousand barrels River Plate.* It was only a few years ago that the River Plate countries imported large quantities of flour to supply the deficiency of their own crops. From the United States they took in 1870, 20,051 barrels; in 1871, 54,372 barrels; in 1872, 2,249 barrels; in 1873, 7,833 barrels; in 1874, 10,555 barrels; in 1875, 94,611 barrels; in 1876, 715 barrels. Since 1878 they have imported little if any flour or grain, their own production being more than sufficient to supply their own wants. Their harvesting months are December and January.

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.
To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.
For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va,

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

IN the "WORKMAN," for November we agreed to send a photographic group of Indian students to each one sending a dollar subscription, with a request for it; and for $2.00, (two years' subscription,) the same group as they appeared on their arrival from the Indian Territory in November, 1878, and as they appeared in Jan., 1880.

We hope any who have sent subscription and request, but have not received their picture or pictures, will kindly send word to this office to that effect.

Next to visiting the place, these contrasting groups are the most telling evidence of our success with Indians. The growth in every way is obvious. A set will be sent to each contributor to the Indian Cottage or "Wigwam."

For one dollar, two such pictures will be sent to any address.

THE LEGAL status, rather than the real condition of the freedmen has been the chief concern of their professed friends.

It has been assumed, apparently, that a right state of society is a corollary from a system of good laws, while the converse is more nearly true. Blind to the facts of human nature and to the logic of events, a class of men has labored at the great work of creating a new order of things, building better than they knew in some ways, but, as a rule, subordinating all things to party or personal ends. War is, under God, a terrible force from without that decides vexing questions, as that of slavery; but leaves unsettled multitudes of matters that only a force from within can regulate. Violence can only destroy. It cannot build up. Progress is a growth. It is expressed in wise legislation. But legislation that is satisfied with itself, as has been our reconstructive legislation, having made but one weak recognition (through the Freedmen's Bureau) of the condition of the former chattel, results in reaction.

While just laws are good as setting a standard, and influence people in spite of their prejudices, their end is only attained through enlarged ideas.

No nation ever had so tremendous a problem to deal with as did our own at the close of the war. Its solution was attempted by a political party that never forgot its main chance. Moral ideas could have no fellowship with that idea, and the improvement of the people had, therefore, no place in the plans of the politician.

The legal status of the ex-slaves as vantage ground for party success became more and more his only concern. After the faint philanthropy above referred to, the beaten but brave and proud Southerner with the unshaken convictions he had inherited, and the ignorant, good-hearted, enfranchised negro, suddenly lifted to power, were left to work it out together without a moment's thought of the educational duties devolving upon the professed guardians of the latter. More than most men dream, the situation to-day is due to a mutual kindly feeling, disturbed for a while, that came out of the past. The Negro disliked slavery more than he did the slave-holder. No longer dreading the one, he is coming more and more under the influence of the other, not with the intelligence he ought to have had, but in a great degree as tempting the latter to control him through his fears or his passions,—his ignorance, which is the basis of bodily bondage and makes possible a certain bondage of mind and life.

While the ex-slave was being led through troubled times by his political Moses, not directly towards a safe and happy shore, the consciences of another class of friends stirred them to a quiet work, at first under contempt, and sometimes persecution, but which after a time secured the respect and co-operation of the best men of the South, and is now generally recognized according to its merit: the work of fitting the Negro for freedom and for the use of the power that had been given to him. Few in the North realize, as do the men engaged in this work, the great facts and the terrible necessities of the times. Such men talk so differently from their favorite newspaper that something wrong in them is often suspected.

The representative men of the cause that has sent over five millions of dollars in charity to enlighten the minds of the freedmen, and is now sending at the rate of nearly five hundred thousand dollars a year, are better witnesses than those whose profit is in the success of party. Northern sentiment on the Southern question is educated by men who have a very different standpoint from the Negro educator.

We believe that both sections are now cooler than ever before, and that reflection will hereafter enter more into Northern judgment. The question of legal status is now fixed as far as law will settle it and will interest the thoughtful less than that of the real condition of the Negro. Fifteen years of teaching has given a basis of hope and of faith for the mental and moral progress of the race. After fifteen years of freedom, Negro homesteads dot the entire South. In spite of some political friction, and still widespread but not wholly sectional prejudice, we find in nearly every Southern State, in almost every county, ex-slaveholders pushing the common school work for both races; we find free labor a success, and signs of a break-up of the Solid South.

On the other hand is a vast, ignorant, but well-meaning mass of voters, capable of infinite harm because unable to learn their duty as men and citizens, anxious to do so but prevented by public and personal poverty. National aid for Southern education at this juncture seems imperative; not more so than it has been at any time since 1865; but perhaps more to be hoped for now than then.

Charity is increasing its gifts for the welfare of this race. There never was a year like the last for noble gifts to Negro education. On the well-laid foundations of Hampton, Atlanta, Fisk, Howard, Lincoln, Claflin, and other schools, many more liberal offerings are, we believe, to be laid.

For the Indian has been sought the same panacea of salvation by Acts of Congress. As with the negro, these are essential, but have no exclusive claim upon the attention of intelligent law makers. Indian education is a serious concern with some of our legislators and public officers, but at no point have treaty stipulations been more wickedly broken than with reference to the education of Indian children. Proof of this statement is easy to produce.

A better policy has been inaugurated, and the movement is now towards generous provision for educating the red man's children.

Few appreciate the value of a single earnest, intelligent man. He influences hundreds; he multiplies himself. Purpose fulfils itself and will not fail like laws or promises.

What better use of money is there than helping work that generates such purpose?

The best work for the races who have been given to this country to care for, to be sound, strong and perpetual, must look to private beneficence for its foundation.

EDUCATION IN MISSISSIPPI.

The Report of Col. J. A. Smith, Superintendent of Public Education, is just issued, and is encouraging.

We quote and summarize as follows:—

"It is with much satisfaction that I am able to state that the Public School System is in a healthy and growing condition. As will be seen by the statistics, when prepared, the number of children in attendance is largely in excess of that of any previous year. It will be observed that the financial statistics of 1878, including receipts and disbursements, are in excess of those of 1877, and it is probable that this excess will be increased in the reports for 1879. This cannot but be regarded as a manifestation on the part of the people of the State of renewed confidence in the cause of popular education. Considering the financial embarrassment that pervades the State, the liberality of the people in many counties in voting the necessary funds to supplement that distributed by the State, in order to maintain the schools five months in the year, is worthy of note, as evincing faith in the stability and efficiency of our system of public schools, and that prejudice and opposition are gradually giving way to the light and experience of the age, and that the public mind is now being turned in the direction of the improvement of the system.

"One of the most hopeful features of the system of public education with us, is the almost complete liquidation of the enormous school debts inherited by the present regime. It is true, that under the present law regulating the pay of teachers, the nominal sum is not so large as formerly, yet by reason of the appreciated value of warrants, they receive more money."

The educational machinery of the State is not in perfect running order, owing partly to the frequent changes in the school law. There are, as in most Southern States, County Superintendents. These officers have many duties and very little pay, their total year's salaries having amounted to but $11,765; while in Virginia the corresponding set of officers received $30,150.

Two hundred thousand dollars are annually devoted to school purposes. The law requires that "ample school facilities shall be furnished to all the educable youth of the state," and that schools shall be kept open four months in the year, but this is far from accomplished. The tax of three mills on the dollar is not laid or collected, and the cause of education is sadly crippled by neglect, indifference or opposition, in some counties school interests being the last to be considered. Efficient school officers are hard to find.

"TEACHERS.

"The pressing demand of the educational system of the State is well educated and trained teachers. How this demand is to be supplied, is a question that should command the earnest attention of every one who feels an interest in the future well-being of the State. It is true we have among our teachers some that are the peers of those of any other State. These are, however, comparatively few in number. As stated elsewhere in this report, normal schools for the education and training of teachers have been adopted in most states, and this is doubtless the shortest and surest way in obtaining the end sought. It is, however, attended with an expense that it is feared our people, in their present impoverished condition, are unwilling to incur."

Colonel Smith urges Normal Institutes and Teachers' Institutes as a great and pressing need.

Institutes to be held for five or six weeks annually, under State auspices, are earnestly advocated. He sees that the teacher makes the pupils who become the people, and that the improvement of the teacher is most radical work. Four important Institutes were held last year.

The University of Mississippi, with 354 students; Alcorn University (colored), with seventy, under ex-Senator Revels; the State Normal School at Holly Springs (colored), with 100; and Tougaloo University (colored), attendance not given, are or have been under State auspices, and have sent up most encouraging reports.

The latter (Tougaloo) is owned and controlled by representatives of the most deep-dyed Abolitionism, and is thus referred to:—

"The management of the institution is admirable; its teachers are superior, and every thing connected with it is in excellent condition, as I have had occasion to learn from personal observation. As a recognition of the good work being done by the American Missionary Society in the education and elevation of the colored people of the State, it is recommended that a liberal appropriation be made that it may be rendered still more useful."

The Peabody Fund Trustees gave $5,250 last year, principally for the education of teachers for their work.

The Superintendent adds:—

"This question—as to whether or not the State shall aid in the education of her children—if we accept the sentiments of other states and peoples, is settled in the affirmative. If, as it is claimed, the virtue integrity, and happiness of a people depend upon their intelligence; if the statistics of the prison and poor-house can be relied on, that the great mass of their inmates are uneducated; if it be true that ignorance and sensuality go hand in hand, and that illiteracy, bigotry, and superstition are all closely allied, then the correct answer to this question is unmistakenable. No one in this enlightened age will question the fact that labor is remunerative just in proportion as it is directed by intelligence and skill, and at this particular period of time, remuneration in some shape or other, is the end of all labor, and the amount of remuneration should be in inverse ratio to the amount of labor, or in other words, it should be our aim to derive the fullest benefit from the labor expended, and in order to attain this end we must be able to labor intelligently. I would not be understood as arguing in favor of a parsimonious policy in school matters; for it can be demonstrated beyond the peradventure of a doubt that no investment of State or individual means, brings in so large a profit as in education. Unfortunately for Mississippi, she is, at present, unable to expend that amount in the education of her youth that her necessities demand."

Colonel Smith is an ex-Confederate officer who, in spite of traditional ideas, saw the right course, and has given himself, with all his heart and strength, to a great and humane work for both races. He has induced a number of educated Southern men in the various counties to co-operate with him, and to-day, while the people at large are backward and stupid on the educational question, there is a noble company of men "to the manor born" who are zealously laboring with him for free schools. This is a sign of the times.

This is the reconstruction from within that is working steadily throughout the South, and is too little known and appreciated in the North.

THE following illustrates the experience of many who are fitted and anxious to teach in Southern schools. Sessions are short, from four to seven months, payment is delayed, and unless the teacher is trained to some other work he or she is liable to disappointment.

Teaching and farming go well together in the present condition of things. The teacher-farmer is the man for the times; he is essentially an educator throughout the year.

The agricultural training at Hampton is a valuable basis for the teachers whom it has fitted and is fitting for the field.

"Finding the school-work so uncertain, I have decided to divide my time and attention between teaching and farming. I have bought a mule and farming utensils, and have rented a little farm, aiming to make a crop. So you can see how I stand.

"W. A. YANCEY."

A GENTLEMAN in the North recently received the following letter from a gentleman in the South, and sent it to us to read, thus: "Dear Sir:—Please read and

member of my church, and trustee of the public school for colored children in this place, I write to inquire whether you can recommend an efficient male teacher for said school. The funds in hand will pay a salary of $40.00 per

abroad. They felt a reality never before experienced; there was such a ring of sincerity in every word he uttered that their eyes were filled with tears. When the service was ended, my friends said that they could not leave

calls that afternoon, we thought hers the most interesting."

Good advice to teachers from the "Freedmen's Friend."

A GENTLEMAN in the North recently received the following letter from a gentleman in the South, and sent it to us to read, thus: "Dear Sir:—Please read and return. A chance for a missionary."

We publish it—a true word-picture; not to discourage, but as light on the question that can only be solved by getting at all the points.

When the ex-President of the Confederacy admits that he has changed his opinion on free labor, and that it, as a whole, is a success, no argument for it is needed. But "everything is not lovely" in the lines of labor at the South. That is why we are here and training the missionaries that are needed.

My dear sir:—

Yours of the 10th on sheep is at hand. It is all right where you can take good care of the sheep; but my "negroes" love mutton too well to give me time to carry out the experiment,—and living in town, I would have to do it by "proxy," which, my experience tells me, is one of the most unreliable myths yet discovered or invented.

I wish you were here just now to help me talk. I have scolded, preached and threatened my "renters"—all to no purpose; they have, as usual, wasted all their money and are going ahead on the next crop, getting "advances" from the very start. All their money is now in Boston, New York or the West, gone to pay for luxuries and red waggons that they have no use for; but they are restive and will not be comforted so long as they have a dollar of the old crop on hand. "It is their money," they argue, "and they ought to be allowed to spend it their own way;" so I give up the conundrum and let it go.

I have a beautiful estate in one place of about 1,300 acres; it would be a paradise for a gentleman, but I have turned it over to the negroes and they enjoy it to their heart's content. Game is plenty on it, and to be had for trapping; but they prefer to come to town and buy meat. Cotton and corn grow on it with very little labor. Yet the rascals will not gather it further than it suits their wants; the balance they let remain. They pay their rents, and then my pecuniary interest ceases, but wanting to see them have plenty of money, I keep following them up, urging them to pick their cotton and gather their corn; it is like pouring water on a duck's back and amounts to about as much. Hence, I conclude that my mission as an evangelist is a failure, and we must let the man and brother enjoy his freedom in his own peculiar way; otherwise he is not happy.

Yours truly, G.

MR. J. ALEXANDER TYLER wrote a letter on the Indian Question to the N. Y. *Herald*, dated January 31, 1880, from which we clip an extract:—

"Although Indians are called savages by us, and are savages, yet I think it would be difficult among a community of whites containing the same number of individuals as are on the reservation occupied by the two tribes recognizing Spotted Tail and Red Cloud as chiefs, numbering about 13,000 Indians, to find the same degree of morality in its widest sense and strictness. We are too apt to forget, in this age of great progress, that the arts and sciences which our race boasts of were not acquired by us in a brief space of time, but have been gradually developed by the experiments and experience of ages. The possibility of civilizing Indians has never until now been fairly and honestly tried, and yet the too universal cry of our people, and especially those who inhabit the Western States and Territories, is, 'What's the use of wasting time and money in the vain endeavor to civilize the Indians? Better exterminate them!' These questions naturally arise in the mind of the just man:—Why not exert a little patience, and give to the policy adopted by the present administration, and which truly deserves the prefix of 'peace and good will,' a fair chance of being tested? Why turn them over to the iron hand of the military? The Government can well afford to let the sweet spirit of charity govern our relations with this people, and I feel sure that a supreme blessing will accrue from it in saving from ignorance, barbarism and destruction those who are our own fellow-men and entitled to consideration as such in the name of justice and humanity."

THIS is an example of the constant calls that are coming in for teachers.

We are unable to supply the demand in our immediate vicinity.

INDIANOLA, TEXAS, 27th *Jan.*, 1880.

Principal of the Hampton Normal School for colored persons, Norfolk, Va.,

Sir:—

On behalf of Fred Hamilton, a colored member of my church, and trustee of this public school for colored children in this place, I write to inquire whether you can recommend an efficient male teacher for said school. The funds in hand will pay a salary of $40.00 per month for a term of five months. At the expiration of said term, a private school may be established which will pay the same salary for another term of five months. A teacher who can commend himself to the colored people of this place may secure permanent employment. It may be proper to add, that most of the colored people are Baptists.

Your obedient servant,

D. MCNEIL TURNER.

FRUITS OF QUIET LIVES.

We are getting very fast away from the war in some respects,—none too fast from its strifes and hates and miseries and memories of wrong; but in the very midst of these evil growths which cannot die too soon, from human life stirred to its depths on both sides of the line, sprang a strength and beauty, in heroism and loyalty and quiet self-devotion, which can never be forgotten, though they can well afford to be, for their fruit shall remain.

Not the least worthy of remembrance, while perhaps the least anxious for it, is the army of peace that followed the footsteps of war into the South—a strange army, without banners, of delicate women and peace-loving men, armed only with spelling books and testaments, leaving home and culture and comfort behind them, for hardships of all kinds, isolation, coarse surroundings, and sometimes the risk of death itself, without a regret, scarcely with a thought of the sacrifice, with no malice in their hearts—too full of one earnest purpose and compassion to leave room for anything lower.

To be sure they had their rewards as they went along—compensation even outside their success. The intensity of experience, the romance of the work was theirs, and will always be theirs in remembrance. The teachers of the freedmen now and hereafter can know little of it, full of activity and interest as their work is. As a mere matter of rich experience, they may envy the pioneer.

Among these more fortunate ones, were two who need no introduction to Hampton's friends, and would not allow one more general. We can only hope that some day they may consent to give the public the two, thrilling stories blending into one, that here we can only take the liberty of briefly alluding to.

While "Miss ——" remains a cherished name in many a humble household still "walking in the light" of lawful wedded happiness which her efforts kindled (though Hymen's torch was but a tallow dip); and while hard working men owe the comfort of their little homes to a kind hand that first started them in the right track of business; and while sixty-two Hampton graduates live to thank two good friends for their school privileges and to carry on the work among their people that these two friends began, these two quiet lives cannot keep all their good fruits hidden, and Hampton claims the right to express her own acknowledgement of it.

To those who know the story, there is something beautiful, and specially illustrative of the ever special providence of God, in the calling of these two from the distant homes of New and Old England, by the cry of the lowly; and the union of the two lives in one purpose of good never laid down, but expanding as its opportunities increased of finding out new ones.

On their new journey across the sea, Hampton follows these friends with a loving God-speed, and while she knows that they carry with them a kind intent in behalf of her interests, she wishes them all success in their own.

A CASE OF CONVERSION.

We take the liberty of publishing an interesting extract from a private letter:—

"I must relate to you a little incident about some of our relatives who are spending the winter in South Carolina. Some persons who did not know their true goodness might almost term them skaptics, because cant is so repulsive to them. But to my story. The two gentlemen of the family thought they would visit the colored churches. The first they went into, there was so much shouting, &c., &c., that they were glad to retire, though they were called out before the society for 'sterbing' the meeting. However, they passed on to a second church, taking the lowest seats in the house, that, if like the services of the first church, they could retire more quietly. What was their surprise and delight to become so riveted and magnatized by the preacher that their souls were stirred to the very depths! His burning eloquence and glowing appeals, illustrated by exquisite figures, and choice diction, free from grammatical errors, had a power surpassing any one they had ever listened to, in this country or abroad. They felt a reality never before experienced; there was such a ring of sincerity in every word he uttered that their eyes were filled with tears. When the service was ended, my friends said that they could not leave the church without going up to the preacher, and taking him by the hand and telling him how much good he had done them, and putting a handsome gift into his hand, besides that they had contributed when the box was passed around. My friends had little faith before this that the colored man could be raised from his condition, but conviction came with this day's service."

THE "Weed" Sewing Machine Company has contributed a machine to the Hampton Institute, for the benefit of the Indian boys who are to learn tailoring under Mr. J. C. Robbins. We call attention to their advertisement in another column.

DURING the recent discussion in the General Assembly of Virginia upon the public debt a Southerner opposed forcible Readjustment on the ground of the State's resources and ability to pay.

We quote from the *State*, of Richmond:

"The strongest point he made was to show the fallacy of the erroneous, though we admit plausible argument that the freeing of the slaves had destroyed the property on which the debt was based. It had not impaired their property value in any respect to the State; but, on the contrary, enhanced it; for as the slave property was only property in so far as it represented productive labor, and as the State had lost none of the labor of the negroes by freeing them, it had lost nothing. It was but a change of systems, without affecting values adversely. Mr. Henry, of course, did not say there had not been personal loss to the extent of the ownership of property to each person; only the State had lost nothing by it. He puts it strongly and correctly when he says in refutation of this general error: 'The statement is that by being freed they have been lost to the State. Are Senators willing to subscribe to this statement? Do they not know that what was lost to the master was gained by the freedmen? and that the State, which has a half a million of freedmen instead of half a million of slaves, has lost nothing?' That is exactly it. The wealth has changed hands as any other wealth, but still remained in the State as part of its eminent property, and the loss of the one was the gain of the other. The master lost the price of his slave and the slave gained the price of his freedom, the privilege to dispose of his own labor, and the State, which owes this debt, and must pay it from the proceeds of the productive labor of all her people, was no loser by the change.

This fact is so well settled that it requires no argument. We might with greater force plead the general losses incurred in a great commercial crisis, by famine, or pestilance,—than enter this plea in justification of the repudiation of an honest debt owed to men, many of whom were equal losers by this war and its results. The man who owned slaves also held State bonds, and because he lost his slave property he must lose, too, the little remaining money he had invested in these State securities! But Mr. Henry proves that the framers of the bill have also erred in the matter of the value of our real and personal estate which they claim has so materially shrunk since the war as to render it impossible to meet the interest on our debt at a fair rate of taxation. The Senator from Richmond showed conclusively there had been no such shrinkage of values here as intimated in the bill, and every man who knows the story of the past ten years, will fully agree with him. On the contrary there has been, we think, a very perceptible increase in our property and its values, though very few of our people have become sudden millionaires or accumulated vast fortunes. These things are not expected here. We are not a venturesome, speculative, or mercantile people; but content with slow gains that are sure and come to stay with us. Our poverty, that we plead so piteously is not real. We are not poor in fact, though to hear the very poor mouths many make, a stranger would suppose we were as badly off as the famishing Irish people, and needed a general subscription throughout the world for our relief. It is not so. The people of Virginia are doing as well if not better than in almost any other State in the Union, and should blush to put up this beggar's plea to avoid meeting their just obligations."

A lady in Washington Society (not "political") writes to a friend:

"Last week I gave my young lady visitors a taste of Washington Society, making numerous calls, attending a Wedding at which Mrs. Hayes was present.

We called on Mrs. Sen. Bruce and were all delighted with her. She returned the call on Saturday and although we had a multitude of calls that afternoon, we thought hers the most interesting."

GOOD advice to teachers from the "Freedmen's Friend,"

A teacher, if he (or she) is impressed with the moral obligation to improve his opportunities will instruct in various ways not laid down in the books. His own habitation, if he possesses one, as well as the school-house, will evince tidiness and a general appearance of care. Whitewash will be applied where needed, and scraps of paper, dead limbs of trees, or other trash, will not be allowed to litter the school-house surroundings. From the woods and fields may be obtained a variety of climbing vines, as the convolulus, trumpet-creeper, bignonia and and passion flower, to plant and train in appropriate places. There will be pupils found who will consider it a labor of love to co-operate in such work, and thus the example will extend itself to families, and the influence be even apparent in whole communities. Lincolnton appears to be a pioneer in this direction, and as such the commendation of our Superintendent is well extended.

JOHN BRIGHT ON EDUCATION.

At a meeting of the teachers of Birmingham, England, recently called by the Mayor of that town, Hon. John Bright the famous English liberal statesman spoke in addressing them as follows:

"To feel that I am in the presence of from five hundred to six hundred persons who are engaged in the honorable office of teaching, is a great pleasure, and I hold this to be a meeting of a peculiar and very interesting character. I am not sure it would have been possible for the Mayor to send out invitations to five or six hundred persons of any other class in Birmingham, where he would have had so much that is important to the present and future of this great community.

"Education is not books alone. It is not what is called the 'three Rs.' It is not even classics and mathematics, of which when I was young I knew nothing, and of which I have not acquired any knowledge since. I regard what are called the classics—that is, the ancient language of Greece and Rome—as rather luxuries than anything else. It is a luxury to know anything which is good and innocent; it is a great luxury to know a great deal of the past, not that it makes you more powerful, but it is a pleasure to the person who knows. But I do not believe myself that there is anything in the way of wisdom, which is to be obtained in any of the books of the old languages, which at this moment may not be found in books of our own literature. Therefore, I think a man may be as great a man, and as good a man, and as wise a man, knowing only his own language and the wisdom in it, as if he knew all the Latin and Greek books that were ever written. But I say there is another sort of education beyond that of books; I think Milton describes this sentimcnt in speaking of some ancient person as,

Deep versed in books but shallow in himself,

and there is no doubt that there are people who know almost everything that may be known in a library, and yet they will hardly make their way from one street to another.

"I would have nothing there that was done for ostentation or show; but whatever could be done to make education real, to raise the character of our population, to exalt the sentiment of the people, whatsoever can be done by the expenditure of money, by the devotion of the earnest efforts of good men and good women like the five or six hundred I see before me, that I would do and have done. I only exhort you to go on, and to consider there is nothing in this town more essential to its future prosperity and greatness than the good, sound education of your children, and every one of you as teacher will feel you have been permitted to be one of the helpers in the greatest work which the population of Birmingham has ever yet undertaken."

OBITUARY.

DIED., Jan: 23d 1880, at her house in Williamsport, Pa., a graduate of Hampton Normal School, Mrs. Matilda Jane, wife of Wm. B. Weaver, an ex-student of Hampton.

She was, at the age of 12, taken to the Pennsylvania State School for Soldiers' Orphans, at Bridgewater, Pa. After going through a four years' course there, she was employed as a teacher in the school, and taught one year. Then coming to Hampton in the Fall of '73, she entered the middle class, and graduated in '75. Afterwards she taught two years in North Carolina and Virginia; was married in '77, and went to her home in Williamsport, Pa. where her husband obtained the position of teacher in the public school. The deceased was beloved as a scholar by her classmates and teachers; and as a teacher by her pupils, and leaves a husband, mother, two sisters and many friends to mourn her loss.

A SET OF SCHOLARSHIP LETTERS.

THERE is perhaps no better or fairer illustration we can give of the progress of the students through the school course than a set of their scholarship letters written once a year by them to the friends who contribnte scholarships ($70 a year) to the school. We gave such a set last month, and this is another. The letters are selected for their intrinsic interest. In all other respects they are not above the average, and are given entirely without correction.

FROM AN INDIAN.

HAMPTON, VA.

Dear Friend

I was born in Grand Island Neb. in the 15 day of Nov. my mother was married by a white man and used to liva in Grand Island. and my father was scouting with the Pawnees and once it raiu very hard and he got lightling struck and died. I did not know him. I never seen him. my mother tells me about him. when he died my mother went back to her own home, and lived with her brother, who lived like a white man. In 1869 I went on a hunting with the Pawnees and Puncas we weot on about three days they found some buffios so all the men got their best horses and fixed them up and than took their bows and arrows and guns they went all around them and than they just run after them and see who'll get there first one man would kill two or three sometimes four and eight, and they skin them, and tak'n them home, skin and all the skins are used for moccasins and men legends once I went swimming while the men went after buffios. while I was in the water, I seen a buffio coming towards where I was, frighten me, to. I had to climbed upon a tres. it was mad soma men were after him and had some arrows in him. they killed him and than I got down. from the tree. and I seen them skin it. we had lots buffio meat we camp same place. the Indians were drying their meat so it will less long, after while wa went on again. we want on till sun was sat. next morcing they seen some more buffios. they killed many more they had to stay there till their meat was dry. we stayed there and the Indian women got their things and worked on. with their skin. they finished them. and had lots meat and skins, and return home again. I just use to eat dry meat all the time no towns around nor near, to buy some bread and sugar. I use to get hungry, for brend. I use to cry. for soms brend my stepfather had to taka me where their was some Pawnees that did not go on hunting we got there. I had all the bread I want I was glad then the next day we went on and got to n town and went in the cars and went on we got to another town wa got out and went home. and than they sent me to school. four months. I want homa ngain. after awhils. some soma Pawoees ran awny from their home. went to Ind. Ter. and stayed there for couple years had nice time and had many ponies and mules. they did not need nnything. they sent one back to tell them how nice it was down thers and it, made part of the Chiefs, think it would be nice to go down there. they nse to have a big connsil there with the Agents and Rush Roberts he.p them as I know him. one Chief did not want to go down there that was Lone Chief, because he liked the place where we use to live and because the Pawnees were civilized when they were up there they were commencing putting up their log houses and farming. but they went down to Ind. Ter. At my homa they are just commencing farming. I 'nve got a farm my own. I use to work on my farm in summer and go to school in winter. I had been wanted to go to soma other school I nm very glad they took me to Hmpton School. I think my friends at Hmpton School will help me all they can I want to learn all I enn in Hampton School and stay here till four or five years. my mother was willing for me to come to School and be among the white people. and when I went to the Indinn Territory I went to the day school one yenr, and the next yenr I went to the Boarding School. I never use to talk English one year ago but the Indian Agent at my home kept me nt his house, where there is many white people staying they use to talk to me in English all the time and I try hard I soon learnt how I hnd to interpret for the Agent when we first went down the Territory there use to be many sickness they use to get sick and soma of them died they were not use to in warm country once I was sick I had the chills and favor I pratty near died I got well again before I came away I plowed part of my field and sowed some wheat but I 'nve got brothers who will work on my field while I am away and keep my horses good some white people use to want to take me when I was at home I use to write to Col Meacham to help me to go to some School he did help me and I thank him I am very glad I went to Hampton School I am trying to be a good boy. and study all I can the only thing that troubles me is Georgraphy. I have to try hard. Yours truly

J. M., Pawnee Indian.

FROM A JUNIOR.

HAMPTON, VA.,

Dear Friend

I have been requested hy the principal, Gen Armstrong to write yon a letter concerning the history of my past life.

I was horn in Pickens County S. C. July h2, 1880. When fiva years of age my parents moved to Columbia the state capital, which was at that time a very desolate looking place; there was not a building standing on main street. They having been burned by Gen Sherman's men. The state at that time I believe was under martial law, for when any one committed a crime they were carried to headquarters for trial. The colored people at that time were very poor; many being unable to earn their bread. But luckily for my parents they found good situations. About that time there was a great desire upon the part of the colored people for an education; the larger portion being very poor and unable to send their children to school there was not much done the first year towards education. Bnt the second year a few private schools were opened by colored people who had very little education; and could only teach reading and spelling a little. They knew very little about arithmetic' and grammnr. They being slaves were not allowed books what they learned they did it by chance. To be caught with a book in slavery time would result in him or her being tied np and whipped almost to death.

It was I believe in the year of 1868 that the first school of any importance was opened. It was taught by teachers from the North.

This school still exists under the nnme of the Howard school; nnd is taught by colored teachers and is supported hy the state. It has an average attendsnce of about (700) seven hundred.

I started to this school in 1868. The school nt that time was under the charge of n Northern lady.

I did not go to this school long; my parents not having an education thought I was not learning fast enongh so they stopped me. I learned my Alphabet at this school and how to spell in little. My mother wished to go on a visit to our old mountain home, where we staid abont six months. I did not go to school once while there. When we came home my father sent ma to a private school, there I learned a little about Georgraphy and arithmetic. For some cause or other this school soon closed. I remained out of school this time about one year when I started to school again.

I had by this time learned to appreciate my studies; I studied Davies Practical arithmetic, Barnes' brief history of the U. S.

But unluckily for me my mother was taken sick n hnmber she is still an invalid. I was compelled to quit school to help my father support the family which consisted of five besides myself. This went very hard with me for I was very anxious to learn. The S. C. University at that time was opened for colored boys. I hnd n recommendation given me hy all my teachers. But as I be already said my father was unable to send me. I was however determined not to be outdone hy this; So I started to night school. I had not been going thers long before this school closed. I continued to study at night and at my work whenever I had n chance.

I was stnying with Dr ——, and when he went to see his patients I would carry my books under the seat of the buggy and study untill he came out. Hs caught me at this scveral times and I was discharged. I then gnve up the idea of trying to learn. I had tried every wny I knew how, and had been defeated.

Please accept my heartiest thanks for the contributions you hava so cheerfully given to nid in the elevntion of our race from ignorance and superstition.

I was appointed by Cnpt. S. Thompson atate Supt. of education to receive the benefit of the Peabody fund for one year.

It has been three years since I went to school; I had studied in arithmetic as far as compound numbers. I have been here since the first of October and am very well pleased with the school. I entered the Junior class. Please excusc bad writing as this in my first letter north and of course I am very ncarvous.

Nothing more at present,

Respt. J.,
of Columbia, S. C.

FROM THE MIDDLE CLASS.

HAMPTON. VA.,

Dear Friend;

It gives myscif much pleasure to write you giving an account of my past life. I was horn in Marion South Carolina May, 1866. In the cara of my grandmotber. After the closa of the wnr, father home and in 1870, I was permitted to attend schoo four months each year until 1874, pn being anxious that I should learn n trade and with the advice of my uncle I was put under the cara of a gentlemsn from Portsmonth Virginia who at that time was about to commence shingling in the swamp of the Great Pedee river. After a short time, I succeeded in learning the trade and was getting on very well, but when winter came on, I found that the swamp lifa was very unpleasant; living in tenta roughly hnilt and being exposed to the cold and rain, a spell of sickness was the result. In spits ef the attention I received I grew worse and worse, until if was thought best to send me home, where I could receive better attention. In a short time after I reached home I recovered somewhat and was permitted to attend school for a short time during the latter part of 1875, and in 1878, I practiced my trade a short time but having a thirst for an education, I was not contented with but desired to follow some occupation that was more instructive than making shingles. My mind was fixed on teaching school and after passing an examination, I was authorized to teach and continued one or two short sessions each year from 1878 until 1879 when Capt Hugh S. Thompson (State Superintendent of Education for the state of South Carolina) delivered an address to the teachers of Marion County. In his address he complimented the Hampton Normal and Agricultural Institute and said he was authorized to award (10) ten students of South Carolina with n Peabody Scholarship to tho Hampton Normal and Agricultural Institute. To my surprise I was appointed one of the ten, but not without admiration and joy.

As soon as I received intelligence of my appointment, I commenced making preparations for starting, and on the seventh of August, I started for Wilmington North Carolina, with the intention of spending n few weeks there with my brother. After my arrival there, I was advised not to remain on account of the unhealthy condition of the city. Goldsboro North Carolina was the next place I contemplated stopping, and having taken the cars for that place, I reached there on the night of the tenth and was cordially received by Mr —— (a graduate of Shan University at Raleigh North Carolina) and several others originally from North Carolina who have established themselves at Goldsboro since the war. After spending n few weeks there I set out for this place and reached here on the seventeenth of Sept and after being examined, I was assigned to the Middle Class; by hard study and good deportment I will graduate in 1881.

I am very respectfully yours M.

FROM A SENIOR.

HAMPTON, VA.,

My dear Friend,—

I am very glad to have the opportunity of writing to you once more so that I can thank you for you for your kindness to me and my race.

This is the last time I shall hava to write to you as this is my Senior term.

I am very thankful to the Lord for giving my people and me such good friends as you are, and also such a glorious privilege of getting some education, as it is so much needed in my race particularly. Besides there is work to be dona in the world, and if we do not help to do it of what good shall we ba in this grent and wonderful world of ours.

I had n very hard time when I began my school life. My mother had six children to provide for, and I am tha oldest, (I am not sixteen) she hnd to provide nearly every thing that we had.

Many a day bave I had to sit home and grieve because I could not go to school, but meanwhile I knew not that my Heavenly Father was providing for me. He was thongh for in the year 1878 I had learned enough to enable me to enter the Junior Class at the Normal School. I studied very hnrd and was promoted to the Middla Class in 1877. I got on very wall that term but being young my teachers thought it would be better for me to repeat my middla term.

After school closed at the Normal for thnt term, I thought I would teach school during thnt vacation. So I gathered nt my honse, which is in tbe town of Hampton, n numbar of poor little ragged children so thnt I might teach them, nnd also earn something for myself, as I charged them ten cents a week.

Tha first week I had only four scholars, the second week I had twelve, and the third I had twenty. I had just gotten my school fairly started when disease seized me, and with it came n crnshing of all my hopes for the poor little cbildren.

I had to close my school, as I was very ill, and I remained so all summer.

With my illness also came one of my greatest blessings for it was during it, that I sougbt the Lord Jesus Christ and found bim precious to my sonl.

By the time school opened I was well enough to continne my studies.

I studied more earnestly this term hoping to be promoted to the Senior Class at the end of the term, and also trying to guin all the knowledgo tbat I could for tbat was what I came to school for and that was what I must hava. At the end of the term I was promoted to the Senior Class. Oh joy! what great reward that was for my labor!. How happily I began my work for vacation! I worked a part of the first month in the "Knitting Room," but work getting scarce there, I went to work in the "Crab and Oyster Canning Factory" of Mr. T. T. Bryce. When I first began to work there I picked crabs getting two cents per. lb.

At first I did not make much, but I worked steadily on and after awhile Mr. Bryce had me to pick crabs for the Hygeia Hotel allowing me as many pounds of crabs as I picked and half as many extra so in that way I managed to make more money. I had worked in that way some time when Mr. Bryce allowed me to pack the crabs paying me seventy-five cents per day. At that rate I was able to save some money and when I earned twenty-five dollars I thought that I owned a very large sum of money.

I was very happy but my happiness was transient for just before vacation ended my dear step-father was brought home very ill from New York where he had been working. It was on the 18th of the month that he was brought home, and on the 19th he died leaving my dear mama with six children for whom she *alone* has to provide.

What a dreadful cloud this was that bad been thrown over our family just in the hour of pleasure.

What would I have done if I had not had a loving Saviour to fly to in that hour of dreadful sorrow and distress.

The money I had saved I bad to give to my dear mama to assist her in paying for my father's burial expenses.

In that way I was deprived of the school clothes I needed, but I started to school feeling that the Lord would provide for me as he always had done.

An educatiou I wanted and an education I must have if perseverance and hard study would attain it, and I prayed earnestly to the Lord to help me.

The Lord heard my prayer for he fonnd ma a dear friend in one of my dearly beloved teachers who is now in France and to whom I wrote telling her of my distress. I have also another dear teacher in New York who helps me very much.

I need not try to tell you how I love my kind teachers and Northern friends, for I cannot. I hope the Lord will bless them always.

My dear friend I do wish very much that you will write to me, as I would be very happy to have you do so.

Hoping that the Lord will bless you,

I remain Yonrs respectfully R.

ENCOURAGING.

Mr. Alfred H. James, for many years Superintendent of Schools of the Friends' Freedmen Association of Philadelphia writes as follows, from Charlotte, North Carolina:

"The Freedmen who have not been engaged in agriculture or other work for themselves, have fonnd employment nt moderate pay, and seem to have done well during the summer, and are thankful in being in tolerable preparation for the mora trying season of winter. Several have made good crops of cotton, which stood the dronth better than most other crops. R. S. raised eighty bushels of wbeat and fifty-seven of oats, keeps two horses, some fine hogs, and has a good farm-yard of poultry. The great change for the hatter which has in a few short years come over the colored people of Lincolnton is a surprise to all. It was one of our poorest places, where they had poor houses, no money, hnd clothing and scanty food, and but little work to be obtained at any price. Our school had to be maintained without charge to them, while clothing, food and books had in many instances to be supplied, that the children might have tha benefit of it. Today it is a thriving village of neat cottages, a school-house (ours), and two meeting-houses. It is located one mila ont of Lincolnton (proper), and around our school, which nppears to have formed the centre, and been the nucleus of tha whole thing.

Among other gratifying things there, I will state that a large nnmber of tha former students are now engaged in teaching either public or subscription schools in the surrounding country, and from all I could learn are doing well. I met two of these, who came to see if we would be willing to supply their schools with books at the same prices we did our own, stating they could not obtain books at any price, and that the children were badly in need of them. Lack of books is an essential drawbnck to schools here awny.

Charlotte is a lively business place nt this season. Country merchants come here to buy goods for winter stock. Cotton is coming into the market, and bnying and selling is the order. It is a large cotton mart, and is also called, on account of its being a railroad centre, "tbe Chicago of the South."

LETTERS FROM HAMPTON GRADUATES.

HUNGER FOR LEARNING AND LAND.

after awhila. The most advanced scholars have not entered school yat. They have been busy helping their parents with their crops. I teach reading, writing, spelling, arithmetic, superintendents for teachers are once more coming in to Hampton faster than they can be supplied.

alphabets, but they soon found out that they could learn to spell tha words as soon as they could tho latters; and now I am pleased to say that all my little beginners can read any word I write for them. My scholars seem very anx-

LETTERS FROM HAMPTON GRADUATES.

HUNGER FOR LEARNING AND LAND. THE ANIMAL THAT TAKES THE PLACE OF THE HORSE. THE LITTLE END OF THE HORN. THE SIGN OF A LONG SERMON. IMPROVEMENT IN PAYING TEACHERS. A LESS FAVORABLE REPORT. THE VIRGINIA *Educational Journal* APPRECIATED. A VISITING SUPERINTENDENT. PLEA FOR READING MATTER. A GENEROUS FRIEND. A MERRY CHRISTMAS.

The very general desire among the freedmen for acquiring land and an "education," if sometimes a blind instinct, is a very safe and hopeful one, and one that will necessarily grow by what it feeds on. There is no more common report in our graduates' letters than their report of this craving.

Thue, a recent letter from a graduate who is teaching in Virginia, with an average of fifty pupils, says:—"My school is in a very enlightened neighborhood, where education, Christianity and the accumulation of property are the only *factors*. Am boarding with a colored man who owns abont 330 acres of land which is in a splendid state of cultivation. There are a nnmber of others who live within a mile of my school that own fifty acres or more apiece."

Another graduate, an observing young woman, of last year's class, writes also from Virginia:—"I have been teaching nearly two months. The people are very kind and they like me very much. They are industrious. Almost every man owns his house and land."

She gives a picturesque description of the state of things in her neighborhood, which is in a different condition from the first described:—

I have twonty in my day school and twenty-five in my Sunday-school. Some who come have never been to Sunday-school before; it is the first that has ever been held here.

One very disagreeable thing is, that the women here chew and smoke more than the men. If a baby cries, they will give it a glass of wine or beer to quiet it and "warm it up," as they say. I have not seen a drunken man since I've been here. This is enough African for me. I have a great deal of work before me here. The woods caught on fire here one night, and I helped two men and a woman to put it out. They have no engine, so when snch accidents happen, the women and men will cut bushes and whip it out.

The church is five miles from me. I am fortunats enough to ride there, instead of having to walk as a great many do. I have to go in an ox-cart, as that animal takes the place of a horse here generally. Land is sold here at four dollars an acre. My school-house is quite comfortable; it is a log cabin. The women here are quite untidy; they spit all over the floor, and seldom wear a collar. I spoke to them about being temperate and signing the pledge. They objected, on the ground that "if they feel like taking a dram no pledge could keep them from doing so;" and they offer it to me quite often, but I stick to my resolution.

Hoping to hear from you soon, I am,
Your scholar, L.

THE LITTLE END OF THE HORN.

One of the commonest complaints from the freedmen is, that a colored man may work hard all the year, and come out worse off at the end of it—in debt for his wages, or losing all the payments he has made on his mortgaged land. How far this may be the fault of overreaching employers, and how far the fault of his own reckless improvidence, may be hard to say. In either case, his ignorance is at the bottom of his troubles, and education the only way out of them.

VA., *Jan.* 4, 1880.

General ——, *kind friend*:—

As I have the honor of being one of the Hampton graduates, I thought it would interest you to know what I have been doing since I left school. When I left there last June, I came to this place and taught a private school all summer. I made enough to pay a little for my board and had a little left to buy stationeries.

I began teaching the 13th of October with six pupils for the first week, and when the month ended I had twenty-seven on roll. The second month my average was much better. I am now getting on nicely with my school. My school numbered fifty before Christmas, and it is very likely it will be much larger after awhile. The most advanced scholars have not entered school yet. They have been busy helping their parents with their crops. I teach reading, writing, spelling, arithmetic, grammar and geography. I like the work very well, but I have had but little experience. I know it is a grand thing to be able to help those so low down. My scholars, as a general thing, seem to be wide-awake. They seem anxious to learn.

The colored people, as a general thing, are very peor. Only a few own land. The majority hire themselves to white men for wages, and at the end of the year, when pay-day comes, they get nothing for their year's labor. As the saying is, they "come ont at the little end of the horn." The family I am boarding with owns two acres of laud. Most all the colored people raise their own meat, and own one or two cows. They are hard-working people.

I received the *Journal* and find it to be useful. The SOUTHERN WORKMAN, I am sorry to say, stands n poor chance of being introduced here, as there are so few who can read well enough to read a paper. I would like to take it myself. I have not been able to do anything towards the balance I owe the school, but hope to, just as soon as possible. I must stop as you will get tired of this dry letter.

With love for the school and its managers,
I am respectfully yours, M.

Another writes from North Carolina:—

I am teaching in a district entirely inhabited by ignorant people. I suppose, however, there are a few who are trying to get the bottom rail on top. The family with whom I am boarding are very nice people, and seem very much interested in the cause of education; the lady can read a little, and seems interested when she hears good reading. Except this family, the colored people in general are nearly as bad off as they were in slavery. They work with men who carry on large farms on the river, and they make their contracts in such a way that the white men gets all their wages in return for their board and perhaps a jug of whisky at Christmas; so the next year the colored laborer must stay, thinking that he only makes ont to live on the river, and if he leaves that and goes on the Ridge he will suffer. Some few who contract to buy land, get them an old horse and give a mortgage. In the spring when they need the horse it dies, or if not, when the crop is made (which they have mortgaged), if they are not able to meet the payment, the crop is taken and sold; so when the land payment is due they are unable to meet it, and have to give it up. It isn't only the colored, but the poor whites on those large farms who are equally as bad off. All this arises from ignorance. I have had pupils since I have had this school that couldn't count but five at the age of ten and fifteen years. I have sometimes almost regretted knowing anything of the work of teaching since I opened this school two months ngo; but by perseverance I am now enjoying the work again.

I have a more comfortable school-room than I have ever had before. I teach in the same house where I am boarding, in one of the upstairs rooms. Of course I would much prefer a public school-house if I had a comfortable one; but they haven't any kind in this district. I am at least five miles from my post-office, and have to send hy chances.

How is my brother getting on?
Your grateful pupil, M.

THE PAY OF TEACHERS.

In the last year or two, many graduates anxious to teach have been prevented by want of schools or want of pay. Some have shown much pluck and devotion to their people's needs, in working on without pay, or with only pay in promises and warranta markctable at a large discount, supporting themselves as they could by other work. The condition of things in the State is improving in this respect.

One writes on December 25th:—

"I have no trouble about getting my money now. So you see that there is quite an improvement since last winter."

The lmprovement is not yet nniversally felt, as another writes, Jannary 5th:—

"Viewing it (teaching) from a financial standpoint, it does not present much inducement, as they have stopped, not only pay, but, I might say, issuing warranta; so I shall end my third month to-morrow, and have not received my second month's warrant."

From a third county, a letter of January 1st says:—

"There is a chance for us to get some money for our work soon. The apportionment has been made, and we shall get our money as it is collected."

The pinch lasts longest in the country as a general thing, hnt the prospects are much improved. The applications from superintendents for teachers are once more coming in to Hampton faster than they can be supplied.

THE VIRGINIA EDUCATIONAL JOURNAL.

This valuable magazine is sent to fifty of the Hampton graduates by the school, through the kind coöperation of the proprietors. It is highly appreciated, and is a most important aid to their work.

VIRGINIA, 1—7—1880.

General ——, *Dear sir*:—

Your postal was received some time since, also the sample paper and *Educational Journal*, for which please accept my thanks. I find the *Journal* very beneficial indeed. Dr. Ruffner, when attending the recent institute hold here, recommended it to the teachers, and I was just thinking of taking it when yours came to me soon after. I thank you very much for it.

Enclosed you will find stamps amounting to twenty-five cents, for which please send me the WORKMAN for six months. You have my sympathies in regard to the recent fire. I wish you much success in your efforts to rebuild. I am doing nicely with my school here, having eighty-six enrolled. I enjoy the school very much. Mary —— teaches near me; I see her often. My love to Louise and Edith if they are with you.

Truly yours, A.

A GENEROUS FRIEND.

Another report has come of the Christmas gladness brought to many poor little ones in our graduates' school-rooms, by the benevolence of a generous friend in Massachusetts.

VA., *December* 25, 1879.

Dear General:—

I wish you and the school a Merry Christmas and Happy New Year. I would like to have been with you all to day, but I found that I could do more good by staying here. I had a Christmas tree. The children and most of the old people never saw one before. There were whites as well as colored. The church was so crowded that many stood outside. I have been making ready for it for the past month. The children delivered their pieces beautifully, and everybody was well pleased. I got the tree up by taxing each child ten cents. Of course that would not have given presents for all, but I imposed the tax simply to get candies for them. Most of the presents were furnished by Mr. B. I thought that a good way to distribute them. There were about 300 presents on the tree; so you can judge how well it was loaded. The children were well pleased with their presents. Every child and many grown persons received something. The singing was excellent, too, considering the teacher that they had. We had plantation songs and hymns from Moody and Sankey. The whites were well pleased at the way the children spoke and saug. On the whole, we enjoyed a merry Christmas Eve.

I have a very full school now, more than I can do justice to. I have sixty-eight on roll, and will have after the holidays about eighty. My school term is seven months, and pay, $30.

I received the *Educational Journal*, also the SOUTHERN WORKMAN. Accept my thanks for them. I shall do all I can towards getting subscribers. I shall be at Hampton about New Year's Day, if nothing happens, and will pay for the paper.

Hoping that you may be able very soon to enter a new "Academic,"
I am, as ever, your pupil, P.

BIBLES AND PAPERS NEEDED.

There is hardly any limit to the number of good papers, Testaments and Bibles which we could distribute with advantage in the South, through our graduates. Almost all of them engage heartily in Sunday-school work, often starting the first Sunday-school and temperance movement in the settlement, and often in utter destitution of Bibles, books or papers. The old people can't—many of them—read, but the first thing they want to hear the children read is the Bible. Very many of the children can read, and do their friends remember that if the good and innocent books and papers do not hurry to them, the evil and corrupt will?

VA., *Jan.* 24, 1880.

Dear Teacher:—

I writs to inform you of my sohool. I am now on my fourth month. I have a very large school—100 on roll and average from 65 to 75 daily; so you see I have no time to be idle. I am trying to teach Colonel Parker's method, only in part, which seems to take very well. The reason I teach it only in part is because it requires a great deal of time and patience to teach it fully, and that I haven't got. They like it very well, though they thought it strange at first when I began to teach them words from the chart or board, instead of their alphabets, but they soon found out that they could learn to spell the words as soon as they could the letters; and now I am pleased to say that all my little beginners can read any word I write for them. My scholars seem very anxious to learn. One or two want to come to Hampton, but I have not the means to pay their board. I would like to know if General Armstrong could not take them there and let them work their way through. If so, please let me know soon.

I received your card stating that you desire me to act as agent for the WORKMAN, which I will gladly do; but I am sorry to say that most of my people here do not cherish reading much. Yet I have a promise of a few which I hope to send down soon.

I am doing all I can in the Sunday-school work. I have now that now send for the Sunday-school edition. They are new schools; one I have gotten up since I came here; they are much in need of help. Have you any papers and books that you could give me for them, or could you refer me to a society or company that I could get some Bibles of cheap? I find it a recreation to meet the little ones on a Sunday morning, with a different picture to what they saw during the week; besides, it would be an addition to thn Institute to have them subscribe for the S. S. edition which gives strictly international lessons, also other news that encourage the moral training. Enclosed please find $3.40, which the schools before mentioned send for the S. S. edition. I will write again, and give you a brief sketch of the country and people.

I remain yours ob'd'tly. L.

A PIONEER EFFORT.

A friend kindly sends us this interesting account of the pioneer work of one of the Hampton graduates in a destitute region where there has been no school for five years.

MD., *January* 26, 1880.

My kind friend, Mr. ——:—

I will attempt to write you an account of myself and work. I entered Hampton Institute September, '76, and graduated the following May, '77. The following November I received an appointment in —— County in this State. The vicinity was made up of Catholics chiefly. I did not find the people as much interested or the children as anxious as I had left dear old H. hoping to. I had neither books, maps, or blackboard, and received a very small amount as payment. I resigned the following May.

I received the appointment I have now January 1, 1879. This is my second year. I found the children, some of them, very ignorant; but I am happy to know that there has been some improvement. My patrons, though their children attend school, do not fully realize the true importance of education. The children, after having learned a certain amount, do not seem as earnest as before; the home influence seems to check, in a way, their efforts. I have a blackboard, but no maps or charts. For reading we use the First Reader. We have no globe for geography, and the Commissioners state that the colored people do not contribute, or rather pay taxes enough, to insure them these little necessaries; and I do not find the people ready, and many are not able to supply them themselves. My school has numbered this year forty-seven; I have now on roll forty; average attendance, thirty-two. The parents of four-fifths of my pupils are very poor and their children thinly clad. I have had them so poorly off that I have begged shoes from friends in Baltimore and given them, and found them truly grateful.

This is an inland village, accessible by stage. I am situated about five miles north of it. There has not been a school in this vicinity, I am told, for five years, and this would not have been had not the people banded together and built the school-house. The County Commissioners would give them only books and a teacher. I have tried to do my duty since I have been teaching, and feel that I have helped a few ignorant souls, which is a blessed consolation to me. I believe I have given you a thorough account of my work.

Hoping to hear from you at your leisure,
I am, yours gratefully, N.

FROM A LITTLE FELLOW.

A graduate teacher sends the following specimen of a letter from a class he has taught five months. The handwriting is very neat and legible.

F—— CONNTY VA *feb* the 4 1880

my Dear friend I seat my self to write you a few lines to in form you of my health i am well at this time an doing well i am going to school every day and i like my teacher very well Mr —— —— is my teacher and i think he is a very good teacher mother and father thinks that i am in proving very much in learning and i hope i am and i am going school at Wind hill this is all i have to say at this present time

Nelson Haley.

[This is a letter of a Third Reader scholar living about three miles from the school-house, and about thirteen years old.]

INCIDENTS OF INDIAN LIFE AT HAMPTON.

PRAYER MEETING.

These meetings of the Indian boys are still attended with unabated interest, although they have been conducted ever since they came to Hampton. There is something very beautiful in the Indian's idea of God; God is known as the Great Spirit, and the church as the Spirit house. They have a strong religious tendency when they are brought to the light.

BIG TEMPTATION.

One of the teachers has been having the Indians recite the verse,

Yield not to temptation, for yielding is sin;
Each victory will help you some other to win;
Fight manfully onward, dark passions subdue,
Look ever to Jesus, He'll cerry you through.

An explanation of the words was carefully given, but notwithstanding it all, the verse was misapplied, for very soon one of the Indian girls went running to her teacher, triumphently exclaiming, "I was victory! I was victory!" "What do you mean?" asked her teacher. The girl replied, "one Indian girl she get mad with me, I no like, she at everything and hit nothing. They will put in a great deal of force, but unless there were a guiding hand, they would attempt all of the trades and give up each as its difficulties appear.

The farm boys are now busily engaged in building a new carriage-house for the school. They have cut all the timbers and put the frame up; they enter into this work with a great deal of enthusiasm. The work of building the carriage-house was given to the Indian boys in order to give them some practical insight into house-building; the knowledge thus gained will be of the greatest use to them on their return home. They need to learn to carry some definite plan of work in their own heads, as we cannot always do the thinking for them. The more they are taught to depend upon themselves the more practical the education becomes.

It will no doubt astonish many to learn that these Indians, who have been dashing over the prairie in their fleres and daring rides, madly braving dangers and knowing no fear, are as timid as children when told to ascend a scaffold but a few feet from the ground.

A new feature has been added to the Indian work here; it is on the same plan as that adopted by the school of Technology in Boston; the plan being to teach the elements of the trades.

Several show an unmistakable sense of wit. When called by an earnest voice from the other end of the shop which they know means that their services are wanted, they reply by an equally prompt "*Present!*" as if answering to roll-call in school. Another authoritative call and they come with a rush, suppressing their mirth.

If Ariotchkiss is called for, some one will repeat the order, apparently to hasten his coming, but really to play upon his name, by saying Harry Hotchkiss.

Edwin Bishop's services are frequently sought with a "Bishop here!" when "Bishop Hare," (Episcopal Bishop, Dakota) is repeated till he reaches the scene of duty. Whenever any are working about stove pipes or anything sooty, they are sure to improvise tasteful goatees or mustaches, and when a smile comes over the beholders' faces, they look up with an air of feigned astonishment.

Two boys are ordered to carry away a large book-case. Each puts his hands behind him, grasps the projecting edge, lifts the bulky article and starts—but both in opposite directions. It took five minutes for the more mirthful faces to sober down.

The name of the one in charge of them very closely resembles certain Dakota words of frequent use. He occasionally mistakes them for a call to him, and asks what is wanted, and it was granted to him. He finished it as well as could be expected, and after learning the price to be charged, bore it off in triumph, saying that he would collect the amount and bring it to the shop. A day or two passed without the subject being mentioned. The matter began to look a little suspicious, and the tyro was summoned to render an account. Being a boy who enjoyed the confidence of all, it was difficult to believe one's senses as, with drooping head, the culprit was brought forth and compelled to let the truth be known. A general sigh of relief, followed the confession—"the patch came off." A broadening smile merged into a hearty laugh, and the curtain dropped.

J. C. B.

MORDAU MISSION, *Jan.* 15, '80.

Dear Mr. Robbins:

Your very kind letter was brought to mind this morning by "White Bull," who came up to pay us a visit. He showed me quite a pile from you of which he is rather more than proud, and as he evidently wished me to indorse your good feeling toward him, I did so, and read all you had said of him. I hope you will be able to come out and see us and our work right in the field. My husband joins in an earnest wish

THE USEFUL PLOUGH. (*See Page* 33.)

big temptation; I no yield to temptation; I fight her, I was victory!" and running away she appeared to be perfectly delighted to think she had done so well the first time, in conquering her temptation.

CARE OF WIGWAM.

The care of the Wigwam is almost entirely in the hands of the Indian boys; there is a colored janitor to direct the work, but the cleaning is done by the boys. The building is swept twice a day, morning and afternoon; the boys make their own beds and sweep their rooms every morning. On Saturday, the floors are washed. The boys on the different floors are required to keep their floor and stairway clean, and are detailed by twos every Saturday for this purpose. Saturday has become a general cleaning day; the effect of clean halls is apparent, they want a clean house all through. It is a very common thing on this day to find the hall blocked by tables, bedsteads, bed-clothing, trunks and chairs, all put out of the rooms to give the floor time to dry. Habits of neatness and order form an important part of their education, for it is these things they will greatly need when they are men.

The rooms of the Wigwam are small, accommodating but two boys to a room; strict privacy is thus secured. We believe the boys will gradually lose all taste for the old way of living with ten or twelve in the same apartment; such a course will do more to correct their idea of living than all the lectures that can be delivered. The plan is to let them enjoy it for a time and then they will have no desire to return to the old way.

WORK.

Do they love to work, some one asks? About as well as most boys; but they are at work and doing well. One inclination of the Indian boys when at work is to aim

A CRAVING.

The temptation to take something to one's room to eat before going to bed is sometimes irresistible; the little Indian girls have the same craving, for one night they crept down stairs and after groping around the dark kitchen for a time they found a cake of corn-bread about eighteen inches long, twelve inches wide and two inches thick; with great joy they hurried up stairs with their treasure; after eating as much as they could, they carefully hid the rest of the bread in their bureau drawers for future lunches.

INDIAN WIT.

One day, on leaving the workshop, where some of the Indians work, I asked each one if he know what his work was and if he understood how to do it; each boy answered, "Yes, sir," until I came to the last boy, when I put the question to him as he stood by his work bench, "Yes sir, *I stand*" and then, after a roguish smile to his companions, he renamed his work. The following amusing incidents showing the Indians' love for the humorous are reported by Mr. Starkweather.

Visitors at the shop have frequently expressed surprise when told that the boys are mirthful; they repeat the old fallacy that "the Indian never laughs," little dreaming that before they are five rods from the place every face will be beaming with smiles, and perhaps quite as free a criticism going on among them as among the visitors departing. A general dance in honor of their departure is what is often inaugurated, especially when the one in charge has occasion to step out for a moment.

When not under restraint, they as playful as kittens; no school-boy ever appreciated more keenly than they do, the fun of slyly attaching a string or a paper to another's coat.

One of the boys never seems happy when not perpetrating some joke. If there is no work at hand, several long shavings answer for feathers, some coloring matter is generally to be found, as are scraps of tin for earrings, and hastily erecting some kind of a throne, on the bench, he perches himself thereon in all the solemn dignity of a sachem. Or he may noiselessly come up to some one at work, and, as if prompted by curiosity merely, slowly insinuate his nose much further into his comrade's affairs than seems compatible even with Indian urbanity. The insult is resented by the angry upraising of the tool in hand,—saw, plane, soldering iron or shoe knife—when the intruder, quick as a flash, drews from behind him a sledge hammer, and for a moment, to any one unsophisticated, blood-shed would seem certain to follow. But as the sham affray speedily terminates by one of both of them rolling over in the shavings, as they give vent to roars of laughter, the spectator is not slow in joining the chorus.

There are limits, however, to an Indian's sense of the humorous. A highly illuminated card, professing to show just how Uncle Sam feeds Boston baked beans to Sitting Bull, was shown to some of them. They viewed it with critical eyes, and the foremost said it was not accurate, that the mouth was too large. The boy with the largest mouth was made to open his jaws to their utmost possible stretch, when a close comparison was instituted between the picture and the living specimen. The verdict was slowly reached that Sitting Bull was misrepresented. "Yes," said the foreman, in English, pointing to the caricature, "*too much* mouth; he swallow a boy."

One youth who had just joined the sons of Crispin, brought in a comrades' shoe with a hole in the upper which needed a patch. He asked the privilege of cementing it on, when a general hearty laugh ascends.

that you may do so, and we shall be glad to have you in our pleasant home in the wilderness, from which you can make journeys all over the Reservation with my husband, in the "Mission" wagon or on one of the ponies. That the work right here is an attractive one, perhaps the fact of our living at this distance—sixty-seven miles—from a white neighbor, may give you some idea.

You ask for information as to the nature of the work here, and its extent. I am not of the descriptive turn, but will try to give you some impressions. In the first place, the Agencies are given in charge of religious denominations; the Sioux fell to us. At each Agency there is a Boarding School, perhaps two, where the common English branches are taught and manual labor; at each camp there are day schools, usually in charge of an educated Indian Catechist, who gives instruction in Dakota, and teaches the scholars to read and write and sing. We consider it of the greatest importance that this people be instructed in their own language first, as they have the Bible, Prayer Book, hymns, and a great many good books, which they can take hold of and read understandingly, and also to be able to convey lessons for spiritual life, for although an Indian may be able to read and write, even speak, English, he does not readily take hold of English ideas, and the best way we have found after eight years' work, has been to convey our ideas in their own tongue. Perhaps with you, where the children are surrounded by white men, and the white man's ways are predominant, they may be more apt to put their English to use. But here they have had to contend against the ignorance and prejudice of their people. Happily now the Dakota sees the good of improvement. Had Capt. Pratt come five years ago for children, he would have in all probability had a bullet through his body for his pains. We have had girls taken from our school, for the sole rea

the respect for the Indian and the cause it represents. The first their more advanced neighbors, they have

son, frankly stated hy the parents, thet the girl was beginnig to know more then the father and mother. Seven years siece, my husband started e hoarding school for boys, hnt until the past three years it was *utterly impossible* to keep one eny langth of time. Not thet any feult was found with the menage-ment, for we tried to do our best and the Indians themselves acknowledged it, but that the child "was tired," "did not want to etay," or that the parents were enwilling. I remember an old man brought his hoy one night, and took him eway tha eveniog of the next dey, ahusieg me roundly hecause Johnnie had not learned to read and write in that time. Howaver, we "stuck to it," and heve hed the pleasure of heving to heve the school enlarged, and more applicants than could he admitted, because all who ceme stayed. This is also dne to the wise administration of Cept. Schroon, who has done nohly.

At ell the stations, Sundey moreieg and evening, and Wedeesday avening, services are kept up. Yon would be snarpised to see a whole congregstion of Indiens go raverently through the whole service, and in thair own languags. We visit tha sick, aod go freely among their homes; the ladies of the mission heve regular sewing schoole where we also givs religions instruction, elso teach tham how to take care of their homes and persons; in fact, ars a sort of Living Tracts for Indian people. My husband, each month, mekes a visit to each station, spending from two to six days at each, preparing catechists for ordination and giving classes for haptism and confirmation instruction, visiting tha sick, marrying the living and hurying the deed.

In fact we do general pioneer work, and the fact that nearly all tha children attend, school, when a a few years since I had hard work to pay four to do so, gives you an idea that the work is important, and I can hardly realize tha improvemeet in a few years.

When wa firet worked hers it was dangerous to do so, hut all thet is changed.

We are glad to send our girls and hoys to you. I am thinking of a visit home. Ood willing, next summer, and think we could get you twsnty, if "mama" or "curvi" as they call me, would take tham.

Hoping to hear from you again, I am,

Very truly yonrs,

M. A. Swift.

DOES WORK FOR THE INDIANS PAY?

WHITE EARTH VS. RED LAKE.

This very common question is met in a very practical way hy the *Minnesota Missionary*, in an interesting account of a vieit to two Indian communities in the state, in one of which mieionary work has been carried on for ten years, and in the other, has been etarted only within a year. We quote what we have room for from the graphic description.

The traveller, going north from tha Northern Pacific Railroad, notices that when he crosses e certain line, the color and featnres of the peopla suddanly change. Instead of heing white, they are olive-colored, and the men heve no heards—he is among Indians. But he is glad to see that all, nearly without exception, wear the same kind of clothes that he does—he rarely sees ona in feathers, paint, and blanket—thet they are driving oxen, ploughing, chopping, and performing all tha operations of civilized life, just liks the people he has left; that they live in houses and heve farme. In fact, but for the change in color, he sees nothing very different from what he would at home. He notices that tha expression of their countenences is mild and heignant, and thet they greet him with a pleasant amila and their salutation of Bo-jo. All this ie very different from the fierce, bloodthirsty, painted aaveges thet he has his life long been reading about, but eo it is. Something has changed them. He looka around and sees everywhere great flocks of cattle feeding on the prairies, and is told that these are all the property of the Indiens. His snrprise increases when he is told that these ara tha finest hody of cattle in the State, or perhaps in the North-west, take them all in all. He is told thet the Member of Congress from this district, when here a year ago last summer, said that the cattle on the White Earth Reservation wera tha finest cattle he had ever seen in his life, taking tham generelly.

Ha scee e school-honse on a hill, and goes into it and finds nearly a hundred Indian children, and the school carried on entirely by Indians or persons of Indian hlood in part, without the assietance of any white person whatever—ona of the teachers a full Indien, the two others of Indian hlood in part, likewise the metron and ell the other officials. Four thousand dollars is annually expendad hy them. He goes a little further, and comes in sight of Bishop Whipple's hospital, tha finest building in the county. Ha goee into it, and finds it moet scrupulouely clean from top to hottom, and, on inquiry, finds thet thera is no full white person about it, hut that it also is carried on by members of the Chippewe nation. His respect for tha Indien nation now hegies to iecrease when he fieds that they can carry on e school end a hospital nnaided.

And now, wearied with his day's journey, ha goes into e house to pass the night—oee of the Indian farm-houses around. He notices that they have a cookieg-stove aed perhaps a warming-stove, cheirs, tebics, hede; that the house is cleen—washed every Seturday, which day, ho leares, is celled, in the Indian language, "Washing-floor-day." He notices thet the beds are well mada up, and thet tha women evidently keow how to keep house. When supper is prepared he sees e tahls-cloth spreed, cups and eaucers, knives eed forks leid, as ie e whita house. He sees hutter, mede hy tha woman of the house, and hiscuits. He has hread and hutter, pork end potatoes, tea end sugar, the eccesseries, if not tha luxuries. He is pleased to see tha men of the bouss bow his head eed sey somethieg in Ojibwey hefors thay hegin their meal. He thinks it is returnieg theeks. Before they lie down for the night he observes thet they all kneel down together, and the head of the femily says something which he does not understand. Only one word has he ever heard hefore, and that startles him every time he hears the man pronounce it, end that is the word "Jesus." His previous experience of the use of that word leads him to conclude that the man is either swearieg or preying, aed from his attitude he concludes he is praying. On inquiry, he is gratified to learn that Indians never swear, that there is no oath in their lenguege, and that if one of them becomes so drunk or so wicked that he wants to swear, he has to hetake himself to English. Tha treveller by this time concludes that he is in a Christian Indien family, and in a Christian community, end that somehow or other these Indians haves heen woederfully chaeged and wonderfully improved from what his ideal Indian was.

To be sure, he finds unfavorahle features, which do not appear upon first inspection, thet these peopls are not all faithful Christiaes; that they are often wayward, liahle to relapse into old hahits end into old sins, and sometimes discouraging their friends hy the sudden lapses they meke into what it was supposed they had forever given up. Bnt this is only what the traveller would expect of people who had lived thirty, forty, or fifty years in the vice and misery of heethenism, and whose hahits hed hecome almost fixed. Ha knows how old hehits cling, even with the best intentions and sees they meke into what it was supposed they had forever given up. Bnt this is only what the traveller would expect of people who had lived thirty, forty, or fifty years in the vice and misery of heethenism, and whose hahits hed hecome almost fixed. Ha knows how old hehits cling, even with the hest

THE USEFUL PLOUGH.

AN ENGLISH SONG OF THE 18TH CENTURY.

A country life is sweet!
In moderate cold and heat,
To walk in the air, how pleasant and fair!
In every field of wheat,
The fairest of flowers, adorning the bowers,
And every meadow's brow;
So that I say, no courtier may
Compare with them who clothe in grey,
And follow the useful plough!

They rise with the morning lark,
And labor till almost dark;
Then folding their sheep, they hasten to sleep;
While every pleasant park
Next morning is ringing with birds that are singing,
On each green, tender bough:
With what content and merriment
Their days are spent, whose minds are bent
To follow the useful plough!

THE PRESENT PROCESS OF PRESIDENT-MAKING, AND SOME OBJECTIONS THERETO.

Anyone, who studies the history of that form of government known as the Constitution of the United States, and examines the condition of public feeling, and the sentiments of the thirteen States towards one another at that time, must be struck by the difficulties with which the framers were surrounded. Every state was jealous, to a greater or less degree, of every other State, and all the States morbidly sensitive as to their recently acquired sovereignty.

Bitter experience had shown everybody that a "more perfect union" had to be had, yet the temper of the people was such, that the real problem offered for solution to the framers of the constitution was how "to eet one's cake and keep it." As it has been tersely stated, "The framers of the Constitution made the best form of government they *could*, not the best they *would*." It was made by a series of compromises, and hardly a section was passed without bitter opposition.

The kind of government which had existed among the States before 1787 was of the sendrope style; there was no executive department, and no National judiciary; it consisted of a tolerably large Congress, which had abundant power to pass a great variety of bills, but no power to enforce them after they had been enacted. The first object of the framers was to form a "more perfect union," and it was manifest, if we were to have a government, it must be unlike the headless, soulless form, existing as the Articles of Confederation. So soon as the fact was accepted, that the new government should have a head, the troubles of the framers began, and probably no sections of the Constitution were so much discussed and reported upon, as those in relation to the President, and how he was to be chosen. Even the length of the presidential term was the ground of a long debate, and the four years finally agreed upon, was the result of a compromise obtained by striking the average of the terms of a Senator and Member of the lower house.

These preliminary difficulties being settled, the great question came up as to how the people should express their preferences. At first glance, it would seem that the simplest way would have been the best, and that Presidents should have been chosen by a majority of the popular vote, just as Governors in most of the States. There were two difficulties, however, in the way; in the first place, the small States were afraid of granting too many rights to majorities, and secondly, the institution of slavery was recognized in all but one of the thirteen States. Thet slavee were property was conceded on all hands, but it had been provided, when the representative power of the different states was to be fixed, that these human properties were to be counted three-fifths of a person. For instance, if in fixing the number of representatives for any State, it was found to contain 100,000 slaves, these would count in the enumerstion as 60,000 persons. Nevertheless, these compounds of property and persons, of course were allowed no ballots; so states that held a good many eleves would have less power in electing the exeutive than the legislative branch of the government, if the plan of electing Presidents by a mejority of the popular vote had been suggested or adopted. The plen finally selected was obout as cumbrous a bit of political machinery as was ever cast, and in 1804 proved nearly fatal to the progress of the United States as a Nation. By means of the twelfth Amendment, passed thet year (1804), some of the most dangeroua features of the mode of electing Presidents were stricken out, and it was made a little moro simple. Nevertheless, it is altogether too complicated for the present age, and as the reasons for adopting it have passed away, there seems no good reason for retaining it.

The present method of electing a President and Vice-president is substantially as follows: every State appoints in such manner as it see fit as many electors as it has Representatives and Senstors in Washington; for instance, New York has thirty-three representatives, so it appoints thirty-fivs electors. These electors may be chosen by the States Legislature, they may be elected by the voters of the state on a generel ticket, or by means of electoral districts. When these slectors are selected (end in almost ell cases they ere selected by a popular vote on the first Tuesday after the first Monday in November) they meet at ths capitel of their state, the day being fixed by Congress and is now the first Wednesday in December. At their meeting they vote by ballot for President, and by scparate ballot for Vice-president; it is their duty to maks separate lists of ths votes thus cast in triplicate, and forward two of each to the presiding officer of the Senate (one by mail and one by messenger), and this officer, in presence of ths Senate and House, opens the certificates (on the second Wednesday of February) and orders the votes counted by tellers. If eny person has a majority of the electorel votes cast, he becomes Presidcnt of the United States on the 4th of March next ensuing.

Surely this is n wonderfully complicated way of finding out whom the people want for President. But the complications do not rest here. If by chance three candidntes should be in the field, and so divide the electoral votes that no one receive a mejority, then the "election falls in the House," and a terrible fall it is too; for the ballot is then taken by States, each Stato having one vote. As et present constituted, only thirty-eight votes would be cast for President, and in order to he elected, somebody must receive twenty of the thirty-eight votes cast. It might work so thet two men each receive twelve votes, and another fourteen votes. Even then there would be no election, and the Senate would elect a Vice-president, voting on the two men who had received the largest popular vote for that office. As the Senete consists of two Senators from every State, nnd is presided over by the Vice-president of the United States, it is almost certain they will elect somebody, as their presiding officer would have "the casting vote" in case of a tic. On this event, the person elected as Vice-preaident would become President, if both the people and the House had failed to elect.

The above is the present process of President-making in the United States; it is as twisted as a bengman's rope, and in the past seventy years the intentions of the framers have been so warped by the course of events, thet the present practice and their theory as laid down are as opposite as the poles. Their theory was ingenious, perhaps ingenuous, and emounted to this—that each state should select in such manner as it saw fit, as many of its best citizens, as the census permitted it to choose, and these citizens should then declare what American eitizen they deemed best fitted for ths office of President. But how are the mighty fallen! Instead of a certain number of the Stetes' most trusted citizens being chosen, and the Presidential contest settled by their wille, we find that partisan conventions nominate the candidates, end the power appointed by the result of a popnler election meet, and say "Aye, eye, sir," to the order of the convention. To ho sure, there is no law compelling a Presidential elector to vote for the nominee of his party, but it would be political suicide to do otherwise. As things stand, Presidential Electors are but tools in the hands of their party—they do the convention's bidding whether it eccords with their own views or not.

To a thoroughly non-partisan. tha present mode of electing Presidents seems absurd, as it was based on conditious which do not now exist, and which are never likely to again exist. The idea of slave property being representable more than horse property has been exploded by the last three Amendments to the Constitution; and the question whether the United States be a leagne or a Nation was affirmed in the Preamble to the Constitution, and confirmed at Appomattox.

The President is the head of the executive department of the Nation, and is responsible to the people for his acts. If he do wrong, he is impeachable by the people, through their Representatives in Congress, not through the Senators of the states. The latter sit as a petit jury on auch trial, and by perhaps a fiction of law, bnt still by law, are supposed to try the case on its merits, even as if at their homes they were on jury duty, trying a case of larceny, forgery, or other crime.

Many believe that the people at large are heartily sick of the old way of electing presidents, but it seems almost impossible to make Congress take any action. How simple it would be to let the people of every State vote as they please for president, (for nine-tenths would vote as ths convention of their different parties proposed), and then have certificates of all votes cast sent to Washington and counted as at present; the man receiving the the majority of the popular vote for the presidency to be declared President, and the man receiving the majority of the popular vote for the vice-presidency to be Vice-President. If nobody received such majority, then let the election fall in the House and be determined by the vote of members on the two candidates who have received the highest votes from the people. It is almost certain the House would choose somebody; if it did not, then let het alternative of choosing a vice-president by the Senato be continued as now. An ameadment of this sort would be popular, hut some of the "Rings" would oppose it; by this means the man would be elected who had a majority of the popular vote, and the principls on which this goverament exists is that majorities rule, and minorities are protected.

If a constitutionel emendment of this sort he passed, and be supplemented by an act of Congress, requiring a registry of all voters before voting for president, we would as n side issue have a splendid chance to know the growth of every part of our country. As it stands now, our population in a political sense grows like a crab—by jerks, end these jerks ten years epart. Suppose for illustration thet the census of 1880 shows that Indiana and Iowa are both entitled to ten electors and that between now and 1888, Iowa should double her population and Indiana lose half of hers. By our present laws Iowa and Indiana would heve the same number of electors in 1888 as in 1880, although by population she would be entitled to four times as many. This inaccuracy would continue until set straight by the census of 1890. (These til set straight by the census of 1890. (These til set straight by the census of 1890. (These dates, States and figures are simply used as illustrations, the principls can he applied anywhere.)

Under any circumstances the present wey of deciding a presidential election in the House is wrong—for the vots of the great State of Ohio can he off-set by the vote of Delaware, and the little State of Rhode Island will have as much of n vote as New York. This is contrary to even ths spirit of our Governmcnt, which recognizes the equelity of the States in the Senate, but their difference of population in the House. Under our present rules it is within the range of possibilities for 18 of the largest States to be beaten by 20 of ths smaller States; and the millious of popular vote on one side, offset by hundreds of thousands on the other.

This possibility is ot variance with our theory of government. Taking in a hit of history, it may be ioteresting to know thet very few Presidents have been elected by a majority of the popular vote, and even the few who have been so elected have not had much of a majority; the highest being that received by Jackson in 1827, when he had 55.81 of the populer vote.

An amendment such as suggested would do nobody eny harm; it would make the President the popular choice, and avoid the possibility of a minority's choice having executive power over the mejority.

T. T. B.

PRORGESS.

Of the recent Industrial Fair of the colored people at Raleigh, N. C. the "Freedmen's Friend," under the auspices of the Friend's Society of Philadelphia, give an interesting account written hy a teacher.

"RALEIGH, *Tenth mo. 25th*, '76.

"The Industriel Fair was a complete success. Notwithstanding the inclemency of the weather, the people came in multitudes from all parts of the State. This being the first feir of tho kind ever held by the colored people of the South, they ceme to the city by railroads and vehicles of every description. No line of color was drawn; all ideas of politics seem so have been forgotten. The white people seemed to bo much interested in our welfare, They not only visited the fair in large numbers dnily, but they contributed largely for the support of it, hy giving money to other worthy donations. Gover Jarvis opened the feir on Tuesday with an admirable address.

"Floral Hall was visited by the best classes of whites in the State, who said they hed not seeu anything surpass it in any fair since the surrender. The needle-work of all kinds, and knitted garments, all kinds of drawings by the boys and girls, presented a handsome appearance as specimeus of improvemcnt among our people.

"Farmer Hall was also woll filled. In edition to the donations made to us by tha white people, a large number ware presentod, made by our own colored men, such as buggies, wagons, plows of all kinds, all kinds of house furniture, several pieces of machinery, &c. A great many kinds of products were brought in. Cotton, potatoes, specimens of wheat, oats, corn, barley, peas, tobacco and every other thing imaginahls, such as wa raise on our Southern ferms. They all far exceeded the expectations of tha spectators.

"The stock fowls were very fine. They were sent in from all parts of the State, which enabled all to see that the colored people are gradually advancing from low to higher aims in agriculture as well as in literatnre. I think it would heve cheered tha heart of any Northern man had he been present and witnessed what was on exhibition—all the handiwork and raising of the colored people.

NEWS OF THE MONTH.

FOREIGN.

On the night of Febry. 17th, the fourth attempt was made upon the life of the CZAR of Russia by exploding a mine of dynamite under the dining room in the Winter Palace at St. Petersburg.

The *Novoe Vremya* publishes particulars of the attempted assassination of the imperial family, showing that the dinner was appointed for 6 o'clock on Tuesday evening. If it had not been accidentally delayed all would have been seated at the moment of the explosion. As it was, their escape was very narrow. The Emperor, accompenied by the Princess of Hesse and Bulgaria, were about to enter the dining-hall through one door and the other members of the imperial family, except the Empress, by another, when the explosion took place. Two servants who were in the dining-hall were injured. The force of the explosion was such that a number of windows of the palace and adjacent houses were shattered. The gas was blown out, and complete darkness prevailed.

Thirteen soldiers were killed and forty more or less injured in the guard-room, which was immediately under the dining-hall, and under which the mine was placed.

LONDON, Feb. 10—Reuter's Constantinople dispatch reports that during a fete a barrack three stories high near that city suddenly collapsed Two hundred soldiers were killed and three hundred wounded. [The number of casualties has probably been exaggerated.]

A dispatch sent from Dublin at 12 o'clock last night says that one woman and seven men were killed and thirteen workmen and firemen seriously injured by the burning of the Theatre Royal yesterday Everything in the building was consumed, including a large and costly wardrobe. The theatre took fire at about one o'clock, from a light in the hands of a boy who was lighting the gas. Most of the employes were at dinner at the time, and the flames spread rapidly Manager Egerton lost his life by remaining too long in the building in his effort to arrest the flames. Loss $200,000.

THE DISTRESS IN IRELAND.—The correspondent of the *Times* at Dublin reports on 15th that the general condition of Ireland is decidedly improved. Although severe distress is still felt at many places there is reason to believe that the whole aspect of the country is improved and that the relief measures have proved adequate to the emergency The Duchess of Marlborough, writing to the Lord mayor of London acknowledging the receipt of £2,000, says the committee, in order to guard against the famine in Ireland next year, have purchased £10,000 worth of potatoes for distribution there. The *Times'* despatch from Rome announces that a collection taken up in Trinity church on Sunday in aid of the Duchess of Marlbrough Fund amounted to 545 francs The *Times'* Paris despatch says the Archbishop of Peris, in a pastoral prescribing parochial collections for Ireland, dwells on Irish liberality to France during the war of 1870. America's contribution for the relief of Irish distress is very large.

DOMESTIC.

The Imperial Mills elevetor, in Chicago, was blown down Thursday, Feby. 15th, and 125,000 bushels of wheat were spilled on the ground. It was 100 feet high, and 110 by 50 in extent, with a capacity of 300,000 bushels. The mill adjoining was badly damaged. The establishment was owned by Douglass & Stuart, and was rented to Munger, Wheeler & Co. The elevator, which cost from $90,000 to $100,000, is a total loss. The loss on the wheat is about $65,000. The loss to the mill is $50,000. There was no insurance covering this kind of accident.

A number of prominent New Yorkers have issued an urgent appeal for funds to alleviate the sufferings of the colored refugees in Kansas. The appeal states that there are 15,000 or 20,000 of them in the State, and they continue to arrive every day, "ragged and barefoot, and without money." It is added that many are sick from exposure to the severe climate, and a number have frozen to death. They are unable to get employment, as they are simply farm laborers, and farming operation are now at a standstill. This is a gloomy representation, but doubtless a true one, and illustrates the short-sightedness, to say the least, of those who were instrumental in causing these ignorant people to sacrifice their small savings and desert their Southern homes for promised high wages and cheap houses in the inhospitable climate of Kansas.

Nashville, Tenn., was visited by a toroado at 11 o'clock on the night of Feb. 12th. The toroado was accompanied hy rain and did great damage. Not less than fifteen dwellings and twenty business houses were partially destroyed At one time the wind blew at the rate of forty miles an hour. Men were blown down in the street. The surfooing of an elevator caused the damage by rain of 20,000 bushels of wheat. The streets were filled with tin roofs, signs, and fallen trees. Several large manufacturing establishments were almost totally destroyed. St. Paul's church (colored), a fine edifice, was almost a total wreck Several freight cars, which were standing on the Louisville and Nashville Railroad, were precipitated down an embankment. The damage in the city alone was estimated to be $100,000, but in the country it cannot be approximated. Several lives were reported to have been lost.

A company has been organized in Boston, Mass., for the purpose of constructing and operating a railroad from Cairo, Egypt, through Port Said and Damascus to connect with the Euphrates Valley Railroad, about to be built by an English company. Branch roads are also provided for by the Company's charter. The Turkish Government has been applied to for concession of the necessary right of way.

The City Hall at Albany, N. Y., a handsome and costly marble building, facing the easterly front of the Capitol, was almost destroyed by fire February 18. During the progress of the fire, the dome surmounting the hall fell in, and three firemen were severely injured by the falling debris. Many of the court records were destroyed and others were badly damaged. The loss on the building is estimated at from $30,000 to $50,000, the walls alone remaining.

The report of the auditor of Virginia shows that the delinquency during the pass eight years in the accounts of the county and city treasurer aggregates over $32,000.

As we go to press, the Normal School is enjoying a visit from "Bright Eyes," whose eloquent appeals for her injured people, the Ponca Indians, have ronsed the whole country to sympathy, and new interest in the Indian question. She is accompanied hy Mr. Tibbles, the Omaha editor who first brought the Poncas' case before the country and the people, and hy his Secretary, Mr. Andersson. "Standing Bear," the Ponca Chief was prevented hy sickness from accompanying the party.

Hand Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On each can will be found full directions how to prepare Crab Salad and Deviled Crabs,—would-be cooks desiring which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an intruduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all sea-food, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6 00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $3.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

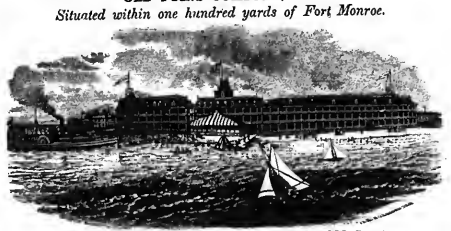
Hampton, Virginia.

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

Situated within one hundred yards of Fort Monroe.



Open all the year with ample capacity for 600 Guests.

Has all modern improvements—elevator; gas and electric bell in every room; water bath-rooms and closets on every floor. Equal to any Hotel in the United States as a Spring, Summer and Autumn Resort. Six daily mails and telegraph office; 15 to 20 first-class steamers land daily (except Sunday) to and from the door. Rooms and Halls comfortably heated, and comfort provided for tourists and health seekers during the winter. Fire-escapes only 50 feet apart on every floor. Superior beach for bathing at door-steps, and good from May until November. Boating, fishing and driving especially attractive. Send for circular describing hygienic advantages, terms, &c.

HARRISON PHOEBUS, Proprietor.

Oysters! - Oysters!

The canning of steamed oysters has long been an important branch of industry in Baltimore; but the canning of the very best oysters in the Chesapeake, almost on the spot they are caught, is an enterprise just established. The undersigned feels confident that in opening a Packing House at this point, he is affording his fellow-citizens in all parts of the country, an opportunity (which he hopes will be appreciated) of getting the best and freshest of oysters, prepared in the most healthful way, at the most moderate prices

An Oyster may remain out of water many hours, nay days, before it be completely spoiled; but from the moment it is caught and exposed to the air a process of deterioration goes on. It needs no argument to show that the sooner an oyster is hermetically sealed after being caught the better it will be in taste, solidity saliiness, and healthfulness. Within a radius of fifteen miles of this point, are million-on millions of bushels of oysters, from the best of which will the stock used, be selected. The time consumed in transporting he bivalves from their beds to the Packing House is not worth considering, especially as the majority of the boats employed are the little "canoes" peculiar to these water.

My packing is at present divided into three grades, according to the size of the oysters use : the same care, however, is taken in the preparation of all grades. A case of one pound cans contains 4 dozen: a case of two pound cans contains 2 dozen. Owing to the unsettled condition of the market, I can only quote to-day's prices, which are as follows:

Giants of Hampton Roads, No. 1 — No. 2 $3.00 per doz,
Beauties of Hampt'n Roads, " 1 $1.30, " 2 $2.00 " "
Cove Oysters, " 1 $1.00, " 2 $1.75 " "

The above prices are net cash, and remittance may be made by drafts on New York, Chicago, or Norfolk, or P. O. order. Authority to draw at sight with else by F. O. order. Authority to draw at sight with bill of Lading attached will ensure the prompt forwarding of any goods ordered. If preferred, cases may be sent by Adams express, C. O. D.; but unless specially directed, all shipments will be made via Norfolk, Va.

Direct all telegrams, via Fort Monroe. T. T. BRYCE, Box 10, Hampton, Va.

$5 to $20 per day at home. Samples worth $5 free. Address STINSON & Co., Portland, Maine.

BOOTS AND SHOES!

to their fashion in tones of despair; "I should think "You have done your work well," said the sun ap-

HEALTH AND HUMANITY.

THE POWER OF SOAP AND WATER.

(Reprinted by permission of London Ladies' Sanitary Ass'n.)

"Well, Mrs. Bennett, you do look comfortable," said Mrs. Lawson, as she seated herself, and glanced somewhat discontentedly round her friend's room. "I can't make out how you manage; you always look as though you had everything about you had just come out of a bandbox."

"Mine is a secret very easily learned," replied Mrs. Bennett, with a quiet smile; "with fresh air, plenty of soap and water, a little trouble to make things neat and to keep them so, any one that likes may have a home like mine."

"Oh yes, it is easy to talk," replied Mrs. Lawson pettishly; "you have a husband who always brings home his wages, and children who do what you bid them. If your husband staid out drinking at the tavern, and your children were nearly brats like mine, I should like to see what good fresh air and soap and water would do you then."

"Even then I think I should be inclined to try them," answered Mrs. Bennett; "they could do no harm if they did no good; and when a man finds he has a clean, neat home to come to after his day's work, it's ten chances to one he will not want to stay drinking away his money at the public house.' And as to children, half their naughtiness, at least when they are young, comes from their being sickly. Keeping a child clean and healthy, and giving it plenty to do, go a long way towards making it good-humored and obedient."

"It's fine talking," said Mrs. Lawson; "but I can tell you if you had my troubles to put up with, you would not find them so easily cured. I only wish you had a bad husband and quarrelsome children."

Of course, Mrs. Bennett could not agree in this kind wish; so she prudently turned the talk to other matters.

If Mrs. Bennett and Mrs. Lawson had not been children of the same village, and girls in the same school, they would certainly not have been friends in after life, for the two women were as different as the light and the dark. The one was active, cleanly, and industrious; the other slovenly, idle, and gossiping. The one had been brought up from her childhood to fear God and to try to do His will; the other had been taught to think only of herself, her own ease and comfort.

Both had married hard-working, respectable men. Mrs. Lawson's husband got rather better wages than Mrs. Bennett's. But more money does not always make more comfort; that comes from good management for more than anything else. Any one might have seen this by looking at these two women's homes; Mrs. Bennett's all cleanliness and order, Mrs. Lawson's all dirt and misery. No wonder that Mr. Lawson found the tavern with its company, its pipes, and its drink, a more pleasant place to go to, than his own here, and comfortless home. No wonder that his children, sickly and dirty, were always whining and pining, sworn at by the father, scolded and beaten by the mother.

Mrs. Lawson thought herself a very miserable and ill-used woman, envied the comfort of her neighbor, Mrs. Bennett, and wondered how it was some people came in for all the good things in this world, and others for all the bad. But she never thought of tracing events up to their true cause, or of asking herself how much of her wretchedness was owing to herself.

But somehow on this afternoon, when she came home after her visit to Mrs. Bennett, her friend's words, "Fresh air, plenty of soap and water, and a little trouble to make things neat and to keep them so," rang in her ears; she could not forget them, and without intending to do so, she found herself saying them over and over and over again to herself. With these words still fresh in her mind she went to bed, and thinking over the difference between her own home and her old friend's, she fell asleep. She slept on, how long she did not know, and then all at once she heard a very strange sound coming near the door of the room. It was such a sound as she had never heard before—lump, lump, lump—louder, louder, louder still—and a clattering came with it, and a splashing like water. What could it all be? Presently, while she watched, the door opened of its own accord, and what should come into the room but a pail, so full of water that, although it was supported on one side by a piece of soap and a roll of flannel, and on the other by a brush and a broom, it was quite tired by the journey upstairs, and had to take breath before it could look about it, and see what it had come there to do.

"Well, was ever such a place!" said the water, as it swayed itself uneasily from side to side.

"Never," replied its companions, speaking according to their fashion in tones of despair; "I should think that none of our family or connections has ever been in this room since the house was built."

"What could Mrs. Bennett have been thinking of to advise us to come to such a place as this!" said the brush. "Why I should be worn out with my work before it is half done!"

And as it looked round the room, the brush might well be forgiven for feeling frightened at the quantity of work set before it. The floor, except a small piece in the middle which was covered with a bit of greasy carpet, was inlaid with dirt; the grate was choked up with ashes, the bars were eaten with rust, and the table was littered with scraps of the last night's supper, a torn copy of a cheap newspaper, and some of the children's old clothes which Mrs. Lawson had been patching up. A candlestick full of drops of grease, and with the socket so bent on one side that the candle had no choice but to melt and run away, stood on the dirty chimney-piece, which was ornamented by a few broken cups and mugs, whose only use was to hold the duplicates of things pledged at the pawnbroker's. The window, which was a good-sized one, overlooking a large, airy yard, was so covered with dirt, that no one could tell whether it looked out on to the trees or chimneys; and from the stifling, foul air of the room, it seemed to have been opened no oftener than it had been cleaned. Some clothes which had been washed, and then never properly dried or folded, were lying together in one corner of the room, while in another were a great heap of odds and ends—boots and shoes, onions, apples, bits of bread, bones, an old bonnet and some broken plaything. This was the state of the sitting-room, and the bed-room was worse. There lay five children huddled together in one corner, on a dirty heap of clothes, and the husband and wife on a turned-down bedstead, with the window shut, and the chimney stuffed up with straw. What could come of such a state of things but sickness and misery?

Well might Mrs. Lawson's strange visitors groan as they thought of the greatness of their work.

"Well, looking will not make things better," said the brush at last; "it is better to set to work with a good heart and try what can be done."

"Yes" replied the water; "but where shall we begin?"

"I wish we had some kind friend to open a bit of the window for us," said the brush, "for we shall all be stifled before we can do our work."

"I think I am tall enough," said the broom, "I will try."

And, suiting the action to the word, the broom put its head to the window-frame, which gave way to its touch, and a stream of pure, fresh air came rushing into the room.

"Ugh! ugh!" it exclaimed, stopping short as it met the pent-up, foul air.

"It is all very well for you to say, 'Ugh! ugh!'" said the water smilingly, as the pure air rippled over it; "if you find the room bad now, think what it was for us before you came in."

"Open the door, open the door," sighed the fresh air. The brush obeyed, and then the wind coming through in a strong current, overpowered the foul air, driving it out before it with a rushing, hissing sound, and never stopping in its work until it had peeped into every cranny and corner, and turned out the enemy from all its hiding places.

The brushes meanwhile showed their approbation by sundry approving taps, while the flannel, refreshed by the breeze, unrolled itself to be ready for its work. "And now," said she, as she undid her last fold, "now we have the air, let us have the sunshine too. See he is only waiting to be let in, and while you scrub the floor, I will clean the window."

And soon a glorious flood of light came pouring into the room, with the soft, fresh morning air, while the dust motes danced joyously together on the bright sunbeam. But the sunbeam was offended at the liberty; he thought he was meant for more noble purposes than to be a means by which merry dust motes might take their morning's exercise. So he went away behind a cloud, and told the broom to go on quickly with her work and not to call him out again till she had done making that dreadful smother of dust.

And perhaps he was not altogether wrong, for the broom, bent on doing her work thoroughly, had so forced herself into every crack and corner of the room, that it was not until the dustpan had walked off with the sweepings, and the brush and the soap and the water had taken their fair share of the work, that the air of the room became at all fit to be breathed. Then the sun ventured again to peep through the window, to see what had been done since he went behind the cloud.

Done! Why a room had been cleansed and purified, and so changed that you would not have known it for the same. And by what? Just by fresh air, soap and water, and a little trouble.

"You have done your work well," said the sun approvingly. "But what have we here?" he added, as he glanced into the broken cups on the mantel-piece and spied out the dirty pawnbroker's tickets.

"Oh, leave us alone! leave us in peace!" sighed the tickets, as they stirred uneasily under the influence of the passing current of air.

"Not I," returned the sun impetiently; "if I had been allowed to come in sooner, you would never have been here at all. Now I am here, I shall certainly try to stay till I have turned you and all your connections out-doors."

"Ah well, you'll be a long while doing that," replied the tickets, as they huddled themselves together, to keep as much as possible out of the sun's rays.

The sun flickered for a moment scornfully on the edge of the cup, then looked downwards on the heap of clothes still lying in one corner of the room, and, lighting them up with his bright glance, called into view every stain and dirt-mark

"There is plenty more work in store for you," he said turning to the soap and water; "I wish I had it in my power to help you more than by just pointing out what you have to do."

"That is the best help in the world," replied the soap cheerfully; "it is very much harder to work in the dark then when you show us the way. Then we know that everything done is done once for all, while in the other case it is all mess and muddle, and ten to one, half the work has to be done over again, and my life is too short a one to allow me to waste my strength."

"Ah, you do look but poorly," said the sun compassionately as he looked at the soap, which was plainly wasting away.

"Yes, I and all my family are very shortlived," replied the soap; "but I do not fret about it, I would rather wear out than rust out, and though my life is short it is a useful one.

Nothing would make me so unhappy as to be put upon a shelf, and know that if I were left alone I might live on in idle selfish quiet for hundreds of years, while all the time the work that I came into the world to do was left undone."

"Ah!" broke in the water, who was a little affronted at not getting his fair share in the talk; "if people did but know our value—mine and my dear sister's here—we should soon see a very different state of things about us. Why, I would undertake to bring about a thorough change in society,—a change too by which the people would gain everything and lose nothing."

"Ay, ay," laughed the air; "but what would you do without me?"

"You would have worded your question better," replied the water, good-naturedly, "if you had asked what we could do with you. If we each went alone, it is possible that ignorance, idleness, and disease might be too strong for us; but together we must conquer. Rooms full of pure air, inhabited by healthy, rosy, well-washed children, are seldom the places where discontent and crime will come to take up their abode. White-washed ceilings, well-scrubbed floors, clean clothes, wash tubs, and plenty of soap and water, will do more to make good husbands and wives, obedient children, and industrious, orderly citizens, than all the laws that have ever been made, or all the police regulations that have ever been put in force."

"Right," said the sun; "no one is better able than myself to bear witness to the truth of what you say. There are few houses in the world into which I do not at least try to peep, and I always find that those where I get in most easily—those where I find you, my dear friends, are most loved and valued—are always those where God is most honoured and man is best served."

"Of course they are," replied the water; "and no wonder; it is very hard to be industrious and happy, when one is feeling weak and ill. Now," he added, as he splashed himself gently towards the side of room where Mrs. Lawson and her children were lying, "if we might be allowed to treat those poor children them as we have just served this room, in a week's time they would not be like the same boys and girls. It stands to reason that as they never will let me nor my sister come near them, all the dirt which we should take off, chokes up the pores of their skin so that the perspiration has no means of getting through, and so, of course, it can do nothing but make its way back again into the body whence it came. There it causes boils, sores, fevers, and a host of other miseries which would soon be put to flight if people would but invite us, my dear friends, to come to live amongst them."

"True," said the sun, as he flickered pleasantly across the well-scrubbed floor.

"True," repeated the air, as she wafted herself backwards and forwards in the room.

"True," whispered the soap very faintly, for her strength was well nigh gone.

"Ah," continued the water, "if we could but make

this poor woman see with our eyes; if we could but make her see how much she would gain by seeking our friendship; if we could but show her this room as it

What a change there was when that load of dirt was rubbed off, and the bright, cheering sunbeams fell upon walls and ceiling! True, they lit up plenty that ought

then cleaning fit was yet fresh upon her; and if one or two good cleanings would have done, all would have been well. But, unluckily, dirt has an obstinate habit of collecting again as quickly as it is washed off; and, therefore, no one, two, or three cleanings will drive

this poor woman see with our eyes; if we could but make her see how much she would gain by seeking our friendship; if we could but show her this room as it looks at this moment—bright in sunlight and with the pure air flowing freely through every part—the well-scrubbed floor—the shining furniture—the clean hearth and bright grate—children with their bright eyes and rosy cheeks, and their merry laugh of youth and health—some helping mother in her work, some busy with a game or invention of their own, all seeking to add to the general stock of home happiness! Oh what a difference she would see between such a home as we might give her and that which she chooses for herself! Oh that she could be wise in time! that she might awake to a knowledge of this truth, before these things are hidden from her eyes!"

And excited by his own earnestness, the water gave so loud a splash that Mrs. Lawson started and woke—and behold she was in bed, in the grey morning light, with nothing but the old dirt, misery, and confusion around her.

So clear was the recollection of her dream that it was some time before she could believe that it was a dream only, and that she had not really seen the bright sunlight, and breathed the pure air, and listened to the water's wise words of counsel. It was with a sort of hope that, after all, she might find that what she had seen was real, that she slipped on part of her clothes and stole noiselessly into the front room. Alas! it was just as she had left it the night before. There was the grate choked with ashes, there were the dirty, littered table and the heap of clothes, half mended, all muddled together. There was the window covered with long weeks of dirt, and the air heavy with the fumes of tobacco, beer, and smoke. How different it was to the bright, clean, cheerful home, on which but a few moments before she had been looking in her dream!

"Then it was only a dream after all," said Mrs. Lawson to herself as she looked sadly round.

"Oh, if it had but been true!"

And then came the thought, "Well, but why should it not all be true; if fresh air, plenty of soap and water, and a little trouble, can work the change? Why should I not have a clean, cheerful home, like the one I have just been looking at?" And scarcely thinking of what she did, Mrs. Lawson stepped to the window, and for the first time, for many days, she threw it wide open. Oh, what a stream of pure, fresh morning air rushed in! It almost seemed to speak to her in words again, and give her a promise of returning health and cheerfulness. It was a bright, clear, summer's morning; the sun was rising, and his golden rays were lighting up the great city; all was quiet, for it was very early yet, and city life was not astir. There was something in the calm, and hush, and stillness, that wrought powerfully on the poor woman's heart, and, kneeling down by the open window, she leaned her head upon the sill, and tried to pray—prey in words, such as she had been taught when she was a little child. But it would not do; her heart was too full, and with a simple, "God help me," she covered her face with her hands and sobbed—great choking sobs; but they did her good. They relieved the pent-up misery of feeling, and carried off the excitement in which she was still living, as in a dream. Then she rose from her knees and looked round the room, and her heart almost sank within her as she saw the amount of work which was before her. Where should she begin? When should she make an end? Oh it was hopeless—matters were gone too far—better leave things as they were—Why stir the muddy waters? But then, as if in answer, the soft air breathed gently upon her forehead, and a sunbeam glanced across the room, towards where an empty pail was standing, as much as to say "Let me in, let me in, and I will soon show you how matters may be put to rights."

Mrs. Lawson's eyes followed in the same direction. "Well," said she to herself, "there is the pail, surely enough; why not go down stairs and draw a little water, and see what I can do towards making a beginning at the work? If I go back to bed, I shall not sleep; I should only lie turning, and twisting, and thinking over all the strange things I have seen. Perhaps if I set to work with a good will, I could put the room a bit to rights before my good man wants his breakfast."

And, full of these new thoughts, Mrs. Lawson hastened to the pump, filled the pail with water, and came back with a good heart to her work. Flannel was scarce; so was soap; and as to brushes, they were worn down to the handles. Still, she thought she would do the best with what she had. Who knew that she might not get the loan of better before the day was over? But what was she to do first? Oh, the window, to be sure; she remembered how pleasant the sunshine had looked in her dream, and how his glance had fallen hither and thither, pointing out each fresh work to be done. And so she set herself busily to work at the window.

What a change there was when that load of dirt was rubbed off, and the bright, cheering sunbeams fell upon walls and ceiling! True, they lit up plenty that ought not to have been there; but to see one's faults is halfway towards mending them.

Work, however, as hard as she would, she had only time to get through a small part of her work, before her husband woke, and missing her, called out loudly to know where she was and what she was about.

"Getting things straight for your breakfast," replied Mrs. Lawson, in tones so unusually cheery, that the voice that announced the fact was as startling as the fact itself, and roused Mr. Lawson to get up and see what it all meant.

Quite enough work had been done already to make the husband see that his home looked more comfortable than it had for years.

"Why, wife, whatever has come over you!" he exclaimed in astonishment; "and whatever are you doing!"

"I am trying to make up for lost time," replied Mrs. Lawson; "I have heard strange things lately, things that perhaps we shall all be the better for."

"Well, wife, what time of day have you been up, to get through all this lot of work? If you had waked me, I would have come to help you."

"No; would you though?" said Mrs. Lawson.

"Aye, that I would. I am sure I have worked hard to keep a home respectable over our heads, and I would work harder still, if I could see there was any good likely to come out of it. Here, shall I lend you a hand in cleaning up that grate you are doing? I could carry away the cinders and rubbish in no time."

Not since the days of their early married life had Mr. Lawson spoken so kindly to his wife, and her heart bounded with pleasure at the unusual sounds. "Well then, William, if you would, it would be a real help," said she; "and if you will clear away this dust here, I will get the children up the while, and perhaps it will do them no harm to give them a bit of a wash before they sit down to their breakfast."

"And now, wife," said Mr. Lawson, as about an hour later, he sat down to the most comfortable looking meal he had seen in his own home for many a long day past, "tell me, what has put all these new notions into your head. Who has been talking to you and telling you how much happier we should be if we kept our home a bit tidier and cleaner?"

"Why to tell you the truth, William, you have asked a question I do not know very well, how to answer; however, you shall have my story, and then you may judge for yourself." And in very simple and touching words, Mrs. Lawson told her husband her night's dream; dwelling strongly on the picture that her strange visitors had drawn of the home she now had, and the one with which their help she might soon have. "And I am sure, William, I think they must have been right," she added, as she finished the strange story, "for, though to be sure, we are still in a mess and a muddle, I have not felt so well nor so happy, ever since the day when I first came home with you to my own house."

A hearty kiss from the husband showed how thoroughly he shared in her feelings.

"I am sure, wife," he added, "if you will keep a comfortable home over my head, I am not the man to go to the public-house. I would rather come home and sit with you and the children any day. But what is a man to do when he has not a place fit to sit down in, through the dirt and litter, nor a table fit to spread his newspaper upon, nor a moment's peace for the children's squall, squall, squall? It drives a man to the public-house whether he likes it or not."

"Ah, well, I am sure I am very sorry," replied Mrs. Lawson, "and it shall not be my fault if things go on so again. And I will tell you what I will do, husband; I will go to Mrs. Bennett as soon as I have washed up the breakfast things, and I will ask her to come and help me to put the house a bit straight. And I will tell her what I saw last night, and I will ask her the best way of getting rid of those pawnbroker's tickets there." And as she spoke, Mrs. Lawson glanced towards the broken cup, over which the sunbeams were shining, just as she had seen them in her dream.

"Do, wife; go to Mrs. Bennett and welcome. She is one of the right sort, and you will get nothing but good from following her advice. I will come home straight from work to-night, and if there is any little thing I can do, just leave it till I come back." And shouldering his basket of tools, off walked Mr. Lawson to his day's work, with a step so light and elastic, that one or two of the neighbours asked each other, "Why, whatever has come to William Lawson? One would think he had had a fortune left him."

And William Lawson had had better than a fortune left him. Money quickly got is often as quickly spent; while industry, frugality, cleanliness, and order are lasting riches; and in his wife's awakened conscience lay the seeds of all these virtues which, in due time, would bring forth an abundant harvest.

There was quite a stir among the school-children that day as the little Lawsons took their places. Why! who would have thought it, those little dirty, untidy urchins, were really pretty children, with fair skins, and soft, curly hair! Well, if a little soap and water could make such a change as that, it was indeed a pity it had not been tried before. If their clothes had been but as clean as their faces, they would have been sweet-looking children indeed. Ah, well, wait a while. A city cannot be built in a day, and there is plenty of work cut out for Mrs Lawson, before the neglect of years can be repaired.

And so, indeed, poor Mrs. Lawson found it. She needed all Mrs. Bennett's help—happily, Mrs. Bennett gave it readily—to keep her from growing tired of her work and leaving it before it was half done. It was not very hard to her to work well at first, while the cleaning fit was yet fresh upon her; and if one or two good cleanings would have done, all would have been well. But, unluckily, dirt has an obstinate habit of collecting again as quickly as it is washed off; and, therefore, no one, two, or three cleanings will drive out the enemy. He can only be beaten by fighting him every day. Often and often, Mrs. Lawson was on the point of giving up the struggle in despair. But then the remembrance of that bright home she had seen in her dream came back to her, and she determined once and again to persevere. She was encouraged too, by finding that every step she took in the right direction, was a solid gain of home happiness.

It is true that all things did not come quite right at once. Mr. Lawson's first burst of satisfaction died away, and it was some months before he kept quite away from the tavern. Happily, however, his wife had learned more from her friend Mrs. Bennett than to keep her house clean and her children tidy. She had learned that the woman who would win her husband to his home, must put on "the ornament of a meek and quiet spirit," and bear and forbear long and patiently, as becometh the servant of the Lord God. And so, trusting not to her own strength, but to Him who is all-powerful to help, Mrs. Lawson tried to bear up under hardship and disappointment. Though the struggle seemed hard at first, it gradually less and less, till, at last, in the return of her own self-respect, in the improving health of her children and in the happiness of her husband, she ceased to feel that the exertion was a painful one at all, and she wondered at herself, as she looked back to the days when she had been content to let her home be the abode of dirt, disease, and wretchedness.

And now a year had rolled round since the night on which Mrs. Lawson had first made the acquaintance of the strange visitors, who had now become the daily inhabitants of her home.

Wonderful had been the change that year had made; and as Mrs. Lawson sat up to finish some work that she was doing after her husband and children had gone to bed, she might well be pardoned as she looked round the room with a feeling of honest pride, as she thought how different it looked.

There was no litter now; there was "a place for every thing and everything in it its place." The floor was so clean, that the moonbeams, which fell through the open window, flickering hither and thither, failed to show a stain of dirt or grease. The old broken cups on the chimney-piece, were replaced by new ones, and the pawnbroker's tickets, which for months past had been as eyesore to Mrs. Lawson, had been all taken away to the place whence they came. Yes! the last pawnbroker's ticket had been redeemed that very day, and Mrs. Lawson could at last say with truth, that she owed no man a penny.

Well might she feel happy as she thought what a change a year had made. And by what simple means had the change been brought about! "Fresh air, plenty of soap and water, and a little trouble to make things nice, and to keep them so;" these had been the friends by whose help she had fought the good fight against dirt and misery, and gained the victory.

Oh, that women would be wise in time! If they would but remember how much of the health, and consequently of the happiness of their families depends upon attention to such simple things as keeping a window open scouring a floor, or washing a child's skin, we should not have such constant stories of home quarrels, of sickness, and early death.

But, unhappily, it is just to these little things that many women will not attend. Ask from a woman some great act of self-sacrifice, and she will be found equal to the task. Yet, the woman who will cheerfully sit up through long nights of sickness, by the bedside of a friend, who will for years bear patiently with brutality of a husband, who will give up every pleasure for the good of her child, is sometimes the very person who is found wanting, the moment she is asked to take the trouble to do some little thing which would often prevent the illness, pacify the husband, or further the best interests of the child.

"Where's the need to worry about cleaning the room? it will do very well as it is," say such women.

And so the dirt is left clinging to the walls, the foul air is shut in by the closed window, and in due time, the necessary consequences follow. This child dies of fever—that other is a martyr to boils and scrofula.

When shall we be convinced that the cure for half the ills we suffer from, lies In our own hands? Would that we could be persuaded to send a warm invitation to Mrs. Lawson's midnight guests, to make them our friends for one year, and to work them heartily for that time; then we should learn to value them so much, that we should bid them stay all the years of our life. M. B.

Temperance.

THE STRENGTH OF YOUNG MEN.

THE POET'S FRIENDS.

The Robin sings in the elm;
The cattle stand beneath,
Sedate and grave with great brown eyes,
And fragrant meadow-breath.

They listen to the flattered bird,
The wise-looking, stupid things!
And they never understand a word
Of all the Robin sings.

—*Atlantic Monthly, Feb.*

THE "CATTLE" TO THE "POET."

(Atlantic Monthly July, 1860.)

How do *you* know what the cow may know,
As under the tasseled bough she lies,
When earth is a-beat with the life below,
When the orient mornings redden and glow,
When the silent butterflies come and go,—
The dreamy cow with the Juno eyes?

How do *you* know that she may not know
That the meadow all over is lettered "Love,"
Or hear the mystic syllable low,
In the grasses' growth and the waters' flow?
How do *you* know that she may not know
What the robin sings on the twig above?

UMBRELLAS.

Umbrellas, such a necessary convenience in our day, were, even at the beginning of the present century, but little used in England, or indeed in any part of Europe, unless by invalids or very fine ladies. And they did not carry an umbrella in the streets as we do; but one was kept hanging in the hall of stylish mansions, and held by a servant over visitors as they passed to and from their carriages. It was deemed very effeminate in a man or boy to shirk a wetting; and so it was no wonder that an old soldier like Lord Cornwallis should have had his ire aroused by the offer of an umbrella. He had been dining with a friend, and when about to enter his carriage to return home, stopped a few moments to converse with his host. As it was raining in torrents, a servant in attendance attempted to hold the house umbrella over his Lordship's head; but the old soldier exclaimed, wrathfully:

"Take that thing away! Do you suppose I am a sugar doll, to melt in a shower? or do you take me for a woman, who is afraid of her fine head-gear? I have not been fighting my country's battles, to be frightened now at cold water. A shower of rain is no worse than powder and ball, and I never shirked them."

Then, baring his head to the pelting rain, the nobleman walked deliberately to his carriage.

An old English record states that as early of the middle of the eighteenth century some enterprising genius introduced umbrellas at Oxford and Cambridge, letting them out to the students at so much per hour, thus enabling poor young men to pass from building to building to their lectures without being drenched by rain. But people no more thought of taking an umbrella about the streets of a town or city, than of taking a bed to sleep in, or a stove to warm themselves by, as they went about their regular business.

The first person who ventured on carrying an umbrella was Jonas Hanway—the same benavolent old gentleman to whose exertions England owes the foundation of its "Marine Society," and to whose memory there is a monument in Westminster Abbay. Mr. Hanway had traveled in China and other parts of the East where umbrellas were in general use, and having brought one over with him as a sort of curiosity, he at length determined to avail himself of its protective benefits, and so one day ventured on the streets of London, holding "the queer looking apparatus" over his head, during a heavy rain. Perhaps if he had known what a shower of ridicule, and even abuse, he was provoking, he would rather have faced the rain. For groups of men hustled him on the sidewalks, and called him mad; women, from windows and doors, clapped their hands and laughed; and boys in crowds ran after him, hissing, hooting, and even pelting him with stones. But they soon got tired of such shameful sport, and took it quite as a matter of course, as Mr. Hanway, day after day, walked the streets umbrella in hand, whether in rain or sunshine. Occasionally he invited a friend to share his comfortable shelter, and all agreed in pronouncing it very pleasant; but so afraid were they of ridicule, that it was more than three years after Mr. Hanway's first experiment before another man in London found courage to own or carry an umbrella. Jonas Hanway died in 1776, and for the last thirty years of his life he carried an umbrella whenever either sun or rain rendered one desirable; yet the present century has passed more than its first decade before the use of umbrellas became general.—*St. Nicholas.*

LETTER FROM CARLISLE.

Many visitors go to Carlisle to see the Indians. Some of them are disappointed. After nighting at the Commandant's office and being courteously received by Captain Pratt or one of his assistants, the spokesman of the party asks politely if they may "first look about by themselves a little. Cordial permission given, they set forth, but in the course of half an hour are back again with clouded brows and the appeal, "We thought we might see some *Indians* round. Can you show us some?" A smile and a circular wave of the hand emphasizes the assurance that a score or two of the noble red men are within easy eye range at the moment. Following the gesture with a glance over the green where the boys and girls are passing, perhaps, to their school-rooms, the shade of discontent deepens and they explain, "Oh! but I mean *real* Indians. Haven't you some real Indians —all in blankets, you know, and feathers and long hair?"

A little allowance must be made for sentiment in human nature, as when these inhabitants of the vast treeless plains of Dakota were addressed by an enthusiastic visitor as "dear children of the forest." Aboriginal picturesqueness is certainly sacrificed in civilization. Not having expected myself, however, to see a menagerie of wild creatures kept for exhibition, I was not disappointed to find instead, a school of neatly dressed boys and girls with bright eyes and clean faces, as full of fun and frolic as if they had been the descendants of the Puritans. My only wonder —and a wonder which grew, as I passed through one department after another of the school, till it became the strongest impression it made upon me—was wonder at the degree of order which had been secured in so short a time, and with so few assistants.

Carlisle Barracks stand on a knoll half a mile from the old town of Carlisle, which was held awhile by the Confederates who burned the barracks when they left. The buildings have been restored in nearly their original style, so that they have still an antiquated look though comfortable and convenient. The post has an older, historic interest as the place of Andre's confinement.

Standing on the upper plazza of the Commandant's quarters, now occupied by Captain Pratt, the eye sweeps over a beautiful landscape. The bold range of the Cumberland circles around the front and right, only five miles away; the old town lies down in the hollow; green fields stretch between, and the little "Yellow Breeches Creek" winds its very tortuous way round the fort grounds and through a grove of old trees. Walking to the end of the balcony and looking back, one sees the Blue Ridge, blue enough in the distance, though only eight miles off. Looking forward again beyond the flagstaff in front of the Captain's house, is a large green where the boys parade and the girls play. A pretty sight it is to see the merry little crowd enjoying their games of ball, or, with heads up and toes trying to turn out, taking off the boys' setting up drill with shouts of laughter, finishing up all properly with the difficult feat of touching their feet without bending their knees.

The girls' green is flanked by their quarters and the lady teachers', on one side, and their Industrial room and the offices on the other; while the boys' quarters and school building stand behind on either hand, with greens between; and the school dining-room, and kitchen, and the hospital—unoccupied by any student at present, fortunately—make up the fourth side of the large hollow square. The large stables of the garrison have been, for the most part, converted into workshops and a gymnasium. A little chapel has been put up for the school, simply a long room, well lighted and furnished with settees, but this is all the building that has been necessary. So many substantial buildings in tolerable order to start with, have been a great advantage. This is especially noticeable in the school building, two stories high like the rest, the upper half of which affords four school rooms, each fifty feet by twenty-four, and two recitation rooms of half the length. All are furnished with comfortable desks, blackboards, and all the conveniences of a well ordered school. The lower story, containing the same room, allows for doubling the number of students, which is the Captain's desire. Several of his teachers have had experience in teaching Indians before in the Territories. A remarkable degree of order prevailed in the school rooms, and a good start has been made in the three R's, while the advanced class of those who could talk some English before they came, are dipping into geography, and a little history in connection with it. Among these are the St. Augustine young men whom we learned to think of as our Hampton boys in their year's stay at the Normal School. As janitors and company officers at Carlisle, they are helping the new comers in the road of law and order, and are very useful to their old commander and friend, who has of course the best claim upon them.

The smiles that greeted the Captain as he passed from room to room, showed that he has called out the affection of the wild young hearts; and that is a long step in their education.

A good beginning in the industries has been made, as was described last month in the interesting letter from Lieut. G. L. Brown. This officer, after generously devoting very nearly the whole of a five months' leave of absence to voluntary service at Carlisle, is now about to return to his post at Cheyenne River station, in Dakota, unless, as earnestly to be hoped, he shall be detailed to help Captain Pratt in his noble fight for civilization against savage ignorance and civilized indifference.

While their children are off at school the tribes remain at peace, and the horrors of Indian warfare are averted. The true value of the work at Carlisle and Hampton is not in the training of 200 Indian children in English and industry, important as this is to them and to their tribes, but in the educating of the public mind to perceive that if 200 can be trained, all can be; in rousing public sentiment to the point of feeling that all *must* be, to fulfil our national pledges, and sustain our claims of national Christianity and civilization.

CHRISTOPHER COLUMBUS.

BY AN INDIAN.

The following, is from the pen of Michael Oshkeneny, a Menomone Indian, a Catholic, who entered the Junior class at Hampton, having studied considerably at home. The composition was handed us by his history teacher who requires the class to write out what they have been taught: there has been no correction whatever.

"Columbus was born in the year 1435 at Genoa one of the commercial cities in Italy. He was well taught in geography and astronomy and navigation. And when he was fourteen years old he went to sea till he was twenty-eight years old. He made many long voyages extending as far north beyond Iceland, and as far south as to Guinea and went to the Azores islands. The valuable East Indian trade was carried on at this time by way of the Mediterranean and the Red Sea. And Columbus having heard about this rich Empire with its mountains of precious stones and abundant of gold determined to go there. He believed that the earth was round, and Asia could easily be reached by sailing boldly west across the unknown Atlantic. But he was poor he had no ships so he went to the king of Portugal to get him to help him, explaining to him all his plans, but the king did not believe him, so he went to the Court of Spain where Ferdinand and Isabella reigned and again explained his plans to get them to help him, but they did not believe him at first, and Columbus was just giving up in despair when he received a message from the Queen, so he went back, and the Queen was willing to fit out two ships for the voyage and Columbus with the help of his friends added a third ship, the first two were caravels, small ships, with no decks on, but the third one was a quite large ship. And Columbus was furnished with a letter to the Grand Khan of Tartary. And in 1492, August 3d, Columbus started from Palos a small seaport on the coast of Spain. And after many days passing without seeing the expected land, all the sailors were scared; they did not want to go any further and wanted to throw Columbus overboard, but Columbus told them to sail ahead a few days longer. And one night while Columbus was watching he saw a light at some distance ahead and so he anchored his vessels, and when morning came, the joyful cry of "Land" was given, and Columbus with his officers landed. His first act was to kneel down and thank God with tears, second to take possession of the country. The Island discovered was San Salvador, one of the Bahamas, and he soon after discovered Cuba. And one of his ships got wrecked so that he had to leave some of his men as a colony, and returned to the Old World with some of the natives and products of the land he discovered. And he was received as the great Discoverer. On his second voyage he took with him settlers, and Jamaica and Porto Rico were found. Third voyage he discovered Trinadad and the main land of South America, and his fourth voyage was to find a passage to India. But after many hardships in sailing along the coasts of Central America, he returned to Cuba and then to Spain and found Queen Isabella dead and Ferdinand ungrateful, and to tell what he had discovered a new continant, was only ontlying islands of Asia.

Columbus was appointed viceroy over what ever lands he should discover and governer. But at last he was treated very badly and sent back to Spain in irous.

Junior B. Section.

Temperance.

THE STRENGTH OF YOUNG MEN.

The apostle wrote unto young men "because," as he said, "they are strong." But when is a young man strong? Is he strong when he is held and shaken like a reed in the clutch of some base appetite? Is he strong when he is scourged and driven at the hand of some lust like a slave, and like a slave submits without shame or resistance? Is he strong when a low-bred sneer, a stinging taunt, or a silly banter, can sheer him from a noble purpose? Is he strong when the breath of a woman, expressed in an invitation to taste the wine-cup, can blow his resolution and pledge into the air, and whirl them, as the wind whirls a feather, out of sight and thought? Is he strong when he is too cowardly to stand by his convictions of loyalty to Christ and virtue? It was not to such that John wrote.

The thing that makes young men strong is moral courage—high, undaunted courage; or, to put it in a single sinewy Saxon word, *grit*. In public and business life this quality enables a young man to say *No*, not as though he wanted to say *Yes*, but a negative that everybody, the devil included, will understand the meaning of.

RUM HEAVIER THAN WATER.

One man said to another, "Which is the heaviest, a quart of rum or a quart of water? Rum most assuredly; for I saw a man, who weighs two hundred pounds, staggering under a quart of rum, when he could have carried a gallon of water with ease."

PENALTY PAID BY SMOKERS.

An eminent writer on the diseases of the brain, Dr. Solly, in a late lecture to medical students on that frightful and formidable malady, softening of the brain, says: "I would caution you, as students, from excess in the use of tobacco or smoking, and I would advise you to disabuse your patients' minds of the idea that it is harmless. I have had a long experience of brain diseases, and I am satisfied that smoking is a most noxious habit. I know of no other one cause or agent that tends to bring on functional disease, and organic disease of the brain, so much as excessive use of tobacco."

PETITIONER FOR A LICENSE.

A carpenter, who was tired of making an honest living, came to a gentleman with a petition for a public-house license; which he requested him to sign. The gentleman looked at him; and asked him why he did not stick to his plane and bench. The answer was, "The public-house pays better, sir."

"Well, but do you not think you will be affording additional facilities to drunkards to destroy themselves?"

"Perhaps I shall."

"Do you not believe that at least five men every year will become drunkards if you succeed in getting a license?"

"Why, I never thought of that before; but I suppose it would very likely be so."

"Then if you keep a public-house for ten years, fifty men will become drunkards through your agency!"

The man threw down his petition, went back to his honest occupation, and was never tempted to desire a license again.

RUM OR RUIN.

Not long since I saw a soldier cruelly attempting to drive a poor hog beneath the wheels of a train then in motion.

It was a cruel act, a disgrace to the manhood which clothed him and to the uniform he wore.

I turned my back upon so sickening a sight, only to behold another a hundredfold more atrocious.

A man was leading a youth of not more than eixteen summers down the steps which conducted to one of those low, dingy, dirty places—a bar-room, there to pollute his young lips with that which crueheses the body and mangles the soul.

"Which of the twain, think you, reader, was the worst?"—*What Cheer.*

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

THE Anniversary exercises of the Hampton Institute will be on Thursday, May 20th. Visitors can leave New York City at 4 o'clock P. M., Philadelphia at 6 P. M., connecting with the "Bay Line Steamers" at Baltimore, which leave at 9 o'clock and arrive at Fortress Monroe at 8 o'clock A. M.; returning, the steamers leave Fortress Monroe at 7 o'clock P. M., arriving at Baltimore at 7 o'clock the next morning, at Philadelphia at 11, and at New York at 2 o'clock P. M.

THE hopeful feature in Southern affairs is the earnestness of a class of men in improving the condition of their ignorant population. The Hon. W. H. Ruffner, Superintendent of Public Instruction of Virginia, freely quoted in this number, is one of them. The majority of State Superintendents of Education in the South are in hearty sympathy with him.

The other side of the picture is the spread of the repudiation idea, still far from universal, but with a tendency that alarms many who see in its possible triumph a basis of danger to the National credit.

The "outrage" is fading like a dissolving view and the outlines of an even more terrible thing are dimly seen.

THE article on "A Fool's Errand" in this number, by a regular contributor, is, we believe, just and discriminating. The narrative and word painting of the book is powerful; its philosophy is weak.

No person who gave himself wisely and fully to the work of bettering the condition of the needy classes of the South would ever publish his experience under the title of "A Fool's Errand."

THE *Weekly Advance*, a democratic colored paper published at Montgomery, Alabama, says:—

"As an evidence of this hatred and prejudice towards the colored man in the North, we need only to mention the fact that in no Northern city will a white mechanic work with a colored man—the lowest menial will refuse to be degraded (?) by working with a negro."

We offer a test to the truth of this statement.

Mr. Henry Pryor, a bright, reliable and worthy young colored man aged twenty-one years, has worked five years, in the Printing-office of this institution. He desires a place in a Northern office. He is competent and is desirable in every way.

Is his color a *taboo* from all Northern printing-offices?

THE MONROE DOCTRINE.

This doctrine holds that no European power shall acquire any foothold on the North American Continent. So long as it is confined to opposing any military occupation of any part of the continent, it is just possible for a civilized American to support it, on the ground that self-preservation is the law of nations as of individuals. This is not exactly a Bible doctrine, but good people take to it quite as keenly as bad people. Many of our opinions will hardly bear any closer examination than the old negro's title to the chickens he had for sale. But when the National Government proclaims that it will not look with a "friendly eye" upon the project of a ship canal across the Isthmus of Darien, constructed by European capital and protected by a European power, it seems to us that it passes all debatable ground and stands on the ground of the wicked monopolist and the unconscionable brigand.

The State of Colombia has absolute title to her own soil and the waters lapping it. The United States are a thousand miles away, and several alien countries intervene. The United States have no concession for a canal; nor have they any right, by nature or treaty, over the land through which it is proposed to run it. The State of Colombia is a free and independent State, and has a right to act for the best interests of herself and her people. She may dispose of her territory to Englishmen, Frenchmen or Hottentots, and she is not bound to sacrifice her interests because the United States ask it. For the United States to threaten or intimidate or retard the legitimate action of an independent State, is only a piece of impudent bullying. If the Chinese, with an army of ten millions of men and a navy of a thousand ships (and some day they will have them), were to declare that "The movement of the American people towards the western coast of their continent is calculated to produce grave complications with our people, and we cannot tolerate a rival interest in the Pacific," the enlightened citizens of America would denounce the Chinese as tyrants. Our statesmen would become tearful and sad, and look upon life as full of injustice and trouble; and our good men would find excellent moral reasons for holding the Chinese to be a selfish lot.

It is quite possible that it would be for the "best" interests of the world that the United States should control the proposed canal. But nations, like individuals, cannot always have things their own way. We may manage our own property as we choose, but to dictate to, or interfere with, the rights of Colombia is a wicked business. We dare to do so, because we have more guns than she has. It is this same vague, plausible, bad doctrine which England and Russia are adopting, in pushing their conquests into the heart of Asia. We have failed to open the canal ourselves, and we forbid Europeans to open it. If we feel the need of controlling such a canal, let us, at least, say to Colombia, "We cannot allow you to sell the right to build a canal to any European capitalists, but whatever loss you may meet with in being kept by us from doing so, we will promptly pay you in cash, so that you suffer no loss." This might not be the best morality, but it would have a semblance of fairness about it. W. N. A.

"THE FOOL'S ERRAND."

As a novel this book has little merit. As a skilful, incisive, graphic revelation of the facts occurring at the South after the close of the war, it is a book of most remarkable power. Just now there is a large class of intelligent Northern men, who are cutting adrift from the teachings of their old political leaders, and are seriously interested in getting at the truth concerning Southern affairs. This book commends itself to such men.

The author presents the three schemes for adjusting the complicated Southern question as it arose after the war. The first was that the seceding States did not lose their *status*, but merely passed into a condition of suspended animation, which the capitulation at Appomattox relieved, and, thereafter, they became as they were before the first act of hostility. The second was that of disposing of the seceding section as "territory," the people of that section to be treated as minors or wards, to be so held until time and an adjustment of the conflicting social forces, under the care and direction of a paternal government, should make state sovereignty feasible and safe. The third plan was that of giving the ballot to the negro as a means of self-protection.

The object of the book is to show, that in adopting the third plan, namely, that of giving the ballot, peremptorily, to the negro, and in rejecting the second, namely, that of holding the seceding section in a "territorial" or probationary state, the governing power made a gross, if not fatal blunder. While we do not dispute the author's statement of facts, we dissent from his conclusions.

In adopting a plan of reconstruction there was left only a choice of evils, and the third plan was the least evil. No doubt it was harsh, revolutionary, galling, full of mischief and trouble. Nevertheless, it was the only plan that met the case boldly and sufficiently. Far-seeing men recognize it, and all men will be persuaded in due time. Even Senator Lamar, in his *North American* article, admits it. The territorial plan was theoretically good, but practically impossible. That plan turned on the capacity of the Federal Government to deal soberly, wisely and justly with a territorial section. We are with the negative on that issue. The power of the Federal government over a territory is, in a large measure, despotic. It can make and enforce such laws as it chooses. It is a representative government that becomes non-representative, so far as the territories are concerned. It is possible for the Government to rule a territory wisely and justly, but practically and for sufficient reasons, it does not rule wisely or justly. If the statesmen, called in this book the "wise men," had at the period of reconstruction, proposed the territorial plan, a thoughtful citizen, well read in the political history of the republic, would have said to them: "It is not possible for you to succeed with it. Theoretically you should fail, and practically you will fail. Your weakness, foolishness, incapacity, even imbecility in dealing with territorial questions has been illustrated too often during the last fifty years. You held the Mormons in a territorial state, and in 1857 sent an army after them. They hid their guns and made themselves rich in selling food and fodder to your troops, barricaded by snowdrifts in the canyons, while their leaders snapped their fingers at you. You have since then left them under a territorial government of your own device, with officers of your own choosing, backed by a great military encampment overlooking Salt Lake City. Yet the emigrant ships of Europe are crowded with their converts. The Christian monogamist has been seated by the side of the Mormon polygamist in the halls of Congress, and you can find no means to prevent it. You have supreme power, but the result has been a lusty and rapid growth of the 'twin relic' of barbarism. Again, you have had a handful of Indians to manage, with power of life and death over them. Yet you have managed them so badly, so wickedly, so stupidly, so cruelly, so corruptly, that every decent man is ashamed of his Government, and the pulpit says you are only fit to be visited with divine vengeance. As to the whites scattered through the vast territories held by you, you have merely flung them a 'territorial act' and gone about other business. In other words, you have branded "U. S." on each man, as you brand it on Government mules, and turned them out on the ranges." So a thoughtful man might have then said. And now he might add: "After a hundred years of Indian policy, you have at last found out that the simple way of treating the Indian is to make a citizen of him, and give him a piece of land. About ten years ago you purchased Alaska. You have given the people of that territory neither aid or comfort, and now, after years of disgraceful dawdling, you are talking about giving them a civil government. One thing you did quickly enough. You handed over the valuable fisheries of that territory to a monopoly, which is exhausting those wonderful resources."

A government with such a record was hardly in a position to assert its competence to deal with the vast, complicated, delicate questions arising out of the wild confusion resulting from the emancipation of four millions of blacks. So the best thing the "wise men" could have done, was just what they did do. "They builded wiser than they knew." The territorial plan would have resulted in the most frightful disorganization, and every Southern man ought to be thankful that it was not adopted. It would have been a *Saturnalia* of office-holding. The South would have been covered with a swarm of hungry officials. Third-rate politicians would have ruled as satraps. As it was, the abominable legislation in South Carolina and Louisiana was under the control of men backed by the Federal power. Though military administration would have been better, it would have ultimately failed, because soldiers are not founders of "institutions."

The truth is, that while our people are capable of self-government, they are not capable of administration over other and alien people. At the basis of our political system we put self-government, the rule of the people for the people, "squatter sovereignty," as Douglass called it. The habit and sense of our people is that every community shall rule itself, and we become foolish and awkward when we abandon that system. This we have already illustrated. When New England wished to cast the character of Kansas in mold of freedom, she worked on the true theory, and sent out her men to live there, to colonize, to vote, and form the social system. Our political growth is that of the individual fusing and massing itself into the organism of the State. To obey self-imposed laws is the habit of the Anglo-Saxon. To impose laws on other people is beyond his traditions, his habit or his education. The people of a state make the civilization of that state. No exterior force or pressure can do it. To have tried any plan of reconstruction not in accordance with the habit of the people, would have resulted in utter confusion.

In the Southern complication, there was but one simple and safe rule to follow, namely, to place all men, so far as law could place them, on an equality of rights and citizenship, and allow the problem to work itself out. In no community on earth are all laws enforced or all rights protected. There is an approximation only. If the ground work of the political system is made broad and just, there will be in time a strong and healthy growth. Even the Puritans of New England ordained freedom of thought in religious matters, and then proceeded to expel dissenters. But the organic law was broad and just, and in time there was complete harmony.

The people of the South are intelligent enough to know that if they fail to elevate the blacks, they must go down to the blacks. Having, as the "Fool" said, put the negro under their feet, they will find it no easy task to keep him there. The negro's freedom, fixed by the ultimate fiat of the Constitution, is secure forever. So the white man of the South no longer seeks to restore the old order of things, but will make the black a tolerable neighbor by other means. There is no way to do this save by education. Already the white sees all this and is at earnest work. It is the only salvation for himself, his property, his community. He is like the passenger in the boat struck by the squall—he must bail or go to the bottom.

Northern men do not know of this general movement toward the education of the blacks, because it is not done with trumpets and banners; nor do the Northern newspapers report such uneventful work, because it is not considered "available matter."

Because the hero of this book settled in the South when chaos ruled, and the social forces were striking wildly in every direction, and the whole population was a vast social wreck, and over it swept and howled a typhoon of a most radical revolution, bursting from every point of the

and because in all this he could | are often double the size they ought to be— | legislation on the subject of military land | 4. The negro is fond of politics, and has has

compass; and because in all this he could not see that the plan of negro suffrage was instantly successful, and because he tried to enforce it and failed, he gave up his mission in disgust and called his errand a "Fool's errand." W. N. A.

NORMAL SCHOOLS AND COLORED TEACHERS IN THE SOUTH.

From 1870 to 1880 free schools in the South have been struggling for existence. That is now assured on a foundation of public sentiment which makes their destruction impossible. Poverty, ruined finances, and the still faithless and hopeless element prevent their rapid improvement, but existence is a settled fact. There is now more thought of improvement.

The able men composing the Trustees of the Peabody Fund for years devoted almost their entire resources to building up public schools. They are now helping those that train teachers, to meet the great need and demand on every side for better teachers.

Teachers' "institutes" for discussing methods, comparing experience and promoting *esprit de corps* are held with increasing frequency.

State legislatures have, in some cases, granted aid to Normal Schools. The cause of popular education has steadily gained ground till the question is not so much, "Shall we have free schools?" as, "Shall we improve them?"

The negro is not neglected. In spite of old ideas and theories for which the South fought, and fell in utter exhaustion and confusion, it is furnishing, from the ranks of its best society and ex-soldiers, men who are earnestly and ably pushing educational work for the blacks.

There is, on the part of these men, as a class, a singular readiness in accepting new ideas.

Dr. W. H. Ruffner, Superintendent of Virginia schools, in the Virginia *Educational Journal* for February mentions a six weeks' Summer Colored Institute, at Lynchburg, which he has been instrumental in opening for for the benefit of the colored teachers of the State. We recommend it to all colored teachers in that part of the State.

We quote a few remarks of the Doctor under the heading,

COLORED TEACHERS FOR COLORED SCHOOLS.

"Because of the superior culture of the white race, to say nothing of race pride, our theories would incline us to prefer white teachers for colored, as well as for white schools: and a strong and varied argument can be made on this side of the question. But the world's experience seems to have demonstrated that a people are best taught, that is, most acceptably and successfully taught, by members of their own race. The missionary work seems to have proved this.

"There is a direct work to be done among the colored people by the whites, and it should be done faithfully and ungrudgingly. But it is chiefly in training the educators of the colored race. This is the noble work at Hampton. We would not say that even this higher, or secondary work should all be done by whites. The time has already come when able normal instructors may be found among the better educated of the colored teachers; and it is the purpose of the writer to seek for some of this class as instructors in the colored normal school which is to be held in Lynchburg next summer.

"As to who are to be the religious teachers of the colored race, this is a question which has settled itself. Colored congregations desire and call only for colored ministers. An amazing work among these people is now going on in our very midst, under ministers of their own color, the good effects of which are apparent to every careful observer.

"In all this upward movement our colored public schools have been a prominent factor. These schools have generally been well taught, partly by white and partly by colored teachers. Many of these white teachers have been and are animated by the best motives, and have done great good. All honor to them. It has not been possible, however, in all cases to obtain the services of suitable persons either white or colored.

"But after observation continued for ten years, and pretty widely extended, we can bear an emphatic testimony in favor of the colored teachers who have usually been found in our schools. They surpass the whites in their management of colored children. In fact we have usually found their schools to be models of order and system. Their schools are often double the size they ought to be—and school officers should give heed to this—but even when sixty to eighty children were present under the care of a single teacher, we have almost always found quiet order, and also systematic and successful instruction; and always have found good manners. In some cases also we have been struck with the neatness of everything about the school, including teacher and children. The Charlottesville colored school may be referred to as an example. [Taught by Hampton graduates.—Ed.]

"Some of these colored teachers received all their training at home or in the schools taught under the auspices of the Freedmen's Bureau. The best and most agreeable teachers, as a class, were trained at Hampton; but many other colored institutions have sent out excellent teachers, such as the Colored Normal School at Richmond, which was for many years under the able management of Rev. R. M. Manly, also the Richmond Institute under the care of Rev. Dr. Corey, who still gives his valuable services wholly to the work of training colored ministers and teachers. And from schools beyond the State good teachers have been derived.

"The result of all our seeing and thinking is, that as a rule, colored teachers are best for colored schools.

"And this we say in full view of a fact which has not always been recognized by school boards, namely, that colored schools need as good teachers as white schools,—indeed better, because colored children have more to unlearn than white. And we cannot hope to find colored teachers who are cultivated in as many directions as white ones. But there is a magnetic influence in community of blood which gives special power to the colored teacher. He enters at once into the confidence and affection of his pupils, and this gives him a moral advantage which the white teacher gains slowly and never fully. The colored teacher also finds an immediate welcome into the hearts and homes of the entire community to which the children belong. There is no restraint, no line of partition between them. And this social backing gives power in the school, and this the white teacher cannot have. And this reciprocal action helps all parties, and makes the school a greater blessing to the whole colored community. And when, as is usually the case, the teacher helps in the church, the Sunday-school, the Temperance Society, and in the affairs of social life generally, his influence for good goes far beyond the limits circumscribing the white teacher of colored children. Cases have come to our knowledge in which the colored public school, under a colored teacher, has thus proved a rapid and powerful civilizer of a whole community."

This is testimony from a public officer, formerly a slave-holder, who has no political hopes from the freedmen, but has with tremendous earnestness and energy given himself to the cause of popular education for all.

Such men are steadily coming to the front as the true saviours of society; but are, as yet, far from being classed as friends of the colored race by its professed champions.

CONGRESS AND THE EDUCATION OF THE PEOPLE.

A meeting of the Department of Superintendents belonging to the National Educational Association was held in Washington city, February 18-20, 1880. A large number of the most distinguished educators in the United States were in attendance. Superintendent Ruffner, of Virginia, as chairman of the Committee on National Legislation, reported the following resolutions, which were unanimously adopted:

1. *Resolved*, by the meeting of School Superintendents here assembled, That there is immediate and pressing need of Federal aid to the States, and especially to the Southern States, in the work of educating the people in the primary branches of knowledge.

2. *Resolved*, That the Congress now in session be most carefully urged to consider and act favorably upon the bill now before it, H. R. 834, entitled "A Bill to apply the proceeds of sales of public lands to the education of the people," and so forth, or some modification thereof which would recognize the principle of applying these funds wholly for the general education of the people.

WORDS FROM SUPERINTENDENT W. H. RUFFNER'S ADDRESS.

The call upon Congress for aid in educating the people will not cease until aid be granted. * * * * * *

Besides political and sectional jealousies, other interests antagonize this patriotic object. Private or corporate schemes are ever moving, or preparing to move, on the public domain. How little do the people of the United States generally know how largely their vast landed estate has thus been alienated. The American system of land grants to railroad corporations, which originated in 1850, has already surrendered a territorial empire of over *two hundred million acres!* The legislation on the subject of military land bounties, while nearly profitless to the soldier has been a national disaster, beneficial only to speculators and monopolists. The acts of Congress on the subject of swamp lands, and college and Indian scrip, have been vicious and indefensible. The curse of monopoly in the states of the North-West, caused by the cruel commerce in the land which the government has encouraged, has been an irreparable blight to their prosperity. Great estates in every where tending to swallow up the smaller ones, and to produce a constantly multiplying and crouching tenantry."

* * * * * * *

The tremendous logic of events has made astonishing changes of sentiment in the South but the dregs of all these old ideas and feelings lie scattered about. And in addition to these the early post-war history stirred up new difficulties, so that altogether we find that our cause has to wade through seas and sands, with now and then a battle.

And to this wearisome list we might add the high-strung State Rights men who are very jealous of Federal gifts to the education of the people, but get very fearless of Federal power when the river and harbor budget comes along. * * * * * *

Ideas, like seeds, cannot take root until the conditions are right. The moon must be in the right sign. Hitherto the conditions have not been right for this idea, but the conditions are now right, and we may confidently expect it to grow and spread—the only danger being that it will spread too wildly. The era of the oak is giving way to the era of the pine: God forbid that we should pass on to the era of broom sedge and prairie fires. By which I mean that the social and political era of the past is different from that of the present, and the present is possibly different from that of the future. The people are claiming more for themselves through the government, and if this has to be accomplished by revolution it will run into a terrible socialism. My firm belief is that socialism cannot long prevail in a government like ours. But we are on the line which points in that direction. Where then must we look? To the people—to these threatening masses who, wrong, will read society to pieces, but who, right, will be her grandest muniment.

In our Southern country, extreme conservatism has been the controlling spirit during most of our history, and it had much to recommend it. The events of this war opened the eyes of the privileged class to the value of the common people. And after the war no man would have ventured to talk about the "mud-sills" of society.

Society is still unsettled, and no man can forecast the future. Many good men are gloomy and despairing. Some would only croak and groan; others would curse and fight. But all this is foolish and unavailing. The panacea for the ills of society is not malevolence, but *sympathy;* and this sympathy must not be a sentimental vapor, or a smiling hypocrisy, but he of that substantial sort which provokes an honest study of each other's wants. To put your arm around a shabby voter when leading him to the polls is one thing, to study how you may permanently better the man and improve his lot in life, is quite another thing.

And when we are trying to move Congress in this matter of help to educate the people, we may claim that we are doing a great service in exalting the sphere of legislation. Could we only establish *man* as the central figure in this wearisome wilderness of legislation, we would perform a public service far beyond the value of the landed domain.

I know not what is true of Northern and Western States, but I can say for my State and for most of the Southern States, we are not able to educate our people in any tolerable sense; we are too poor to do it.

A state may press nearer to the extreme verge of ability in levying taxes for education than for almost any other object; because education is a reproductive force. A low rate of taxation on a people not improving is more oppressive than a high rate on a prosperous people. It is idle for any one to suggest a mixture of the races. It can't be done. We must educate in separate schools, or not at all. * * * * * *

THE NEGRO.

Coming as I do from a Southern State, Mr. President and brother Superintendents, you will expect me to say something specially about the negro, whose fate is to be determined largely by what the Federal government does for him, or leaves undone.

1. He wants to do right, and he is the most amiable of the races. He is also the most religious of human beings, and the character of his religion is improving. It controls his daily life more than formerly. Among these people there are many centres of great moral power.

2. The negro craves education, and I believe that this desire has increased. It certainly has not diminished. He makes fully as great sacrifices to send his children to school as the laboring classes of whites.

3. The civilization of the race is progressing—and even faster than his thoughtful friends anticipated.

4. The negro is fond of politics, and he has just one principle of political action, and that is to go with those who will do most, or lead him to think they will do most, to advance his interest. He has an eye to the past, but a much sharper eye to the future. He has no strong faith in men or parties—and he will go hither and thither according as his confidence is gained at the moment. He is most suspicious of those who have heretofore formed the controlling element in Southern society and politics.

5. But as a class, they are in character weak and ignorant—and hence to that extent a dangerous element in society. The negroes are a highly improvable race. A surprising proportion of enlightened, right-thinking men have already risen from their ranks—men who have taken a respectable position—some in the learned professions—some in editing and printing newspapers, and some in the management of business—and what is not less commendable, great numbers are living worthy lives in the humble occupations. The colored children learn well at school, and show good effects promptly. * * *

SUMMARY.

In conclusion, the points made or assumed in the remarks now made are: 1. That there is an enormous and most dangerous mass of ignorance existing in the whole United States, and that this is particularly true of the Southern States, where the poor circumstances of the people forbid an effective system of common school education. 2. That these ignorant classes, white and colored, improve readily under right influences. 3. That we have entered upon a peculiarly critical period in which there is an ominous disposition on the part of the masses of the people, to discard old leadership, and to lay hold of the controlling forces of society. 4. That safety and justice alike demand that the people shall be educated in right views and habits, and thus be made the unconquerable defenders of order and property. 5. That the subject demands the immediate attention of the Congress of the United States.

EDUCATION IN TENNESSEE.

We welcome the "*Fisk Expositor*" from Fisk University, Tennessee.

Its officers, Northern men, are in sympathy with the Hon. Leon Trousdale, State Superintendent of Education, whose last report partially given in the "Expositor" is encouraging.

Number of whites in school, 208,850; 53 per cent. of the teachable children.

Number of colored children in school, 55,329; 44 per cent. of the teachable children.

Number of teachers, 4738, of which 1267 are colored. There are 3793 school houses. Value of school property, $1,162,684. Average monthly salary of teachers, $25.67. Average number of days taught 77. Total school moneys expended for the year closing Aug. 31, 1879, $710,651.72.

The *Expositor* says further,

"Few things can be more gratifying and cheering to those engaged in the grand work of educating the colored people in Tennessee, than the fact that those having charge of educational affairs in the various towns, named below, either have, within the past few years, organized graded schools for colored youth, or are now taking steps for organizing such schools: Clarksville, Trenton, Shelbyville, Brownsville, Jackson, Union City, Bolivar, Paris, Covington, Pulaski, Columbia, Fayetteville, Mason Station, and perhaps some other towns. Another thing that all who are engaged in the educational work in the state ought to regard as a hopeful sign, is the fact that, the last legislature, in all its zeal for retrenchment, made no effort to reduce the income of the free school system. This, and the fact, that much complaint was uttered by the people all over the State, because of the suspension of schools consequent upon the postponement of the collection of taxes by the legislature, show how deeply the system of the State has taken hold upon the affections of the masses.

Still another ground for hopefulness, is found in the fact, that whereas, year before last, not quite 39 per cent. of the colored children of the state were enrolled in the free schools, last year nearly 49 per cent. were so enrolled. And there are reasons for believing the superintendent's forthcoming report will show equally encouraging figures."

THE REAL TROUBLE.

It is not only the lack of chances,. The men in charge of the Negro schools in the South, know that no first-rate man or woman in good health need fail of an education. Thousands are willing enough, but few are up to the standard of brains,

energy, tact and "gumption," to make

period in '78-'79 equal to 22,313 tons, or the carrying capacity of a handsome fleet; and

lodging and lights but not washing. The latter can be had for one dollar a month; mak-

know that there are those who are giving their time and energies to their education,

energy, tact and "gumption," to make the best of things.

The following from a colored College student about to graduate from Fisk University, is taken from the "*Fisk Expositor*," and shows that "There's no such word as fail" to those who are made of the right stuff. The trouble is often in the weakness or deficency of those who try.

"A COLLEGE EDUCATION.

"'Can a young man, dependent upon himself, secure a college education?' is a query made by many a young person who wishes to prepare himself for usefulness. Having spent some years in school, the writer does not hesitate to answer the question in the affirmative. Many of the difficulties, said to obstruct the path of those desiring to obtain a thorough education, are only imaginary, and readily disappear when approached. That real obstacles exist, no one will deny, but even these if rightly met will prove to be a blessing in disguise. It is by contending with difficulties that a young man gains strength. Every success makes the succeeding one less difficult of accomplishment. He who has learned well this lesson will not fail to realize his fondest hopes. Young men possessed of good mental ability can, if they will, overcome the difficulties connected with the obtaining of a college education. The first thing necessary is a fixed purpose. No person, be he rich or poor, who has not fully made up his mind as to a certain course in life, has a right to expect success. Lack of decision prevents many a young man from going through college. Here is a young man who enters school, seemingly determined to pursue his studies to completion. His progress causes comrades and teachers to have great hopes of him. But imagine their disappointment when he informs them that, being somewhat short of means, he has concluded to give up his class and go out to teach a year, since he has a chance of getting a good situation. Contrary to their advice he quits school and never returns. This is only one of many cases in which lack of purpose has entailed failure and disappointment upon young men of promise. One's mind should be so thoroughly made up that no inducement will be able to shake his purpose. It is well enough, says one, to talk about perseverance and a fixed purpose, but where is the money, necessary to carry out this purpose, to come from? My answer is, each young man is to furnish his own means. Wages in this country are such that any one, who will practice economy, can save a few dollars every month. The actual expenses in such institutions as Fisk University, are so low, and such encouragement and help are given by its teachers and officers, that an education is placed within the reach of every young man of real ability who will husband his earnings. Seventy-five or a hundred dollars will give him a start in school which will enable him (we suppose, of course that he is pretty well along in his primary studies) to teach, at least a country school.

"As soon as he can teach with credit, his way is comparatively clear. The compensation which he receives for services during vacation can be so economized as to go far toward covering his necessary expenses, and in some cases a little money can be earned out of school hours. Some young men hold out pretty faithfully until it comes to the question of wearing old clothes. Here their fortitude too often fails them, and the money which would have carried them through the term goes for a new suit of clothing, and the result is, that they are compelled to go out to teach two or three months earlier than they otherwise would have gone. They soon find themselves behind in their classes, and become discouraged, and fall out of school. The young men who have the strength to economize in this direction, are those who prove a blessing to themselves and to society.

"E. H. ANDERSON, CLASS '80."

NORFOLK.

Under the heading "*The Onward March of Norfolk*," the *Landmark* of that city states that

"February, '80, compared with February, '79 shows an *increase* in cotton receipts of 2,620 bales, the whole number having been last month 48,179 bales; and an *increase* in exports of 5,682 bales.

But a better expression of the export values during the two periods compared for the two months referred to, can be had thus: those in February, '79, were $1,041,520; in February, '80, $1,628,254, give an increase in favor of the month just passed of $586,734.

The comparison of Semi-Annual Statements is also highly gratifying, and our figures examined in detail will show that Norfolk is steadily expanding her trade and increasing her importance. The tonnage accounts, when compared, show that the six months just ended give an increase over the corresponding period in '78-'79 equal to 22,313 tons, or the carrying capacity of a handsome fleet; and the increase in cotton shipments amounts to 58,421 bales. A Semi-Annual Comparison of export values shows in '78-'79 the sum of $7,683,495.11 sent abroad, and in '79-'80, $10,295,323, an increase in our favor of $3,059,827,801; and finally to complete the gratifying picture, we have received here during the last six months 478,400 bales of cotton, an increase over the same period in '78-'79 of 113,173 bales. With such facts as these before us, there seems to be no reasonable doubt as to the future before this port; and every man in the city ought to rejoice at this aspect of our affairs, which were never more promising than they are to-day.

MR. JOHN B. GOUGH, the temperance orator, is to speak in Virginia Hall, Hampton Institute, on Wednesday evening, April 21st, and in Norfolk, Va., Tuesday, April 20th. His topic will be Temperance.

It will be, we believe, the first appearance of this great orator in this region.

A NUMBER of the citizens of Hampton, Va., have erected at an expense of nearly one thousand dollars, a very convenient and attractive school house, taught by a lady fresh from Col. Parker's training school at Quincy, Mass. It stands close by the spot where the first Federal field battery was placed in the war, and is attended by the children of Northern and Southern families.

It seems to be a complete success, and is a just reward of the zealous efforts of those who have worked hard to build it up. A feature of the school is the eagerness of the children to attend, and the brightness of the school house. Nearly an entire end of the house is a bay window, filled with flowers, and pouring a cheerful light upon the rooms. Hampton has no prettier ornament than the "Banner" school house.

THE citizens of Hampton recently formed a Town Improvement Association through which the streets have been lighted and covered with oyster shells.

The neighboring colored settlements "Little Scotland" and "Church Hill" are now collecting funds to light and pave their own streets and will succeed.

We hope this is but a beginning of better roads, and more attractive school houses throughout this Commonwealth.

THOSE desirous of visiting Fort Monroe, and Hampton which is two miles distant, connected by a fine shell road, and to whom good accommodations but quite moderate terms are an object, can secure this by the middle of April at Mrs. S. F. Eaton's who has just increased her accomdations. It would be well to apply to her beforehand at Fort Monroe, Va.

The best time in the year to visit this region is from the 20th of April to the 20th of May. On the latter date is the Anniversary of the Hampton Institute.

DURING the winter the Hygeia Hotel at Fortress Monroe, Va., has been fitted for spring visitors; the spacious verandas are enclosed in glass, making the interior comfortable in any weather, and insuring protection from the keen winds that come sometimes in April and May.

The tedious Northern winter may be most pleasantly shortened by spending these months at Fort Monroe, where spring is far advanced and summer arrives early in May, hot weather being exceptional till June. The number of spring guests is greater than ever and is increasing.

THE attention of colored teachers in the State of Virginia is invited to the Colored Normal Institute to be held at Lyehburg, Va., next summer under the auspices of the Board of Education. In the announcement it is stated that—

"There will be no charge for tuition or contingent school expenses; and owing to the zeal and activity of some intelligent colored citizens of Lyuchburg, arrangements have been made whereby persons attending the school can be comfortably accommodated at boarding houses and in families at sight dollars ($8) a month. This includes table board, lodging and lights but not washing. The latter can be had for one dollar a month; making the total cost of living just nine dollars a month, or thirteen dollars and a half for the whole term.

The instruction in the school will be given by experienced, well trained, and in every way competent colored instructors, whose names and qualification will be announced in due time.

All colored teachers, male and female, and all persons who expect to become teachers, are invited to attend this school. The cost of living will be so small as to come within the reach of all who would be qualified to take advantage of the privileges of the school."

THE following from Albemarle Co., Va., is encouraging. It is one of the many bright spots in the South.

The writer is a teacher of unusual ability, who paid his way through school by shoemaking.

"Hampton has a fine name with our superintendent and people. The Superintendent speaks in high terms of Hampton. He treats them well and not only Hampton graduates but all colored teachers are respected in this County by all classes. They want you to come up to the point of your profession and you are supported. The County pays up when the work is done. There is some probability of the schools running six months, there is already a surplus in the treasury. Please find in closed P. O. order for $10. Please receipt. I owe something more which I am good for in my next payment.

In speaking of the ruins of Academic Hall to one of the colored citizens, I spoke of the bell and he asked me to ask you if you would sell it to them for their church and for how much? Let me hear from you about it.

This is a quiet community here; but there is room for improvement. I am doing all I can for both old and young; later I hope to be able to say more.

Yours very respectfully,

D."

THE colored people in Northwestern Texas have organized a Farmers' Association for the purpose of acquiring and improving farms and homesteads in that section. At a recent meeting the orator of the day, Rev. S. H. Smothers said among other things, the following:

Much has been said in regard to wrongs and oppressions of which our people complain. While, doubtless, there is some ground for their complaint, their hardships, in my opinion, are more the result of their illiterate condition than all things else. If a class of white laborers were as illiterate as our people, they would be equally oppressed as are the Irish tenants to-day. Capitalists look out for their own interests, and will, if they can, oppress one man, be his color what it may, as soon as another. We should remember that knowledge is power and ignorance is weakness. The protection which we most need is the power which education and property give. For my own part, all I ask of any man is an equal chance, and then if he can outstrip me in the race of life let him do it."

TRANSFORMED BY EDUCATION.

Photographs of our Indian students were taken soon after their arrival, a year ago last November. The year of training and new associations was felt to have wrought some change, and to test its degree new pictures have now been taken, with about the same arrangement of groups. A gentleman in the North, to whom the contrasting pictures were recently sent, gives his impressions as follows:—

MAINE, *Feb.* 24, '80.

Dear Sir:—

The photographs which you sent came in good condition. Many thanks. They are pictures of unusual interest, being a forcible illustration of the power of education.

It seems incredible that so great a change could have been wrought in the short time in which they have been under your care. A member of the Legislature who saw them was so impressed by the wonderful transformation that he asked leave to take them to show to the Committee on Education.

Having always felt much interest in, and sympathy for, the Indians, I rejoice that another answer than extermination is being given to the question, "What shall we do with them?" May the experiment prove successful!

The SOUTHERN WORKMAN makes its trip regularly, and is a welcome visitor. I was early taught to consider the colored people as *human beings*, whom we should protect and assist. That struggle ended, it is cheering to know that there are those who are giving their time and energies to their education, and that they prove worthy of the efforts which are being made.

I will enclose $1.00, with the request that you will send copies of the photo's to ——.

Yours respectfully,

A. F. QUINBY.

PHOTOGRAPHS OF THE INDIANS.

Photographs of the Indian pupils were taken on their arrival at Hampton, Nov. '78, and the same groups, as far as possible were taken again 14 months later, in Feb'y '80. The contrasts are very interesting and suggestive. There is a group of ten boys, another of four; a group of three girls, and one single figure—making four pairs. These will be sent by mail for 50c. a pair.

PLEASANT APPREOIATION.

A friend renews a yearly contribution to the Hampton School with the following pleasant note.

"——, N. C. March 16, 1880.

Gen Armstrong—

Dear Sir:—The time has come to remit the check that pays for a yearly scholarship. There is no contribution that gives more satisfaction than that to your Institution. May it be a blessing in the future as has been in the past."

(*From the Educational Journal*).

THE UNIVERSITY NORMAL SCHOOL.

It has now been definitely arranged that the State Normal School for white teachers will be held at the University of Virginia, beginning about the middle of July and continuing six weeks. All who have been or expect to be engaged in teaching, whether in public or in private schools, are invited to attend this professional school. No charge will be made for tuition, or for use of rooms, it only being required that the rooms or other property used must be left in as good condition as when taken possession of. Women, as well as men, are invited, and suitable arrangements have been made for their accommodation.

Those attending will have the option of boarding on or near the University grounds, or of joining the mess clubs. Boarding at regular boarding houses can be obtained at from $15 to $18 per month. There will be two messing clubs, one for males and the other for females, with the boarding and lodging arrangements of each grouped on opposite sides of the University premises.

MR. JOHN BRIGHT ON THE SOUTH.

The Atlanta (Ga.) *Constitution* publishes the following letter, addressed by Mr. John Bright to a gentleman of that city, and dated London, England, February 19:

"I thank you for sending me your little book. I have not yet seen it, as it is doubtless at my home, in Lancashire. I did not omit notice of the South, for I said a good deal about Texas. As for your old slave South, you will have few Englishmen settling there so long as the old temper of your people continues to exist. We hear of the ill treatment of the negro, and of the hostile disposition of many of your white population toward families who come from the North. I know not how much of this is true, but so long as the belief in its truth exists your southern States will make small progress in comparison with the North and West. You have soil and climate, but you will not easily or speedily shake off the old curse, and men from Europe will prefer a country where slavery has not prevailed, and where the negro is not a considerable portion of your population. They will think the North and West offer a better field for them, with more real freedom and less of the elements of disorder. I wish all your States a growing prosperity."

MISSIONS DEVELOP COMMERCE.—We have recently seen tables giving the value of exports from San Francisco to the Hawaiian Islands for the past three years. They amounted during this period to $4,702,029. Vessels from other parts of the world have also found a market at these Islands. Boston has sent them directly, during the same three years, merchandise valued at $347,435. It is a striking fact, which business men should consider, that the Sandwich Islands, commercially of no importance sixty years ago, now pay *annually* at a single American port more money by $300,000 than the total amount paid by the American Board during the whole three score years in Christianizing the Hawaiian nation. Do missions *pay*?

MISSIONS AND TRADE.

One of the marked developments in the missionary world, seen just now more than ever before, is the numerous inquiries from the countries where missionaries are working as to the cost of utensils and simple machinery of various kinds.

LETTERS FROM HAMPTON GRADUATES.

—— series of letters with one

that has been directly tried or not. Some, no doubt, from Liberia have been educated in this and other countries, but probably for

as heretofore, in the recent (State) election. A spirit of soberness was generally expressed. There are two colored voters in this county to

ple of the country than to see that such work is supplied with every resource?

Dear Sir:—

LETTERS FROM HAMPTON GRADUATES.

We open our series of letters with one from a former member of the "Hempton Singers" who is teaching in North Carolina, under a yonng man who was also a member of that hand.

Nearly every one connected with that company has made an excellent record as teacher of colored schools in the South.

N. C., *Feb.* 19, 1880.

Dear Miss M.:—

Thongh I have been very silent in expressing my thoughts to you, they have been very active, and have been the meane of cheering many a moment in my life since leeving Hampton, ite teachars, schoolmates and influence. Whan at Hampton I had all dreams abont my life in the future. I could see nothing but sunshiue, no clouds; my peth strewn with flowers, no pebbles. But since then I have been awakened to find out that life don't oconsist of dreems; we heve realities to battle with. Though I think my dreeming did me a great deal of good, I built a great many air-castles, and I am glad to say that they have not all proved bubbles. I find that I have to work real hard to accomplish any good, end that all my interest and zeal must be centered on the one great duty that I have to do, end that is, teaching. Before I entered the work, I thought that I would never grow weary, and that I should ever be found in the school-room. I am not tired yet, but I find that I am not so enthusiastic as I was at the beginning, and that I feel more anxious for the week to come to a close, and less enxious for the beginniug of another week. This is just the reverse of the state that I was in at the beginning of my career. Still, I love the work and find much pleasure in being of some service to my people in training the minds of the yonug. I can see that my labor is not in vain, for as the pupils are promoted from a lower to n higher class, I feel that the seed has taken root, is springing up, and I hope will bear good fruit.

The building thet I taught in last year has been enlarged, two schools consolidated; and five teachers employed. We have 387 enrolled, and nn everage deily ettendance of 331. So you see thet we hnve our hands full. Mr. H. is the principal. He is severe and determined with the children, yet he is kind; consequently, he has the best of order and the children feer him nnd love him too. . I think thet colored people have such a tender and forgiving spirit! I often see it displayed here nmong the children. If they are punished in any way hy one of the teachers, they forget all nbout it and the very next day bring a beautiful bouquet of flowers, or are the first to offer to do something for that teacher. Not that I think that they ought to receive a rebuke from the teacher as not being for their good, but children, you know, cannot see things in thet light, end that is why I hove noticed thie peculier feature in the colored children since being thrown emong them so constently.

Isabelle H. and Mary N. are teachers in the colored public school in the other distriet. They have a very fine school also.

We teach gaography, reading (First, Second, Third, Fourth and Fifth Readers), spelling, grammar, history and philosophy, in our school. We have introduced Appleton's Readers in school this year; they are very nice readers, and the children are delighted with the change, as they have been using the American series for the last six years in the city schools. Every Friday we have a spelling metch (girle against boys) and e general drill in geography. The committeo have supplied us with splendid large maps of the Eastern and Western Hemispheres, end e separate map of Europe, Asia, Africa, North and South America, and one of the United States. So the children are well drilled in their various recitation rooms, and when they are all in the lerge assembly room they ere sent to these maps to point out what is asked them. We take it by turns, each teacher, to drill them. In the nfternoon e portion of them (each teacher eppointe four each week) comes forward to read nn essay or declaim. After each piece reeited, the whole school joins in singing. Then when all have finished, the exercises are brought to a close hy one of the teachers (this is also taken hy turns) reading something. We have a very interesting school. I only wish that you could drop in some day and pay us a visit.

My love to Miss L, and all whom I know.

Lovingly, M.

A graduate teacher comments on the responee of Dr. Blyden of Liberia to our offer to edueate three African boys at the Hampton Institute, published in the January number of this paper.

VA., *Feb.* 16, 1880.

Sir:—

I heartily agree with the editorial in the last WORKMAN, in reply to Professor Blyden's response to your offer to accept African boys at Hampton to be educated.

Professor Blyden is n man of great intelligence, and ranks among the highest of men. But there is nn man so perfect, but that his first view and opinion of a subject may err. This Mr. Blyden will admit. No doubt he is judging from past observations, end is justifiable in his opinion. But I question whether that has been directly tried or not. Some, no doubt, from Liberie have been educated in this and other countries, but probebly for some other profession, and not directly for the missionary work. Two, to my knowledge, have been educated at Lincoln and Howard Institutes, and no doubt are doing serviceable work in the fields for which they were educatted; though their parents were from this country.

Sir, I truly believe that if trus Africans of the right pluck and metal could go through the normal training at Hampton School, they would return walking firmly upon their feet. Of course, silver cannot be made from lead; nor can gold be made from iron. I mean by this, that boys of the right quality and spirit must be obtained, else they will go back with the wrong end up. A better system cannot be planted than that of educating the hand, heart end head for Christion civilization. Such is the plan of Hampton School.

No doubt, General, but that you may be censured for this wise offer, as you have already been hy some for taking the Indians at Hampton; but as they do not destroy the purpose for which the school was first founded, I highly favor and encourage it.

Yours respectfully, W.

This is not the first ease in which a colored teacher has replaced a white one in the free schoole of this State. When competent, they have much greater influence over the children, take more interest, and excite a higher enthusiasm than their white predecessors.

The cross-road grocery referred to below drains the resources of the negro race to an extent hut little known and appreciated.

VA., *Dec.* 8, 1879.

Dear General:—

Thinking that you would like to hear of my work in this section, and the condition of the people generally, I thought that I would write and give you a few details. I began teaching here November the 3d with four pupils, but now I have fifty-six; it took me several weeks to get the little ones classified and to establish a few rules for discipline, but I heve gotten them quite well fixed now, and shall expect an improvement very soon. The people are trying me as an experiment for a teacher; they never had a colored teacher here before; the three teachers that have taught here were white. I shall do the best that I can for the advancement of those entrusted to my care. My school-house is as good as the average. I have had one visit from the Superintendent; he was very pleasant, and spoke very highly of all the Hampton graduates who heve taught in his schools, and said that he would always employ one of them whenever there was a vacancy.

It was some time after I made my arrangemonts about the school, before it could be decided where I should board. The first man asid that he was building a house, and that he would like to board the teacher, but that he could not get the lumber to finish. The second man said that he had only a wood chimney to his house and that he had only one fireplace, and that his family needed all the space there. The third man said that he would be married in a day or two, and that he would not like to bring a hoarder into his house except his hride consented to it. So in a few days I went to see him again, and the new mistress was there; she looked at me, and soon egreed that I might have the upstairs room. I came, and have gotten on woll so far.

The colored people own land to a great extent; some of them are doing quite well, while others live from hand to month; a great deal of their earnings is spent for ardent spirits. The whites have stores at most of the forks of the roads, where plenty of liquors are kept.

I must not worry your pationce with too long a letter.

Your old pupil, S.

The following remarks on the colored voter are food for thought.

The number of those who do not vote at all is, we helieve, increasing; we estimate that now one-fourth of the entire number stay at home on election days.

Plainly, the schoolmaster is the man for the times.

VA., *Jan.* 1, 1880.

This majority of the voting population in this county is not in favor of paying the State debt in its present form. They claim to be Readjusters, willing to pay such n per cent. of the doht as will enable them to live comfortably and to continue to run the Government. Both candidates, one for the Senate and one for the lower House, were elected as Readjusters (hoth were colored), viz., Hon. Ross Hamilton for the lower House, and Rev. C. L. Davis for the upper House. About three-fourths of the voters of this county go to the hallots and vote with their own discretion, as privileged—as free citizens. The residue remain at home neutral. They claim that they see no use in voting at all, as it does them no direct good. This is their stated reasons for not voting. There was no intoxication shown, as heretofore, in the recent (State) election. A spirit of soberness was generally expressed. There are two colored voters in this county to one white, and of course they have the power in their own hands—but the want of education makes them unahle to rightly wield it. Such is tha state of affairs now, and such will be until education takes a general spread among the voting portion of this and other counties.

In this county I firmly believe that things will not simply remain as they are, but will, I believe, degradate and become like the factions of Rome. We will not and cannot discern any beneficial changes until our colored voters as a majority, and a good many of the whites, are educated. Some of the benevolent friends of the North have founded an institute, on Hamptonian basis, at Boydton, known as the Boydton Institute. It has some forty students, and the same studies, with some additional ones by different authors.

I very kindly thank you for the WORKMAN. As I've not had it in some time, it gave me great consolation to read its columns, you may earnestly believe. It's the very paper which I need in my field of labor. It recruits my thinking powers, and reverts my mind to the old beloved home, Hampton. It's to my ideas just what nutritious food is to the body. The *Educational Journal* has not been received by me for some time. I will be also grateful to you for its continuance. Best wishes to all.

Your once guided T.

Dear Miss L.:—

I've been teaching very regularly since I left Hampton and have been quite successful in my laborious operations. I'm now teaching near ———, with n large number of pupils enrolled, about 100; average daily attendauce about 75; no assistent. So you can see that my labors are. My very easily imagine how my labors are. My pay has been decreased, but I labor just the same. T.

My reeding metter from abroad is very seant.

The writer of the following lost an arm in the late war. He has made an excellent peace record.

We ask attention to his letter and submit whether money can do more good than in fitting such men to he teachers of their people.

Seventy dollars a year (tuiton) for three years is what we ask for this purpose. The student pays his own hoard hills.

MD., *March* 1, 1880.

Dear General:—

I alweye feel glad when I heve something to relate.

I have a very fine school, and the Commissioners are very much eotisfied with my work, and the community at large, also; which, you know, makes me feel grand, that I heve done something for my race. I have on roll forty-five pupils, end only five but whnt can read and write, end when I took this school three years ago there was but one could write his neme. For arithmetic, grammar, geography, history and physiology, they are

INCIDENTS OF INDIAN LIFE AT HAMPTON.

VISITORS.

We have recently had the pleasure of entertaining Bright Eyes, Standing Buffalo and White Eagle. The quiet, lady-like bearing of Bright Eyes, together with her intelligence, won the admiration of all at the school. After the departure of our visitors, an Indian girl who possesses a very sweet disposition said to one of the teachers, "Miss Bright Eyes—I wish I like that." She then added, "When I came to here I feel had all the time; I want to go home, I no want to stay at Hampton; now I want to stay here, I not want to go home; I want learn more; teach my people." A heautiful wistful expression lighted her face, leaving no doubt of her sincerity. Our Indian visitors are a very wholesome stimulus to our Indian charge here; we should be glad to hear that more of them are to visit Hampton. A faithful care of his children must soon convince the Indian of the white man's interest in him and in his.

We have had a very pleasant visit from Lieutenant Brown, who has been assisting Captain Pratt at his Training School for Indians, at Carlisle Barracks, Penn. Mr. Brown selected the boys who came to us from Cheyenne River Agency, Dakota, where he is stationed.

THE CLASS ROOM.

It is very gratifying to write that the Indians are making repid progress in their studies; they begin to understand tha importance of work and study; probahly the best thing we can say of them is that they are trying to improva themselves and are thoroughly in earnest. It is very difficult to get them to converse in English; they will probably suddenly awake to the fact that they have this gift and then will exercise it most freely. That they can understand and do speak Englisb, the following class compositions will show. I copied them from the blackboard after tha classes had recitad their regular lessons.

Tha teacher of this class is in the habit of taking a picture into tha class every day, for the hoys and girls to talk about. This is what thay said they saw in the pictures:—

"*Fishing in Winter.*

"I see some spotted fish in the hasket. Thero is snow on the mountain. We can see a house on tha hill side. Some pins trees are hy the pond. The men hava cut holes in tha ice with their axes. Then thay drop their lines through tha holes. I see a man skating on tha ica."

"*A Buffalo Hunt.*

"Here is a man hunting buffalo. Tha man is riding the horse. Tha horsa is running very fast. The huffalo is tired so he cannot run fast. When I see those huffaloes it makes ma feel hungry. I think the man will soon kill him. Then he will skin the huffalo, and make moccasins out of the skin, and eat his fiesh. I like huffelo meat very much, it is like very nice heef only it is better."

When they began to talk about tha skin of the huffalo, ona of tha boys said that it would be very nice to maka shoes out of it; tha others cried out, "Not shoes—moccasins, moccasins," and so tha shoes were changed for moccasins.

One day the teacher told her class, "I shall write on tha hlackhoard tha names of all those who talk Indian in tha class." Immediately a petition was urged that she would write opposite this list the names of all those who talked English. On leaving her class, sha said, "One boy has talked Indian." They all exclaimed, "Wa talk English; Miss L. talk Indian." There is a young Cnhan in the Indian class, and when the Indians can find no excuse why they should talk Indian, they will turn to the teachar and say, "Jimenez, he talk Spanish."

GEORGE WASHINOTON.

Breathes thers a man beneath the sun who has never heard of George Washington and his little hatchet? So thought the teacher as the 22d of February drew nigh, when she would freshen the memory of her charge by relating the story of the hatchet. In the words of the teacher, "Such attentive listeners I never saw hefore; they were perfectly enraptursd. They understood everything, even the moral, for a few days nfter this I was annoyed hy too much talking in the class; when I asked who did it, everyona blamed his neighbor, and when I said, 'Now, boys, don't tell a lie; who will he a George Washington?' two hoys at once stood up and said, 'We did it.'"

A STOMACH OR A TURKEY?

It is fonnd necessary to give ths Indians more or less talk on matters of health, and it has been decided to give them some plain talks on physiology. A short timo ago I talked to them about the work of the stomach; to give them some idea of its shape as well as its office, I drew a rough sketch of ons on the hlackboard. I did not tell them what I intended to make when I went to the hoard. I felt confident they could find no ohject like it in the outsids world, and when I should finish I expected to hear the familiar "I don't know." Finishing the drawing, I turned and asked, "What is it?" They all cried out, "It is a turkey!" and the more I looked at it the more convinced I becams that thers was too much turkey in that stomach. Their reply was dampening to my artistic aspirations. I told them it was a stomach, and not a turkey to put into the stomach; and after we had a hearty laugh I continued my talk.

GIRLS' SEWING ROOM.

Every Monday, Tuesday, Wednesday and Fridsy afternoon the Indian girls meet in a class room for sewing; they have learned to sew very well. The new girls who arrived recently handle the needle skilfully, evidently having been taught this art before they came to Hampton. They have begun to sing while doing their work. The old plantation melodies of the colored students seem to ha preferred to all others; sometimes they go right into a regular shout, when the teacher has to come to the rescue, lest time and work ba thrown away. On one occasion, after a most stunning rehearsal, the teacher rehehind grim old Time and push him forward if they could. When tha minute-hand reached the hour, a shout of joy went up from that martyr throng. They are not likely to repeat the experiment again; one such lesson is enough for a lifetime!

PLUMS OR FLOWERS?

Two of the little Indian girls took it into their heads to find out with whom they were favorites; to go directly and ask, appeared to them a poor way,—there must be strategy about it; so one of them took the name Plums, and the other, Flowers. They wrapped a shawl about themselves (a girl's shawl always seems large enough to cover one more besides herself), and they set out on their expedition. Everyone they met they stopped with the question, "Which do yon liks best, plums or flowers?" Getting an answer, they passed on, ons remembering how many had said plums, and the other, how many had said flowers. They went to one of the teachers and put ths same question to her; she said at once, "I like flowers." The girls laughed. Then ths teacher asked them why they laughed. One of the girls said, "She is Plums and I am Flowers." The last I heard of them they were still in the field, and Flowers seemed to be preferred. J. C. R.

THE FIRST UMBRELLA IN LONDON.

(*See page 38*).

CARLISLE BARRACKS.

DESCRIPTION OF THE GROUNDS, BUILDINGS, INDUSTRIES AND AIMS OF THE CARLISLE INDIAN TRAINING SCHOOL.

The total area of land belonging to tha Barracks is something over 27 acres. Of this, 15 acres ara occupied by the huildings, with tha school grounds proper:—the remainder can he nsed for Agricultural instruction.

Arrangements ara being mada for an additional thirty-five acres immedistely adjoining tha grounds, half of which is suitahla for tillage, and the remainder for grazing purposes.

Carlisle Barracks, one of the old military posts in the country, was permanently established during the Revolutionary War. The guard-house, still standing—was hnilt hy the Hessians. The Post itself went to decay; hut in 1837 it was rehnilt, and permanently occnpied by United Statas troops. For many years prior to the late war, it was a Cavalry Training School. Ahout the time of tha hattle of Gettysburg, it was occupied hy the Confederate forces under Gen. Fitzhugh Lee; and by them destroyed hy fire. In 1865 it was rehuilt, npon the original plan, and continned as a Cavalry Training school until 1872—since which time it has been vacant, and no material repairs have been mads. It is one of the Posts named by the Adjutant General to the Indian Committee, as available for the purposes of of an Indian school.

Under orders of the Department of War and of tha Interior—pending action of Congress upon the Bill proposed hy Representative Pound—it was occupied, in October last, as a Training School for Indian yonth; and 158 Indian children wers brought hers hy the Department, on the 5th and 27th of that month. The parents of most of these children are Chiefs or Head-men on the Rosebud, Pine Ridge and Sisseton Agencies in Dakota: ths Cheyenne and Arapahoe, Kiowa and Comanche, Pawnee, Ponca and Nez Perces Agencies in the Indian Territory; and Green Bay Agency in Wisconsin.

The Buildings consist of:—

I. The Sonth Barracks, two stories, each 10½ ft. high, 251 ft. long by 24 ft. wide, and 8 ft. porch north side. Ths hnilding is divided into 5 rooms of eqnal dimensions on both stories. The upper story is used for school rooms, accommodating all the students we now have and would bear an increase of 25 per cent. The lower story is nnoccupied.

II. Tha Sonth Officers Quarters, a ranga of two-story huildings, 155 ft. in length, by 20 ft. in width, with three extensions to tha south; 27x30 ft. each, and with a porch ahova and below, extending across the whole north front. This building is now partially occupied by Offices and Industrial Room, Teachers' Boarding House and a Store Room.

III. Tha North Officers' Qnarters, a two-story huilding, length 155 ft., width, 34 ft.; threa projections on north side, each 28x32 ft.—now occupied as girls' and teachers' qnarters. There ara 18 good sized and six small rooms above, with corresponding rooms helow.

IV. The North Barracks, of corresponding dimensions with the South Barracks, divided into 6 rooms, each story. This building is used as Boys' Dormitories, with ths exception of two rooms—Bath Room and Laundry. Each "Squad Room" is nnder the care of ona of the older hoys who is responsihla for the behavior of thosa in the room. As this position is successive, a large number of boys will ha trained to habits of care and responsihility.

V. Laundress's Quarters, a range of huildings—two story and hasement—212x24 ft. divided into twelve tanements—now vacant.

VI. The Stahles, on north sida of Barracks, occnpy three sides of a sqnare, 18 ft. each side, huildings 41 ft. wide. This formerly furnished ample room for the horses of two companies of cavalry. The south end of ona has heen tarned into a room for mechanical instruction, and is of sufficient capacity for carrying on tha manufacture of harness, hoots, and shoes, tin wars, etc. Another end has bean fittad up as a Gymnasium whera liharal provision is meda for exercising the muscles and fortifying the constitution against sickness. Ampla stable room still remains for all our need.

VII. The Blacksmith, Wagon-making and Carpenter shop—55x29 ft.—a stone huilding, is in good condition.

VIII. Tha dining room, 24x134 ft. is a lumber huilding of cheap construction, answering all our needs, and can be enlarged to donhla its present capacity, without material expense.

IX. Tha capacity of the Bakery is 500 rations daily.

X. The Hospital is of tha same size as the dining room, and is hnilt of tha same matarial.

XI. The Chapel was hnilt under recent authority of the Indian Department at an expensa of $1165. Its dimensions ara 36x60 ft. with 21 ft ceiling; and it will seat ahont 325 persons.

The Stora Honse and Coal House accommodation is ample, and good for some time to come.

Besida ths aforementioned buildings, there are the "Principal's Residence" and one frame huilding suitable for a family; a Guard House and an Ice House. Tha hnildings having hean nnoccnpied for seven years, and no material répairs having been made in that time, all need to he repainted and yellow washed; the roofs need repairing and some nnderpinnings replaced; many of the floors are hadly worn, and need renewing.

The Laundry and Bath Room ara both fitted np in a cheap, temporary manner, and it will be necessary to enlarge the capacity of hoth.

INDUSTRIES.

The labor of getting tha children free from varmin, and into habits of cleanliness, and establishad in school routine, has heen a great

sists of, I only need call your mind hack fiva years to the time when we saw these men bound in shackles and chains, loaded in a wagon at midnight (for fear of trouhla) and

should he corrected at once. Trusting that thera will be ample appropriation for Carlisle and Hampton schools, and that your noble efforts may he crowned with success, I remain,

furnished by Bright Eyes:—

"To tha Indian students, White Eagle said: 'For tha first time in my life, I see a great and kind work being dona for my people. You have advantages here never placed with-

INDUSTRIES.

The labor of getting the children free from vermin, and into habits of cleanliness, and established in school routine, has been a great drawback on this feature of the work; and it is only within the last three weeks that we have been able to give it much attention. In the agricultural department we have engaged the services of a competent instructor; and shall be able to give every boy in the school some knowledge of this most important branch. The purpose is to so divide the available land that each boy may have a portion under his especial care;—and in order that he may be encouraged to do his best, it is designed to give him half the crops,—which the school will purchase from him at their market value.

In the Shops (if we may be allowed to turn over to the Indian Department for issue, such suitable articles as we may manufacture) we shall be able to furnish wagons, carts, harness and tin-ware; and in addition make and repair the boots and shoes repaired for the school. These several branches of mechanics in operation will enable us to give all the older boys instruction in some particular trade. In addition to the foregoing, the boys will be required to perform police and such other duties as good order and cleanliness may demand.

The girls are under industrial training in the manufacture and repair of garments, both for themselves and for the boys; and they are detailed on kitchen and dining-room work—it being proposed to thoroughly instruct them in these feminine duties. An enlargement and rearrangement of the laundry is needed to meet the increased demands of the school; and this will be made with a view to having the girls do the greater part of that work.

The aim of the school is to give education in the common English branches, adapted to the condition in life of the students; to inculcate habits of industry and thrift; and to impart to them such knowledge in common, useful pursuits as will make them feel self-reliant and incite them to free themselves from the position of government paupers.

It is claimed for this school that it serves a double purpose—first as an educator, of those who are here; and second, as an educating and controlling influence over the Indians of the West. It is plain that they will feel a lively interest in an institution which shelters and provides for their children. It is plain that the fact of having here so many children of chiefs and head men is an effectual guarantee of the good behavior of the tribes represented. Our buildings furnish ample accommodation for 350 students; and, by adding recitation rooms, 500 can be handled. Increase of numbers would reduce the per capita cost.

An ordinary intelligence is now exhibited by the pupils in all the departments, and their progress is already greater than we had expected. Their personal influence on the Indians at home is very great, and is entirely on the side of friendship, good feeling and progress. The tide of Indian sentiment has set toward education. Our correspondence with agents, educators, missionaries and Indians themselves is very large, and it all indicates that the time has arrived when almost every Indian child may become a pupil in an English school.

The Bill submitted by the Indian committee directing the use of vacant military posts for the establishment of Industrial Training Schools ought to provide the best of opportunities for thousands; and these Agency Schools would receive new impetus, and through these means most of the wild Indians can surely be placed upon a self-supporting basis before many years. A personal letter just received from Agent Jno. D. Miles, of the Cheyenne and Arapahoe Agency, in reference to the recent return of three of the former Florida prisoners has so much of value bearing directly upon this subject, that this paper cannot be better closed than by inserting it for consideration.

R. H. PRATT, 1st Lt. 10th Cav'y,
In charge.

LETTER FROM AGENT MILES.

DARLINGTON, I. T., *Feb. 12th*, 1880.

MY DEAR PRATT,

Yours of the 26th and 31st were duly received. Charlton White man, and Little Chief reached home all right. The Agency carriage that took Mr. Pugh to the R. R. Station brought the three boys home. There was great rejoicing among their friends. Charlton is still unwell. White Man accompanied myself and wife to the Cheyenne Sabbath School on last Sabbath, and Little Chief attended the Arapahoe School. Each made excellent talks to full houses, which were well received by the children and camp Indians. The scops of ideas taken in by them in their discourses, gave evidence of the purity of their motives and the extent of the earnest Christian labor that has been given them. We know that the transforming power of God alone, could have wrought such a miraculous change as has come over these boys. To state what that change consists of, I only need call your mind back five years to the time when we saw these men bound in shackles and chains, loaded in a wagon at midnight (for fear of trouble) and carried whither they knew not. White Man and Little Chief each took the Bible for their texts, and a more heartiful thought could not be presented than that by White-Man, which was in substance, "From this Book we obtain ALL knowledge of good." I will say what better endorsement of the Bible could we ask? I know their influence will be for good. I shall endeavor to furnish them some kind of employment. Can we not work Little Chief into the position of "Asst. wagon master" to accompany the traine to R. R. after supplies? You will know better of his trustworthiness and capability than any other person. Their advantages must be utilized in some way, and by placing them (such as are capable) in positions of trust, they will grow in usefulness rather than retrograde. I can assure you we have excellent workers in "Star Meat" and "Nocomista." And in the Police Service "Little Medicine" and others are deserving of praise for their efficiency. I see no reason why the balance of the Florida Boys should not be permitted to come home, provided you are willing, and take smaller youth in their place, and you can now get all of this class of youth that you may desire. We have now in school at this agency 170 Arapahoe children and 102 Cheyenne, and ought to have 500 more children receiving the same advantages. The children must be taken from the camps if we expect them to advance from savage life, and I count it money about wasted to continue the large annual appropriations to feed and clothe these children in camp and under camp influence. Congress may go ahead from year to year and appropriate means to supply the youth in camp and they will still be the same dirty, ignorant camp Indians, while if it would increase the appropriation just sufficiently to clothe and support them in school (industrial schools) and make it only available while in attendance at school, either on their reservation or at "Training Schools" similar to the Carlisle School, then we might expect a decided forward movement from our present Indian status. There are so many points gained in placing Indian children in school, that I cannot forbear speaking of them briefly, for I know you are anxious to get all the points to be gained in the management of Indians looking towards their improvement. First, the child being in school the parents are much easier managed, are loyal to the government to the Agent, and take an interest in the affairs of the agency, and never dare or desire to commit a serious wrong. I am yat to know of the first individual Indian on this reservation who has joined in a raid, who has had his child in school; and I know the "Dull Knife" raid would never have occurred had the children of his band been placed in school. Had there been sufficient accommodation on this reservation for school children at the proper time while the "Dull Knife" Band were here, I could have secured the attendance of at least a majority of their children of school age; this may look to you like compulsory education; well, what if it is? Is there any serious objection to such a course? was not the taking of thirty-three Cheyenne braves and chiefs from the reservation in chains in the Spring of 1875 compulsory in the superlative degree? Who is there to-day that would question the justness and charity of that measure? If there is one, let him come to this agency and take a seat in the assembly room of our own schools and listen to the discourse of some of these same men pleading with their more unfortunate (yes, in a certain sense) people to come out from their heathen degradation and step up into a higher and more enjoyable scale of existence.

Second, the agency schools are made the principle feature of attraction for the Indians, as by having their children in school the parent becomes personally interested in the progress of his child and the prosperity of the school, and he soon gets a desire to locate in the vicinity of the agency, and his habits are consequently localized. And this effect is still more apparent in the case of those who have children at Carlisle and other points in the States. The parents of these children are as completely committed to the general welfare of the whole people of the United States as any other loyal citizens, and by this uniting and blending of common interests, they will the sooner be prepared to enter into and take upon themselves the duties and responsibilities of a common citizenship. Third, in the management of the school upon the reservation, the service of the police is called into requisition—looking up truants, absentees, etc., and in this way the police force becomes interested in the school and its progress.

No greater mistake could have been made than was made last summer by the Hon. Commissioner in relieving "Little Chief" and his band of Northern Cheyennes from the necessity of placing their children at school. It has interfered with their management at this agency, and has had its effect with the other Indians. It was a great mistake and should be corrected at once. Trusting that there will be ample appropriation for Carlisle and Hampton schools, and that your noble efforts may be crowned with success, I remain,

Yours sincerely,
JNO. D. MILES, *Agent.*

FROM ONE OF OUR CHEYENNE BOYS.

The following pleasant letter has been recently received from one of the Cheyenne young men who went from Hampton to Carlisle with Captain Pratt:—

CARLISLE, PA., *March* 13, 1880.

Dear Gen. ——,

I am very much pleased to received your letter last night and also I am pleased to reading your lotter and I am sure that I am very delight to write to me a letter. Now I am going to write and reply your letter this morning. It is Saturday this morning wa have very much snow all over in the grounds and cold weather hers in Carlisle. I did not much like cold weather but I should like so much warm weather and summer. I have had a letter from Little Chief to write to me a letter and he tell me all about at Indian Territory and said that some Cheyenne and Arapahoe they have doing well to go to work out there in Indian Territory and they have gotten some cattle and plows and wagons and the horses. Little Chief said he were very glad to see mother and sisters brothers and all relations and they were very glad to see him. Capt Pratt he want all the Florida boys we are going to stay here this school and to helped Capt Pratt he have se many Indian boys and girls and taught them about the good way and doing something some days.

All the Indian we are going to school every morning and in the afternoon they all learn some thing every day Some boys and girls to reading the books very rapidly and we have a good speak English some of the Indian boys and girls. Some very foolish boys not quiet every day have to much play and so much noisely in this boys quarters. I no like it that boys have so much noisely and play every day. I speak to them that I want them to keep quiet and to be a good boys. But I am going to trying hard to acquainted about some thing every day and I will try hard to learning to talk English more and more as soon as I can: you know ma that I am always to trying hard to learn ahont the good way and to talk English and work hard. That is the way I want ahont that way, I am going to stay here a little longer and I want more english and to do well and than when I got through school I will go back home at Indian Territory and I am sure that I will helped our my relatives out west and I will teach them about the good way and working in the white man's road. I have tell Capt Pratt he says he will remember you and he says tell Gen Armstrong to come up here and to see us this school, says Capt Pratt. I couldn't see Mrs Pratt to day. I guess she will remember to you. And hoping to hear from you again. I did not have much time to writa to day when I write the Florida boys went home and I will tell them remember to you. Please tell Miss ——, Miss ——, Miss —— and Mrs —— and Mr —— they are my friends and I do I will remember all of them and think it of them very often tell them I sent it my lova to them, and I am very anxious to write to ma a letter any other of them. I am very sorry for my friends most of gona home the Florida boys and I shall miss them very much and think of it them very often. Only three the Florida boys they stayed here now. Matches Koba and I and the new Indian boys and girls thero are a great many they were here this school in Carlisle Barracks. We have very kindly teachers in this Indian Schooi and also very kindly friends the white people at Carlisle town. I shall he happy always to get your letters.

I remain very truly yours
HENRY ROMAN NOSE.

THE PONOA CHIEF

Under the auspices of Mr. W. H. Lincoln, of Boston, a second visit was recently made to Hampton by Bright Eyes and Mr. Tibbles, accompanied this time by her brother, Zoutetah (Wood-worker), Khethaska (White Eagle) Tatung Amuie (Standing Buffalo) and Joseph Esau. White Eagle and Standiug Buffalo are Ponca chiefs, Esau is a Pawnee, but in citizens dress, and well acquainted with English. White Eagle, of highest rank in his tribe, is a superb specimen of an Indian chief, towering over six feet in stature, majestically proportioned, with a fine, well poised head and a handsome face full of strength and intelligence. Looking at him, all question of the possibilities of his race seems puerile. He is thoroughly in favor of education for his people, and has left his little boy at Carlisle. He made a speech before the school, which was interpreted from the Ponca into English by Bright Eyes, and then from English into Sioux by David Simmons, tha little boy interpreter of the Hampton Dakota students.

The following is a sketeh of his remarks, furnished by Bright Eyes:—

"To the Indian students, White Eagle said: 'For the first time in my life, I see a great and kind work being done for my people. You have advantages here never placed within our reach before. These people and this man (turning to General Armstrong) are doing their best to help all they can to make men of you, but you must do your part also. You must work for yourselves. Study and work all you can.

To General Armstrong he said: 'You have children placed in your hands here for you to make man and women of. The highest work a man can do is to fit for the best possible use the material placed in his hands, whether good, bad or different, and I believe that you are doing that work. Some of these children may be dull and hard to teach, but you will have done a great work when you have fitted then to make tha best possible use of themselves when they go ont into the world.'"

In connection with this visit, it is interesting to notice that the Government has decided, at the instanes of Mr. D. H. Goddard of Boston, to send five boys of the Omaha tribe, to which Bright Eyes belongs, to Hampton for education.

THE INDIANS' IDEA OF CREATION.

The Indians of the Southwest have a singular tradition respecting creation. They recognize God as the creator of all things; also as existing in a triuity of persons. Somewhere in space they locate an Indian wigwam. Its single inhabitant is a woman in the form of a spider. For a long period she dwells alone—the first person of the Trinity.

In duo time the second person appears in the form of a beautiful boy. Ha is received at the Indian tent very cordially, entertained in a princely way, and finally persuaded to remain.

The first person assumes charge of the second, clothing him and placing in his hands the bow and spear. He is permitted to go and come as he pleases. The spear can be thrown every way but directly upwards. This is strictly prohibited. For a time the youth is satisfied within the law, but soon turns longingly to the forbidden fruit. He hurls his spear into the air. It returns, and striking him upon the head, instantly, there are two boys where there was one before.

"My brother," cries the first, and embracing, they return to the woman. Sha reproves the offender sharply for his disobedience, but finally upon his sincere repentanee, receives him again into her confidence.

Arrangements are now made for the great work of creation. The woman sends the boys to make the earth, the mountains, hills and rivers—everything material. She reserves for her own special work tha fishes, birds, animals and man.

By these three all things were made.

Agricultural.

From the Correspondence of the New York Herald.

A GREAT PROBLEM SOLVED.

The general result of the experiments of Professor Collyer of the Department of Agriculture at Washington, in the production of sugar from sorghum and corn may be ranked in importance with the inventions of the cotton gin.

It appears from the Commissioner's report that the several attempts to make sugar from beets in this country having been abandoned as profitless, and all the attempts of twenty-years to make a merchantable sugar from sorghum having failed down to the new processes of 1877, it has become a settled opinion that only from the tropical cane and the sugar maple tree could sugar he profitably made in the United States.

It is estimated that the annual consumption of sugar in the United States does not exceed forty pounds per capita. The Crystal Lake sorghum sugars of Weinder & Co., of Chicago, sold last year at ten cents per pound, and at this figure our farmers have now in sorghum and Indian corn the canes from which they may add $200,000,000 to the wealth of the country.

Two years ago this great desidernum was held to be so far beyond our reach as to be utterly unattainable. Now, with the improved and cheap machinery and chemical processes employed, the profitable production of sugar from sorghum—and a superior, merchantable sugar, too—is placed within the reach of every farmer on whose lands sorghum or Indian corn will grow.

A PROFITABLE CROP.

The numerous chemical experiments made at the Agricultural Department in the crystallization of the juices respectively of the Louisiana ribbon sugar cane, a half dozen varieties of sorghum and several kinde of Indian field corn, show tha following results:

From the juice of the Louisana ribbon sugar cane (the choicest variety) the highest percentage obtained was:—

	Per Cent.
Sucrose (or true cane sugar)	16.50
From the early amber sorghum	17.00

may be desired by tha reader on this important subject can be obtained at or from the Agricultural Department. Tha object of this com-

ple, and clothing is "made to do" for a long time.

Among the most general of their wants is to be possessed of land, and it would be amusing were it not painful, to see what

NEWS OF THE MONTH.

FOREIGN.

THE work of piercing Mount St. Gothard was satis-

tage obtained was:—

	Per Cent.
Sucrose (or true cane sugar)	18.50
From the early amber sorghum	17.00
From the Chinese sorghum	15.90
From the white Liberian	15.26
From the Honduras	15.10
From the pearl millet	11.30

And from the samples on exhibition all these sorghum sugars are of excellant quality. The general conclusion, from the numerous chemical examinations made, is that there exists but little difference between the various kinds of sorghum as sugar producing plants, and that the juice of each of them is, in its full development, nearly as rich in sugar as the best tropical cans produced in this country.

Now, hearing in mind tha fact that sugar and syrup have been mada from sorghum by the carload tha past season, which commanded the highest market price, and that the cash value per acers above all tha costs of its production is such as to make it more profitable crop than wheat, Indian corn, tobacco or cotton, it cannot ho doubted that, with the diffusion of this information, the cultivation of a field or two of sorghum for its sugar will be largely adopted by the farmers of the country; first, as an experiment, and next on a larger scale, as a regular crop from year to year.

A MINE OF NATIONAL WEALTH

But the most remarkable results from these experiments in sugar making obtained by Professor Collyer were from Indian corn. From an acre of land planted last year with a common white field corn, known as the horse tooth, from the shape of its kernel, he gathered the ears when fully ripe, and their yield of shelled corn was sixty-nine and one-tenth bushels—more than doubls the average crop per acre of the country at large. Next, stripping and grinding the stalks and working up their juice by tha new processes, ha extracted from it 960 pounds, or nearly a half a ton of sugar of a good quality. Here, then, from tha stalks—thrown out by our farmers into the refuse of the barn-yard as fit only to be reduced to manure—a more profitable crop has been obtained than the corn. Nor is this all. The saccharine juices (to the extent now practicsble, sixty per cent.), have proved nutritious food for cattle, from their elements of starch and nitrogen retained. Applying this extrsct of sugar to the Indian corn crop of the United states—that is, to the rejected cornstalks—they would give us an income which, within the brief period of ten years would extinguish our national debt.

Incredible as this fact may appear, it is deducible from the product of 960 pounds of sugar obtained from tho stalks of an acre of Indian corn, in addition to their yield of sixty-nine hushals of good shelled corn. Or take it in another form. Putting our Indian corn crop at tho average of $400,000,000 in value, and estimating the sugar in the stalks at only half tho valua of the corn, with the production of so vast an amount of sugar we have still in these cornstalks gold and silver to the amount of $200,000,000—mors than double tha sum of the gold and silver extracted from all our mines between tho British Dominions and Mexico, and equal in valua to the cotton crop of all our Southern States.

NAPOLEON'S BEST CONQUEST.

Whsn the First Napoleon, when France under the blockade of the English navy, was cut off from her forcign supplies, offered a reward of 100,000f. for a home produced substitute for the sugar of the West Indies which could be produced equal to tho wants of the French people, he secured a reward worth incalculably mors to France than all his victories in the battle fiald—a reward the value which cannot be reached in the millions of money saved to France in her beet root sugar. How, then, can wa estimate the value of these new appliances which render tho production of sugar from sorghum and corn stalks a more profitable industry on our larga Southern plantations than cotton, and on our small Northern farms yielding a richer return than corn, wheat, grass or potatoes?

A CHANCE FOR THOUSANDS.

Tho strongest argument in support of the scheme of tho annexation of the island of St. Domingo was the plea that it would render us independent of Cuba in the important article of sugar. This plea now falls to the ground. Tha new machinery and processes employed in the extraction and crystallization of the sugar from the sap of sorghum and cornstalks are simple and comparatively inexpensive. Sorghum sugar, worth ten cents, can now be produced, all costs included, at less than four cents per pound. The machinery and implements employed includa grinding mills, drying pans and centrifugal driers. They are now at Chicago, operated hy steam, and many persons are preparing to follow tho profitahle example of the Chicngo firm already referred to on the scale of at least a ton of sugar per day. There is room in this work for hundreds of small factories in the United States, for the nearer tho mill is to tha sorghum and corn fields the cheaper will he tha carrying of tho stalks to the grinder. Any further light that may be desired by tha readar on this important subject can be obtained et or from the Agricultural Department. The object of this communication is simply to herald the advent of a new industry among our peopls; no *novus multicaulis* fallacy, but e highly profitable field of industry, equal to the gain of $200,000,000 to tha country, and wide as the zona of sorghum and Indian corn. W.

NEGRO LABOR.

When the war closed there were two sets of Radicals, divided in opinion on Negro Labor. One of them claimed, in their own peculiar phraseology, that "Free niggers would not work"; the other claimed, that the colored man would labor as well as the white man, and competa successfully with him in all branches of human effort. As usual, when extreme views are stated, there is soma truth and some fallacy in both statements. Fifteen years have passed since Appomattox, both sets of Radicals have had a chance to retire from their extreme positions, and the most intelligent people, North and South, are now pretty well agreed on what Negro lahor has shown itself. To be sure, some extremists still snrvive on both sides, but if prejudice could be extracted from the South-side Radicals, and ignorance of the subject from the North-side Radicals, the sentiment of the country would be nearly unanimous.

Looking at it broadly, the Southerner's idea of tha colored man as a laborer, is upset by the fact, that we have harvested larger crops in the South during the fifteen years since tha surrender, than for any fifteen years hefors tha war. The cotton crops in particular, have not only been larger, but very much larger; and nobody familiar with the subject will claim that all, or even half the increase is due to white labor. One of the Radical ldeas goes hy tho board in this hlast of facts; but it would be unfair, if it were not stated, that in the hottom of the other Radical theory, facts have sored many holes.

In considering negro labor, then, it is fairer to look at it as it is, and to throw asido all mere theories, whether hased on prejudice or ignorance, or their compound—fanaticism.

In the coarser sorts of industry, the negro hefore the war was master of the situation in tha Southern States; he is so still, and for aught we see, promises to remain so many a year. But the Northern Radicals, fifteen years ago, declared their belief, that the negro would not only maintain the mastery of this situation, bnt that he could and would at once successfully compete with the white man in all kinds of human effort. To be sure, they qualified this statement, hy saying that the negro must have the ballot, and that too at once, in order to establish this competition. Tbis theory has failed about as signally as the other. What else could have been expected? Was the aim of slavery to educato and elevate the negro? Was it possihls for a race, which had been slaves in America for 250 years, and been harbarians or semi-barbarians for countless other years in Africa, to rise at once to tha lavel of a people, who for a thousand years had been learning (in the best of schools, experience) the road to civil liberty, self-government, and self-support?

My personal experiencs with negro laborers coincides with the experience of others, with whom I have compared notes. I have found that tha colored people, if tha samo chance be given to them, work as diligently as the whits, hut not so intelligently. With intelligent direction they are admirable laborers, obeying orders promptly and willingly; but when they attempt tha direction of their own lahor, it is apt to amount to but little. It is rara to find a colored man who can control a force of colored workmen, and produca the same results, as if tha direction had been in the hands of a competent whits man. It would he a misstatement to say that no such colored man can be found, but they are comparatively few. This dislika to submit to the authority of ons of their own race is an unfortunate characteristic, hnt one not likely to be dono away with for generations yet.

In the South the mechanical arts are mainly pursued hy tha colored people, while in the North but few colored artisans are to be found. Social prejudice is the stronger on the upper half of Mason & Dixon's lino, and few openings ara there presented to colored laborers, save as household servants, barbers atc. Thia is a nice fact for those to swallow, who delude themselves with tho idea that tha late war had the ebolition of slavery for its main object.

It is claimod that tho negro is not a steady worker, that he wants too many holidays, and cannot resist the temptations of circuses, political meatings, etc. While this is in part true, is it not fair to ask what race does work steadily? If wo hegin making comparisons, we will find that tha despised "Chinese" is the steadiest of all workers: a something not very flattering to tho bonsted civilization of the Anglo-Saxon. Tha wants of tho average negro are simple—the food he prefers is simple, and clothing in "mada to do" for a long time. Among the most general of their wants is to he possessed of land, and it would be amusing, were it uot painful, to see what high prices they will promise to pay for plots of land, and with how lavish hands they pin mortgages on their purchases. When we see rows of figores showing the valne of land standing in colored people's names, and proceed to draw conclusions therefrom, we are proceeding left-handed, unless wa know for how much they are mortgaged.

The negro has not yet learned to be an economical laborer,—wastefulness was one of the bright, particular hadges of tha "peculiar institution," and the negro has worn it and seen it worn for too many generations to put it asida in ons. A single instance from my personal experience will illustrate. A new colored cook had been employed in our house, and boiled more potatoes for dinner than a family three times the siza of our could hava eaten. Shortly after dinner the lady of tha house, having in mind Hamlet's remark about "Thrift, Horatio thrift," entered the kitchen, and asked where were the cold potatoes (that a salad might he preparcd for tea.) The answer was discouraging but characteristic, "Law, Miss, done gone trowed dem in de crick."

Nine-tenths of the colored people have no conception of the necessity of asving little things, howsoever they may feel concerning larger ones. Any store-keeper in the South will say if a colored person comes into tha store to buy, and his money is in a large piece or pieces, it will take a long time hefore he is willing "to break it;" but if his store of coin consist of coppers and nickels, they will cross the counter with alacrity.

As to the negro's ability to endure hard work opinions differ; and it is oifficult to get together any two sets of experimcnts with which to make a comparison. Of one fact I am convinced, and that is that the negro can work with longer intervals hetween his meals, and is satisfied with coarser food than the white man. He cnn stand intense heat hetter, and seems less affected hy malaria. On the other hand, the average negro has, or seems to have, more pains and aches than the average white man; which pains and aches the negro generalizes under the term "miseries," particnlarizing them hy their location; for instance, a misery in the head, a misery in the hack, etc., etc.

Anyone who expects to get quick work from the average negro is almost hound to he disappointed. The negro is a creature of the tropics, and in no tropical race do we find that push, energy and dash, that seems peculiar to the North Temperato Zone. The effect of climate is always a factor in tha development of any race, and it might seem that the negro would do hetter in higher latitudes; but experience shows that the negro does not hear transplanting Northward, and among the negroes in that section, pulmonary diseases, rheumatism, &c., are terribly common.

The old hoast that all roads led to Rome finds a modern equivalent in tha fact, that tha discussion of all phases of the negro leads to the conclusion, that he must he educated, We may give him the ballot, civil rights, or what you will; yet nothing practical will have been dono for him till he has had a chance to he educated. If the negro he not so good a laborer as the white man, it is his misfortune, not his fault. I heard it flippantly asked not long since, what chance is there of a negro's ever learning to labor, if he did not learn during the period of his enslavement. Tha statement of the question is its own refutation. During his enslavement the negro had no chance to learn to labor, although work was the only hranch of education open to him. A man lahors only when he puts forth an exertion in order to get something in return for it,—if a man put forth an exartion through fear of punishment or through tha compulsion of some other man, he is not a laborer, he is only a worker. To point sharply the distinction I would make between lahor and work, the following illustration may answer: Aa I write, I see a hoy driving a mule: tha hoy is putting forth his exertions in order that he may obtain his wages Saturday night; the mule is putting forth his exertions, not from the hopa of getting anything in return, but from an impression, more or less distinctly impressed upon his mind, that if he does not put forth his exertions, the consequences may be nnpleasant. We can ring numberless changes on this statement of facts, but the result will always bo the same old chime; if we would increase the usefulnšss of tha negro to himself and to others, *he must be educated.*

T. T. B.

THE Northern guests of the Hygaia Hotel at Fort Monroe who desira to sco places of interest will find the "Butler School" worth a visit. It is of a primary grade, serves as a practice school for the Senior Class at tha Normal Institute and also as preparatory to the latter. It is now maintained by tha tuition fees of parents and by contributions. As the Spring opens many of the children ara taken out to work, much reducing the numbers.

NEWS OF THE MONTH.

FOREIGN.

THE work of piercing Mount St. Gothard was satisfactorily completed at 9 o'clock on Sunday morning, amid great rejoicing.

A despatch from Berlin says: "The German Government is about to revive the scheme for cutting a canal navigable for war vessels between the Baltic Sea and the German Ocean. The scheme is warmly supported in military circles."

LONDON, March 13.—The Guion Line steamer Montana, Captain Gadd, which left New York March 2 and arrived at Queenstown yesterday and proceeded for Liverpool, went on the rocks in Church Bay about 3 o'clock this morning. It is understood that a dense fog prevailed at the time. The passengers and mails were saved, and started for Liverpool at 11 o'clock this morning. The steamer is ashore on the mainland, with a list to port of about twenty degrees. The forward compartments of the ship are full of water. She is afloat aft, but there is not much prospect of saving the vessel.

France has increased its school appropriations to $15,000,000. At the fall of the empire they were $5,000,000.

LONDON, March 8.—In the House of Commons, to-day, the chancellor of the exchequer stated that the Queen had been advised to dissolve Parliament at Easter. The chancellor of the exchequer, in making the announcement, said he thought it desirable to state the views of the government regarding the dissolution. They were that the urgent measures regarding Ireland were now in so forward a state that the question could be decided, and that a spring dissolution was always better than an autumn one. The government therefore had advised the Queen to dissolve Parliament at Easter. He said the new Parliament could meet at the beginning of May. March 23 was named as the day of dissolution. He expressed the hope that the House would co-operate with the government to enable them to accomplish the necessary work before the dissolution. He promised to introduce the budget on Thursday next, and said that the bill for the allocation of the six vacant seats in the House would be withdrawn.

The Right Hon. Wm. E. Forster, liberal member for Bradford, expressed his satisfaction at this announcement.

DOMESTIC.

DENNIS KEARNEY, the great Sand-lot agitator and leader of the so-called working-men's—and Chinese—party of California, became so blatant and high-handed in his infamous leadership that the decent citizens of San Francisco demanded his arrest on the charge of using incendiary and vulgar language and trying to provoke riot. After a fair trial Kearney was found guilty and sentenced to pay a fine of $1,000 and suffer six months imprisonment in the House of Correction.

THE Southern Pacific railroad was completed to Tucson, Arizona, Wednesday, and the track laid through the town.

THE first locomotive reached Tuscon, Thursday, and was received with imposing ceremonies by the people.

THE Wisconsin Senate concurs in the House resolution providing for female suffrage by a vote of 19 to 11.

THE Iowa Senate, by 27 to 17, has passed the joint resolution to grant school suffrage to women.

THE presidency of the Nashville, Chattanooga and St. Louis Railroad has been accepted by ex-Gov. Jas. D. Porter of Tennessee.

A terrible accident occurred in Lincoln, Lancaster county, Pa., on the night of March 20th. Between five and six hundred persons were present at a school exhibition in Lincoln Public Hall, and as the entertainment approached its close that part of the floor at the rear of the hall gave way with a terrific crash, precipitating about two hundred people to the floor below. Many were seriously injured and several cannot recover.

JUDGE HILL of Buckingham County, Va., was acquitted in the U. S. Court for the Western district of Virginia of the charge of refusing to have Negroes put on the juries, in violation of the United States law on this subject.

THE Boston *Journal* newspaper office was destroyed by fire on the night of March 21st. Loss covered by insurance.

HON. B. W. LACY, speaker of the Virginia House of Delegates, has been elected Judge of the Eight Judicial Circuit in place of Hon R. L. Montague, deceased.

RICHMOND, March 8.—The Senate to-day refused to pass the Riddleberger debt hill over the veto of the Governor—yeas 19, nays 18; not the necessary two-thirds in the affirmative.

The Senate to-night, by vote of 24 to 14, adopted a joint resolution providing that the readjusters' debt hill (vetoed to-day) and the hill known as the Ross Hamilton substitute, which was rejected by the House a few days ago, shall be submitted to the people in November next for a vote thereon, in order to decide which of the two measures is most acceptable. The Hamilton substitute fixes the rate of interest at 3 per cent., and the principal at about $34,000,000.

THE Supreme Court of California to-day decided the law passed by the Kearney Legislature prohibiting employment of Chinese by corporations was unconstitutional, opposed to public policy, and in violation of United States authority.

THE New York *Herald's* Irish fund now exceeds $300,000. The latest reports are to the effect that the necessity for relief was never more pressing than now.

A BILL providing for compulsory education has just been passed by the Iowa Legislature. The forfeiture incurred by a parent or guardian for not sending a child school is $50.

THE Crescent Hill reservoir at Louisville, Ky., which cost over a million, has been nearly ruined by the sliding in of the dividing wails.

THE Navy Department has received from Commodore Schufeldt, commanding the Ticonderoga, a large number of samples of cotton goods used by the tribes of Africa and Arabia. The price list of them as furnished by foreign dealers has not yet been received. When it is, manufacturers in this country who apply will be furnished with small pieces from each of the samples with the price now paid for the goods by the natives.

NEW YORK, March 11.—An Havana letter says a plot to set fire and blow up a theatre in Mariano on Sunday, Feb. 29 was discovered and frustrated.

SANTA FE, March 11.—On Feb. 26th Lieuts. Conline and Stark, of the Fifteenth Infantry, in command of a scout of thirty men of the Ninth Cavalry, struck a band of about thirty hostile Indians in Arabia Canon, in the southeast corner of the Sacramento Mountains. Lieutenant Conline with thirty men, attacked the camp, and after a brief encounter drove out the Indians, capturing and burning their equipage, while Lieut. Stark, with ten men surrounded the Indian stock, capturing the entire herd, sixteen horses and fifteen mules. The scout returned with the captured stock to Fort Stanton the 3d inst. The Indians are supposed to be of Victoria's band.

LONDON, March 11.—There has been a sudden outbreak of fever on Kore Island. Sixty-three persons are prostrated by the epidemic, and there has been one death. The population are destitute, and measures for their relief are being taken.

VICK'S

Hand Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad, and Deviled Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all sea-food, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6.00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at sender's risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $2.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

By T. T. BRYCE.

Price 50 Cents. *Mailed on receipt of Price.*

Normal School Press, Hampton, Va.

Hampton Normal and Agricultural Institute,

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

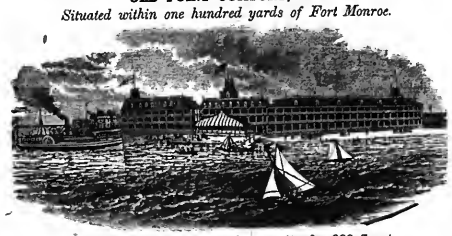
I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable &c., &c.

For further information address,
S. C. ARMSTRONG, *Principal,*
Hampton, Virginia.

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

Situated within one hundred yards of Fort Monroe.



Open all the year with ample capacity for 600 Guests.

Has all modern improvements—elevator, gas and electric bell in every room; water bath-rooms and closets on every floor. Equal to any Hotel in the United States as a Spring, Summer and Autumn Resort. Six daily mails and telegraph office; 15 to 20 first-class steamers land daily (except Sunday) 150 yards from the door. Rooms and Halls comfortably heated, and comfort provided for tourists and health seekers during the winter. Fire-escapes only 50 feet apart on every floor. Superior beach for bathing at door-steps, and good from May until November. Boating, fishing and driving especially attractive. Send for circular describing hygienic advantages, terms, &c.

HARRISON PHOEBUS, Proprietor.

Oysters! - Oysters!

The canning of steamed oysters has long been an important branch of industry in Baltimore; but the canning of the very best oysters in the Chesapeake, almost on the spot they are caught, is an enterprise just established. The undersigned feels confident that in opening a Packing House at this point, he is affording his fellow-citizens in all parts of the country, an opportunity (which he hopes will be appreciated) of getting the best and freshest of oysters, prepared in the most healthful way, at the most moderate prices.

An Oyster may remain out of water many hours, any days, before it be completely spoiled; but from the moment it is caught and exposed to the air a process of deterioration goes on. It needs no argument to show that the sooner an oyster is hermetically sealed after being caught the better it will be in taste, solidity, saltiness, and healthfulness. Within a radius of fifteen miles of this point are millions on millions of bushels of oysters, from the best of which will the stock used, be selected. The time consumed in transporting the bivalves from their beds to the Packing House is not worth considering, especially as the majority of the boats employed are the little "canoes" peculiar to these waters.

My packing is at present divided into three grades, according to the size of the oysters used; the same care, however, is taken in the preparation of all grades. A case of one pound cans contains 4 dozen; a case of two pound cans contains 2 dozen. Owing to the unsettled condition of the market, I can only quote to-day's prices, which are as follows:

Giants of Hampton Roads, No. 1 — No. 2 $3.00 per doz,
Beauties of Hampt'n Roads, " 1 $1.50, " 2 $2.00 " "
Cove Oysters, " 1 $1.00, " 2 $1.75 " "

The above prices are net cash, and remittance may be made by drafts on New York, Chicago, or Norfolk, or else by P. O. order. Authority to draw at sight with Bill of Lading attached will ensure the prompt forwarding of any goods ordered. If preferred, cases may be sent by Adams express, C. O. D.; but unless specially directed, all shipments will be made via Norfolk, Va.

Direct all telegrams, via Fort Monroe. T. T. BRYCE, Box 10, Hampton, Va.

$5 to $20 per day at home. Samples worth $5 free Address STINSON & Co., Portland, Maine.

BOOTS AND SHOES!

N. McNEILL invites attention of the public generally to his large and carefully selected stock of Boots and Shoes of the

Best City-made Work,

which I will sell at and below cost. All other goods in my store will be sold lower than ever in consideration of the times. Please give me a call and see for yourselves. Ladies' and gentlemen's work made to order, and repairing neatly done.

HEALTH AND HUMANITY.

I was a hundred miles away, unless I could do anything to relieve and cure her."

"Oh, it's no trouble," answered the kind woman. I've cleaned up my own place, and I came in on purpose to help you. Well." she continued, as she moved about

HEALTH AND HUMANITY.

LITTLE MARY'S ILLNESS.

There was great consternation in Mrs. Willis's house when the doctor came to see her eldest child, Mary, who had been ailing for a few days, and said that the poor little girl had the fever. The news spread like wildfire in the out over-clean neighborhood, and mothers warned their children against going near Mrs. Willis's house, as if it were stricken with the plague.

Mrs. Willis herself was in great distress and perplexity. She felt sure that her three other children would catch the dreadful disease; she thought it likely that she might take it herself, and she had a great horror of the thought of illness and death. She was a bad manager at any time, and now that she had a sick child to attend to she didn't know what to do.

She wished with all her heart that she was good friends with her next-door neighbor, Mrs. Symonds, who was such a clean, thrifty body, and such an excellent manager. But one day, a long time ago, when Mrs. Symonds spoke quietly to Mrs. Willis about the little Willises going into her garden and pulling up the flowers, Mrs. Willis stormed away at her, told her she was stuck-up, and thought herself and her children better than anyone else; and in fact, insulted the worthy woman very much indeed. Since that time, Mrs. Willis had carefully refrained from speaking to her. Sometimes, when she knew that Mrs. Symonds was within hearing, she would call out to her children to keep right away from the "lady's" garden-gate, for fear she should put it about the neighborhood that they had been stealing again—which, I assure you, Mrs. Symonds had never done; she had too much regard for her home and family, to go gossiping into neighbors' houses.

She did not heed these taunts and insults, but went on in her own excellent way, a pattern to all around her.

The fact was, Mrs. Willis was envious of her. Her home was so neat and clean, her children so tidy and healthy-looking, she could not understand how it was they were so. "Ah!" she would say to herself, as she looked round on her own dirty, slovenly, puny, sickly children, "some folks are lucky, but I never was."

You were mistaken, Mrs. Willis, in supposing that it was luck, or any other foolish thing, that kept your neighbor's family tidy and healthy. It was industry and proper management.

Now, when all the neighbors were in a flutter of fear about the fever being at Mrs. Willis's house, Mrs. Symonds was perfectly calm and fearless.

When she heard of it she said to her husband, "Sometimes it pleases God to send afflictions upon us, no matter what precautions we may take to keep them off. But we can use means to keep disease away; and I always try, by cleanliness, pure air, and wholesome food, to keep my children proof against attacks of disease. I haven't any fear about this fever. Thank God for giving the dear children robust health; I am sure they will be slow to take any complaint whatever."

It was morning. Mrs. Symonds's children were just gone to school, and she was upstairs making the bed in the back bed-room. She could hear the sick child moaning in the next house, and the sound gave her kind motherly heart pain.

She smothered all thoughts of the insults that Mrs. Willis had heaped upon her, and said to herself, "I ought to go in and see if I can do anything to help." So when she had set her house in perfect order, she went to the next house, and tapped quietly at the door. It was a warm May morning, yet the three windows in the front of the house were all shut. A little girl came to the door, her hair hanging in tangled masses about her face, which was smeared with dirt, her shoulders sticking out of her ragged frock, and without shoes and socks on. A great noise came from the inner room, where two other children were rolling and quarreling on the floor.

"Is mother in, Lucy?" said Mrs. Symonds to the child. She immediately scampered away with her little bare feet, and shouted noisily up the stairs, "Mother, mother, here's Mrs. Symonds wants you!"

Mrs. Willis felt in no mood to quarrel with and insult her good neighbor now. She came downstairs. Her dirty, sallow face bore traces of tears. The fact was, she was helpless about her sick child the whole day.

"I hear your Mary is very ill," said Mrs. Symonds; "can I do anything to help you?"

"Do you know she's got the fever?" said Mrs. Willis.

"Yes; but I'm not afraid," answered Mrs. Symonds.

Mrs. Willis fidgetted a moment, and looked ashamed of herself as she stammered, "Very—very well then, please to come in, and thank you."

As she walked up the stairs Mrs. Symonds felt stifled, the air was so close and offensive. Even at the risk of offending her neighbor, she said softly, "Oh, Mrs. Willis, how can you breathe in this house? It is so dreadfully close."

And when she got into the sick room, she went straight to the window, unbolted it, and opened it top and bottom.

"You'll kill the child!" said Mrs. Willis in amazement.

"No, but this bad air is killing her; it is dreadful." And Mrs. Symonds lingered by the window a minute to get a breath of the pure blessed air of heaven which was now pouring into the sick room, purifying it, and cleansing it of its deathly vapors.

"There isn't a strong wind to-day," she said, turning to the sick bed, "so it can't hurt Mary. Poor child!" she added, taking her burning hand, "how do you feel?"

The child turned her hot head on the uncovered pillow, and moaned as she stared at Mrs. Symonds.

"Oh, she ain't conscious," said Mrs. Willis, sitting down on the bed, and holding her apron to her eyes. "It's awful to ha' hare and see her a-going on. I wish I was a hundred miles away, unless I could do anything to relieve and cure her."

"But, Mrs. Willis, you can do a great deal to relieve her, though I would not say you could cure her," said Mrs. Symonds.

"Well, do tell me what, if you know," said Mrs. Willis. At that moment a pealing scream was heard from the children below. Little Mary started up in her bed, and cried, "Save them! save them!"

"Lie down, Mary," said Mrs. Symonds, soothingly, "there's nothing the matter."

"She don't know what she's saying," said Mrs. Willis. "As for them young 'uns, I'll break their young necks if they don't keep quiet."

"The house should be as still as possible," said Mrs. Symonds; "couldn't you go down and hush them a bit?"

"I'll go and turn 'em out," said Mrs. Willis, in the unfeeling manner of the room.

The pure air seemed to have refreshed Mary. She lay quiet, and stared at Mrs. Symonds. The kind woman looked around the dirty, disorderly room, thinking how matters might be mended for the poor sick child. Mrs. Willis soon came back. She had not done crying. "I've sent 'em off into the field opposite," she said, "but everybody runs away from 'em as if they had the plague. Oh dear me! to think of my eldest having this fever; and the other children 'll be sure to catch it."

"Oh no, not *sure* to," said Mrs. Symonds, in a low, hopeful tone; "you must take means to prevent it, Mrs. Willis. But now let us think of poor Mary a little, and see what we can do for her. Don't cry: crying will do no good. This is a time for *doing*, not for crying. *In the first place*, have you some clean sheets for the bed?—these are not very clean."

"I should think they wasn't; they've been on nigh a month, and the children do get 'em so dirty; but I thought as it was fever, it was best not to get any more sheets in here."

"Oh, Mrs. Willis," said Mrs. Symonds, still speaking in very low tones, "Mary will never get better if you talk so. Let her have the sheets, please."

"Very well; I'll go and put 'em to the fire to air."

"Wait a minute," said Mrs. Symonds. "Will you bring the mop up, quite damp, next time you come? If this room could be well washed, it would be so healthy and refreshing for Mary; but we can get up all the dust and dirt with a wet mop, and that will make it a good deal better. Look what a lot of dust and down have gathered under the bed!"

"La, bless me!" said Mrs. Willis, as she stooped down to see, "just think o' that; and this room was well swept a week ago."

"A week ago!" thought Mrs. Symonds, "then no wonder at its being in such a state." Never a morning passed without the damp mop going under Mrs. Symonds's beds to gather up the dust; and she wellscrubbed her rooms every week.

Mrs. Willis left the room, and soon returned with the mop. This Mrs. Symonds took, and very gently began her work, without making any noise to distress Mary, who now and then closed her eyes, but still continued moaning.

Before she had got over half the room, the mop was in such a dirty, clogged-up state, that she had to go down and shake it in a bucket of water. While she was downstairs she took occasion to open the kitchen and the front-room windows top and bottom, and she also left the back door open.

When she had finished Mary's bed-room she said, "Now doesn't this room seem lighter and sweeter?"

"It certainly do," said Mrs. Willis. "I'll go and fetch the sheets now."

They soon got them on the bed, and an old clean cover on the pillow; and poor little Mary looked so comfortable. She closed her bright eyes, and presently dropped off to sleep, and Mrs. Symonds and her mother went quietly out of the room.

"Now if you want to keep your other children from taking the fever, let me advise you to do two or three things," said Mrs. Symonds. "Don't be offended if I speak plainly. At a time like this it isn't wise to mince matters—it is better to speak out. Where did the children sleep last night?"

"Baby always sleeps with me," said Mrs. Willis, referring to a big fellow of fourteen months, whom little Lucy was lugging about in a field opposite, which the laundresses in the neighbourhood used for a drying ground. "The other two children slept in the front room; I made 'em up a bed on the floor."

"Haven't you another bed-room?"

"O yes, all the houses in this row have got three apiece; but I use my third for a lumber room."

"The front-room window wasn't open when I came in," said Mrs. Symonds, "but I opened it just now. I assure you, Mrs. Willis, if you don't keep the rooms ventilated, you won't get rid of the fever. You should open them early in the morning, and keep them open as much as you can all day, not only at the bottom for the good air to come in, but at the top for the bad air to go out. Bad air rises, and so the windows must be open at the top to let it out. I was rather afraid that your windows didn't come down at the top, for I don't ever remember to have seen them down."

"La! I don't trouble," said Mrs. Willis; "I forget, that's the fact. I've got so much to bother about besides windows."

"But than one can't be healthy if these simple little matters are not attended to," said Mrs. Symonds. "The secret of health lies in having pure air, plenty of pure water, and good food. To these three things, under God's blessing, my children owe their health and strength. I'm sure I couldn't desire to see them healthier or happier."

"But what do you do to them?—what do you give them?" said Mrs. Willis.

"I'll tell you; but let me help you get your kitchen in order while we talk," said Mrs. Symonds. "Mary will be wanting you again presently, perhaps, and you will have to leave it."

"I don't like to trouble you," said Mrs. Willis.

"Oh, it's no trouble," answered the kind woman. I've cleared up my own place, and I came in on purpose to help you. Well," she continued, as she moved about quietly setting things in order, "I wash my children from top to toe every morning."

"Every morning!" echoed Mrs. Willis in astonishment; "however do you find time?"

"It doesn't take many minutes," said Mrs. Symonds. "I've a good-sized piece of sponge which I keep on purpose, and a large towel, and I soon get it over. Then it's so healthy for them. You know the skin of our bodies is covered with millions of tiny holes called pores, from which perspiration is constantly coming out. If we do not wash our bodies, these pores become clogged up, so that we can't perspire properly, and so we lose our health. It is very necessary that the pores should be kept open by frequent washing."

"La!" said Mrs. Willis, "I never washes my young'sters all over. Once in a way I gives 'em a treat, and puts 'em into a tub, but not above once or twice a year."

"And it is a treat," said Mrs. Symonds; "children do like to be well washed, it gives them such a beautiful healthy feeling after."

"But don't mine kick at water sometimes!" said Mrs. Willis, "just about a bit!"

"But if they were washed so as a rule, they would enjoy it," said Mrs. Symonds. "The fact is, if children are not kept clean, they can't be healthy; and if they are not healthy, they are fretful and miserable, and open to attacks of all kinds of disease. Then I am very particular about the food I give the children. I don't let them eat till they can eat no more; I give them what I think is right for them; and I watch them to see that they eat it slowly; for if children swallow down their food fast they don't digest it, and so it doesn't do them a bit of good."

"Well, I suppose that's how it is with my children; they eat as ravenous as young wolves, and yet see what thin bits o' things they are! I can't watch them, you know; I puts a hunch or two o' bread into their hands, and starts 'em off out."

"Oh, that's a pity!" said Mrs. Symonds, in great concern. "I think we ought to make meal-times happy times, by all gathering together round the table, and being comfortable. I don't know what husband would say if we didn't all sit down together."

"Ah, you see your husband comes home regular at meal-times; mine don't," said Mrs. Willis.

"But perhaps he would if you were to arrange to have everything straight and in order when he comes home," said Mrs. Symonds. "I advise you to try this plan. And now about the children: I think the wisest thing you could do would be to keep them especially clean while you have this fever in the house. Give them a good wash all over some time to-day, and change their clothes often. It isn't much trouble to wash out children's little bits of things, and they dry so fast this beautiful weather. And do keep your windows open, Mrs. Willis; let the good air come in abundantly, and the impure air go out. In warm weather I always leave the bed-room windows open just a little all night; it keeps the rooms sweet. You know our breath soon makes a room smell close and unhealthy if we stay in it for many hours, unless it's well ventilated; and if it's not ventilated—that is, the bad air carried off, and pure air brought in, we have to breathe the bad air over again, and it is quite poisonous to us. Do keep Mary's window open as much as ever you can; and if a draught seems to come to her, you might have your clothes-horse up to the side of her bed nearest the window, and hang something over it to keep the draught away. It is very cruel to keep a sick person's room close. Pure air never kills people, but many die for the want of it."

"Well, all this is new to me," said Mrs. Willis. "I never thought about ventilation, and all that, before."

"Perhaps if you had, your Mary would not have been taken with fever," said Mrs. Symonds. "I'll tell you a true story that I heard once. You know that many people sleep in beds surrounded with heavy curtains, which they draw together to keep the cold out, as they say. Then they shut the bed-room door and windows, and close up the fire-place. How a person must feel after sleeping in such a state, I can't imagine. Well, a person hung a bird-cage with a bird in it inside a bed, the curtains of which were drawn so; the room was closed up, and it was left for the night. In the morning, when the bird was sent for, it was found to be quite dead! *It had died for want of fresh air.* It is no wonder people *linger* instead of *live*, who act in such a foolish way. If we don't get fresh air, and plenty of it, we pine and grow sickly. I firmly believe that if you were to keep your poor Mary cooped up in such air as she was breathing when I came in, nothing—not all the doctor's physic and attention—could save her. I trust now that, by proper treatment, she will get well. Keep her cool and quiet, and don't forget the damp mop in the morning."

"Do you think then that them children could be kept from catching it?" said Mrs. Willis. "I've been thinking that they surely must have it, and it have took every bit of spirit out o' me."

"You must do your best to prevent it," said Mrs. Symonds. "Let me prescribe the tub this afternoon," she added, with a smile. "I'll come and sit with Mary while you wash them if you like; and then, follow up the good plan, and doctor them in this way with water every day; and let them have an airy sleeping-room. These things are better than all doctor's stuff for health. Are the drains in good order in your house? You should see that plenty of water runs through them every day, or you'll be sure to have fever-smells hanging about."

"Well, I don't often think about the drains," said Mrs. Willis, "but I'll see to 'em, and mind that they're kept clear in future. I'm sure I'm very much obliged to you for coming and talking to me like this. You've opened my eyes to two or three things, and I'll take care to be more particular in future. I've never thought about good air, and being very clean, and all them things—never thought it worth while to trouble about 'em; but from what you say I can see it's very necessary

to mind 'em. P'raps I ought to have on a clean gown to be round about Mary!"

"Certainly," said Mrs. Symonds; "do put one on if you heve one. And I'd advise you to keep the children away from Mary's room. It is well to be cautious; though, if you doctor them as I have said, I don't think there will be much danger of their catching it. If you want any assistance, don't be afraid to send for me; I'll come and sit with her, and bathe her poor head this afternoon, while you attend to the little ones. What a nice nap she is getting!"

"I'm sure I'm very much obliged to you," said Mrs. Willis, with tears in her eyes; "and I'm very sorry I ever said anything rude to you. My children were in the wrong for touching your flowers, and I'm sorry for it: they are unruly little creetures; but I'll try to turn over a new leaf with 'em"

"There, now the kitchen is a bit tidy," said Mrs. Symonds; "a good washing would make it clear end sweet; but perhaps you'll be able to give it that by-end bye. Now I suppose you'll go end clear up the front room before the children come in. So I'll go in home, and begin to get dinner forward. If you want me, knock at the wall; I shall hear you. How much fresher your house smells for having the pure air in! Don't you feel better for it?

"Well, I feels cleerer somehow," said Mrs. Willis, as she wished her kind neighbor good morning.

There was such a clearing up, and such a washing and polishing of the children at Mrs. Willis's that afternoon as you never saw! When Mr. Willis came home from his work, expecting to find squalor, and wretchedness, and disorder as usual, he was agreeably surprised to find the house in beautiful order, the children clean, and little Mary going on as well as even the doctor could desire; for you must know that the doctor had called that afternoon, and said he was glad to see that Mrs. Willis was acting so wisely with regard to her child. Mr. Willis who really carried an affectionate heart under his rough homespun jacket, stayed at home that evening, and tended Mary, or kept the little ones quiet down-stairs; but first of all, he went out into the wash-house, and thoroughly cleansed himself; for, as he said with a smile, "If he didn't make himself very clean, he should soil something, as everything and everybody were in such trim, and so clean!" There was a heap of rubbish out in Mrs. Willis's back-yard. This Mrs. Symonds found out, and she would not rest until the dustman had been to fetch it away. Those heaps of rubbish about houses were so unhealthy, she said.

I am happy to tell you that little Mary soon got over the fever, and none of the other children took it. Some of the dirty, untidy neighbours wondered greatly; but Mrs. Willis soon let them know what, under God's blessing, was the reason they had been kept from taking it.

When Mary got well, Mrs. Willis did not allow things to go back into their former sad state; she contrived to keep the children and the home clean; she was careful to have airy bed-rooms, and wholesome food, and consequently her children soon became as healthy and robust as Mrs. Symonds's.

Mr. Willis found so much pleasure at home after these reforms had been wrought, that he no longer preferred to spend his evenings out at a tavern with a lot of drinking companions. He stayed at home, and took a pride in his family, and in his bit of garden, which soon displayed as fine a lot of flowers as that of his next-door neighbor, Mr. Symonds, with whom he was on friendly terms.

"Well," said Mr. Willis to his wife one evening, as they sat together in their little parlor, "I'm sure we have cause to be thankful for the fever, that seemed such a calamity when it came upon us."

"Yes, John," Mrs. Willis replied, "but only because of the lessons it brought us. It has taught us to avoid fevers and every other disease that is brought about by dirt and bad management. We shall have cause to be glad to the end of our days for what came of little Mary's illness."

Kind Mrs. Symonds felt quite rewarded for all she had done for Mrs. Willis, by seeing such a pleasant change in her next-door neighbor's home.

THE CHEAP DOCTOR.

I wish everybody knew Mrs. Carter, the schoolmistress in our village; she is really one of the best women I ever saw. To see and hear her work and talk, is enough to do anybody good. Early and late, morning and night, that woman is busy, and always about some good thing. One would think she had enough to do with the fifty children in her school all day, without anything else; but, would you believe it, she goes about between school-times, to see the children's mothers, and tries to be of use to them! The folks in our place are often ill, and Mrs. Carter always says it is because they are in such bad air, and live in a very unhealthy way; and whenever she gets a chance, she has a little talk with them about these things. I was with her the other day, when she went to ask after little Jim Brown, who has been ill ever since Christmas. I thought what she said to Jim's mother was well worth knowing, and I took care not to forget it.

"Good morning to you, Mrs. Brown," said she, "I have just stepped in to ask after Jim. I hope he is better, poor fellow! I was quite grieved to see him look so pale and sickly the other day; I am afraid it will be some time yet before he is fit for school again."

Mrs. Brown. "Thank you, ma'am, for your kind thought of him. The doctor says he's better, but I don't feel quite comfortable about him. He doesn't seem to get strong again, as he ought to do, though I keep him quite warm in bed, and he gets beautiful broth and puddings, which the squire's lady sends him off her own table."

Mrs C. "You are a good, careful mother, and I know how hard you work to feed all those little ones, and to keep them so tidy. It grieves me sometimes to see you so poorly clad, because I know all your little savings go to buy doctor's stuff, instead of a Sunday gown, or a bit of flannel for yourself."

Mrs. B. "Well, ma'am, that is true enough. I don't know how it is, but one or other of the children always seems poorly, and sickness does throw one back so."

Mrs. C. "I have been thinking, so too, Mrs. Brown, and I want to have a chat with you; for I believe, if you would follow my advice, I could help you to mend matters a little. I don't see why your children should not be as strong and healthy as mine, or some others I could name."

Mrs. B. "I'm sure I take all the care of them I can; and no one can say I neglect them, poor dears."

Mrs. C. "No, that you don't! I am sure you try to do your very best; but you must not be hurt. Mrs Brown, if I tell you the truth, which is, that you and the children are half-poisoned every night of your lives, and"

Mrs. B. "Oh, ma'am, you quite frighten me: Whatever can have made you think that?"

Mrs. C. "Well, I will tell you. You remember that day when you took me up first to see poor Jim I am a plain body, and don't care a straw what kind of room I sleep in, if it is only clean—but, upon my word, though yours looked so tidy, it was a hard matter for me to stay there many minutes, I felt so faint and queer. I didn't wonder, then, that Jim was so long getting well, or that the children looked sickly, and you were so often laid up with headache. I only wish, Mrs. Brown, you would just try *my* doctor; he is a very cheap one; and if you would let him come in every day, you would soon see a change, I know. I cannot live without him, and though he cannot *cure* all complaints, he can *keep off* a great many."

Mrs B. "I'm sure I can't afford any more doctors; Jim's illness has cost so much already."

Mrs. C. "Well, now, my good friend, don't cry out before you are hurt. I want to *save* your money, and not to spend it: or you will say next you cannot afford to send the children to school, and I shall lose some of my favorite scholars. My doctor's name is *Fresh Air*. He only asks you to set the window open, and he will never keep you waiting any day, but walk in at once, and charge you nothing for his visit. You are all being poisoned for want of him."

Mrs. B. "I don't quite understand you ma'am The room isn't a large one, to be sure, for me and the four children; but it is as big as I can pay rent for. I keep the door shut because of Jim; and as for the window, it's been broken a long time, and won't stay open."

Mrs. C. "Do spend a trifle, then, in having it mended; and, take my word for it, it will pay you well in the end. The room will be big enough if you'll let my doctor in. Don't you find a difference, now, when you come in from hanging out your clothes to dry, and go up stairs to take Jim his cup of tea? Doesn't the room smell close and hot, and fusty? You would not for the world stint the dear little fellow in food, or, as long as you have a half-penny in your pocket, let the children go without their bread and milk for breakfast. You would rather work all night than do that, and would not grumble if they ate twice as much as they do."

Mrs. B. "No, that I shouldn't."

Mrs. C. "And yet it would be of no use to fill their stomachs with good food, if you did not fill their lungs with good air. Suppose you took that cat now, and shut it up in a box, and after a little while peeped in, you would find the poor creature only half alive; and if you were cruel enough to keep it there long, it would die, all for want of air. We can live longer without food than we can without air. How many times a-day do you eat?"

Mrs. B. "Well, ma'am, the same as most folks; we have our breakfast, dinner, and tea: I take a bit of supper myself, but the children are all put to bed by seven."

Mrs. C. "So I thought. Well, then, most folks eat three or four times a-day, but they breathe every minute about twenty times. Only think how many times you and I have breathed since we have been talking! There, you know, we don't eat in the night, but we *do* breathe."

Mrs. B. "That's very true."

Mrs. C. "Yes, and what is more, all the air we breathe out is *poison*, and is no use to us again; it has done its duty in our bodies, and the sooner we turn it out of the house the better. That is why I said you were all half poisoned, because if you don't open your windows wide, to let in my doctor, *Fresh Air*, there's nothing left but bad air; and if you put the children to bed at seven, there you and they are, drawing in that nasty, foul air, till six o'clock in the morning. It is just that which gives you a headache when you wake, and makes the children so pale, and restless, and uncomfortable."

Mrs. B. "I think I begin to understand you, ma'am; but no one ever told me of it before."

Mrs. C. "I dare say not, but you may depend upon it, it is all true; you are a kind mother, and are always ready to listen if I tell you of anything that is good for the children. When your cupboard is empty, you go to the shop and buy more victuals, the best you can afford, though it is often a hard matter to pay; and when all the good wholesome air is used up in your room, why don't you go to your window, and open it? There's plenty of air to come in, and nothing to pay."

Mrs. B "Well, I really will get that window mended; it's been broken ever since Jim was taken."

Mrs. C. "And it has been one reason of his not getting well sooner; every day the air is getting worse and it takes away his appetite for the nice food he might have, and hinders his getting stronger. Those pretty plants, too, which you have put in the bed-room windows, to look cheerful and bright, rob you of good air when you are asleep, for they have a way of breathing, and want air just as we do; they will be much better down in the kitchen."

Mrs. B. "I'll tell Jim what you say, ma'am, and then he won't mind losing them."

Mrs. C. "I know you have found it hard work to make both ends meet since your good husband died; and it's only because you manage so well, and work so hard, that you can afford to keep the children so tidy, and send them to school. I would not for the world put you to any expense, but I want you to try my plan for a few months, and see if it does not answer. As sooner as ever you wake, then set the windows open; at first only a little way, if you are afraid of cold; but as soon as you and the children are dressed and washed, put both door and window wide open; strip off the bedclothes, and spread them over two chairs, so that the fresh air may sweeten them. Don't be in a hurry to make your beds; for the more they are blown on, the fresher they'll be. Even while you are sleeping, you should have the window open a little way. I don't think you will find it too cold; and if you do, it's easy to have a thin curtain or blind, to keep out the wind. This will make your little room fresh and sweet, and you will find it much pleasanter to sleep in; the children will not be tossing about, hot and restless; and, when you wake in the morning, I hope you will feel brisk and strong, and ready for your day's work."

Mrs. B. "I haven't felt like that for a long time. My head's sometimes very bad, and I haven't any appetite for my breakfast."

Mrs. C. "I don't wonder at that, for nobody can feel well who sleeps in bad air. We all want a hogshead of it every hour of our lives: it ought to be the very freshest we can get, and if you wish to see your children grow up strong, let them have plenty of it, and plenty of fresh water and constant exercise—they are the finest medicines in the world. Depend upon it, it is very expensive to live in bad air, bad smells, and dirt, though some of our neighbors do seem very fond of them. God has so made us, that we cannot be well without plenty of fresh air, any more than the fish can live without water, or the kettle boil without fire. Don't let us try, then, to be wiser than God. He sends us what we want, cheap blessings, and when we don't use them, then He sends us ill-health, to remind us how foolish we are, and how, if we *will*, we may help ourselves. But I must go now, or the children will be coming in to school."

Mrs. B. "I'm sure, ma'am, I'm much obliged to you for stopping so long. I shan't forget about your 'cheap doctor,' and I shall just speak to some of the neighbors about him, for I'm sure many of them want him quite as much as I do."

Mrs. C. "That's right, Mrs. Brown; we'll try if we cannot do something between us to make the children about here more rosy and strong. The mothers would not have half so much trouble with them if they were well, and I should have better scholars if they came more regularly to school. Good air to breathe by day and night, and fresh water to drink and to wash in from top to toe, are the finest things in the world for health and comfort—the sooner you give them a trial the better. By the way, there is a story I should like to tell you. It is quite true, and will not take many minutes. A hundred years ago, one hundred and forty-six Englishmen were taken prisoners in Calcutta. The great man who took them ordered them to be shut up in a dungeon called the 'Black Hole.' He only wished them to be there for one night, because he meant to have them brought up to judgment before him in the morning. Now this 'Black Hole' was only eighteen feet square; the door was locked, and there were only two very small windows by which air could come in. As soon as the door was shut, these poor creatures began to feel the dreadful heat and suffocation; every minute made it worse, and in a short time they all began struggling and fighting with each other, to get as near as they could to the windows; they knew it was their only chance for life. But it was of no use, there were too many of them; all the good air was now gone, and there was nothing left for them to breathe but *poison*. If the door could have been set open so as to make a draught, the bad air would have been carried out and they might have been saved, but the cruel men outside would not listen to their cries for help; eleven hours after, when the door was opened, only twenty-three out of the one hundred and forty-six were found alive: and even these poor creatures were ill with fever, caused by the poisonous air."

Mrs B. "I've heard of the 'Black Hole' of Calcutta before, but I never knew all about it till now. It must have been a very wicked man that did it. I wonder how he'd have liked to have been shut up in that way himself."

Mrs. C. "Ah, well, we have nothing to do with that; and perhaps, after all, he did not know that bad air was poison, and could kill people so soon. But *we do* know it, and must take care that no corner of our houses becomes like the 'Black Hole' of Calcutta;—but I hear the clock striking two, so I must say good afternoon, and be off."

THE "LITTLE IDA."

THE "LITTLE IDA."

THE *Little Ida*, built by Mr. John Roach at Chester, Pennsylvania, is said to be the smallest sea-going keel yacht afloat, being only eighteen feet long. She is made of galvanized iron, with air-chambers forward and aft, and rigged so that all the halliards, sheets, reefing tackle, and steering gear work amidships, where her owner sits and handles the vessel without leaving his seat. The cooking is done on a coal-oil stove forward; and under the decks are the racks for guns, fishing tackle, charts, and other odds and ends.

Nearly two years ago this little craft set sail from Baltimore on a pleasure trip among the Sea Islands and along the Florida and Gulf coasts, the owner intending to winter in Florida, and spend some time in hunting along the St. John's River. At Elizabeth City a boy was taken on board to help in working the boat. The first few days everything went well; but presently a hurricane caught the vessel and blew her out to sea, where she had a desperate struggle with the wind and waves. But she weathered the storm, and proved herself a thorough-going sea-boat.

Skirting the Florida coast to Mosquito Bar, the captain put in for the first shooting, bagging quantities of ducks and curlews, and a few bright-plumaged herons and cranes, and enjoying excellent fishing. The only serious discomfort arose from the necessity of closing up the cabin windows and companionway with muslin to keep out gnats and mosquitoes, which nearly smothered the brave sailors. They stayed at the Bar a few days, but were fairly driven away at last by the insects. Sailing to Indian River, they hoped to escape these pests, and to enjoy the shooting in peace. But the insects there were even more troublesome, and the trip was pushed still farther southward, through the Florida Keys to the Tortugas, and northward in the Gulf, and along the coast, without stopping, to Brazos Santiago, where stores were procured, after which the vessel returned to winter quarters on the St. Johns.

After leaving Charleston, South Carolina, a serious error nearly proved fatal to the brave voyagers. When off Assotengue the course was lost, the Chincoteague Light being mistaken for the shoal light-ship. Steering directly on the beach, they barely escaped the shoals. At the same moment a huge wave curled over the boat. Luffing up, the captain got her in the trough of the sea, when a second breaker caught them broadside, driving the boat furiously toward the beach. When the third wave came, they were ready for it, and going "bows on," rode safely. Having no time to reef, they carried full sail, and beat off shore safely, with the lee cabin roof under water and streams of water running in at the windows. Sailing out to ten fathoms, they bove to and waited for daylight, when they continued the voyage reaching Sandy Hook safely.—*Harpers' Weekly.*

Temperance.

PITCHER, OR JUG?

WHAT SHOULD COLORED PEOPLE READ?

About two years ago, as I stood by the counter of a book-store, a shabbily dressed colored man, carrying a satchel, and looking as if he had traveled far and wearily, entered the store with hesitating steps, and asked the merchant for "a book that would teach him a great deal of knowledge."

The bookseller seemed somewhat puzzled, and laid down numerous handsomely bound volumes, at which the young man looked eagerly, seeming unable to make choice among them. Although very dusty and poorly dressed, he had an intelligent expression, and a gentle, somewhat shrinking manner

Feeling interested in him, I inquired what sort of book he wanted to read. "I want a book that will learn me a great deal," he answered, diffidently. "I have been to school some, but I want to know a great deal more than what I do; I have been saving a little money to buy books, and I thought I could find some kind of a book that would give me *a great deal of knowledge.*" When I left the store, he was still anxiously turning over the volumes before him, unable to choose among them, and I never knew whether he found what he wanted; but the image of the weary dusty traveler, with his wistful eyes and his eager thirst for knowledge, and the thought of the long, *long* journey he must needs accomplish before the desire of his heart could be reached, has often come to my mind.

As Lynchburg is a factory town, and most of the workers in the wood are colored, at certain seasons of the year they handle a great deal of money, and those who are thrifty can put by a snug little sum every year. Wo have also colored mail-agents, preachers, teachers, grocers, hucksters, livery men, and barbers, many of whom own a good deal of property and derive a very comfortable living from their business. The assessor rates the wealthiest colored man in the village at about $15,000. Anyone who sees these people in their homes can tell at a glance, that with prosperity, they are fast acquiring an education, and the taste for reading increases rapidly among them. I have noticed, at the news stands, colored people are always found among the crowd awaiting the arrival of the serial and sensational papers so eagerly sought by lovers of fiction. Some of our colored citizens, I am glad to say, have too much taste to read the *Ledger, Saturday Night, etc., etc.* One of my young colored friends, now a teacher in the public schools, showed me lately a copy of the Encyclopedia of English Literature, a present from one of her admirers.

Already the irrepressible book agent knocks loudly at the door of the colored man's home, and the congregations of African churches are frequently requested to remain after the services, while the book-peddler displays his wares—but too often works of very trashy character.

What should colored people read?

This question was asked some time ago by a Hampton student, through the columns of the SOUTHERN WORKMAN.

On the sound principle of treating a Negro "like any other man," one might at first be disposed to answer, let them read what everybody else reads; and this is of course true in regard to the small class of Negro-Americans who have had the same advantages of education and society usually enjoyed by white people. But to the great mass of colored people in this country—those from whom the Hampton students come—this subject is a very important one, and should be considered with reference to the peculiar circumstances of the average Southern Negro.

The traditions of the white race, the habits of family life, the daily conversation of those about them, bring some degree of literary taste almost insensibly to those who have inherited culture as well as property in our land.

With those who have been slaves the case is far different; the children are, in very many cases, in advance of their parents in learning—the young stand beyond the old, in knowledge. The African race in America is in its infancy in literary arts. The "Nation that was born in a day" has so suddenly waked to mental life; emancipation, suffrage, education have come to it with such bewildering rapidity, that, now that the rudiments have been acquired, the dark barriers of ignorance left behind, the gates of knowledge thrown open, these new pilgrims in the pathway of learning may well pause and consider carefully before taking another step forward.

Whilst watching with deep interest the progress of our late chattels, so eagerly striving for a higher life, I often wish that these people entering upon untried fields, instead of merely imitating those who occupy a higher social sphere than they have yet attained, might learn by their experience to choose the good and shun the evil, to preserve the true and discard the false, to copy only what is useful and avoid all that is harmful and frivolous. This is especially true in regard to the cultivation of the mind, and if, instead of the miscellaneous and desultory handling of books but too often practised by white readers, the colored students would seek only that which "profiteth the understanding," what great gains might be made in one lifetime, what strides might be taken in the path of knowledge, what improvement be formed in mind and character!

In making suggestions as to the choice of reading matter, I should advise every one who can afford to do so, to take at least one good weekly newspaper. Such journals as the New York *Independent*, the New York *Observer* and the *Springfield* (Mass.) *Republican*, the latter costing only $1.50 per annum and being one of the safest guides in the country, convey a vast amount of useful information. The newspaper has been called the "History of the world for a day," and no one who does not read the papers can keep up with the wonderful progress of our age. Every one who can afford it should take one newspaper published in his own State, and, if possible, one or more journals of our large cities, which contain a vast amount of information from all quarters of the globe.

In selecting books to read, two methods are usually offered to young students. One is such a system of reading as will secure general information. This would include histories of the various countries of the world, biographies of the distinguished men of all nations, and books of travel. Another plan is to select some special era in the world's history, or some particular subject, and read all the books attainable on such themes.

It seems to me that any young American might find much pleasure and profit in taking a survey of the "First Century of the United States." This would include the works of Bancroft, Irving, and other historians; biographies of a host of public men; the poems of Longfellow, Whittier, Bryant, Holmes, and other sweet singers of our nation; the novels of Cooper, Mrs. Stowe and a few other writers, with many useful works beyond my power to mention now. For myself, for years past, I have been studying the history of the African race, especially the strange, sad story of the Negro in America, and have met no more interesting work than "The Rising Sun," a valuable contribution to American literature made by Dr. Brown, a colored citizen of Boston. The "Life of William Lloyd Garrison," by his friend and fellow-worker, Oliver Johnson, is said to be a book of great interest, and should be read by all colored people.

Besides the long lists of works of history, biography, travel and fiction, this prolific age affords many valuable books to teach us of the plants, animals, birds, fishes and insects which share our earthly home; and all studies of this kind are improving, as they lead our minds "from the contemplation of nature to nature's God."

The American Book Exchange of New York (*Tribune* Building) offers many advantages to readers of limited means. Among these are "The Library of Universal Knowledge," a good American reprint of Chambers' Encyclopedia with a great deal of new matter added, 20 volumes for $10; "Macaulay's History of England," 3 vols. for $1.00; "Acme Library of Biography," 50 cts.; "Acme Library of Modern Classics," 50 cts.; "American Patriotism," 50 cts., "Plutarch's Lives of Illustrious Men," 3 vols., $1.50; "Smith's Dictionary of the Bible," illustrated, $1.00; "Dryden's Translation of Virgil," 50 cts.

To all our colored people, I would say earnestly, *read*. No matter what your life may be, you should find some opportunity to read good, instructive books.

The ancient Egyptians inscribed over the entrance to the first library of the world, "The remedy for diseases of the soul;" and whoever will turn from the bustle, the cares, the temptations of the world, to the silent, instructive companionship of books, will find a solace, a potent remedy for the wounds and heart-burnings, which, sooner or later, are ever the portion of the children of men.

ORRA LANGHORNE.

UNCLE JACK.

Extract from Howe's History of Virginia.

In 1843, there died in Amelia County a Negro preacher of considerable celebrity, who went by the name of "Uncle Jack."

He was kidnapped, and brought from Africa at seven years of age, and landed at Osborne's on James River, from what, it is supposed was the last slave-ship which deposited its cargo in Virginia.

Such was Uncle Jack's worth of character, that, on the death of his master, several benevolent individuals by their contributions purchased his freedom. One, who knew him well, said of him, "I regard this old African as a burning light, raised up by Christian principles alone, to a degree of moral purity seldom equalled, and never exceeded in any country."

The late Rev. Dr. Rice also remarked, "The old man's acquaintance with the Scriptures is wonderful. Many of his interpretations of obscure passages of Scripture are singularly just and striking. In many respects, indeed, he is the most remarkable man I ever knew."

Uncle Jack's views of the leading doctrines of Christianity were thorough and evangelical. His preachings abounded with quotations surprisingly minute, and his illustrations were vivid and correct. His knowledge of human nature was profound; and hence his extensive usefulness among the African population, as well as among a large circle of whites. His language was pure English. In his intercourse with all classes he was governed by Christian humility, and he abhorred all cant. He uniformly opposed, both in public and private, everything like noise and confusion in the house of God. His colored audiences were very prone to indulge themselves in this way. But whenever they did, he invariably suspended the exercises until they became quiet. On one of these occasions, he rebuked his hearers, substantially as follows: "You noisy Christians remind me of the little branches (*brooks*) after a heavy rain. They are soon full—then noisy—and soon empty. I had a great deal rather see you like the broad, deep river, which is quiet, because it is broad and deep."

Of this worthy and strong-minded old man we take the liberty of annexing a few anecdotes drawn from his memoir in the *Watchman of the South*. In speaking of the excitement and noise at a protracted meeting, he remarked, "I was reminded of what I have noticed in the woods: when the wind blows hard, the DRY LEAVES make a great deal more noise than the green ones." When persons scoffed at his religion, his natural diffidence and reserve would give way to a firm and dignified defence, and most happily would he "answer a fool according to his folly."

A person addicted to horse-racing and card-playing, one day stopped him in the road and said, "Old man, you Christians say a great deal about the road to Heaven being very narrow. Now if this be true, a great many who profess to be traveling it will not find it half wide enough." "That's very true," replied Uncle Jack, "of all who have merely a name to live, and all like you." "Why refer to me?" said the man; "if the road is wide enough for any, it is for me." "By no means," replied Uncle Jack. "When you set out, you will want to take along a card-table and a race-horse or two. Now there's no room along that way for such things, and what would you do, even in Heaven, without them?"

An individual accustomed to treat religion rather sportively, and who prided himself upon his morality, said to him, "Old man, I am as good as I need be. I can't help thinking so, because God blesses me as much as he does you Christians, and I do not know what I want more than he gives me." To this the old preacher replied with great seriousness, "Just so with the hogs. I have often looked at them rooting among the leaves in the woods, and finding just as many acorns as they need. And yet I never saw one of them look up to the tree whence the acorns fell."

In speaking of the low state of religion in the country, Uncle Jack said, "There seems to be a great coldness and deadness on the subject of religion, everywhere. The fire has gone out, and nothing is left but a few smoking clumps lying about in places."

The laws of Virginia prohibited religious as well as other assemblies of slaves, unless at least two white persons were present. Such, however, was the universally acknowledged happy influence of Uncle Jack's meetings, that in his case it was not deemed necessary to enforce the law. On one occasion, some mischievous persons undertook to arrest and whip him, and several of his hearers.

After the arrest, one of the number thus accosted Uncle Jack: "Well! old fellow, you are the ringleader of all these meetings, and we have been anxious to catch you; now what have you to say for yourself?" "Nothing at all, master," was the reply. "What! nothing to say against being whipped! How is that?" "I have been wondering a long time," said he, "how it was, that so good a man as the Apostle Paul should have been whipped three times for preaching the gospel, while such an unworthy man as I am has been permitted to preach for so many years without getting a lick." It is hardly necessary to add, that the young men at once released him.

His influence over the members of his church was almost unbounded. As evidence of the fact, take the following. A gentleman who resided in the neighborhood detected one of his servants, who belonged to Uncle Jack's flock, in some very improper conduct. The only notice he took of it, was to threaten to inform that spiritual man. When he arose on the following morning, he found the servant waiting anxiously to see him. "Why, Tom," said he, "what's the matter, why don't you go to work?" "Why, master," replied the man, "if you would just please whip me yourself, and don't tell Uncle Jack." We would like to extend this notice, but want of space forbids. Uncle Jack died at the age of nearly one hundred years. He was one of those characters, that, under propitious circumstances, might have left an undying fame, but in the limited sphere of his influence, his humble and consistent life won for him the affections of the best people of the community.

Temperance.

PITCHER, OR JUG?

When, in the heat of noontide sun,
Which, when the work of day is done,
Refreshes most the weary one,
Pitcher or jug?

Which makes strong to cradle the grain,
Which heaps highest the harvest train,
Which gives muscle and heart and brain,
Pitcher or jug?

Which sows kindness over the soil,
Lighting the heavy hours of toil,
With friendly words that never roil,
Pitcher or jug?

The pitcher, filled from the bubbling spring,
Playing and spraying,
Curling and whirling,
Over the pebbles under the hill.
It cools the brow and steadies the brain,
Making the faint one strong again;
For its daily task it nerves the arm,
And lends to labor a borrowed charm;
It is a step on the road to wealth—
Many a step in the way to health;
It lightens home with a cheerful glow,
And banishes from it useless-woe;
It smiles in the children's winsome ways,
And leaves no sting in the holidays.
So in all the best things a man will be richer,
If he gives up the jug, and drinks from the pitcher.

THE USE OF INTOXICATING DRINKS AND TOBACCO,

For they are always together in cases of drunkenness—mortgages the farm, fills poor houses and prisons; retards public improvements, promotes ignorance and wretchedness, brings disaster to the merchant-ships and the railroad trains, lights the torch of the incendiary, maddens the brain of the robber and assassin, closes the shop, bank, factory, store; writes "bankrupt" upon many a promising enterprise; is the great curse of manufacturing villages, and dooms the city to vice, violence and misrule; tends to deteriorate, morally and physically, the offspring yet unborn of those addicted thereto.

This state of things, if produced in any other way, would spread weeping and sackcloth over nations and continents. Any sweeping pestilence that could do this would hold a nation in alarm, and diffuse, from one end of it to the other, trembling and horror.

It is well understood that this is the effect of the use of these baneful articles—alcohol and tobacco. The effect is not casual, incidental, and irregular. It is uniform, certain, deadly as the sirocco of the desert.

It is not a periodical influence, returning at distant intervals, but as a deadly pestilence, breathing always; diffusing its poison when men sleep, and when they awake; by day and by night; in seed time and in harvest.

WHAT BECAME OF THEM.

An Ohio correspondent of the Tennessee *Good Templar* gives the following sad illustration of the wages of sin.

Forty years ago, I noted down ten drinkers, six young men and four boys. I saw the boys drink beer and buy segars in what was then called a "grocery" or "groggery." I expressed my disapprobation, but the seller gave a coarse reply. He continued the business, and in fifteen years he died of delirium tremens, leaving not five dollars.

I never lost sight of those ten, only as the clods of the valley hid their bodies from human vision. Of the six young men, one died of delirium tremens and one in a drunken fit; two died of disease produced by their excesses before they reached the meridian of life; two of them left families not provided for, and two sons are drunkards. Of the two remaining, one is a miserable wreck, and the other a drinker in some better condition.

Of the four boys, one had a good mother and grew up a sober man; one was killed by a club in a drunken broil; one served two terms in the penitentiary; and one has drunk himself into an inoffensive dolt, whose family have to provide for him.

Southern Workman,

tention to the moral of all the facts about the South, namely, that education is the best panacea for its ills.

From twelve years' experience in coeducation of the sexes at the Hampton Institute, we incline to increased faith in the stability of character which education

Providential movement to accomplish a higher development of the negro.

The curse of miscegenation is checked; the forced level of slavery is broken;

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

THE Anniversary exercises of the Hampton Institute will be on Thursday, May 20th. Visitors can leave New York City at 4 o'clock P. M., Philadelphia at 6 P. M., connecting with the "Bay Line Steamers" at Baltimore, which leave at 9 o'clock and arrive at Fortress Monroe at 8 o'clock A. M.; returning, the steamers leave Fortress Monroe at 7 o'clock P. M., arriving at Baltimore at 7 o'clock the next morning, at Philadelphia at 11, and at New York at 2 o'clock P. M.

Owing to the destruction of Academic Hall, the general public will be invited to attend only the afternoon rhetorical exercises commencing at half-past one o'clock. The invited guests from a distance, who shall arrive on the morning of the 20th, (a comparatively small number) will have an opportunity of witnessing the class exercises of the morning in the somewhat limited accommodations.

THE memorial of the Trustees of the Peabody Fund to Congress, from which we publish extracts, embodies the argument to individual friends of humanity and of their country, to aid the cause of negro education. The free school systems of the South must be supported by taxation; there is no other way; but the skill, experience and private resources of the North should be applied at certain central points which are likely to extend a wide influence and give to the South a help and stimulus that it needs.

The fitting of negro teachers for the negro race is the work to be pushed by the North.

The mental capacity of the colored people is an established fact, and the success of negro teachers is assured by the testimony of hundreds of Southerners under whose supervision colored teachers have been employed for the past eight or ten years. The last fifteen years have demonstrated the improvability of the ex-slaves, their eagerness for knowledge, and the increasing sympathy of the whites in their improvement, and have made it perfectly clear that only by their mental and moral elevation can the nation escape sad consequences from their enfranchisement.

THE educators of the Negro are, we believe glad that the "Fool's Errand" has appeared. This book seems to have been written to prove that reconstruction is a failure; it exalts the "carpet bagger," and declares that the South is solid for the ideas of the rebellion. Opposing these opinions from his personal experience, especially of late years, the Negro educator is glad of an agitation that brings attention to the moral of all the facts about the South, namely, that education is the best panacea for its ills.

No application of external force can do any good. The remedy must work from within outwards. What is needed is the leaven of free, intelligent thought.

Experience is the best teacher, and has given the South some lessons that have not been lost. A certain class will not learn and has not learned anything. But independent thinking is coming to be the order of the day.

More than fifteen years after emancipation, there is the strongest conviction that the education of the colored people is a serious matter and must be attended to; it is in the air as it never was before. The "Fool's Errand" has, we think, done much to quicken this feeling.

A SOUTHERN VIEW.

The letter published below was so interesting that we requested of the gentleman who received it and of its author, permission to publish, which they kindly gave.

The author is a native citizen of one of the Southern States, who adhered to the South throughout the war, but embraced the national party and believed in the politics of the Republican party afterwards.

He says:—

"I believe I have a profound respect for the African race. I have met with few who respect or sympathize with them more. I hope there is nothing in my letters giving a contrary impression. I am fully alive to the duty of the white to the black for a hundred years to come, and am disposed to do my own.

* * * * * * *

"We know the negro infinitely better than any one who has only an adult acquaintance with him can know him. We know him from our cradles up. We know the old women, the young women, the old and young men, the child, male and female, from infancy to age. We know them under every circumstance in which they are to be found, as their equals, their associates, and their superiors and owners; and what we know of him is still, in much the greater part, an unwritten book. Your people can't learn the negro. You mistake in one thing. I think the real negro female is naturally virtuous. Ignorance is, of course, such a promoter of vice, that in the concrete, there is much licentiousness among the race. But allowing for the extraordinary influence which their preachers have over them, the pure negro female is a woman inclined to virtue and actually virtuous to a remarkable degree.

"But, aside from all this, your article comes practically to this, that the negro is not fit for American citizenship. The truth is, there is scarcely any race on earth that is fit for the fine institutions of our English and American race of Teutons, Angles, and that blood. The Freedman is not. The Latin races are not. The Asiatics are not. Nor are the Africans. Excuse me for saying that I believe the Africans are more capable of being freemen under our system than any of the races just named. But that is far from saying that they are fit, or ever will be. The thing which we should guard most zealously is citizenship. Philosophically (treating the matter from an ethnological point of view), none should be admitted to it but the Teutonic and Anglican races.

"The whole North has been for a hundred years under the influence of cant in regard to slavery. They have ascribed the difference perceptible between the two sections to slavery, the curse of slavery. Well, we have got rid of slavery, and is the curse removed? Look at the statistics of Virginia, and you will see that in the counties in which the African race is numerous, lands are assessed at the rate of four or five dollars an acre; while in the counties where that race is few in number the assessment is at the rate of twenty-five to fifty dollars. This is fifteen or eighteen years after the abolition. Can you not see that it was not slavery which was the curse? Do lands command in any Asiatic country where there is no slavery (so-called) a high price?

"Oh, no! It was not slavery. Think of Athens, which presented the highest picture of civilization of ancient times, where there was no black race, but where the slaves numbered 400,000 and the free only 40,000; and how absurd does the cant in which Boston has been dealing as her chief staple of commerce for seventy-five years appear.

"No; slavery was a blessing to the negro; and as others had inflicted the *curse of an inferior race of beings* upon the South, slavery to them was a blessing. I admire Hampton Institute; but how sadly inadequate is it to the task of fitting an inferior race for the free institutions of our Anglican system of government!

"The abolition of slavery was the doom of the negro. The law of the survival of the fittest now obtains, and will work out his destruction on this continent in a century or two.

"Let us do all we can for him. It is our duty to do so. Let us protect him in the fullest enjoyment of political rights and of all means of moral advancement, and leave the rest to destiny, which is sure."

FROM twelve years' experience in co-education of the sexes at the Hampton Institute, we incline to increased faith in the stability of character which education gives to young colored women of *all shades*.

There is more in them to work upon than we expected to find. The white woman is protected by public sentiment, by law, and by the bullet that is sometimes sent where it is deserved; there is added to her inherited, innate, educated instincts, a panoply of external helps. The negro girl, with the past terribly against her, practically without a shadow of protection, relying only on her conscience and innate self-respect, is considered as fair game by hounds of every color who may follow her with nothing to fear.

How does she hold out? We believe, with wonderful success and credit to herself. We refer to the better class.

There must be a basis of character or fine womanly instinct in the negro woman (as above claimed) which has survived generations of damaging influences. Recent travelers in Africa have pointed this out in various tribes, especially the Zulus. The work of fitting colored girls for the family life and Christian work is full of encouragement. Their educators everywhere testify to rapid development of womanly qualities wherever they have a fair chance. Would that national or northern wealth would treble their chances!

If the practical question were of the present ability of the negro to govern himself and others, there would be little hope for him in this country. The real question is, Can the Nation carry this new load of 700,000 ignorant voters until they shall be better fitted for their duties? Their improvability is beyond a doubt and is only a question of the people's will.

The negro is the only race that seems to have affinity for, and that survives contact with, the white race; it has a genius for adaptation and for making itself useful. It gained ten per cent in population from 1860 to 1870. What will the coming census say?

It is eager for land and for education, and has a tremendous grasp as an agricultural or producing power. There is no need of despair about it except as it may be neglected.

It will make good use of all educational facilities, push itself steadily onward and upward, provided its inward force shall be developed by sufficient opportunities. It will, under wise treatment, furnish good material for the building up of the nation. It may, through neglect, be a serious drag upon the country.

We, at Hampton, live in a region with a large negro majority, where land sells from ten to seventy-five dollars an acre. What is said above, as to the general effect of a negro majority on the value of land, is worth attention; we would welcome further information on that point. The writer of the above letter seems to forget that the lands of the South were worked under the exclusive control of white owners, and that any exhaustion and consequent low value where the blacks abound is not the fault of the negro but the legitimate fruit of slavery.

That the negro gained and that the white man lost by slavery, is sure to be the verdict of history.

The Hampton Institute and other schools are pushing not creating a forward movement, taking advantage of the long pent-up eagerness of the freedmen for knowledge, adding breadth to a thought and experience gained under Southern taskmasters, and are spreading the leaven of ideas as far and as wide as their resources permit. With trebled means they would be equal to the need of the people; but the National Treasury is closed to the nation's great duty in this matter, and the pocket of the public seems willing to do no more.

The inferior race is not likely to get abreast of the superior, but that it can be gained to the side of industry and good morals is the simplest question of effort from without to meet their own needs and aspirations.

We believe that the "abolition of slavery" was not the "doom of the negro," as our friend claims, but a wonderful Providential movement to accomplish a higher development of the negro.

The curse of miscegenation is checked; the forced level of slavery is broken; thousands have sunk below it and thousands have risen above it. The negro South like the Irishman North is buying the land and getting a foothold.

The negro is in a struggle in which he does not so much need laws and boxes of second-hand clothing as light. Educating the negro is helping pay part of the nation's debt; repudiating this is as bad and as dangerous as any other form of repudiation.

PARTISANSHIP.

The Supreme Court of the United States recently decided that the judges of the State courts were liable to indictment and conviction for crime, in refusing to impanel colored men on juries. The *State* of Richmond, Va., says of this decision: "It is an act of tyranny of the North over the South, a piece of reckless revenge of the conqueror over the conquered. Northern and Southern men and women hate each other instinctively, and this habit is only modified, not removed entirely, when they happen to come into close association. The study of revenge occupies the thoughts of the great majority of the Northern people, and to this feeling the leaders pander."

Of about even date with the above, the New York *Tribune* says: "Who does not know that the bitterest and most malignant rebelism is displayed to-day, not by men who fought to the end and were beaten, but by the children of the men who fought. Southern mothers have taught their boys to hate the party and the men by whom the rebellion was subdued. There is less of true loyalty, less of disposition to forget the past, and join hands for the good of the whole country, among the generation just coming forward than appeared among the Southern people ten years ago. Conciliation has entirely failed."

These are sad and dreadful pictures of human and political depravity. If they are life-like, the people of the country are given up to revenge and rebellion, and there is no good in them. Gray-headed merchants from the North and South have gushed towards each other with all the passionate devotion of young women. Hands have been worn thin in shaking hands over the "bloody chasm." Northern and Southern men are trusting each other with untold sums of money in business and trade. "Revengeful" groomsmen from the North are leading to the altar "rebellious" Southern brides. "Revengeful" capitalists of the North are investing immense sums of money in the industries, the State securities, and railways of the "rebellious" South. Bloody minded and "revengeful" Northern people stayed the rising tide of disease at Memphis, and "rebellious" Southern people thanked them for it from the bottom of their hearts.

And yet, the eyes of these journalists glare at each other across the border line. They patiently rub their fingers in the now dry and scanty gore of the same bloody chasm, and fiercely shake the faintly colored tips at each other, crying aloud, "It's a lie! It's a lie! There is no love, no conciliation. It's all hate and revenge, tyranny and disloyalty!"

Is it then true that there is no more hope? Is a real Union impossible? Is the Constitution a rope of sand, is self-government a failure, and must the Republic finally die? Revenge on the one side and disloyalty on the other are swift centrifugal forces, which cannot be subdued, and must set the atoms of Unionism flying off into promiscuous ruin. We do not believe it. These hostile opinions are partisan, and even fanatical and foolish. The *Pall Mall Gazette* said recently, in comparing English and American political machinery, that the Americans did not tolerate constant and daily stump speeches by their candidates for the highest office, but left the stirring up of strife to itinerant speakers who did the business for them. "The Americans," it says, "know well that if great multitudinous constituencies are to be reached,

coarse instrumentalities must be employed. There must be gross exaggeration, bold misrepresentation, arguments too weak to deserve the name of sophistry.

THE PEABODY FUND TRUSTEES.

[The Trustees of the Peabody Education Fund have addressed a memorial to Congress, signed on their behalf by Hon.

Phaeton was less a fool when he mounted the chariot to drive the horses of the Sun, than ourselves, if we expect to reach the zenith of prosperity and happiness under such guid-

try, those who desire to maintain the peace and order of society, that the time for vigorous action has come. Delays are dangerous. If the corrective be not promptly applied, the

conrse instrumentalities mnst be employed. There mnst be gross exaggeration, bold misrepresentation, arguments too weak to deserva tha name of sophistry, clumsy dauhing of one side with flattery and indecent pelting of tha other side with rhetorical mud."

The hot words of these typical journals would justify the opinion that tha press of Amarica was enlisted to do tha dirty work of the politicians. The truth is, that the many errors nnd defielencies of the South are matched against as many errors and deficiencies of the North, nnd it is not profitnhle or amnsing for the Northern pot to taunt the Southern kettle with blackness. Tha attitnda of tha South on many questions regarding tha rights of tha colored people, and the ohligations of States to pay their debts, is not attractive, and should compel them to deal with the North in an undertone. And the North is bound to an equal mildncaa of speech.

In a recent dehnte in tha United States Senate, over tha matter of Whittaker, the colored cadet at West Point, Senator Hoar said: "The colored boy who enters West Point, unless the praetica has changed within a yesr or two, is in as complete solitude as Rohinson Crusoe was on his island. The boy is left absolutely without an associate. Nobody speaks to him. Nobody calls on him in his room. Nobody nffords him any sympnthy either in sickness or in sorrow." Now tha majority of cadeta at West Point nre of Northern hirth and with Republican antecedents. They reflect the instincts, opinions and conduct of tha communities from which they enme. Tbnt sentiment is now strongly opposed to granting any social standing to the negro, simply on account of his color. It is hardly fair for the North to exhibit such hostility to the South for its attitude towards the negro, when it utterly fails itself to do justiee in the first instanee. The North is in no position to throw stones when to-day a negro in New York is testing in the conrts, the question whether or not he can attend the theatre.

Thera is no paper at the South which has, as a rule, presented broader, more independent opinions on politieal subjects thnn the *State*. It is doing in many ways the best work. Its conductors are in the advaneed line of thinkers at the South. But, in this instanes, the *State* has fallen, for a moment, from its high estate, and has dona itself and the Southern peopla great injustiee. Tha *Tribune* falls into the same error, and utters sentiments which the best thought of the North does not endorse.

Thera has been a conflict of two "eivilizations" in this country, ending in a terrible war. In law and in fact there is now hut ona "eivilization." But tha old habits of thought, tha old traditions, the inharited hostilities, still exist, though they diminish in strength each year. Just now it is a conflict between ideas of government. The North, for certain sufficient reasons, entertains the idea that large power lies in the central government; while the South, for certain reasons, holds to the idea of State sovereignty. No laws can control or modify these ideas. Change comes from social growth only. Custom-houses and bayonets cannot reach men's thoughts. Angry, hot words cannot ereate a platform upon which all can stand together. If the press of both sections should become eonciliatory and appreciative, the politics of the country would instantly be purified, and a hetter understanding would arisa. This can hardly be expected to arise whan men are given to one-sided views. But those who are disposed to taka their opinions from the newspapers should always remember that the papers show the weakness and strength of human nature. The instanees wa have given are samples of the weakness.

W. N. A.

Dr. John R. Hewett, formerly of the Hampton Soldiers' Home, has located at Hot Springs, Arkansas, to practice his profession. Ho has a good educatian as Physieian and Surgeon, and also as Chemist, and we trust will meet with sueeess. His office is just above the Arlington Hotel.

THE PEABODY FUND TRUSTEES.

[The Trustees of the Peahody Education Fund have addressed a memorial to Congress, signed on their behalf by Alex. H. H. Stuart of Virginia, M. R. Waite, Chief Justice of the United States, and Wm. M. Evarts, Secretary of State, praying that such public "aid may be granted as may be required to seeure to the colored population of the Southern States the edueation which is neeessary to fit them for the diseharge of their duties as citizens of the United States."

The memorial was written by General Stnart, an ex-slaveholder. It embodies the prineipl reasons on which have been hased the gift of over five millions of dollars hy Northern friends for nego edueation during the past fifteen years, and which inspire an annual stream of nbout half a million dollars in charity that goes steadily from the North to colored schools in the South, to mingle with something like twelve hundred thousnnd dollars devoted to negro edueation from the treasuries of the states lntely in rebellion.

To meet the needs of four and a-half millions of ex-slaves coming out of ages of harbarism and immediately from three centuries of bondage in America, this aid is most inadequate. To fit seven hundred thousand negro voters, mostly illiterate, for tha duties of citizenship is vitally important.

When "a race numbering five millions of aoula is elevated from the degradation of slavery to the high position of eitizenship of a great republic, with all its preeious rights nnd weighty responsihilities," there is work to be done for them.

The well known and nhle men comprising the Trustees of the Peabody Education Fund seem to have realized this as never before, and have stated tha need, the danger and the duty in this matter, with singular clearness and force.

We quote from their memorial, believing that we can put nothing better into our columns than soma of its weighty words:—

"In a letter to Mr. Yancey, dated January 6, 1816, Mr. Jefferson says: 'If a nation expects to hs ignorant and free, in a state of civilization, it expects what will never be.'"

The inaugural address of President Monroe, delivered March 4, 1816, is quoted as follows:—

"'The people themselves become the willing instruments of their own dehasement and ruin. Let us look to the great cause, and endeavor to preserve it in full force. Let us, hy ell wise and constitutional measures, promote intelligence among the people, as the best means of preserving our liherties.'

* * * * *

"We arc thus compelled to face the fact that more than half a million of voters, scattered over half the Union, from illiteracy are notoriously incompetent to the intelligent discharge of the public duties intrnsted to them. This large class of uneducated voters, It must be remsmbered, are not merely citizens and voters of the States in which they respectively reside: they are also citizens of the United States. The power which they wield and the influence which they exart is not merely local: it is co-extensive with the Union. Their votes may decide the issues of peace or war; thsy may control presidential elections and give shape to the policy of the nation; they are entitled to participate in the election of President and Vice-President, of Members of the House of Representatives, and of the State Legislatures which choose Senators of the United States; they elect governors and legislators of their respective States, judges, clerks, sheriffs, supervisors, magistrates, and almost every officer intrusted with the administration of public affairs; they are themselves eligible to all positions of honor, trust, and emolument, and legelly competent to act as judges or to sit as jurors in cases involving the most sacred rights of life, liberty, and property."

These words of Horace Maan of Massachusetts, referring to the National Government, may he applied to the present day:—

"'All this splendid structure, the vastest and nicest ever devised hy mortals, is under the control of men who are incspahle of reading one word of the language which describes its framework and defines its objects and its guards, incepahle of reeding one word of contemporeneous exposition, of antecedent history, or of subsequent development, and therefore make it include anything or exclude anything, as their blind passions may dictate. Phaeton was less a fool when he mounted the chariot to drive the horses of the Sun, than ourselves, if we expect to reach the zenith of prosperity and happiness under such guidance.'

"If Horace Mann felt justified in using languags like this more thrn twenty years ago, whers would he find words edequats to the expression of his thoughts if he were living in the present day!

* * * *

"But, in the opinion of your Committee, the colored race constitute an exceptional class of our population. Having for generations been held in slavsry, they had no opportunity of obtaining education, of acquiring property, or of qualifying themselves for the intelligent discharge of the duties of citizenship. They are not responsible for their ignorance. They have had no teachers to instruct them in even the rudiments of knowledge, and their parents were as ignorant as themselves. It cannot, therefore, be matter of surprise that they should be, as they unquestionably are, generally incompetent to form intelligent opinions on political questions, or to exercise with discretion the elective franchise. Justice would seem to demand that when a duty is required of a class of citizens, the means should be afforded to them to discharge it properly. The general sentiment of mankind has condemned as tyrannical and oppressive the conduct of the Egyptian task-masters, who required the Israelites to make brick and yet refused to furnish the straw that was necessary.

* * * * *

"Your Committee have already quoted the pregnant remark of Mr. Madison, that 'Knowledge will forever govern ignorance, and a people who mean to he their own governors must arm themselves with this power which knowledge gives.' Can the people of the United States feel that they have done their whole duty to the colored race until they have given them thet degree of education which is esscntial to self-protection?

"Passing to the considertion of the subject in its broader and national aspects, can any reflecting man doubt that the infusion of so large an element of ignorance into the constituent body must be a source of weakness to our system of government? Cen any one fail to perceive thet such a class of voters are constantly liable to become the dupes of artful demagogues, and give their support to measures dangerons alike to liberty and property?

The Chairman of our Board, in his address at the opening of the last meeting, gave us an admonition on this subject which should never be forgotten. It was in these words: 'Our free institutions rest upon intelligence and virtue, and can survive almost anything except ignorance, and the vice, corruption, and violence which are so generally the results of ignorance.'

* * * * *

"Where large masses of population are uninformed, and in need of the common necessaries of life, nothing is more easy than for artful demagogues to to infuse into their minds against their more fortunate countrymen, who, hy peticnt industry and thrift, have been able to surrouud themselves and their families with ell the appliances of comfort and luxury.

"What right have the people of the United States to claim exemption from dangers of this kind, which have proved so disastrous in other countries? It must be remembered that probably four-fifths of all the bonds of the United States, of the several States, of counties, cities, and towns, and of railroad end canal companies; and even a larger proportion of the stocks of all banks, railroad and canal companies, factories, insurance companies, and other monsyed corporations which are held by citizens of the Unitcd Stsles, are owned by capitalists of the Northern and Eastern States. The people of the Southern and Western States, end cspecially the colored people, own very few of them, and have no further concern with them than to bear, directly or indirectly, their share of the taxes levied to pay the interest or dividends on them. Whet security have the people of the United States thet these jarring interests of debtor and creditor, of numbers end property, may not in the future give rise to serious conflicts? Very recently serious commotions of this kind assumed such formidable proportions as to render it necessary to use military power to suppress them. If to this turbulent element of the North there be added seven hundred thousand untntored and non-property-holding colored voters, whose interest is opposed to these kinds of property because of the station which they entail upon them, it requires no spirit of prophecy to foresee that the danger will be greatly increased. Attempt have elready been made, and not without some success, to instil into the minds of the colored voters the idea that they are neither morally nor legally bound to pay any public debt which was contracted before they were emancipated and invested with the rights of citizenship.

"Admonitions liko these ought to teach the thoughtful men of all parts of our country, those who desirs to maintain ths peace and order of society, that the time for vigorous action has come. Delays srs dangerous. If the corrective be not promptly applied, the svil may become irresistible. That corrective is the diffusion of knowledge among the peoples; and this can be accomplished only by teaching every voter to read and write, so that he may be able to have access to the best sources of information and form an intelligent opinion on every question which may arise.

* * * * *

"It appears from the last Annnal Report of our eble and accurate General Agent [Rev. Barnas Sears, D. D.,] that there are at this time 'two millions of children in these [the Southern] States without the means of instruction.' Of these doubtless more than one-half are colored. Our General Agent presents the necessity of action by Congress on this subject in the following impressive words: 'The mere neglect of a great opportunity mey entail disaster upon them and their posterity hy suffering a horde of young harbarians to grow up to prey npon the peace of society. The peril, if once overlooked in this critical moment, cannot afterwards be remedied hy legal enactment and penal measures. If men fail to take the necessary prscaution by training the young to be useful citizens, they must expect to reap e corresponding hervest, and to see around them a community distinguished for "dwarfish virtues and gigantic vices."'

* * *

"Georgs Peabody, the enlightened and beneficent founder of the trust which bears his honored neme, was a native of Massachnsetts, but for many years a resident of London, where he accumulated e large fortuns. With characteristic sagacity, he was among the first to foresee the evils which would be entailed on the Southern States hy the ravages of the war, and the consequent inebility of the people of those States to extend to the rising generation the blessings of education. Discarding every feeling of a sectional character and acting with a megnanimity almost without a parallel in history, he dedicated several millions of dollars of his private fortune 'to he held hy trustees [named by himself] and their successors, and the income thereof used and applied, in their discretion, for the promotion and encouragement of intellectual, moral, and industrial edueation among the young of the more destitute portions of the Southern and Southwestern States of our Union, his purpose being that the benefits intended should be distributed among the entire population, and without other distinction than their needs and the opportnnities of usefulness to them.'

"For twelve years the members of this Board have endeavored faithfully to discharge the duties of the trust reposed in them. In the performance of this duty their thoughts have been turned to the destitntion of the Southern States, to the anlettered condition of a large portion of their population, and to the necesgity of extending liberal assistance to the edueation of the new class of voters who have been introduced into our system. The Boerd have the satisfaction of knowing that with the limited means at their disposal they have been able to accomplish much good. But these means are entirely disproportionate to the end. Where millions of citizens are growing up in the grossest ignorance, it is obvious that neither individnal charity nor the resonrces of Impoverished States will be sufficient to meet the emergency. Nothing short of the wealth end power of the Federal Government will snffice to overcome the evil."

Mr. John B. Gough, the veteran Temperance lecturer, who for forty years has not failed in eloquenee or fire, has recently given two lectures at Hampton Institute, one of which, on Peculiar People, he generously gava for the benefit of the Butler School, and the other, a private one to the students. The school is indebted for his visit to the kind offices of Hon. Wm. Claflin, Representative and Ex-Governor of Massachusetts, who, with his wife and Mrs. Senator Crapo, accompanied Mr. Gough.

ENTERPRISE AMONG THE COLORED PEOPLE.

Some months ago we published, with permission of a friend of Hamptoa, a letter from a young colored man, graduate of the Philadelphia High School, in which he spoke of the effort he was making to put up a suitahle huilding for his school in Louisville, Ga. His friends in Philadelphia aided him with money to some extent, but advised him to encourage the colored people to do the chief part themselves, promising to supply maps and a

small library when the school-house was finished. Stimulated by his efforts, they have finished it in about two years. Some of the colored people gave material; others, labor; and some, donations of money, from twenty-five cents to five dollars, but most of them very small sums. The house completed, the enterprise of the people has been pleasantly encouraged by the gift, not only of the maps and library, but of a nice set of desks and seats for thirty-six pupils. The great delight and gratitude with which this wise and generous gift was received, is very eloquently expressed by the young teacher. We publish extracts from his account of it in a Louisville paper:—

Mr. Editor:—Allow me through the columns of your valuable paper to express my gratitude and thanks to the citizens of Louisville for the sympathy and aid which they so kindly gave me in my recent efforts to erect a school-house here for colored children. Two years ago, through the liberality of some philanthropic friends (principally patrons and well-wishers of the school in which I was educated, and hence interested in me and my enterprise,) I was enabled to commence the building, and at different times to make such renewed efforts towards it as required but very little additional labor and expense to render it serviceable, though not entirely complete. And now I am pleased to state, that through the kindness of Hon. J. H. Polhill, Dr. Powell and several other prominent citizens who contributed variously to the cause, and also through the assistance of a number of my colored friends and patrons, additional work upon the building has been accomplished. The lower apartment has been furnished with maps, seats, desks, and other conveniences that belong to a well appointed school-room, for which my thanks and those of the colored people of this community are due to Miss —— and other kind friends, referred to above, who promised me such donations on condition that I would succeed in my undertaking. I think the colored people of Louisville have now taken the lead in this county in respect to educational facilities (I refer only to colored schools). My hope is to raise the standard and increase the efficiency of this school until it shall be all that may be desired in an agricultural community. I believe that the only true method to make my people good citizens is to improve their morals, their religion and their education. If our Solons at Washington could frame their statutes with that object in view, it would do more towards bettering the condition of the black man and eliminating sectional bitterness and strife than all the other legislation for him that could be passed between now and the 90th Congress.

"To conclude, let me again tender my sincere thanks to all parties. They have shown themselves the friends of education and enlightenment. With such sentiments among our private citizens, may we not hope that the time is not far distant when our public legislators will devise some means by which the State and county may give our common schools a longer and more generous support?

"Truly and gratefully,

"GEORGE E. JOHNSON."

SCHOLARSHIP LETTERS.

We give below another set of the "scholarship letters," which, as most of our readers know, are written yearly by the students of Hampton to those who make their education possible by gifts of scholarships of $70 a year, or $210 for the three years' course. The Indians and State students, though not provided for exactly as the rest, are also required to write letters as specimens of their progress which may be used to interest the friends of the school.

FROM AN INDIAN.

Dear friend:

I am a boy of twenty years of age and was born in Indian Territory in the tribe known as the Absentee Shawnee Indians. My parents were both dead: my mother having died first, when I was about fifteen years of age. And my father died just two years ago. I can remember the last words that he spoke to me while he was yet alive. He says that I must not gave up the great object which I am now aiming for, because a day is coming when all Red, Colored and White should live in peace under one law, like one great nation of people. I have these words in my mind all tha time. So I have been going to school ever since; first, at Shawnee Mission, near Sac and Fox Agency in Indian Territory and afterwards I came here. Permit me therefore to express my warm thanks to you for this opportunity I now have for obtaining an education. So that I may know how to live in a better life, and also to know how to teach my people after I go home.

When I left home, I did not expect to see so many things that are strenge. Such as steam-boats and sailing vessels: also I never seen ears untill last fall as I was coming through. Because I live long ways, at least one hundred and twenty-five miles from the Rail Road. Well I came here on the 18th day of October, 1879. I find the school very pleasant and is more than I had expected. Although I was very lonesome at first because I never was away from my relatives before. And I think its natural for any one to feel that way, especially one that never has been away from his relatives in his life. But now I am happy and feel contented and like to study my lessons. Of course I like the school real well in every respect. The teachers and others that are in charge of this school are such a good people and done all they could to make the Indians better and turn them from their bad ways. I hope that they will succeed in so doing, for we know now (at least I do) how *little* the Indian knows about the world: and what was above him. So I will draw my letter to a close by thanking you again and again for this chance of getting an education.

I am respectfully yours,

THOMAS J. WILDCATT.

FROM A JUNIOR.

Dear Friend:

I am writing to one whom I am not acquainted with, and I know no better way of introducing myself to you, than to write you an outline of the history of my past life, and future desires.

My father and my mother were both slaves and I was born as a slave in Alabama, about the year 1849. I commenced picking cotton on the farm when very young, and my mother used to take me on her shoulders and carry me to the house which was about a half mile from the fields. I grew up as a slave in ignorance. You may judge from the following remarks what sort of a man I belonged to. A friend gave me a book, it was called the Webster spelling book, and the man that I belonged to took it from me and told me that if he ever saw me with another book, I should be punished for it. And I took him at his word. I knew what would follow. He did not allow his servants any time to eat. They ate on their way to the fields and sometimes we would be at our plows waiting for day to break, so we could see how to plow and hoe, and one time my mother commenced teaching her children the Lord's Prayer. He told her if he ever heard of her teaching her children the Lord's Prayer again he would punish her severely for it. And she was obliged to stop teaching us the Lord's Prayer. Therefore I never learned the Lord's Prayer, untill 1873.

Wilson's rade passed through Alabama in 1865. And the soldiers carried me along with them, and we arrived at Montgomery after a three weeks' travel through the country. I was also glad to have the chance of going with them. When we got to Montgomery we met some colored troops there, and I enlisted as a recruite in the 61st United States colored infantry. I belonged to Company I. I continued in service nine months, then our regiment was mustered out at Baton Ruge, La., and disbanded at Memphis, Tenn. When we were paid off I drew eighty-five dollars, and before night of the same day I lost my pocketbook, and all of my money. Therefore I began to work there in Tennessee and it took me three years to make and save money enough to pay my way back to Alabama to see my people. I reached them in March, 1869. And I found them without money and with very little food as they had been working for the tenth of the crop.

Then I commenced working on the farm. I continued working on the farm for some years, but kept thinking of going to school. As soon as I could save enough money, and after awhile I saved money enough to pay my way three months in the Burrell Academy at Selma. Then I got out of money and had to leave school and go to work again. I made four attempts to go to school. Three times at Selma, and one time in Talladega. I got out of money each time and had to go to work again. I have never been to school a whole term.

I became qualified to take a first grade public school in 1875. But I did not get any money. I only got due bills and sold them for 60 cents on the dollar, and took a part of that and gave it to my step Father and Mother to help them take care of their children and themselves. My own Father and Mother were never married to each other, therefore I have no whole brothers and sisters. I have always tried to help Mother as my step-father did not know very well how to provide for a family, and had to pay one hundred and fifty dollars for as much land as he could cultivate each year with one horse, and therefore it left him nothing to spare.

Not wishing to stop short of a Normal school education, after reading of the Hampton Normal and Agricultural Institute, I resolved to come here where I can pay part in cash and work out the balance.

I arrived here on the 21st of June, 1879. I worked on the farm awhile, and at my own request I was admitted to enter the knitting department, therefore I remained there untill the first of October, then I entered the Junior class, I am getting on very well with my studies. I am doing the best I can, and hope to be able to enter the Middle class by next term

I like this school and its regulations, and I feel that it is one of God's great gifts to the cast down and degraded human beings for whom Christ shed his blood on the cross to save.

When the Academic Hall was burned, I was one among the number that lost every thing I had except what I had on. I confess that I felt sad and cast down when I could not tell where my next garment would come from, but I thank God that I have learned through the teaching of a good missionary to trust in Christ. I have received some clothes and I am thankful to my heavenly Father that he will always remember those who put their trust in him, and I try to trust him every day and I believe he will help me.

If it is his will, I desire to stay here three years to qualifie myself to teach. I have been teaching and wish to make it a business. I would rather teach than to do anything in the world. I do not use tobacco nor whiskey in any form. I will now close with best wishes for your success in this world, and also in the world to come, that is the beautiful city that is prepared for the people of God.

Yours respectfully, H.

FROM A MIDDLER.

Dear Friend:

As I am requested to write you a letter about my vacation work; I have decided to do so.

I left the school for home on the 15th of July. I only stayed a few days at home; I then went on the light house with my father and staid in his place while he could go ashore, to do a kind of work that he always took a large part in. And that is preaching.

I didn't have hard work to do, but constant and important. It is also very dangerous during storms, and very cold in winter. I caught a great many fish while I was there and a variety of them. We would have a shark fishing once in a while, and would catch some very large ones.

I suppose that you would like to know where this light is. It is situated between the two capes, Charles and Henry, in a very bleek place, five miles and a-half from the nearest land. It is built on a round lump of sand, which is supposed to have been formed by the strong tide which never stops running.

During heavy storms it will rock you in the bed, but I believe that it is very firmly built. If you should sail this way and enter the two capes, Charles and Henry, the first fixed red light you see will be the York Spit Light. When I got back to the school I found everything in a good condition "as usual." And when I was doing very well when suddenly we had to give up one of our fine buildings to the raging flames, of which I suppose you have heard.

We only stopped school one day after the great loss; we did not get discouraged for we have "a good and true hearted chief," Gen. Armstrong, who soon got everything in working order again. I turn you a great many good thanks for your kindness toward this school which I hope will be the means of lifting up the two races which we have represented here, to such a high standard that you will not feel as though you could have put your money to some better use. I have not yet decided what I shall do when I leave school, but I want to do some good work, "that is" something worth doing.

I am glad to say that we have good and kind teachers, and if we don't do well, it will not be for want of good teachers. I have learned something about a great many things since I came here, and I believe that I am still learning but not so fast as some of my schoolmates. There are some persons as you know that learn very fast, and there are some that don't; and seems as though I am among the last mentioned. I am now in the Middle class, and intend to study hard; for if I don't be promoted at the end of the term; my father says that this may be my last year at this school, so I have got to study, I am compelled to, and with the help of God, I am going to do tha best I can. I have not yet decided what I shall do when I leave school, but I want to go to Africa where there is plenty of work to do, it is very likely that I will go, because I am after helping my race all I can. I think with the help of God I can do some good work.

Yours truly, S.

FROM A SENIOR.

HAMPTON, VA.

Dear Friend:

This is the third and last time that I will have the pleasure of attempting to express my gratefulness to you as a student of Hampton. What a happy yet sad reality! When I was a Junior I longed for this day to come that I might I be able to write you a real interesting letter. The word Senior seemed as large to me then as President does now. I thought to be a member of the Senior class was to know something about almost everything. Now I have arrived at the long wished for period, I feel my deficiencies more than ever. I feel, in fact, I know that I know nothing when compared with the knowledge of the great school I am about to enter.
